PROCEEDINGS AND DEBATES OF THE 88th CONGRESS, FIRST SESSION

SENATE

Thursday, April 4, 1963

The Senate met at 11 o'clock a.m., and was called to order by the Vice President.

Rev. Wayne R. Woods, pastor, Augustana Lutheran Church, Washington, D.C., offered the following prayer:

The Lord be with you. Let us pray.

Lord and Father, have mercy upon us. We are sinful men. Our motives are mixed, and our words often drip with deceit. We are weak and inadequate for the heavy work we have been given to do.

Create in us clean hearts, O God, and put a new and right spirit within us.

It is good to remember Jesus Christ and his strengthening word, "I am with you always."

Bless our Nation and these who are its leaders. Grant them a heaven-sent wisdom by which they may perceive Thy will and Thy purpose amidst the revolutionary confusion of our time. Through their decisions, let justice roll down like waters, and righteousness like an ever-flowing stream—for all the people.

So may Thy Kingdom come on earth, beginning here and now. Amen.

THE JOURNAL

On request of Mr. Mansfield, and by unanimous consent, the reading of the Journal of the proceedings of Wednesday, April 3, 1963, was dispensed with.

MORNING HOUR DISPENSED WITH

On request of Mr. Mansfield, and by unanimous consent, the morning hour was dispensed with.

ECONOMIC AND POLITICAL IMPLICATIONS OF COMMON MARKET TO THE UNITED STATES

Mr. MANSFIELD. Mr. President, on behalf of the Senator from Alabama [Mr. Sparkman], I yield 2 minutes to the Senator from Delaware [Mr. Williams].

The VICE PRESIDENT. The Senator from Delaware is recognized for 2 minutes.

Mr. WILLIAMS of Delaware. Mr. President, on April 1, 1963, at the Conference on Industrial Property Protection, at Villanova University, the distinguished Senator from Nebraska [Mr. Hruska] delivered an address on "The Economic and Political Implications of the Common Market to the United States." It is a sound appraisal of some of the problems which currently cloud our relationship with the European Economic Community.

The EEC is the world's largest market for farm imports. Its agricultural system is mostly antiquated, and is not equipped to compete efficiently with American producers. Yet the Community has embarked upon a highly protectionist policy in this area. Because of this, great injury already has been suffered by certain parts of American agriculture; and more trouble looms on the immediate horizon.

In his address, the Senator from Nebraska pointed out additional areas of concern, and raised some interesting questions. Do our antitrust laws provide sufficient safeguards for American firms competing abroad, especially in the growing markets of Africa and South America? Are our laws adequate to prevent foreign producers from selling goods in this country at prices lower than those for which they are sold in the home country or in some third country? What proof and procedures should be required to show that our producers are being injured by such discriminatory practices?

Free trade is a two-way street; and the Senator from Nebraska has ably pointed out several areas which are causing some restrictions in one of the lanes of traffic.

Mr. President, I ask unanimous consent that the Senator's timely remarks on the Common Market be printed in the Record.

There being no objection, the address was ordered to be printed in the Record, as follows:

THE ECONOMIC AND POLITICAL IMPLICATIONS OF THE COMMON MARKET TO THE UNITED STATES

(Remarks of Senator Roman L. Hruska at the Conference on Industrial Property Protection, Villanova University, April 1, 1963)

It is a great pleasure to appear on this program. I consider myself deeply honored. The memory of this evening's fellowship will remain with me for a long time, for your conference has brought together a group of outstanding authorities whose contributions throughout these 3 days will provide an impressive study on the subject of "Industrial Property Protection."

What a splendid way to exchange ideas, views and information—in the company of men who have gained high respect and wide distinction in their respective areas of study. To see and hear them, to participate in panels where questions pinpoint specific areas of interest, and to have the opportunity to discuss the issues which develop with associates possessing like interests—all these activities fulfill the conference goals, which I take to be the gathering of information which can be put to use in your particular areas of work.

I speak as one who has participated in similar searches in the legislative field for some years. I know of no more effective method than the one you are employing to obtain a working knowledge of the foundations and complexities of that extraordinary enterprise, the Common Market, which is giving Europe a vigor and direction without parallel in its history. The Federal Bar Association, Villanova University, and Georgetown University are therefore to be commended for arranging this stimulating conference.

The panel of prominent speakers includes at least a half dozen who have journeyed across the Atlantic to be with us. This is gratifying. After all, they live close to the Common Market; some of them have an official connection with its present activities and had a decisive role in their initial development. It is well that they should participate in the program with others who engage daily in, and help shape the destiny of, the Common Market which is on this side of the Atlantic, and is now enjoying its 175th year of successful venture.

There is much we can learn from one another.

A NEW WORLD POWER IN THE MAKING

The creation and establishment of a new world power is no easy accomplishment. There are very few meaningful precedents to study as it does not happen often. In terms of human resources it takes enormous energy and incredible ingenuity to bring about such a result. In the past decade we have witnessed the gathering momentum for such a phenomenon. And today we face the accomplished fact.

The United States rejoices in the success of that effort.

It has been our policy from the inception to favor and encourage the fusion of European interests, just as it is American policy to similarly encourage and be of assistance to our Latin American neighbors.

In the immediate postwar years, a stable, prosperous Europe was deemed to be of paramount importance in preserving the common freedoms of the Atlantic nations.

Uppermost then was the thwarting of further Communist aggression and subversion. This involved political and military considerations. Their handling would have been difficult, if not impossible, without vigorous, orderly economic growth in the threatened areas. The strength of any military alliance is drawn from the well-being of all of its component parts.

More recently, another mutual responsibility has arisen through assistance to the poorer and underdeveloped nations. If this goal is to be attained, we must have increased, and certainly continued, economic prosperity on both sides of the Atlantic.

The Common Market is described by some as being a supranational organization following a Federal pattern. Others refer to it as containing merely the seeds of supranationalism. Perhaps the caution of the latter characterization is well warranted. The advocates of a "Europe-of-Fatherlands," a loose confederation of member states as opposed to a more closely unified organization, are very insistent.

In what direction the ultimate political development of the Community shall go is an issue which will not be settled for a long time. Moreover, I venture to say that the pattern will emerge quite gradually.

Obviously with a new economic power in being and a political one in the offing, it will behoove America to guide her actions and protect her own interests accordingly.

It is my purpose tonight to comment briefly on some of the areas in which the Congress will have an especial interest. With my observations goes a caveat, however, that the thinking of the Congress is still very fluid.

Basic assumptions which seemed so valid at one moment, such as Britain's entry into the Common Market when the trade expansion bill was enacted, have had to be discounted. Faced with so many unknowns, whose dimensions, let alone numbers, are yet to be fathomed, the Congress can well afford to remain conjectural about most of the apparent problems. Tonight I am taking a leaf from that notebook.

AGRICULTURE

The Treaty of Rome necessarily extends to agriculture and agricultural products and provides for the establishment among the member states of a common agricultural policy.

This constitutes one of the most difficult, complex, and far-reaching problems of any with which the six countries of the Common Market must grapple. By its nature, agriculture is on a different footing than are the other sectors of a national economy. Left to his own devices, the farmer cannot keep up with the rest of the economy. This is as true in Europe as it is in America, although for different reasons.

The European Economic Community is the world's largest market for farm imports. Its farm system is in the main antiquated and not sufficiently productive to be competitive with modern methods. It is far from being self-sufficient. In contrast, the United States is the greatest producer of many farm products the Community needs. Moreover, we are the most efficient producer in terms of manpower and machines. As a low-cost producer we can, in many instances, ship to the markets in Western Europe our farm products at a lower delivered cost than some, and perhaps most, of the countries can raise the products themselves.

For true free traders, this is a perfect situation because it would call for opening the doors to imports from a country which can more efficiently and economically produce the farm stuffs for the European consumer. The European farm laborer could then be released for more profitable occupations in other areas of the economy, whether they be industrial, commercial or otherwise.

But things just have not worked out that way.

First, because Europe wants to be self-sufficient in food production and, secondly, because the farm situation is more a matter of politics than economics—as I am sure you all are aware.

In the European Economic Community 1 out of every 4 persons belongs to the farming population, comprising a total of some 40 million. They till about one-tenth of the acreage farmed in the United States and require at least twice as many workers to do it. Their farms number 9 million as against our 5 million, with an average size of about 4.5 acres as against one 18 times that area in the United States. This tends to place their agricultural economy to a dismal level of inefficiency and high productive costs.

Just the same, the European Economic Community is embarking upon a highly protectionist policy as to farm products. Keeping its agriculture isolated and insulated, it hopes to hammer out a policy that will insure an adequate income for its farmers, increase agricultural productivity, balance production and consumption and supply food to the consumer at reasonable prices. Little wonder the member nations find themselves unable to devise a workable solution to their agricultural problem. When we scan the scope of such a policy, we can only exclaim: "What an order."

But the protectionist policy which the European Economic Community is forging and implementing vitally and directly affects American industry and trade beyond agriculture.

Variable import levies on certain farm stuffs went into operation on July 1 of last year. "Variable" is an appropriate term for the device by which the Community expects to obtain a protected, artificially priced market for the product. The designated import fee is of any size necessary to make certain that the product would not come into the Community at a price lower than the target price established throughout the six countries.

Its success is, as would be predicted, brilliant. For example, in the case of broiler poultry going into West Germany, which was our principal poultry market among the Six, exports dropped from 31.0 million pounds in the last quarter of 1961 to 10.8 million pounds in the same period of 1962. The reason? The duty plus variable levy was raised on last July 30th from 4.8 cents per pound to 12.5 cents per pound. The combined charges of each of the other countries were increased in about the same degree. As a result, poultry exports everywhere dropped precipitously. For this market our poultry trade has been seriously hurt.

Similar trouble looms in other product areas, especially wheat and feed grains, as soon as the six Common Market countries can compose the serious difficulties among themselves to agree on a target price.

The Common Market is by far our largest foreign market for farm products, particularly for sales in hard currency. In recent years our farm exports to the Common Market have averaged better than $1 billion a year. That is nearly a third of our total agricultural exports sold for dollars. Ten years ago the United States exported 100 million bushels of wheat. Last year the figure was 700 million. To have farm exports cut off or even heavily reduced would produce serious repercussions.

What interest will Congress take on this point? When the Congress enacted the Trade Expansion Act last year, which gave the President substantial authority to negotiate the reduction of foreign import restrictions by granting reductions of U.S. import restrictions, Congress attached an amendment which hopefully will set the tone for all future trade and tariff negotiations.

The statutory language, thrashed out in committee and conference, is designed to obtain a tough policy at the bargaining table. The President is directed not to grant additional concessions to countries that are imposing variable fees or other import restrictions which are contrary to existing trade agreements. He is also authorized to cancel previous concessions made to countries which persist in such practices.

You might like to know that some of us in the Congress pressed vigorously for mandatory action upon the President in such cases but the effort was beaten down.

The reason for urging the requirement of mandatory action in this area had good foundation. Far too often trade negotiations would be undertaken and completed on manufactured goods before any consideration would be given to agricultural products. Bargaining stock was usually dissipated by the time discussions reached that latter point on the agenda, with the disappointing result that the elimination of foreign restrictions on agricultural imports lagged far behind the elimination of restrictions on manufactured goods.

Recently, however, we have had some encouraging news in this regard. Secretary of Agriculture Freeman, testifying before one of our Senate committees on this very point, announced:

"And our policy, the policy of our Government, is very clear, and I think very important, that agriculture will be an integral part of the negotiations, and that we are going to negotiate across the board, and we are not going to put agriculture in a corner and say, agriculture for agriculture, cow for cow, hog for hog, and automobile for automobile, which on an item by item basis was done before, leaving agriculture to the last, when the problem became almost insuperable.

"This is a very significant recognition by the administration, by Mr. Herter, by the State Department, and it will be very important to agriculture in the basic long-term negotiations. They of course include more than just the Common Market. These negotiations include all the nations in the free world."

It will be with keen interest that Members of Congress await developments in this area. Industrial exporters who wish to sell to the United States must recognize that expanded trade in industrial goods cannot be realized if U.S. agricultural exports are oppressively restricted. The agricultural policy now enunciated by the six member states will neither strengthen the Common Market nor promote trade alliances. While the American farmer has a primary stake in the outcome, the issue affects more than his foreign markets and the European consumer's pocketbook. Possibly the unity, and certainly the strength, of the free world is involved.

EXTRATERRITORIAL ANTITRUST

It is not my intention to dwell at length on the subject of our antitrust laws and how they affect American foreign commerce. This subject was thoroughly examined in your conference earlier today. But I would like to refer briefly to the hearings conducted by the Senate Antitrust and Monopoly Subcommittee 2 weeks ago and leave with you some impressions which may indicate possible areas of future congressional interest.

Considerable testimony was devoted to the Webb-Pomerene Act which, as you know, was enacted to promote our export trade. Under this act, American companies may associate to engage in export trade. There are, however, substantial limitations on what these companies can do under the act.

For example, such an association must not be in restraint of trade within the United States or of the export business of any domestic competitor of the association. Moreover, the act does not permit export associations to enter into international cartel agreements.

The Chairman of the Federal Trade Commission, Paul Rand Dixon, reported that the number of export associations registered under the Webb-Pomerene Act has dwindled steadily over the years and that in the first half of 1962, there were only 29. Little wonder, in view of the limited scope of the act.

Assistant Secretary Behrman of the Department of Commerce pointed out that the EEC's antitrust laws and regulations might permit a European cartel or restrictive combination to engage in foreign trade practices that a Webb-Pomerene association would be barred from doing. American firms could thus be placed at a disadvantage in foreign markets such as Latin America, Africa, and Asia. The suggestion followed that our antitrust laws might need to be amended to place American firms on an equal footing abroad.

On the other hand, Assistant Attorney General Loevinger, in charge of Antitrust Division, testified that these laws need no relaxation—that for the foreseeable future the "rule of reason" is an ample safeguard for American firms competing abroad. But is that enough assurance for American firms? Will such vagueness spur them to go confidently ahead to do battle in the trade markets of the world?

What about their competitors based in the Common Market? Does the Treaty of Rome prohibit them from restraining competition outside the Common Market? It would appear not to. Would it make any difference if such external restraints were to result in a distortion of competition within the Common Market? The treaty is silent on this question. It might make a difference, but we can only speculate on this point.

Let us assume that restraints outside the Common Market having effect within it may ultimately be held to violate the Treaty of Rome. Still, compare the differences between our antitrust laws and those of the European Economic Community. For example, restraints against competition may be exempted under the Treaty of Rome if, with certain limitations, they contribute to the promotion of economic progress within the Common Market. Mr. Dixon points out that American law would condemn some of these restraints as per se violations of section 1 of the Sherman Act. Hence we are confronted with the serious question whether the so-called "rule of reason" permits American businessmen to venture forth into the world with the same confidence and encouragement with which their European brethren embark.

Our balance-of-payments problem is sufficiently urgent to require an imaginative reappraisal of our antitrust laws as they apply to foreign commerce. In this connection it has been suggested to be in the interests of the United States—and, indeed, all of the nations of the free world—that there be sought an international treaty against restraints of trade.

To quote from the report of the Attorney General's 1955 Committee To Study the Antitrust Laws: "We cannot * * * depend on the gradual evolution of foreign law to protect the American economy against international cartels."

At the moment we can only speculate as to whether the European Economic Community Commission will be liberal or conservative in the application of its antitrust laws and regulations. But I believe Congress should be prepared to balance the scales if and when the rulings of the Commission make it clear that it does not intend to curtail the foreign trade practices of European businesses in a manner that American firms are restrained by the extraterritorial effect of our antitrust laws.

ANTIDUMPING STATUTES

As if the disadvantages imposed on American firms in the foreign arena were not enough, they must also contend domestically with dumping practices of some foreign businesses. "Dumping" occurs when a producer sells his products in a foreign country at a price below what he charges in his own country and so low as to be injurious to producers in the foreign country.

Foreign businesses have good reasons for selling their surplus goods here for lower prices than in their own countries. It is economically beneficial to them—and they are not subject to the Robinson-Patman Act.

Under our present statute it is very difficult for an American firm to show adequate injury as a result of such practices.

Here is an area that the Congress should carefully reevaluate. The Robinson-Patman Act prohibits discriminatory pricing within the United States by American firms. It may well be appropriate to consider amending the act so that it applies as well to foreign businesses which sell their goods in the United States at discriminatory prices, that is, at prices lower than those they charge in their home country.

THE DRAFT CONVENTION FOR A EUROPEAN PATENT SYSTEM

U.S. Patent Commissioner Ladd gave you his views in the morning session on the Draft Convention for a European Patent System. I join him in congratulating the authors of the draft. It is truly an outstanding achievement. But I share his disappointment in the possibility that the European patent may be effectively restricted to nationals of the contracting countries.

There is now a very substantial exchange of technological information and industrial property rights between the countries of the European Economic Community and the United States. It is difficult to comprehend why anyone would want to curtail this most useful relationship. It could have been expected that the Congress is perplexed that this remarkable document—the draft of the European Patent Convention—should set forth as an alternative that the European Patent System be in effect a closed shop.

Commissioner Ladd has given you some of the practical and legal reasons for such concern. I shall add but one further consideration.

We have provided, and still provide, to our European friends a common market of 50 States in which they may exploit their inventions under the protection of our patent laws. This may be done, not by filing 50 patent applications, not by filing six, but by filing just one. The patent that issues on this single application may be exploited in the vast common market that is the United States. America would not want it any other way.

For this reason, I find it difficult to believe that anyone would want to impair so forward-looking an institution as the proposed supranational European patent system by denying, or severely impeding, the availability of European industrial property protection to nationals of countries that are not parties to the convention. That would simply be retrogression, with consequences which cannot be foreseen.

CONCLUSION

If I have dwelled on some of the disappointing implications of the Common Market, it is because we in the Congress are concerned about them. But it is not my intention to leave you with the impression that I take a dim view of the organization in general.

On the contrary we can take a great deal of comfort in the progress made by the Community. The six countries appear headed for an order similar to our own. Certainly whether we have served as a precedent, the organization holds more promise than what previously existed on the Continent. While it remains to be seen if it can develop a better order of things than we have, there is no question that it will be an improved order for the Common Market countries.

It would be highly inaccurate to say that our interest in such development is paternalistic, but our pleasure at witnessing the rejuvenation of the Common Market countries is understandable. Beyond the challenge that stems from our businessmen trading there, we can sense the assurance that this new world power will be a significant and immediate force for European stability and world freedom.

URBAN MASS TRANSPORTATION ACT OF 1963

The Senate resumed the consideration of the bill (S. 6) to authorize the Housing and Home Finance Administrator to provide additional assistance for the development of comprehensive and coordinated mass transportation systems, both public and private, in metropolitan and other urban areas, and for other purposes.

The **VICE PRESIDENT**. The question is on agreeing to the amendment of the Senator from Oregon [Mr. MORSE].

Mr. **SPARKMAN**. Mr. President, I ask unanimous consent that there may now be a quorum call, and that the time required for it not be charged to the time available under the agreement.

The **VICE PRESIDENT**. Is there objection? The Chair hears none, and it is so ordered. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. **HUMPHREY**. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The **PRESIDING OFFICER** (Mr. RIBICOFF in the chair). Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. HUMPHREY, and by unanimous consent, the Subcommittee on Internal Security of the Committee on the Judiciary and the Subcommittee on Public Lands of the Committee on Interior and Insular Affairs were authorized to meet during the session of the Senate today.

URBAN MASS TRANSPORTATION ACT OF 1963

The Senate resumed the consideration of the bill (S. 6) to authorize the Housing and Home Finance Administrator to provide additional assistance for the development of comprehensive and coordinated mass transportation systems, both public, and private, in metropolitan and other urban areas, and for other purposes.

Mr. **HUMPHREY**. Mr. President, I know that the pending amendment is the Morse amendment. A conference on that subject is going on right now. I ask unanimous consent that, without taking time from either side on the Morse amendment, I may be permitted to address the Senate for not to exceed 15 minutes.

The **PRESIDING OFFICER**. Without objection, it is so ordered.

THE YOUTH EMPLOYMENT ACT: A STATEMENT OF THE FACTS

Mr. **HUMPHREY**. Mr. President, the Senate and the House of Representatives are making encouraging progress in the consideration of the Youth Employment Act. S. 1 will soon be placed on the Senate calendar; floor action is scheduled within the next few days. The House

Education and Labor Committee has already reported the House bill favorably. Both Senate and House bills are remarkably similar in all fundamental respects. As principal sponsor of the Youth Employment Act, I am indeed hopeful that prompt and favorable decisions will be returned by both Houses.

I compliment the distinguished Senator from Pennsylvania [Mr. CLARK] and the distinguished gentleman from Kentucky, Mr. PERKINS, for their outstanding labors in both Houses in behalf of the proposed legislation. They could have been satisfied to rush this legislation through perfunctory hearings and executive sessions. Instead, the controversial aspects of both the Youth Conservation Corps and the Hometown Youth Corps were inquired into and examined with great care. The opponents of the legislation were permitted every opportunity to state their objections, marshal their arguments, and question witnesses. The hearings published by both Senate and House committees contain a wealth of information and opinions regarding the Humphrey Youth Act.

This morning I rise to set forth the fundamental reasons for my 7-year advocacy of title I of the Humphrey youth bill, the Youth Conservation Corps. Often it is helpful to have the principal author of legislation discuss the bill's basic purposes and objectives. I hope to do this with all the candor, objectivity, and frankness at my command.

In discussing the basic purposes of the Youth Conservation Corps, I plan to analyze the major arguments that have been raised by the opponents of the proposal. It is possible to identify three basic issues that have been developed through the hearings and committee consideration. First, it is alleged that the training and work experiences available to enrollees in the Youth Conservation Corps are not adequate to the employment demands of our contemporary society. Second, it is charged that the cost of the program is excessive in relation to ultimate benefits. Finally, it is alleged that the program will have little impact on the overall problem of youth unemployment.

These are serious allegations. They warrant answers that are frank and forthright. If the proponents of this legislation cannot provide adequate answers, they have no business advocating the Youth Employment Act in Congress or before the American people.

Mr. President, I believe we have the answers. They are answers based on facts, not opinions; dollars and cents, not good intentions; and hard results, not mere promises. The problem of youth unemployment touches every section of the country, every city, town, and village. The tragedy of the enormous waste of human resources clearly places this problem above short-run political considerations. If this is possible, I have no doubt that the American people—particularly the hundreds of thousands of unemployed young people—will be the ultimate beneficiaries.

BASIC CAUSES OF YOUTH UNEMPLOYMENT

First, the objectives of the Youth Employment Act must be understood in relation to the basic causes of our youth unemployment problem. If we go to the roots of this problem, what do we find?

We find an economy that is lagging far behind its potential in terms of providing new jobs for both adults and young people. We find an elementary and secondary school system that often fails to provide the education each American child rightfully deserves. We find a society that considers vocational education to be second-rate education and has never provided adequately for such instruction. We find the American society—both urban and rural—undergoing profound transformations that radically alter the traditional modes of employment, family living, and social organization.

Do the proponents of the Youth Employment Act claim that the Youth Conservation Corps or the Hometown Youth Corps will provide the solutions to these root causes? Of course they do not. But anyone claiming to "solve" the problem of youth unemployment had better be ready to deal with each of these questions. For here lie the roots of the problem. Here are the causes.

What do the proponents of this legislation claim? They say simply this: the Youth Employment Act provides opportunities for assisting thousands upon thousands of young people who are victimized by the problems of sluggish economic growth, inadequate educational systems, automation, urbanization, and social disorientation.

While the Nation wrestles with solutions to these basic problems, can we afford to sit quietly by, with hands folded, and permit these young people to lose all chance for productive and meaningful lives? The President of the United States, the Senator from Minnesota, Members of Congress from all sections of the country, scores of private organizations, and thousands of private citizens say, "No."

It is interesting to note that many persons opposing the Youth Employment Act also oppose the President's program for tax reduction and reform, the legislation to foster educational improvement on the elementary, secondary, college, and postgraduate levels, urban renewal, and expanded vocational educational opportunities.

In the 87th Congress, for example, the same persons who now oppose the Youth Employment Act for the reason that it fails to provide sufficient vocational training voted to eliminate training allowances for young persons—16 to 21—in the Manpower Development and Training Act. The same persons attempted to cut the entire manpower retraining program in half by reducing the program's authorization from 4 to 2 years.

Alternatively, most Senators supporting the Youth Employment Act are also counted as vigorous supporters of President Kennedy's recommendations to attack the basic domestic problems that are the roots of youth unemployment.

In short, the proponents of the Youth Employment Act want to provide job opportunities for thousands of unemployed young Americans even though such job opportunities, in themselves, will not solve the basic causes of this unemployment. But such opportunities will do a great deal toward alleviating its devastating impact on individuals and on society at large.

WHY THE YOUTH CONSERVATION CORPS WILL WORK

Are the programs contained in the Youth Employment Act capable of accomplishing even this limited task?

Opponents of the Youth Conservation Corps tell us that what filled the needs of the 1930's is not sufficient to meet the needs of the 1960's. This, I submit, depends entirely on the nature of the needs that existed in the 1930's as compared to the needs that still exist today.

As studies of the Civilian Conservation Corps have demonstrated, the primary need that existed among CCC enrollees was the opportunity to develop reliable, dependable, and mature work habits. After all, the most fundamental of all so-called job skills is the ability to appreciate the value of work—hard work—for its own sake. An individual possessing a highly developed technical competence and lacking this ability is just as poor an employment risk as the most unskilled school dropout.

I devoutly hope our civilization has not reached a plateau of technical sophistication where hard, honest labor is no longer necessary. My personal experience, as corroborated by expert testimony at the recent Senate hearings, suggests quite another answer. The personal qualities of reliability, maturity, dependability, and honesty far outrank in importance any specialized technical ability that may be taught to a young worker.

Frankly, Mr. President, I believe the opponents of the Youth Employment Act actually accept the proposition that sound work habits form the basis for any successful employment experience. Their own careers indicate the value of hard, dedicated work. In fact, I am still hopeful we can convince them of the great potential residing in the Youth Conservation Corps for bringing hope, enthusiasm, and self-fulfillment to America's forgotten youths.

If the crucial importance of nurturing these attributes among unemployed young people is acknowledged then I maintain that the Youth Conservation Corps is uniquely able to develop such personal qualities to a degree not possible in other vocational or occupational training programs.

The entire experience of the Civilian Conservation Corps stands as compelling evidence to this central fact. In my testimony before the Employment and Manpower Subcommittee chaired by the distinguished Senator from Pennsylvania [Mr. CLARK], I referred to a study of 272 boys from Cleveland who had enrolled in the CCC. This study was undertaken by the School of Applied Social Sciences at Western Reserve University and the conclusions are well worth repeating:

> The values which these 272 boys received from their camp experiences seem to fall into two general classifications: those having to do with the more or less concrete

> factors of improved physical health, increased weight, and financial gains, and those having to do with the intangible but significant factors of greater maturity, increased self-confidence, and general security. As we review the experiences and comments of these boys, we are impressed with the values from which many of them benefited, but we are impressed, too, by the responsibility placed on the individual boy for seeing and obtaining these values.

Let me also quote from the conclusions of another study, "The Administration of the Civilian Conservation Corps," undertaken at the Johns Hopkins University in 1937:

> Perhaps the most noteworthy achievement and the most beneficial result of the Civilian Conservation Corps program has been the development of good citizenship among the enrollees. The President (Franklin D. Roosevelt), in emphasizing the spiritual values of the project said, "Through you the Nation will graduate a fine group of strong young men, clean living, trained to self-discipline and above all, willing and proud to work for the joy of working." In their contacts with the administrative personnel, both camp and project, as well as with their fellow workers, the enrollees learned some of the valuable lessons of life. They learned to give and take, that honesty, sobriety, and truthfulness are the best policies, and above all how to live with others.

What young man ever outgrows the need for these qualities? To borrow the phrasing of certain opponents of S. 1—if the CCC provided such opportunities for young men in the 1930's, the Youth Conservation Corps will fill a similar need today.

Most of the enrollees in the Youth Conservation Corps will have dropped out of school prior to graduation. They will have failed in their attempt to acquire a basic education. They will have failed again in their attempts to locate permanent employment. They will be prisoners of their failures, prisoners of their local environment, and prisoners of their own discouragement.

The Youth Conservation Corps offers these young men an opportunity to break this chain of self-perpetuating defeats and failures and substitute in their place a unique experience of accomplishment and self-fulfillment.

They will leave their depressing local surroundings for a totally new start, among new companions and friends. They will travel to a well regulated community under the direction of experienced camp foremen. They will receive work assignments within their capacity to complete satisfactorily. They will participate in additional educational and training activities. They will engage in organized recreation, sports, and intracamp activities. Each of these factors will play an important part in transforming the outlook, attitudes, job skills, and employability of the YCC enrollees.

WORK EXPERIENCES IN THE YCC

What types of on-the-job work experiences will be available in the YCC camps? While this will vary according to specific camp locations, it is possible to identify the broad spectrum of tasks already planned for YCC enrollees.

Mr. President, I ask unanimous consent that a list of projected work projects as supplied by the Department of Agriculture and the Department of the Interior be printed at this point in my remarks.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

TYPES AND DESCRIPTION OF CONSERVATION WORK WHICH YCC ENROLLEES CAN ACCOMPLISH

The following types of work are available for accomplishment by a YCC on national forests and grasslands, experimental forests, national parks and monuments, wildlife refuges, fish hatcheries, Indian reservations, public domain lands, State parks and forests, and other public lands and related installations:

SOIL AND WATER DEVELOPMENT

Stabilizing eroded gullies and drainage channels, sheet erosion control, stabilizing dunes and earth slides, controlling erosion on roads and trails, water spreading, flood prevention, and stream pollution control. Stabilization of recent burned areas, brush control, permanent modification of vegetative cover for increasing production of the most valuable vegetation for consumption and watershed protection.

This work involves reseeding, reforestation, contour trenching, small dam construction, and fencing or ripraping of erodible areas by both hand and machine.

TIMBER STAND IMPROVEMENT

Gathering seeds for nursery production; propagation of trees in nurseries; hand and machine planting of seeds or seedling trees on understocked, lightly stocked, or burned forest areas and submarginal farmland; and thinning, pruning, weeding, release cutting, and plantation care to increase the productive condition of forested lands.

RANGE RESOURCE DEVELOPMENT

Type conversion and revegetation of depleted ranges; machine, chemical, and hand labor control of noxious or poisonous range plants and farm weeds, reconstruction or rehabilitation and maintenance of existing range improvements; construction of new improvements such as range fences, stock water developments, cattleguards, and stock trails. Control of rodents harmful to range lands.

RECREATION FACILITIES

Develop new camps and picnic grounds, swimming areas, boating and winter sports areas, visitor information facilities and services such as museums, exhibits, nature trails, outdoor amphitheaters, scenic vistas, and roadside rest stops. Provide essential facilities such as roads, parking areas, adequate sanitation, cleanup, safe water, fire prevention, and safety conditions on public recreation areas. Install picnic tables, fireplaces, shelters, restrooms, and water supplies. Rehabilitate and maintain existing facilities.

Salvaging and preserving artifacts from known sites of archeological remains that may be threatened with loss or damage through construction activities. This includes work at protected sites that need further investigation and preservation.

This work involves carpentry, masonry, machine and equipment operation, and related skills.

WILDLIFE HABITAT IMPROVEMENT

Planting game food and cover in forest and grassland areas; developing wildlife openings, food patches, water supplies, and game ways in dense vegetation; improving fishing streams and lakes by stabilizing banks, planting streamside cover, constructing channel improvements, and cleaning up streams and lakes. Taking game census, population surveys, and surveys of habitat use and damage.

INSECT AND DISEASE PROTECTION

Controlling forest insects and disease by such means as removal and/or treatment of infested trees or removal or spraying of host plants.

This work involves both hand and machine methods of surveys, treatment, and eradication, including ground support of aerial operations.

FIRE PROTECTION

Fighting forest fires, using hand tools, hose, and pump operations, motorized fire equipment, and providing fire camp service support. Reducing fire hazards with such techniques as clearing hazardous debris concentrations, falling dead trees, roadside fuel removal, and clearing and maintaining fire equipment in a state of readiness such as hand tools, power saws, pumps, tankers, and other specialized fire equipment. Impound water for fire protection purposes.

ROAD AND TRAIL DEVELOPMENT

Maintenance, reconstruction, and construction of roads and trails.

This work includes such work as right-of-way clearing, assistance to survey and layout crews, culvert and bridge construction, trail construction, drainage installation, sign construction and installation, and assistance to equipment operators.

FIRE AND ADMINISTRATIVE IMPROVEMENTS

Maintenance, reconstruction, and construction of dwellings, offices, barracks, warehouses, lookout towers and cabins, footbridges, signs, and other service structures. Telephone line maintenance and construction. Maintenance and construction of landing fields, heliports, helispots, and ground facilities for air operations such as mixing plants and spraying facilities.

BOUNDARY SURVEYS AND MARKING

Assisting survey crews in land ownership boundary location surveys, clear and post boundary lines and establish corner monuments. Construct and maintain boundary fences.

MISCELLANEOUS

Providing camps support services such as clerks, cooks helpers, medical assistants, equipment maintenance assistants, warehousing and camp maintenance. Construction and maintenance of demonstration area improvements.

Mr. HUMPHREY. Mr. President, how much conservation work of this type exists? Frankly, the backlog that has accumulated through years of neglect is tremendous. Mr. President, I ask unanimous consent that forecasts of the work suitable for the YCC program be printed in the RECORD at this point. These forecasts have been prepared by the Forest Service and the Department of the Interior.

There being no objection, the forecasts were ordered to be printed in the RECORD, as follows:

NATIONAL BACKLOG OF NEEDED CONSERVATION WORK

This work in forestry, soil and water conservation, parks, fish and wildlife, range revegetation, water pollution and sediment, and other similar investments in protection and management of these basic resources would require an investment of nearly $20 billion. This calculation does not include the heavy construction programs in water development with a backlog of authorized projects nearly equal in size. These investment estimates are summarized as follows:

Forestry: Reforestation of 28 million acres; timber stand improvement, 140 million acres; expansion of fire protection, especially in Alaska, 200 million acres; purchase of 10 million acres of national forest in-holdings—total $2.6 billion.

Soil and watersheds: Establishment of soil and watershed conservation programs on 300 million acres of farm lands; purchase and retirement from crop production of 13 million acres of dust bowl lands; revegetation of strip mine areas—$5.1 billion.

Western rangelands: Brush clearing, water-spreading devices and revegetation over large parts of 200 million acres of Federal grazing districts and forest lands—total estimated cost $1 billion.

Parks and recreation lands.—Establishment and refurbishing of recreational facilities on National and State parks, national forests and other public lands; purchase of additional strategic recreational tracts and access to water areas—3 million acres—total cost $2.6 billion.

Fish and wildlife.—Establishment of wildlife habitat and structural improvements on wildlife refuges; expansion of wildlife cover development on private lands; and expansion of wildlife research programs; purchase of 7½ million acres of wetlands—total cost $1.2 billion.

Pollution control.—Construction of waste treatment facilities for all presently outdated industrial and municipal pollution—$5 billion.

Capital expenditures in renewable natural resources of the type just enumerated may be roughly classified into three major categories: (1) those which yield a direct "onsite" return in the form of additional yields of timber, crops, forage and other products; (2) those designed to prevent soil losses, siltation and damage from floods, etc., and (3) those which provide unmeasurable nonmonetary benefits such as recreation and wildlife.

Conservation Work on Lands Administered by the Forest Service

GENERAL SITUATION

The Forest Service has the responsibility for the development, protection, and management under principles of multiple use and sustained yield of about 186 million acres in 154 national forests, 18 national grasslands, and other administrative units in 44 States and Puerto Rico. Much of the work in connection with the development, management, and protection of these lands is suitable for accomplishment through camps such as would be established under the proposed Youth Conservation Corps program. Modern and efficient methods and equipment would be used on all work. Manpower would be used where it is most the efficient method. Much of the needed work on these lands is of the type that would utilize large amounts of manpower.

READY CONSERVATION PROJECTS

For several years, the Forest Service has maintained up-to-date inventories of all Forest Service work needed on each of 805 ranger districts in the national forest system. These project work inventories are the basis of the project work in the development program for the national forests. They are also the source of work projects planned, budgeted, and accomplished in the ranger districts' annual plans of work. The amount and location of the project work in these inventories is known. All of it is needed and designed to meet the present and future demands upon the national forest system if these public lands are to provide their share of the Nation's future needs.

TYPES OF SUCH WORK

1. Timber stand improvement.
2. Reforestation.
3. Recreation area development and maintenance.
4. Fire hazard reduction.
5. Trail construction and maintenance.
6. Fishing stream and lake improvement.
7. Wildlife habitat improvement.
8. Range water developments.
9. Range, boundary, and other fence construction and maintenance.
10. National forest boundary line maintenance.

WORK ESTIMATES

A detailed table of these work estimates follows:

Type of nonrecurrent work (project work)

	Total man-years
Reforestation (seed or plant 4,400,000 acres of nonstocked and poorly stocked lands)	40,000
Timber stand improvement (pruning, weeding, thinning, and release cutting on 30,000,000 acres)	99,700
Recreation resource development (rehabilitate 2,000 campgrounds, picnic, and other recreation sites; develop 28,000 new campgrounds and picnic sites and construct 283,000 family units; develop 4,000 other recreation sites)	45,200
Wildlife habitat improvement (improve 1,500,000 acres of game range, 7,000 miles of stream, 56,000 acres of lakes. Develop 2,000 wildlife watering facilities, 400,000 acres of wildlife openings, food patches, and game ways; 11,000,000 acres of rodent control)	5,300
Range resource development (revegtation and control of noxious or poisonous range plants and farm weeds on 4,000,000 acres; construction of 16,000 miles of fence and 8,100 water developments)	7,100
Soil and water resource improvement (9,000 miles of gully and channel stabilization, 1,300,000 acres of sheet erosion control, 10,000 acres of dune and blowout stabilization, erosion control on 13,000 miles of substandard roads and trails, 5,600 acres of water spreading, 570 structures for flood prevention and stream pollution control)	9,000
Land surveys and boundary marking (clear and mark 200,000 miles of property lines)	3,000
Forest fire protection (reduce hazardous fuels on 4,000,000 acres, consisting of 250,000 acres of debris burning, 350,000 acres of snag removal, 3,500,000 acres of prescribed burning, and removal of roadside fuels on 39,000 acres; construct 11,000 miles of firebreaks)	6,600
Structural improvements for fire and general purpose (construct 2,500 housing and related improvements, 2,500 service buildings, 450 lookouts, 13 special structures; betterment of existing structures; replacement of 3,000 miles of telephone line; construction and reconstruction of 62 landing fields; construct 1,821 heliports and helispots)	11,200
Road and trail construction (construct 46,400 miles of multiple-use purpose roads and 8,000 miles of trails)	65,800
Total	293,300

Type of recurrent work

	Annual man-years
Forest fire protection [1]	3,500
Insect and disease control	1,400
Maintenance of resource and administrative facilities	6,300
Total	11,200

[1] Does not include fire suppression.

Inventory of YCC work potential, National Park Service, Department of the Interior [1]

Man-years annually	27,600
Camps needed	129
Capital improvements:	
Camp and picnic grounds (sites)	9,280
Minor structures (number of)	9,945
Historical, archeological work (man-years)	858
New roads and trails (miles)	1,153
Grounds improvements (man-years)	2,159
Boundary marking and fencing (miles)	5,146
Water suply and storage (projects)	659
Maintenance:	
Forest protection (man-years)	742
Vista clearing (miles)	1,480
Grounds maintenance (man-years)	2,041
Road and trail maintenance (miles)	3,312
Soil and moisture conservation (man-years)	945
Building maintenance (number of buildings)	2,893
Wildlife construction and protection (man-years)	233

Trail maintenance (miles)	2,850
Site maintenance (sites)	475
Building maintenance (number)	4,750

[1] Prepared by Department of the Interior, Mar. 15, 1963.

Mr. HUMPHREY. Mr. President, as these figures clearly indicate, there is no possibility that the YCC could exhaust this existing backlog and expected recurring work for many years. The exhaustion of work projects is not a matter of serious concern to those persons familiar with the facts. There is much to be done. I submit that an analysis of the job opportunities contained in this extensive list of projects will arrive at three principal conclusions. First, these work projects cannot be described as makework. The respective Federal agencies concerned with conservation have programed these projects long before the YCC became a possible means of accomplishing them. The Forest Service has a fully documented forecast of required work entitled, "A Development Program for the National Forests." The various bureaus of the Department of the Interior have also submitted their estimates of work within their respective jurisdictions. Such statements referring to YCC projects as make-work blatantly ignore the documented evidence to the contrary.

Second, the nature of these work projects are exactly the type of planned work experience that will most effectively build sound work habits, create the opportunity for personal accomplishment, and provide the physical exhilaration of hard labor.

Third, these jobs will also provide valuable skills to enhance the future employability of the YCC enrollees. Rather than providing young men with the experience of raking leaves—the picture that many opponents of this bill insist on propagating—I see YCC enrollees acquiring the following skills, among others, from their on-the-job work experience: automotive repairing, baking, carpentry, clerical, construction equipment operation, cooking, conservation and engineering aid, electrical wiring, masonry, metalworking, photography, plumbing, sign painting, surveying and mapping, and truck driving.

I contend that a YCC enrollee will acquire on-the-job skills that compare most favorably with those learned in a vocational education program conducted for a similar period of time, but the enrollee will also benefit from the additional personal experiences found only in a resident work camp experience. Rather than describing the YCC as being seriously deficient in its training potential, I prefer to look at a YCC experience as job training-plus.

One should also understand that many industrial firms and businesses operate extensive job training courses for their employees. These companies do not expect their new workers to come fully trained, ready to begin their particular jobs. In fact, they frequently prefer to train new workers to the requirements of their specific assignments in a manner that corresponds directly with the established procedures of the company.

However, these companies are seeking employees with mature and responsible work habits. If these basic work attitudes exist, the employee can be trained to his specific responsibility, and often at company expense.

VOCATIONAL AND EDUCATIONAL TRAINING IN YCC

As a vital supplement to the on-the-job experience, each YCC camp will also provide after-hours vocational and academic training. These courses will be provided through the U.S. Office of Education working in cooperation with State and local school officials. As Secretary Wirtz said in his testimony before the Clark subcommittee, it is currently deemed likely that each YCC camp would specialize in training for a particular skill. For example, certain camps would be equipped to teach basic fundamentals of automechanics; others would specialize in TV repairing, and so forth. Each enrollee should receive a minimum of 10 hours per week of supplementary vocational and academic training.

It has been suggested that the extensive home study curricula provided by the Armed Forces Institute could supplement other forms of instruction. Mr. President, I ask unanimous consent that a list of subjects which could be taught at YCC camps through accredited home study schools, including the Armed Forces Institute, be printed at this point in my remarks.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

Subjects which can be taught at YCC camps through accredited home study schools (including the Armed Forces Institute):

Accountancy, agriculture, air conditioning, aircraft and drafting mechanics, appliance servicing, auto body and fender, automotive work, baking, blacksmithing, boilermaking, bookkeeping, bricklaying, building construction estimates and maintenance.

Cabinetmaking, camera repair, carpentry, civil engineering, club and camp management, college preparatory, concrete engineering, construction, diesel engines, drafting, electroplating, engines.

Farm management (marketing, shopwork), foremanship, forging, foundry, gardening, high school subjects, horticulture, instrumentation, jewelry making.

Landscaping and gardening, livestock management, lumber yard management, machine shop, machine trades, mechanical engineering, merchandising, metal crafts, metallurgical engineering, metallurgy or metals, mining, mapping, and surveying.

Patternmaking, photography, plumbing, poultry raising, showcard and sign lettering, stenotypy (machine shorthand), surveying and mapping, telephony (electronic and nonelectronic), textiles, typewriter repair, waterworks and sewage plant operation, welding, wiring, woodworking.

Mr. HUMPHREY. Mr. President, during the markup of the youth bill, the Labor and Public Welfare Committee accepted an excellent amendment offered by the Senator from New York [Mr. JAVITS] that called for special emphasis on vocational training and educational services adapted to the special needs of YCC enrollees. Where such services were shown to be deficient in a particular camp, the amendment also provided for the enlargement, improvement, development, and coordination of such services with the cooperation of local school officials and the Secretary of Health, Education, and Welfare. I commend the distinguished Senator from New York for his highly constructive amendment that, in my opinion, has materially strengthened the entire bill.

I would also like to make one final suggestion regarding the educational programs in YCC camps. Recently I have been astounded by the progress that has been achieved in the area of machine and programed teaching. A former Member of this body, the Honorable William Benton, has recently undertaken to establish complete schools relying primarily on programed teaching and teaching machines. Britannica Schools, a division of Encyclopaedia Britannica, Inc., has opened its first teaching institute in Chicago. Others will soon open throughout the country.

The results are amazing. I intend to discuss the potential of machine teaching at greater length. For the present let me just note that the teaching methods used so successfully by Britannica Schools and other similar institutions provide an exceptional opportunity to guarantee vocational and academic teaching of the highest caliber to each YCC enrollee. It is my intention to explore this possibility with the U.S. Office of Education and the officials charged with administering the Youth Conservation Corps.

ACTUAL COST OF PROGRAM

Opponents of this legislation have charged that it will cost between $9,000 and $12,000 per year to support one YCC enrollee. As Secretary Wirtz repeatedly testified before the Clark subcommittee, these figures are exaggerated and misleading.

They are exaggerated and misleading in two fundamental respects: One, they are flatly contradicted by the cost data supplied by the Departments of Labor, Interior, and Agriculture; two, they fail to take into consideration any of the substantial financial returns that will accrue from the conservation projects undertaken by the YCC.

Mr. President, I ask unanimous consent that the "Estimated Annual Costs Per Enrollee" as prepared by the executive agencies be printed at this point in the RECORD.

There being no objection, the information was ordered to be printed in the RECORD, as follows:

ESTIMATED ANNUAL COSTS PER ENROLLEE

(These estimates represent the cooperative efforts of the Departments of Agriculture, Interior, H.E.W., Labor, Army, and the Bureau of the Budget. They are based on a 50-man camp operation.)

Enrollee pay and benefits (annual base pay $720, ratings $18, OASI and BEC $57)	$795
Housing—amortized over 20 years ($250,000 per 50-man camp—less in camps with facilities available)	250
Camp maintenance (repairs, utilities, and services)	100
Clothing and personal equipment (includes blankets, towels, sheets, etc.)	200
Subsistence ($2.50 per day for 300 days, food and preparation)	825
Medical and dental care	300
Education and training	300
Transportation of enrollees to and to and from camps includes fare, food, and cost of group leader	100
Recruiting and administration (selection, induction, director's offices, bureaus, and departments)	150
Camp and work supervision (camp staff pay, benefits, and travel)	700
On-the-job transportation	190
Miscellaneous	70
Total	$3,985

Work equipment, materials, and supplies will vary greatly, depending on type of work, from $150 to $1,000; may average $500.

Mr. HUMPHREY. Mr. President, the greatest controversy has arisen over the estimated construction costs of the YCC camps. Construction of a 50-man camp has been estimated by the executive agencies at $250,000 amortized over 20 years, the life expectancy of the permanent buildings. Amortizing the permanent construction costs over 20 years—a legitimate and reasonable length of time—results in $250 being included for permanent construction in the total annual costs per enrollee of $3,985.

The opponents' figure of $9,000 annual cost per enrollee results from absorbing the entire permanent construction cost of a 50-man camp in the initial year of operation. In other words, the $9,000 per enrollee cost figure includes $5,000 that represents the entire payment per enrollee of constructing new permanent facilities.

The manner in which the opponents have used this $9,000 figure is seriously misleading. They have taken permanent construction costs, absorbed these costs in a single year of operation—as opposed to amortizing them over a longer time period—and then portrayed this extremely high cost figure as the average cost of supporting an enrollee in any year of operation. If they choose to absorb all construction costs in the first year, then they must make quite clear that all future annual costs per enrollee will contain no construction funds at all. Thus in the second year of operation, the annual cost would drop back to about $3,700 per enrollee.

In any event, I submit that amortizing the cost of permanent facilities over their normal 20-year life expectancy provides a more accurate perspective of the true costs involved in supporting a YCC enrollee for a single year and over a reasonable length of time.

There are, moreover, additional factors which further discredit the cost figures used by the opposition. For instance, the estimated construction cost of $250,000 for a 50-man camp represents a maximum figure. Many camps built of local building materials and prefabricated structures will cost much less. Some 100- to 200-man camps will also cost proportionately a great deal less than the $250,000 allotted for each 50-man unit.

Finally—and this is most important—there currently exist enough camp facilities to accommodate almost 12,000 YCC enrollees on a year-round basis. These camps need only marginal improvements to bring them to operating conditions. Mr. President, I ask unanimous consent to have printed at this point in my remarks a list of existing camp facilities that would be used in the Youth Conservation Corps. I also ask unanimous consent to have printed at this point memorandums from the Department of Agriculture and the Department of the Interior describing existing camp facilities and providing cost figures for rehabilitation.

There being no objection, the list and memorandums were ordered to be printed in the RECORD, as follows:

FOREST SERVICE YCC CAMPS READY FOR IMMEDIATE OCCUPANCY

The Forest Service has 89 existing facilities which can be used for YCC camps. They vary in size from 50- to 200-man capacity. These include:

1. Former CCC camps which were retained for use by seasonal project crews. Due to recent changes in methods of doing some types of project work, such as control of blister rust by antibiotics instead of manual eradication, and other program changes, many of these old CCC camps could now be made available for YCC.

2. Government-owned camp facilities which are under occasional and temporary permit to organizations such as YMCA and Boy Scouts.

3. Former small military facilities on national forest lands which have been held for possible YCC use pending outcome of legislation.

4. Other Forest Service work camp facilities which are regularly operated for program projects but which can be made available for YCC purposes by making minor adjustments in programs, such as shifting present seasonal crew use.

The 89 existing camps could be rehabilitated and modernized to meet the safety, sanitation, and standards required for YCC at an estimated cost of $13.3 million.

Source: U.S. Forest Service, Division of Administrative Management, March 11, 1963.

FOREST SERVICE ORGANIZATION TO ESTABLISH AND MANAGE CAMPS

Establishment and management of camps of all sizes, up to 500 men, is a routine operation for the Forest Service. Civilian Conservation Corps, blister rust control, timber salvage, fire, and other innumerable emergency and regular camps have been organized by the Forest Service for 50 years. Several camps, 25–150 men, are presently operated on regular conservation programs.

Camps under a Youth Conservation Corps program could be established for natural resource conservation, development, and management work on the National Forests, National Grasslands, and other lands administered by the Forest Service. Normally, such camps would be located in or adjacent to National Forests or other lands on which work would be done. Eighty-nine existing camps could be operating within 30 days with facilities to accommodate about 7,200 enrollees. Within 4 months, up to 60 additional camps could be in operation to handle up to an additional 4,000 enrollees. Necessary added capacity could be constructed thereafter where needed.

Camps would be under the supervision of the forest supervisor. Technical direction of projects would be provided by the district ranger and forest supervisor's staff with direct crew supervision carried on by Forest Service foremen. These foremen would be available from experienced personnel now in the yearlong and seasonal work force of skilled workers and forestry and engineering aids of the Forest Service.

Interior Department YCC camps ready for immediate occupancy

Bureau	Number of camps	Number of enrollees	Rehabilitation cost
Bureau of Indian Affairs	7	780	$244,800
Bureau of Sport Fisheries and Wildlife	14	475	620,000
National Park Service	25	1,475	248,000
Bureau of Land Management	21	1,825	255,000
Total	67	4,555	1,367,800

Camp sizes vary from 25 to 200 men. Existing facilities consist of:

1. Portions of camps and bases in the project areas acquired or available from the Armed Forces.

2. Buildings acquired with project lands.

3. Quarters used during part of the year for seasonal operations.

4. Quarters and mess facilities available from concessionaires.

5. Buildings in nearby communities available for rental.

YCC camps to be occupied in 90 to 120 days

Bureau	Number of camps	Number of enrollees [1]	Rehabilitation cost
Bureau of Reclamation	8	400	$160,000
Bureau of Land Management	27	2,375	329,000
Bureau of Sport Fisheries and Wildlife	19	510	805,000
National Park System	40	2,925	1,265,000
Total	94	6,210	2,559,000
Total available in 120 days	161	10,765	3,926,800
SEASONAL CAMPS (BOTH SUMMER AND WINTER)			
National Park Service	6	650	244,000
Bureau of Reclamation	26	900	360,000
Total	32	1,550	604,000

[1] About 775 more enrollees can be accommodated in these camps, bringing the total capacity for Interior to 11,540.

Mr. HUMPHREY. Mr. President, the estimated cost of bringing these 156 year-round camps to operating level is $14,667,000 or an average of $94,000 per camp. Obviously this represents a considerable saving over the $250,000 allotted for constructing each new 50 man camp. These are savings in hard cash that the opponents of the Youth Conservation Corps never mention in their discussion of costs.

It has been impossible to determine the precise average cost of the on-the-job work equipment. Since the outlay per enrollee will vary from $150 to $1,000 according to the type of work scheduled for a particular area, a reasonable average cost for the work equipment appears to be $500. The addition of this $500 to the $3,985 already enumerated results in a total annual outlay of about $4,485 for each YCC enrollee.

In summary, the alleged annual cost of $9,000 per enrollee is exaggerated and misleading. Even the much lower figure on camp construction costs submitted to the Labor Committee is probably high since it fails to allow for first, the existing facilities that only need rehabilitation, and second, the opportunity to use prefabricated buildings and local building supplies at a resulting lower cost. I sincerely hope this discussion of actual costs will bring some enlightenment and commonsense to an area that has been characterized by something less than objectivity and fairmindedness.

FISCAL RESPONSIBILITY AND THE YCC

I appreciate the concern of certain Senators with the question of fiscal responsibility as it relates to the Youth Conservation Corps. But I cannot appreciate or accept their restricting this concept to the short-run impact of the YCC on the Federal Government's administrative budget. As I mentioned on the Senate floor recently, it is time we began defining "fiscal responsibility" in terms of jobs, investments, wages, products, and growth and not arbitrarily limit ourselves to the single criterion of the Government's annual budget.

Any businessman who approved an audit of his business affairs which only included expenses and made no attention to income would be judged an economic ignoramus. How does this fiscal responsibility really apply to the Youth Conservation Corps? In order to assess the true costs of the YCC it is absolutely essential to move beyond the shortrun cash outlay for annual operating costs and examine the financial returns that will eventually be created by this annual outlay.

The Forest Service estimates that each dollar invested on cultural treatment and planting will increase the value of timber stands by $5 within a period of 10 years. These benefits will be realized as cash payments to the Federal Treasury when these stands are harvested. In addition, payments from National Forest revenues for county roads and schools will increase correspondingly. Finally, the capital value of these timber stands will increase materially.

Thinning of young hardwood timber stands improves growth rate and increases the value of the timber produced. This work can be expected to produce a return in 50 years of twice the cost discounted at 3 percent. The financial benefits of reforesting idle land by planting idle land are widely recognized. Such planting yields sufficient return to retire the investment and provide additional benefits in improved wildlife habitat.

These returns can all be calculated in dollars and cents. And they certainly should not be totally ignored in determining the actual cost of the Youth Conservation Corps. I regret that the opposition rarely mentions this aspect of the Youth Conservation Corps.

This discussion of actual costs has not raised the numerous monetary outlays that will be avoided through the creation of the YCC. We pay an average of $25,000 for every juvenile delinquent who is arrested, sent to trial, convicted, and assigned to a corrective institution. Unemployment insurance represents a direct payment that will be terminated in many cases. These are examples of indirect financial benefits accruing through such a program as the YCC. They should not be totally overlooked in a discussion of fiscal responsibility.

EXAMPLES OF YCC CAMP COSTS IN RELATION TO RESULTING INCOME

In order to grasp the importance of considering short-run costs and long-run returns, I have prepared an analysis of several proposed camps that would actually be established under the YCC program. These studies compare total operating outlays in relation to expected income as generated by the work projects scheduled for the particular area where the camp is located. In other words, these examples of specific camps examine all relevant economic facts, income as well as operating costs.

Let us examine two proposed sites for YCC camps: one in the Southwestern United States, the other in the Middle Atlantic region. Mr. President, I ask unanimous consent that relevant estimates for the operating costs and the eventual monetary returns—both tangible and intangible—for these two proposed camp sites, be printed in the RECORD at this point in my remarks.

There being no objection, the information was ordered to be printed in the RECORD, as follows:

EXAMPLE OF EXISTING FACILITIES AND SITUATION FOR A POSSIBLE YOUTH CONSERVATION CORPS CAMP (CAMP A, SOUTHWESTERN UNITED STATES)

This camp is on Government-owned land previously used as a rehabilitation center by the Army-Navy Hospital. All existing improvements are Government-owned. Access is by 11 miles of paved and 2 miles gravel road.

Existing facilities consist of a permanent modern main building containing recreation area, classrooms, kitchen, and dining hall; four permanent cabins; tennis courts; baseball diamond; boating dock, and swimming area. The offduty recreation opportunity for enrollees is excellent.

Rehabilitation of existing facilities to meet camp standards for a Youth Conservation Corps camp consists of such things as: (1) converting and equipping existing main building to recreation-classroom-canteen-supply office building; (2) converting and equipping one existing cabin to a 4-bed infirmary; (3) converting three existing cabins to quarters for supervisory personnel; (4) constructing and equipping dormitory for 100 men; (5) constructing a kitchen-dining hall for 100 men; and (6) constructing and equipping small miscellaneous service buildings.

This rehabilitation and modernization to required standard would cost an estimated $180,000 for a 100-man camp. The annual camp operating cost would amount to approximately $3,985 per enrollee for pay, clothing, food, medical care, educational services, transportation to camps and on-the-job, camp and work supervision, work equipment, and overhead. Dependent on the particular type of project work, the expense per enrollee for materials and equipment used by enrollees on the work project would run as low as $150 and as high as $1,000.

The inventory of high priority work available to this camp represents half the work in "The Development Program for the National Forests" for the local Ranger Districts. The work represents nearly 500 man-years of work and consists of:

Culturally treating 21,500 acres and planting 7,000 acres.

Constructing 84 campground and picnic sites and related facilities.

Improving and developing small and big game range on 5,100 acres.

Improving 8 miles of streams.

Revegetating 450 acres of rangeland.

Rehabilitating eroded lands and stabilizing gullies, roads and streams.

Surveying and marking 300 miles property lines. Topographic mapping of 610 square miles.

Reducing hazardous fuels on 5,500 acres.

Constructing two housing and related improvements, one service building, several lookouts and special structures; providing three radio installations; and replacing 3 miles telephone lines.

Constructing 55 miles of roads.

The total of all costs for this 100-man camp operating for a period of 5 years is estimated at $2,500,000. Benefits to be derived would far exceed the cost. For example, each dollar spent on cultural treatment and planting will increase the value of timber stands by $5 in 10 years. This amounts to a direct benefit of $3,500,000 for this work alone.

Other benefits would be employment of people in harvesting of national forest timber and other products and the value added to these products by manufacture, distribution, and marketing.

The 84 campground and picnic sites will add 300,000 man-days of use to present recreation facilities. These users will contribute to the local economy in the form of expenditures for sporting equipment, transportation, lodging, and other items.

The many intangible benefits cannot be assessed in dollars for the worth of the relaxation, pleasure, rest, spiritual satisfaction, and improvement in health derived from the use of the national forests. The accomplishment of work from this camp in timber management, recreation, wildlife, soil and water, fire control, improvements and roads will add much to these values.

EXAMPLE OF EXISTING FACILITIES AND SITUATION FOR A POSSIBLE YOUTH CONSERVATION CORPS CAMP (CAMP B, MIDDLE ATLANTIC STATES)

This camp is located on the southern edge of the Allegheny National Forest and is situated on a level height of land in rolling plateau country with adequate space for softball, volleyball, and tennis. It is screened by planted red pine and cannot be seen from the main road.

The buildings are generally in good condition, having been maintained for use as a summer camp for students of forestry and civil engineering.

There are four barracks, administration building, mess hall, hospital, and a bath and laundry building. Commercial electric power is available. The water system consists of spring water pumped into a stand tank. Sewage is handled by septic tanks and disposal fields.

A careful condition survey of the entire camp estimates a rehabilitation cost for possible Youth Conservation Corps use at $42,200, or $130 per enrollee for a 5-year period. This is for a 50-man camp.

The annual camp operating cost would amount to approximately $3,985 per enrollee for pay, clothing, food, medical care, educational services, transportation to camps and on the job, camp and work supervision, work equipment, and overhead. Dependent on the particular type of project work, the expense per enrollee for materials and equipment used by enrollees on the work project would run as low as $150 and as high as $1,000.

A detailed inventory of available work shows a total of 800 man-years of work:

	Man-years
Thinning hardwood stands (14,000 acres)	180
Pruning 10,000 acres Red Pine	125
Planting 10,500 acres	126
Construction of two recreation areas	104
Miscellaneous wildlife habitat improvements	183
Soil and water; roads and trails; administrative improvements, and boundary surveys	82
Total	800

The work program available at this location can be justified on the basis of economic returns to the area. As an example the thinning of young hardwood timber stands improves growth rate and increases the value of the timber produced. This work can be expected to produce a return in 50 years of twice the cost discounted at 3 percent.

The benefits of reforesting idle land by planting are widely accepted. In this area, planting will yield sufficient return to retire the investment and give additional benefits in improved wildlife habitat and enhanced scenic and recreation values.

Construction of recreation facilities at an estimated cost of $65,000 during the first year will produce an immediate return to the local economy of $10,000 per year from increased recreation visits by picnickers and campers. The completion of a second area at a cost of $160,000 will provide additional facilities for attracting tourists to the area. This should give a cash increase of $15,000 to $18,000 annually to the local economy.

This area is heavily used for hunting and fishing. The planned wildlife habitat and stream improvement will maintain the game and fish populations to meet this heavy pressure and help to stabilize the local income from outside sportsmen.

Mr. HUMPHREY. Mr. President, as the forecast for the Southwestern camp indicates, operating costs for a 5-year period are estimated to be $2.5 million. However, the funds expended just on cultural treatment and planting of trees during this 5-year period are expected to bring revenues of $3.5 million within a decade. A similar picture of sound investment exists for the camp in the Middle Atlantic region.

These analyses do not attempt to place a dollar figure on the more intangible returns such as the employment of people in harvesting national forest timber, or the manufacture, distribution, and marketing of these timber products. Similarly, the resulting recreational facilities constructed by the YCC enrollees will contribute to the local economy in both regions. These are not isolated examples. Every YCC camp location would show similar results.

However, I want to emphasize that I primarily support the Youth Conservation Corps on the basis of its potential impact on the lives of thousands of unemployed American youths. What price tag do we place on the opportunity to rescue a young man from a wasted and meaningless life? Here is our opportunity to invest in the human resources of this country.

Those persons who have raised the issue of fiscal responsibility—and I fully support their right and duty to do this—should also include monetary benefits created by the YCC in their calculations. As I have demonstrated, when these income factors are taken into account, the Youth Conservation Corps represents the very essence of fiscal responsibility, that is, a program of investment in income-producing activities that eventually returns the initial operating costs to the people of the United States.

CONCLUSION

Mr. President, this morning I have attempted to outline the reasons why I advocate the Youth Employment Act as a fundamentally sensible attack on the mounting problem of youth unemployment.

This bill will come to the floor in the near future. We will have the opportunity to explore these facts more carefully at that time. I welcome this opportunity, for I devoutly believe that this is a good bill, a bill that will bring new hope and opportunity to many thousands of young Americans currently without hope and opportunity.

In his special message on youth, President Kennedy eloquently described the importance and urgency of this legislation:

> This Nation—facing increasingly complex economic, social, and international challenges—is increasingly dependent on the opportunities, capabilities, and vitality of those who are soon to bear its chief responsibilities. Such attributes as energy, a readiness to question, imagination, and creativity are all attributes of youth that are also essential to our total national character. To the extent that the Nation is called upon to promote and protect the interests of our younger citizens, it is an investment certain to bring a high return, not only in basic human values but in social and economic terms.

In the spirit of the President's remarks, I call for a bipartisan attack on the growing social and economic cancer of youth unemployment. Certainly the problems of young Americans demand of us far more than partisan division for its own sake.

This afternoon I have attempted to clarify the record on several points that have been misunderstood or misinterpreted by certain opponents of this legislation. On the basis of this record I look forward to prompt and favorable action on the Youth Employment Act in both Houses of Congress. We have an opportunity to assist thousands of young Americans find a more productive and secure life. Let us not permit this opportunity to escape us.

Mr. President, I thank my colleagues for their consideration in granting my unanimous-consent requests.

URBAN MASS TRANSPORTATION ACT OF 1963

The Senate resumed the consideration of the bill (S. 6) to authorize the Housing and Home Finance Administrator to provide additional assistance for the development of comprehensive and coordinated mass transportation systems, both public and private, in metropolitan and other urban areas, and for other purposes.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Oregon [Mr. MORSE], offered for himself and the Senator from Michigan [Mr. MCNAMARA] and the Senator from New Jersey [Mr. WILLIAMS].

Mr. MORSE. Mr. President, amendment No. 30, the Morse-McNamara-Williams amendment, is the pending business. Is that correct? Has it been laid before the Senate?

The PRESIDING OFFICER. It is the pending amendment.

Mr. MORSE. Mr. President, I ask unanimous consent that both the majority and the minority be allowed to have such assistants as are needed from the Committee on Labor and Public Welfare and from other committees of the Senate present on the floor during the discussion of the bill today.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. MORSE. I yield to the Senator from Texas.

Mr. TOWER. It is my understanding that, under the controlled time situation, a Senator cannot move to amend the pending amendment until all time for debate on the amendment has expired or has been yielded back. Therefore, I ask unanimous consent that I be allowed to offer, out of order, my amendment to the amendment of the Senator from Oregon. I think it will simplify matters, from the standpoint of debate and discussion, if I may be allowed to offer my amendment to the amendment of the Senator from Oregon.

The PRESIDING OFFICER. Is there objection?

Mr. MORSE. Mr. President, reserving the right to object, I wish to make a parliamentary inquiry.

What will be the effect of granting the request of the Senator from Texas? Will it displace my amendment for the time being, and thereby prevent explanation and discussion of my amendment?

The PRESIDING OFFICER. It will suspend the consideration of the amendment of the Senator from Oregon. The amendment of the Senator from Texas would have to be acted on before action on the amendment of the Senator from Oregon. It would not take any time out of the time allotted on the amendment of the Senator from Oregon.

Mr. CLARK. Mr. President, will the Senator from Texas yield for a question?

Mr. TOWER. I yield.

Mr. CLARK. Would the Senator mind stating briefly what is the purport of his amendment?

Mr. TOWER. My amendment strikes out the protective arrangements provision of the Morse amendment.

Mr. CLARK. In other words, it leaves in subsection (b)(1) and strikes subsection (b)(2)?

Mr. TOWER. It strikes subsection (c) on page 3 of the amendment, beginning on line 9.

Mr. CLARK. And substitutes nothing?

Mr. TOWER. And substitutes nothing. It will leave the labor provision currently in the bill as it is.

Mr. CLARK. Mr. President, a parliamentary inquiry, and I ask the attention of the Senator from Oregon. Would not the Tower amendment more appropriately be considered entirely independently of the Morse amendment, since it is not a substitute for the Morse amendment? I would question whether the Tower amendment was a substitute for the Morse amendment.

Mr. TOWER. I am afraid I am not competent to answer the technical question as to whether it is a substitute or an amendment to the Morse amendment.

Mr. CLARK. Without regard to technicalities, I think it would be the better part of wisdom to have the Morse amendment explained and voted on, and then take up the Tower amendment later, if the Senator desires that.

Mr. MORSE. I may say to the Senator from Texas that a Senator may act independently on his own responsibility; but I am going to object to the request now. It may be that, after consultation with my colleagues, the Senator can do it later.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. MORSE. Yes.

Mr. TOWER. I do not mind waiting until the Senator has used up or yielded back the time on the Morse amendment before mine is taken up, but I think mine will have to be acted on first, so far as action is concerned, before the Morse amendment is acted on, because if the Morse amendment is adopted and then we take up my amendment, it would strike the labor provision out of the bill, if it is adopted, and I know the Senator does not want to do that.

Mr. CLARK. I sympathize with the position of the Senator from Texas, having been in the same position many a day, but it seems to me, speaking only for myself, that I would prefer to have the Morse amendment acted on before we deal with the amendment of the Senator from Texas.

Mr. TOWER. Actually, I intend to propose my amendment before the Morse amendment is acted on, but I withdraw my unanimous-consent request.

Mr. CLARK. If it is not a substitute, I doubt that the Senator can do that.

Mr. TOWER. The Parliamentarian says I can.

Mr. MORSE. I hope the Senator from Texas understands my position.

Mr. TOWER. I understand. I thought my suggestion would clarify the situation; instead it has only confused it.

Mr. HUMPHREY. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. HUMPHREY. Will the Chair give us an indication as to the parliamentary situation with reference to the amendment of the Senator from Texas to the amendment of the Senator from Oregon?

The PRESIDING OFFICER. The amendment of the Senator from Texas can be offered after the time has expired or been yielded back on the discussion of the Morse amendment and before a vote is taken on the Morse amendment.

Mr. HUMPHREY. I beg the Chair's pardon. Before what?

The PRESIDING OFFICER. Before a vote is taken on the Morse amendment.

Mr. HUMPHREY. In other words, the amendment of the Senator from Texas would be either an amendment to the amendment of the Senator from Oregon or an amendment in the nature of a substitute. Is that correct?

Mr. CLARK. Mr. President, which would it be?

The PRESIDING OFFICER. It is offered in the nature of a perfecting amendment.

Mr. HUMPHREY. A perfecting amendment, and as such will be voted on prior to the vote on the amendment of the Senator from Oregon. Is that correct?

The PRESIDING OFFICER. That is correct.

Mr. CLARK. Mr. President, a parliamentary inquiry. Am I to understand that the Chair has ruled that an amendment which strikes the entire text of the Morse amendment is nonetheless a perfecting amendment?

Mr. TOWER. Mr. President, will the Senator yield?

Mr. CLARK. I yield.

Mr. TOWER. It does not strike the entire text, only subsection (c), on page 3, beginning on line 9.

Mr. CLARK. Correct me if I am wrong. I may be wrong. I ask the Senator from Oregon to listen. It is my understanding that the Morse amendment proposes to strike out all of subsection (c) and substitute therefor a new amendment which contains two clauses, (b)(1) and (b)(2). Am I correct?

Mr. TOWER. Yes, I think that is correct.

Mr. CLARK. Now it is proposed, instead of dealing with the Morse amendment at all, that the amendment of the Senator from Texas, which has been ruled by the Chair to be a perfecting amendment, would strike subsection (c). The weird jungle of parliamentary laws is often too much for me, but this is really too rich for my blood.

Mr. TOWER. Actually my amendment would strike out the protective arrangements section of the Morse amendment. It would leave untouched, unsullied, and unhampered the protective arrangements section of the substitute for S. 6 we are now considering.

Mr. CLARK. If the Senator were to prevail, am I correct that we would have untouched subsection (c) of the committee bill, we would have a new section of the first part of the Morse amendment, and the second part of the Morse amendment would be stricken?

Mr. TOWER. That is correct.

Mr. CLARK. I thank the Senator for clearing my rather confused thinking this morning.

Mr. MORSE. Mr. President, I shall use 15 minutes or so for an explanatory statement of the amendment and my position relative thereto. I shall be glad to answer any questions my colleagues may wish to ask at the conclusion of my statement, but I shall not yield during that period of time.

It has been a policy of our American system to attempt to utilize private enterprise to furnish public utility services to the maximum extent possible. Section 3(b)(1) under the amendment would pursue that same policy.

Paragraph 3(b)(2) carries out the basic program under the act, not only of lending an emphasis to continuation of maximum use of private transportation companies, but also keys such use to a planned program for the coordination of the urban transportation system with the overall plan for the development of the urban area.

Paragraph 19(c) concerns the protective arrangements respecting interests of employees affected by the bill. As we know, any legislation which is intended to provide Federal aid for the purpose of strengthening and improving our urban area mass transportation systems must be concerned with another highly important factor, the stability of labor relations. It is a necessary corollary of any such consideration that there be provisions which would safeguard employee rights and promote and maintain the national labor policy with a view toward insuring labor relations stability and promoting employee morale.

The danger in the bill as reported is that it could seriously disrupt collective bargaining, which has had such a long and successful history in the mass transportation field. Accordingly, the amendment provides protections for the interests of employees who may be affected by the assistance or financing provided under this legislation. The amendment would protect existing employee rights, including pension rights; would continue collective bargaining where it now exists; would protect individual employees against their positions being worsened, with a reasonable floor of protection being that already established for the transportation industries subject to Federal regulation; would provide a continuation of the employment relationship where mass transportation systems are acquired by a new employer with assistance under this act.

Mr. President, it might be helpful to my colleagues in the Senate if I present a very brief outline, descriptive of the amendment.

First. No financial assistance under the bill shall be made available to any State or local public body for the purpose of purchasing any facility or property of a private mass transportation company unless (a) such company has, prior to such acquisition, been declared bankrupt or placed into receivership by a court of competent jurisdiction, or (b) the Administrator finds that such assistance is essential to a program, for the acquisition of mass transportation facilities or property, supplementary to the service provided by an existing publicly owned or operated mass transportation system, and (c) in either situation under (a) or (b), the Administrator and the Secretary of Labor, acting jointly under section 19(c) of the bill, find that the project to be assisted complies with the section 19(c) requirements.

This limitation on the use of Federal funds under the bill extends to the improvement or reconstruction of facilities acquired after the effective date of the act as well.

Second. Financial assistance under the bill will be available to any State or local public body for the purpose of developing mass transportation facilities which will compete with or supplement existing mass transportation service only if the following conditions are met:

(a) The Administrator must find that such assistance is essential to the development of a unified urban transportation system which is a part of a comprehensively planned development of the urban areas;

(b) The Administrator finds that the program provides for the participation of private mass transportation companies to the maximum extent feasible; and

(c) The Administrator acting jointly with the Secretary of Labor is satisfied that the protective arrangements required by section 19(c) have been provided by the project.

Third. The amendment clarifies and improves the protective arrangements in section 19(c) of the bill in the following manner: (a) It makes it clear that the rights of beneficiaries will be preserved along with the rights of employees under existing collective bargaining agreements in effect in any mass transportation which is involved in any project assisted under the bill; (b) it makes it clear that collective bargaining in any situation where it now exists will be continued; (c) it assures employees that in the event of any layoff or downgrading of their employee classification in consequence of the development of any project under the bill, they will receive basic job protection benefits at least equivalent to those which have prevailed in the transportation industries subject to Federal regulation; and (d) it provides for the continuation of employment of any employees of any mass transportation system which has been transferred in consequence of any project which has been assisted under the bill.

Mr. President, let me say a few explanatory words about what may be called the philosophy of the Morse-McNamara-Williams amendment. I have worked on many complicated issues in the Senate. However, I do not know that I have ever worked on one with more tug and pull, more conflict of interests of various types, more complexities, than this issue. The amendment I am presenting is the composite result of many minds here in the Senate being brought to bear on a problem, with individual Senators pressing for consideration of individual problems relative to their States. What we have here is a composite amendment that I believe ought to go to conference. I would certainly be intellectually dishonest if I said to the Members of the Senate that the amendment may not need some modification in conference after there is brought to bear the give-and-take conference procedure.

The underlying purpose of the amendment, the underlying principle of the amendment, I thoroughly and heartily endorse. I wish to talk about those purposes for a moment. The issue of public policy runs through the amendment. That is a question of public policy on which reasonable men can disagree. We have already had disagreement on this policy, as we have already had disagreement on the bill with respect to that question.

The question of policy is this: Should the Federal Government make available to cities, States, and local governmental units Federal money to be used to strengthen their mass transit system in those communities when the use of that money would result in lessening the collective bargaining rights of existing unions?

As a matter of Federal public policy, can we justify the use of Federal dollars to weaken what I hope is true, namely, that collective bargaining between free labor and free employers is a basic and essential part of the American economic freedom? If we qualify that, and if we are not willing to agree to that premise, then I can see that individual Senators may have some decided differences with the senior Senator from Oregon with respect to the amendment.

However, let me state my position. In my judgment we cannot justify, as a matter of public policy, the use of Federal dollars by a local community or a governmental unit thereof to be spent for development of a transit system, the expenditure of which would result in worsening the present collective bargaining rights of free labor which operates that transit system.

As I have said in all the cloakroom and office conferences that we have had, I do not believe that the transit bill should be used in order to strengthen labor by imposing a union on a nonunion transit system.

Likewise, it is the position of the senior Senator from Oregon that the transit bill should not be finally passed in a shape in which it can be used to break the back of collective bargaining in any transit system now in operation. Let me very quickly say that neither do I think the bill should be used, in a new community where a transit system has to be built to require that a union be established in that transit system, because that ought to depend on the employees' free choice in the matter and on the processes of an orderly free collective bargaining system between free labor and free employers.

In summary, then, the philosophical position of the senior Senator from Oregon on this matter is one that he has held for years. We had in the War Labor Board a somewhat different fact situation but still the same policy question when in the early days we got into a controversy as to what our position would be on the maintenance of collective bargaining, or the maintenance of a union. As a public member of the Board, I proposed the formula that the Board unanimously adopted, employer members and labor members and public members, by a vote of 12 to nothing. The Board adopted the principle that the war could not be used by an employer to break a union that he already had in his plant; that the war could not be used by a union to force upon an employer a union in a plant then nonunion. If the plant was nonunion, the union could be established in that plant during the war only by free collective bargaining between employer and union, and any attempt to use economic force by way of strike in violation of the no-strike, nolockout agreement, which had come to be accepted by American industry and American labor, at the request of the President of the United States, would be a strike that the Board would not countenance.

Some attempts were made, and the history of that period is replete with instances, in which the Board made it perfectly clear to such unions that they would not have the support of the Board, and would stand in violation of the no-strike, no-lockout agreement. It is also true that under those wartime conditions there were some instances in which employers sought to use the exigencies of the war as a means of weakening or destroying a union. A couple of cases went as far as seizure, so as to make it clear to the employers that we meant it when we adopted the Morse formula and were not going to allow them to use the war as an excuse to destroy a union in their plants.

This proposal is not on all fours with the situation presented by the substitute bill, but there is a similarity of principle that I wish to stress, because it is my underlying thesis as I press for the adoption of the amendment: That is, we ought to maintain the status quo.

Let me talk about a few hypotheticals in my description of what we can do to maintain the status quo. Suppose we consider company X and union A. Company X is going into bankruptcy. It has been decided that city M will take over the company. In my judgment, the city should be allowed to take over the company, and my amendment would permit it, but it should be allowed to do so only if the city is willing also to take over the labor-management relations, if any, that have prevailed in the company. In other words, if there is a collective bargaining agreement, it should be understood that the city shall take them over. But I am told that such an arrangement cannot be accepted by many Senators because in some States there is a policy, by way of law, against recognizing unions.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. MORSE. Let me finish my statement. I think it would be better if I stated my hypotheticals.

Mr. GOLDWATER. Would the Senator allow me to ask him a question or two? I have some questions to propound which I believe will assist in making the legislative history. Would the Senator prefer to finish his presentation?

Mr. MORSE. Yes. I should like to finish this statement; then I shall yield to the Senator from Arizona.

The PRESIDING OFFICER. The time of the Senator from Oregon has expired.

Mr. MORSE. I yield myself another 10 minutes.

What we have in that situation under the substitute bill, as I see it, is a conflict between a sound Federal public policy and a policy of a State. The State can continue its State policy if it wishes to; but in the judgment of the senior Senator from Oregon, the State should not be allowed to receive Federal money with which to continue a policy that is in conflict with sound Federal policy.

In a nutshell, that is my position. I think what we really must decide today is whether the Senate will underwrite and approve free collective bargaining as national policy, or will pass a bill which, in my judgment, will weaken free collective bargaining. I warn the Senate that troublous days may be expected in the next few years anyway in the whole problem of labor relations. I do not think we should adopt a bill today without the protection offered by my amendment. To do so will intensify labor conflict in this country.

The whole problem of automation is growing, with probably tens and tens of thousands of jobs to be lost as a result of automation. Organized labor is greatly concerned about it. It has been said in some of our conferences that organized labor may very well be unduly apprehensive about the bill; but that does not change the reality of their concern. Organized labor wanted more than the Morse amendment offers. They wanted a guarantee that if a new transit company were to be established with Federal funds contributed to it, there would have to be collective bargaining. I said, "In my judgment, you are not entitled to that."

Organized labor wanted a guarantee, in case after case, that they would be strengthened. I said, "In my judgment, the only sound policy to which you are entitled is the maintenance of the status quo. If you have collective bargaining now, I think the bill ought to be so drawn that you will be assured of a continuance of collective bargaining, so far as the Federal Government is concerned."

Mr. President, that is my proposal in a nutshell. It is open to debate. I shall first yield to the Senator from Arizona for a question, and then to the Senator from Connecticut [Mr. RIBICOFF]. It may be that more workable language can be adopted or devised on the floor of the Senate. If so, and if it does not endanger the major premise of the senior Senator from Oregon, I shall not have any quarrel with such language changes.

But if any proposed language changes result in the Federal Government surrendering what I believe is a basic, sound national policy of economic freedom, and I look upon collective bargaining as such a policy, I shall vote against such a surrender if it is incorporated in the bill. I shall vote against the amendment and the bill.

I now yield to the Senator from Arizona.

Mr. GOLDWATER. Mr. President, I shall comment briefly on the proposal of the Senator from Oregon in the field of labor. Actually, it does not change the original subsection a great deal. However, I should like to raise a few questions about it, because I questioned it at great length on the floor when I sought to have the entire subsection stricken.

Mr. MORSE. Mr. President, may I interrupt the Senator from Arizona to inquire how much time I have remaining?

Mr. GOLDWATER. Mr. President, I should be happy to ask the controller of time to grant time on the bill.

Mr. MORSE. Only a part of it.

Mr. TOWER. Mr. President, if it is a question of time, I yield to the Senator from Arizona as much time as he wishes to take.

The PRESIDING OFFICER. The Senator from Oregon has 8 minutes remaining.

Mr. GOLDWATER. My basic concern in the field is caused by language that to me seems to present a possibility of conflict with existing State laws and city ordinances.

I am in partial agreement—I will not say complete agreement—with the objectives of the Senator from Oregon, in that where there are bargaining agreements, pension plans, and the like, already in existence, they should be protected. I believe there are 42 cities in the United States having a population of more than 300,000 which now have bargaining agreements with the workers in the transportation field.

The first question that comes to my mind relates to the language on page 3, line 16, of the amendment of the Senator from Oregon:

> Such protective arrangements shall include, without being limited to, such provisions as may be necessary.

Does the Senator from Oregon share my fear that this language, without being limited, might be interpreted by the Administrator of the act to include the right to strike?

Mr. MORSE. Not in violation of Federal or State law in any case where the Federal law has not supervened.

Mr. GOLDWATER. That is a question that comes to my mind, because at the bottom of the subsection this language occurs:

> The contract for the granting of any such assistance shall specify the terms and conditions of such protective arrangements.

It begins:

> It shall be a condition of the granting of any assistance or the financing of any project under this Act—

And so forth and so forth.

My fear is that if there were a State law which prohibited a strike against any segment of government, this language might preempt that State law.

Mr. MORSE. For the purpose of establishing the legislative history, let me assure the Senator from Arizona that such is not the intention of this language. Here we are talking, too, about the status quo; and whatever the status quo was in regard to that situation, it would continue to prevail. Furthermore, we are also talking about a municipally owned and operated transit company, not covered by the Taft-Hartley Act.

Mr. GOLDWATER. That is a point which I wished to make following the one I have made on the question of striking.

Let us assume that in a hypothetical case, company A, in city X, is privately owned, and has a bargaining agreement with the union, and that the agreement recognizes the right to strike, because the agency is not an agency of government and is not covered by State law or by Federal law. If the company were taken over by the city and if the right to strike were one of the rights gained at the bargaining table, would that right continue to exist under the new arrangement, in the opinion of the Senator from Oregon?

Mr. MORSE. The amendment provides that Federal assistance will not be available under the bill for the purpose of enabling a city to acquire a privately owned transit system except in special instances such as bankruptcy. If there should be such an acquisition in these special cases and if there were a State law which prevented public employees from striking, they could not then strike. They would then have all their other rights, but not the right to strike.

Mr. GOLDWATER. I must disagree with the distinguished Senator from Oregon, and this is my major point of disagreement. I think we should reassure the States and cities that there would be no possibility of striking against the local government. I believe that is a very sound provision of law; and I believe it would be unwise to allow any employee of any government to strike against the people. I think collective bargaining for working conditions, and so forth, is perfectly legal, permissible, and desirable, so long as the right to strike is not included in it in such cases. So I suggest that we try to work out some language which will reiterate that, because if that is not done, I think the language proposed is such as to completely preempt any State law in this particular field.

Mr. MORSE. First, I wish to answer the hypothetical question of the Senator; and then I wish to point out that under the bill, his hypothetical is not altogether realistic.

But in the few special cases of acquisitions of bankrupt transit systems, for example, then, in my judgment, the collective bargaining if such relations were established, would continue. But continuation of the collective bargaining would not mean that the right to strike a private employer would also continue for the reason that the private employer has been replaced by a municipal employer. The public agency would still have the obligation to carry out all the collective-bargaining obligations of the contract; but if State law forbade a strike against a municipality of course the union would be bound by the State law.

But the Senator's hypothetical is unrealistic, because under the hypothetical and under the bill, the city could not purchase that particular transit line except in the special circumstance which I have mentioned.

The **PRESIDING OFFICER.** The time yielded to the Senator from Arizona has expired.

Mr. TOWER. Mr. President, I yield 10 minutes on the bill to the Senator from Arizona.

The **PRESIDING OFFICER.** The Senator from Arizona is recognized for 10 minutes on the bill.

Mr. GOLDWATER. Then, Mr. President, let us extend the hypothetical to a situation in which it could be pertinent. Under the language of the Senator's amendment, which has been changed since he first showed us the other draft, the city could purchase a private company which either was in bankruptcy or was threatened with bankruptcy. Let us assume that company B was going broke, and that the city wished to purchase it, and that the company had a bargaining agreement which recognized the right to strike. Therefore, under this provision of the amendment, in paragraph (c), all rights, privileges, and benefits would be preserved. If one of those rights was recognized as the right to strike, how could the Senator's amendment do other than preserve that right?

Mr. MORSE. In that case, the State law would supervene. The rights we are talking about are those spelled out in the collective bargaining agreement—wages, hours, conditions of employment, pensions, welfare funds. This has nothing to do with the right to strike. In this sense, the right to strike is not part of the collective-bargaining agreement. The State law would be controlling, because a strike would be contrary to the public policy as established by the paramount State law since the National Labor Relations Act, by your hypothesis, does not apply. My amendment does not affect any application made by a public agency operating under such a State policy.

Mr. GOLDWATER. In my opinion, the right to strike is inherent in any bargaining agreement, and is, in my opinion, given to any bargaining agency—to the union, and does not have to be spelled out.

Mr. MORSE. Then the Taft-Hartley Act is not applicable.

Mr. GOLDWATER. But let us assume it were applicable.

Mr. MORSE. Then the situation would be entirely different.

Mr. GOLDWATER. Let us consider a company in Memphis, Tenn., or in New York City, or in Hartford, Conn.—any company in a city where the State line is close by. Therefore, it would be in interstate commerce, and I think the Taft-Hartley Act would apply.

Mr. MORSE. If I understand your point; let me say that your question involves an interpretation of the Taft-Hartley Act, and does not involve this bill.

Mr. GOLDWATER. But I believe the Taft-Hartley Act would apply to this bill or its interpretation, regardless of what the Senator from Oregon or I may think about it. I do not think we can eliminate the application of the Taft-Hartley Act just because there is in the bill a subsection which deals with labor.

Mr. MORSE. If we were dealing with an employer who is subject to Taft-Hartley, the Federal law would preempt any municipal ordinance and State law in conflict with it. However, I am talking about a case in which Federal law does not touch the question of whether there is a right to strike.

Mr. GOLDWATER. Let us consider a case in which an existing private transit system were taken over by a city and were operated at the government level. In the opinion of the Senator, could the bargaining agent strike against the city after it took over the transportation system?

Mr. MORSE. Again, the hypothetical is not realistic except in a few special situations such as a takeover of a bankrupt system, but the agreement in such cases could not supersede State law.

Mr. GOLDWATER. Then is it the opinion of the Senator from Oregon that this language in no way would supersede State law?

Mr. MORSE. Yes, as to the right to strike.

Mr. GOLDWATER. How could it not supersede State law as to the right to strike, but could supersede other law?

Mr. MORSE. That is perfectly clear. The amendment does not supersede any State policy. It makes perfectly clear that if there were a collective-bargaining agreement which covered wages, hours, conditions of employment, pensions, welfare, and all the other forms of collective-bargaining agreements, and if the city wished to obtain a loan or a grant under this bill for an acquisition in the few exceptional cases to which I have referred, and if it proposed to reject the collective-bargaining agreement, it would not be eligible to receive the money.

Mr. GOLDWATER. I understand that perfectly, but my concern does not go to that. My concern is that we would allow the employees of the company, while operating under the city, to have the power to strike against a division of government—which I do not think the Senator from Oregon would agree would be correct.

Mr. MORSE. No, the bill does not allow that and does not cover that.

I repeat that if in a State there is a public policy which forbids government employees to strike, that will prevail and it will in no way affect an application made under the terms of the bill.

Mr. GOLDWATER. I wish to refer to another provision which contains what I believe to be ambiguous language. I refer to subparagraph (4). I shall read it:

> Assurances of employment to employees of acquired mass transportation systems by the acquiring or operating entities—

Then the ambiguity comes in—

> and priority of employment or reemployment of employees terminated or laid off.

In the first part of that sentence there is a prohibition against laying off any employee. In the second part of the sentence the possibility of such a layoff is anticipated. I am not speaking against the Senator. I am suggesting that he might rephrase that provision to erase any idea of it going two ways.

Simply stated, to me the provision means that an employer could not fire an employee, but he might be able to fire an employee.

Mr. MORSE. I do not think we need to change the language. I believe we are covering the point in the legislative history that the Senator and I are now making. The point I wish to stress in the legislative history is that the successor company stands in exactly the same shoes as the predecessor company, and whatever was binding upon the predecessor company in regard to the matter of conditions of employment is binding upon the successor company. The collective bargaining agreement continues until the parties by collective bargaining change the agreement.

Mr. GOLDWATER. Mr. President, I am glad that point was cleared up. I think the Senator will agree that there is some doubt in that sentence. It is a rather fuzzy sentence. I believe it would probably have been just as well to have left the provision as it was or to have stricken the second part of it. It leaves some doubt in my mind as to whether or not the employer would be required to retain the employee.

Mr. MORSE. I believe the point is cleared up in our colloquy. I thank the Senator.

Mr. GOLDWATER. Mr. President, the Senator from Oregon referred to "the declared policy." I wish to state for the legislative record that in title I of the amendment to the National Labor Relations Act, which we call the Taft-Hartley amendment, the following provision appears:

> It is hereby declared to be the policy of the United States to eliminate the causes of certain substantial obstructions to the free flow of commerce and to mitigate and eliminate these obstructions when they have occurred by encouraging the practice and procedure of collective bargaining and by protecting the exercise by workers of full freedom of association, self-organization, and designation of representatives of their

> own choosing, for the purpose of negotiating the terms and conditions of their employment or other mutual aid or protection.

I believe the Senator and I understand that language and agree with it. Many times I have stated publicly that when the law was enacted—indeed, when the original Wagner Act was enacted—it was long overdue.

However, in the definitions of section 2, paragraph (2), the following appears:

> (2) The term "employer" includes any person acting as an agent of an employer, directly or indirectly, but shall not include the United States or any wholly owned Government corporation, or any Federal Reserve bank, or any State or political subdivision thereof.

The **PRESIDING OFFICER.** The time of the Senator has expired.

Mr. TOWER. Mr. President, I yield 5 additional minutes to the Senator from Arizona.

Mr. GOLDWATER. Mr. President, the Senator had not yielded 5 or 10 minutes——

Mr. TOWER. I yielded 10 minutes on the bill. I now yield 5 minutes on the amendment.

Mr. GOLDWATER. I thank my good friend from Texas.

It has already been stated as national policy that collective bargaining is to be encouraged. It is also a part of national policy that States or political subdivisions thereof are excluded.

My fear about the existing part of the act and the amendment proposed by my friend from Oregon is that either the language of the bill or that proposed by the Senator—and they are almost identical—will be interpreted by the Administrator of the NLRB or some court as preempting State laws that cover the field at the present time.

One final word of assurance from the Senator from Oregon that the intentions expressed in the definitions part of the Taft-Hartley Act will not be violated would be of great help on that point if we are ever attacked in relation to it.

Mr. MORSE. The very reason that the language in the bill reads as it does is in order to make it clear that the Taft-Hartley exemptions are not changed by the amendment.

I cannot emphasize the point more than I already have done in the legislative history in our debate. It deals with municipal and State problems, and not Federal problems.

Mr. GOLDWATER. Then, as a final word, the language proposed by the Senator from Oregon or the language of the bill as it now stands in no way would preempt State law.

Mr. MORSE. The answer is yes; and particularly as I have mentioned. If the collective bargaining should be taken over by a public agency in the exceptional case described, the right to strike against the public agency would be taken away from labor. But that is not a contractual right; it is not among the contractual rights the State agency must recognize in order to have an application for aid considered.

Mr. GOLDWATER. The right to strike against the public agency.

Mr. MORSE. Against the public agency where the State or local law forbids the right to strike.

Mr. GOLDWATER. If there is local law, the language of the Senator from Oregon would not prevail.

Mr. MORSE. The Senator is correct.

Mr. GOLDWATER. If there is not a local law, would it be the interpretation of the Senator from Oregon that employees could strike in spite of the language in the "definitions" clause of the Taft-Hartley Act?

Mr. MORSE. In the absence of any local law, it would be for the State court to decide whether they had that right.

Mr. GOLDWATER. Mr. President, I thank the Senator from Oregon for this discussion. I am very apprehensive about the proposed language, as he knows. I do not desire to destroy the bargaining rights of employees affected. Neither do I desire to destroy the rights of the public by some language that would overrule State laws which are designed to protect, and also overrule national policy which is designed to protect.

Mr. MORSE. Mr. President, if it meets with the approval of the Senator from New Jersey [Mr. WILLIAMS], I should like to yield 10 minutes on the bill to the Senator from Connecticut [Mr. RIBICOFF].

Mr. TOWER. Mr. President, a parliamentary inquiry.

The **PRESIDING OFFICER.** The Senator will state it.

Mr. TOWER. It was my understanding that I had the floor. I had yielded to the Senator from Arizona.

The **PRESIDING OFFICER.** The 5 minutes yielded to the Senator from Arizona have expired. The Chair recognizes the Senator from Oregon.

Mr. MORSE. In order to avoid a misunderstanding with the Senator from Texas, I thought I retained the floor. I only asked him, on my time on the floor, if he would be willing to yield time to the Senator from Arizona.

Mr. TOWER. It is quite all right.

Mr. MORSE. I should like now to yield 10 minutes on the bill to the Senator from Connecticut, if the Senator from New Jersey approves.

Mr. WILLIAMS of New Jersey. I shall be happy to have the Senator yield time on the bill to the Senator from Connecticut.

Mr. RIBICOFF. Mr. President, it is important to clarify some doubts in the minds of many Senators. The Senator from Oregon has made some changes in his amendment since yesterday afternoon. As the Senator realizes, there was deep concern on the part of Senators from the New England States and New York concerning the language of the original amendment proposed by the Senator. That would have excluded from financial assistance States or regional authorities which might help or assist commuters by acquiring an interest in a private company already in bankruptcy such as the New Haven Railroad. As the Senator realizes, I offered an amendment to his amendment. Is it correct to say that my amendment No. 31 has now been incorporated in amendment 30 of the Senator from Oregon?

Mr. MORSE. I apologize to the Senator for not making that point clear when I explained my amendment. The Senator and I had a conference yesterday afternoon. We had technical assistance. I thought his amendment was meritorious. I told him it was acceptable to me and I would see if I could not have it included in the bill by obtaining the consensus of the others. They agreed with us, and we find it on line 4, page 2—

> Unless (A) such company has, prior to such acquisition, been declared bankrupt or placed into receivership by a court of competent jurisdiction,

The provision means that they could obtain aid under the bill.

That referred also to the objection of the Senators from Rhode Island [Mr. PASTORE and Mr. PELL] in regard to this particular point, but only in regard to that point.

Mr. RIBICOFF. We were all concerned about it. So there is no question at the present time that should the States of Massachusetts, Rhode Island, Connecticut, or New York find that they must develop a program with the bankrupt New Haven Railroad in order to save the commuter traffic and keep the line in existence, and this program were to include some acquisition of the commuter service of a bankrupt line by a public agency or some interest in such service, then under this act and under the amendment of the Senator from Oregon it would be possible to come to the Federal agency for financial assistance.

Mr. MORSE. There is no question about it. They have the authority to do so.

Mr. RIBICOFF. I thank the Senator from Oregon.

Mr. CLARK. Mr. President——

Mr. MORSE. Does the Senator from Pennsylvania wish to ask me a question, or does he desire time of his own?

Mr. CLARK. I should like to have some time.

Mr. MORSE. I temporarily yield the floor, Mr. President.

Mr. WILLIAMS of New Jersey. Mr. President, I will yield to the Senator from Pennsylvania.

Mr. CLARK. Mr. President, the Senator from Texas [Mr. TOWER] was kind enough to say that he would yield me time.

Mr. TOWER. Mr. President, I yield 10 minutes to the Senator from Pennsylvania from the time in opposition to the amendment.

The **PRESIDING OFFICER.** The Senator from Pennsylvania is recognized for 10 minutes.

Mr. CLARK. Mr. President, with deep reluctance I rise to oppose the Morse amendment.

I am in complete agreement with my good friend, the Senator from Oregon, as to the objectives he seeks to achieve by his amendment. Surely we should not in this legislation attempt to write a labor law. We should leave labor's rights exactly where we found them, once this legislation is disposed of. I do not wish to see this legislation used to diminish the rights of labor. I believe it inappropriate in this kind of legislation to attempt to increase the rights of labor. I am as opposed to a labor-baiting amendment as I am to a labor-take-over amendment. In this I believe I am in complete accord with my good friend from Oregon.

I think it is as unfortunate to attempt to affect basic labor law by this amendment as it would be to try to write a civil rights rider into the bill. Members of this body know well that I have been a friend of labor. Labor has been kind to me. I have also been a protagonist of civil rights, and this has perhaps aided me in my own community and State, and I believe that the civil rights legislation proposed in this body should be passed. However, this is not the way to do it.

Therefore I must oppose the amendment. I oppose it, Mr. President, because in my judgment nobody knows what the amendment would do. I know that my good friend from Oregon, who is one of the best lawyers who has ever served in this body, did not write this amendment. I am sure that if he had had an opportunity to consider it at great length his trained legal mind would have made many changes in it.

This is not the same amendment which was presented to us yesterday by some of our good friends. This is an amendment rewritten overnight. I say again I do not believe the people who wrote it know what is in it. I suggest this is not the way to deal with so important a matter of legislation on the floor of the U.S. Senate.

The labor provisions in the committee bill—and I was a member of the subcommittee and of the full committee, and I approved them—were carefully thought through and carefully worked out by the Senator from New Jersey, who did a magnificent job, in my opinion, in reconciling the conflicting views of those who wanted to use this legislation to curtail the rights of labor on the one hand and of those who wanted to use this legislation to increase the rights of labor on the other. That language was thought out. It was thought through. It has gone through the crucible of minds battering out the truth on the anvil.

I suggest to my friends in the Senate that the language in the bill as it came from the committee is the language which should remain. That language ignores the radical right and ignores the radical left and goes down the middle with a sound provision.

I should like to summarize it at this point. It appears in subsection (c) on page 26. It states:

> It shall be a condition of the granting of any assistance or the financing of any project under this act that fair and equitable arrangements are made, as determined by the Administrator after consultation with and the concurrence of the Secretary of Labor, to protect the interests of employees affected by such assistance or financing. Such protective arrangements shall include—

Not "may include" but "shall include"—

> without being limited to, such provisions as may be necessary for (1) the preservation of rights, privileges, and benefits (including continuation of pension rights and benefits) under existing collective bargaining agreements; (2) the encouragement of the continuation of collective bargaining rights; (3) the protection of individual employees against a worsening of their positions with respect to their employment; (4) priority of employment or reemployment of employees terminated or laid off; and (5) paid training or retraining programs. The contract for the granting of any such assistance shall specify the terms and conditions of such protective arrangements.

Mr. President, I submit that that lays it on the line in accordance with what the Senator from Oregon is trying so hard to do—what I am trying to do also, and the Senator from Alabama and the Senator from New Jersey are trying to do, which is to go right down the middle to protect existing rights, not to increase them or to diminish them but to protect them.

What have the people who drew up the amendment done? They have drawn up an amendment which says, in the first place, that a public agency could not be utilized to buy a private company. Why, Mr. President, this would knock out two-thirds of the benefits of the bill. Why was that done? It was because they fear that if we allow a public company to buy a private company then the rights of organized labor somewhere in the country might be adversely affected.

Mr. President, I say that they are throwing out the baby with the bath water. So I am opposed to it.

Then they went around and said, "We will fix it up." And they fixed it up overnight. They took care of some of the problems in Massachusetts. They took care of some of the problems in Connecticut. And they took care of half the problems in Pennsylvania, but not the other half. Other Senators come around to say, "But you haven't taken care of me."

Mr. President, we cannot legislate in that way on the floor of the Senate. If there are defects in the bill that came from the committee, if there are things in subsection (c) on page 26 which need to be improved, to assure that the objective of the Senator from Oregon—which is my objective, too—is carried out in the final legislation, there will be ample time to take care of that in conference.

The Senator from Alabama [Mr. SPARKMAN] will be on the conference committee. So will the Senator from New Jersey [Mr. WILLIAMS]. So, God willing, will I.

I make my commitment now that I shall use my every effort in conference to see to it that the objectives of my friend from Oregon are carried out.

But, Mr. President, let us not throw the baby out with the bath water.

I hope the amendment will be rejected.

Mr. MORSE. Mr. President, I yield myself 1 minute.

The PRESIDING OFFICER. The Senator from Oregon is recognized for 1 minute.

Mr. MORSE. I wish to say to my good friend from Pennsylvania that nothing disappoints me more than to find us in disagreement. I am glad we are in agreement as to the objectives, though I am sorry we are in complete disagreement as to how to reach the objectives.

As to the preparation of this amendment, I should like to advise the Senator that some 800 man-hours have been used in the development of this amendment by experienced and skilled experts.

The Senator from Oregon did give instructions to the counsel assisting him as to what the amendment should contain so far as the objectives are concerned. Counsel prepared it, but the Senator from Oregon has gone over it and approves the language of the amendment as carrying out those objectives in complete accord with his instructions.

It is impossible to satisfy all Senators. The reason why it is impossible to satisfy them all is that we cannot satisfy each instance and protect the Federal policy, because some changes are going to have to be brought about in some of the States to conform to the Federal policy.

I do not think there would be any great wrong done if we simply said to a State, "You do not qualify for this Federal grant." It does not mean they are entitled, as a matter of right, to the Federal grants irrespective of the fact that they are not following a policy that is in conformity with a Federal policy which I think is sound public policy.

One of the differences between the Senator from Pennsylvania and the Senator from Oregon is that, in my judgment, the committee bill did not provide for the status quo of labor relations. If it had provided for the status quo of labor relations, I would not have been offering an amendment. There would not have been vigorous opposition to the bill as it came to the floor on the part of labor. When they think a great wrong is being done to them, they have the right, as free men, to oppose legislation, because even the language the Senator from Pennsylvania has referred to——

The PRESIDING OFFICER. The Senator's minute has expired.

Mr. MORSE. I yield myself another minute.

Even that language uses the word "encourages" the maintenance of the status quo, but it does not require it. What does "encourage" mean? It cannot be subjected to a definition that gives any real protection to labor.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. CLARK. For myself, I would be glad to change the word "encourages" to the word "protects."

Mr. MORSE. Well, I have the bill before me, and the amendment is based on the bill as it is worded.

Under this indefinite language, collective bargaining agreements could be ignored or set aside by systems of public ownership.

Furthermore, there is not a word said about the Washington agreement, or section 5(2)(f) of the Interstate Commerce

Act. It is not even mentioned in the bill. Its present application to the railroads is vital. It is in my amendment. Without it, there will be unified opposition by the railroad brotherhoods to the committee bill. Under those circumstances, they would be right in their opposition. The precious rights obtained by them under the Washington agreement should be indifferently set aside by a federally assisted transportation system as a matter of sound public policy. Therefore, I could not vote for the bill as it came out of the committee, because I disagree with the Senator from Pennsylvania. It does not adequately protect the legitimate rights of labor.

Mr. TOWER. Mr. President, I yield myself 5 minutes.

I should like to express my thanks to the distinguished Senator from Pennsylvania for his clear and lucid argument against the adoption of this amendment, and state that, while my objectives may not be the same as his, I think his reasoning is absolutely right.

I certainly would not want to try to tack any punitive labor legislation onto this bill. I think that is definitely wrong. But we have been reassured time and time again that it is not our intent to supersede or contravene State law. But with the submission of this amendment by the proponents of the bill, a very ugly cat, indeed, has been let out of the bag.

I agree with the Senator from Pennsylvania that we cannot say what these provisions mean. The bill has not been enacted yet. It has not been tested in the courts. There are no precedents. How do we know what it means?

I think it means that, in a State where political subdivisions are prohibited from recognizing unions as bargaining agents, either municipalities in those States will not be able to qualify for aid under this bill or, if they do, they will have to repeal or amend their laws.

Much has been said about our not wanting discrimination in the bill. I tried to get a definition of urban area adopted. It would have excluded smaller communities. Much has been made of the fact that we do not want to discriminate against smaller communities; that they have as much right under the bill as any other communities. But we are discriminating against a number of States that have rigid provisions in their laws relative to bargaining arrangements, strikes, and picketing on the part of public employees.

I intend to offer an amendment to the Morse amendment in a moment which would strike out the labor provision. It appears that this may be a condition for the support of organized labor of the bill, but that certainly is no argument for the adoption of a provision of this sort.

Much was made in committee testimony about featherbedding. Mr. Wirtz said he was utterly opposed to featherbedding, that it was wasteful; but we are perpetuating featherbedding in this bill. That is precisely what we are doing.

There is a provision for buying bankrupt companies. What has made some of these companies bankrupt? They have been caught in the price-cost squeeze, because their costs got higher and higher, in many instances, perhaps, as a result of featherbedding. Yet we want to perpetuate the very thing that may be bankrupting these companies.

It is my fervent hope that the amendment will be roundly and soundly defeated.

I yield 5 minutes to the Senator from Ohio.

Mr. LAUSCHE. Mr. President, I do not want my silence to leave the impression that I agree with the argument that the bill does not in any manner affect the Taft-Hartley law. In my judgment, the bill as it is written and as sought to be amended by the Senator from Oregon will affect the Taft-Hartley law. I shall endeavor to explain my reasons for that judgment.

The Taft-Hartley law provides that the right to concerted action by workers shall be valid. Concerted action includes the right to strike. However, the Taft-Hartley law also provides that it shall not be applicable to Federal or other governmental employees.

Whenever a transportation system crosses a State line or is engaged in a volume of business that affects interstate commerce, even though that system is solely within the boundaries of a State and does not cross the State line, the Taft-Hartley law is applicable.

There are now transportation systems which may be affected by the Taft-Hartley law. Others are not affected because they are governmentally operated. If the pending bill is passed and a private company is taken over by a government, although the Taft-Hartley law provides that it does not apply to governmental operations, the bill says that it shall apply to carry out the previous agreement.

To summarize, no operation in the transportation business now covered by government is affected by the Taft-Hartley Act. Private enterprises are covered, in many instances, by the Taft-Hartley Act. It is now proposed to have a free enterprise system, through the finances granted under the bill, taken over by a government. I submit to the Senate the language is clear that if that private enterprise had a collective bargaining agreement with a union, when it is taken over by a government the collective bargaining agreement applies, even though the present Taft-Hartley law states that governmental operations shall not be affected by the Taft-Hartley Act.

So I submit to my colleagues that, both by the bill as it is now pending and as it is proposed to be amended by the Senator from Oregon, the Taft-Hartley law will be amended if these proposals are adopted.

Mr. MORSE. I yield myself 2 minutes.

First, I wish to say to my friend from Texas that in my judgment no question of featherbedding is involved in this amendment at all. If there is a serious problem of featherbedding in the country, it will have to be handled as a separate matter. If we have that problem, it will have to be solved by procedures that will have to be developed for the handling of it, just as at the present time we are opening consideration of the charge of featherbedding in the railway industry; and just as analyses and studies are being made with reference to featherbedding in the maritime industry.

I suppose one way to get rid of featherbedding is to get rid of unions. According to the Senator from Texas, another way would be the operation of industry by public agencies, but I doubt he wants to advocate that. Neither method would be in keeping with the place that American unions have in our economy, or the part they have played in easing the transition into automation.

I wish to say to my friend, the Senator from Ohio, that I disagree with him on what would be the obligation under the bill. The obligation derives from the arrangements with the Administrator. It does not derive from the Taft-Hartley law at all. They are contractual arrangements. It is the contracts that are binding. I refer Senators to page 26 of the bill, where this language appears:

> (c) It shall be a condition of the granting of any assistance or the financing of any project under this act that fair and equitable arrangements are made, as determined by the Administrator after consultation with and the concurrence of the Secretary of Labor, to protect the interests of employees affected by such assistance or financing. Such protective arrangements shall include—

Then it sets out such terms of the contract with continuation of collective bargaining in any situation where it now exists plus other obligations arising from the arrangement with the Administrator.

An unfair labor practice charge against the municipality under the Taft-Hartley law for any conduct under such arrangement under the amendment would be dismissed by the National Labor Relations Board because the arrangement that was entered into would create the obligation, not the Taft-Hartley law.

Mr. TOWER. Mr. President, the language of the amendment reads:

> The protection of individual employees against a worsening of their positions with respect to their employment which shall in no event provide benefits less than those established pursuant to the provisions of section 5(2)(f) of the Interstate Commerce Act.

Mr. MORSE. It means that the status quo must be preserved with respect to the employer-employee relationship. The relationships of the successor employer under a federally assisted project under the bill would be the same as his predecessor.

All I am saying is the public operation should extend to employees the same protection they had under private operation.

Mr. TOWER. I will yield in a moment to the Senator from Arizona to read the appropriate section of the Interstate Commerce Act. However, I read further from the Senator's amendment:

> Assurances of employment to employees of acquired mass transportation systems by the acquiring or operating entities.

I yield to the Senator from Arizona.

Mr. MORSE. It means that the employees must be taken over with the plant; the position of the successor is no more or no less than his predecessor under this provision of the amendment.

Mr. TOWER. Whether they are working or not? It means that redundant people must be kept on the payroll.

Mr. GOLDWATER. I thank the Senator from Texas. This is one of the points I failed to cover in my colloquy with the senior Senator from Oregon. He referred to section 5(2)(f) of the Interstate Commerce Act. I am not going to read all of it, but I ask unanimous consent that the entire section be printed in the RECORD at this point in my remarks.

There being no objection, the section of the act was ordered to be printed in the RECORD, as follows:

> (f) As a condition of its approval, under this paragraph (2), of any transaction involving a carrier or carriers by railroad subject to the provisions of this part, the Commission shall require a fair and equitable arrangement to protect the interests of the railroad employees affected. In its order of approval the Commission shall include terms and conditions providing that during the period of four years from the effective date of such order such transaction will not result in employees of the carrier or carriers by railroad affected by such order being in a worse position with respect to their employment, except that the protection afforded to any employee pursuant to this sentence shall not be required to continue for a longer period, following the effective date of such order, than the period during which such employee was in the employ of such carrier or carriers prior to the effective date of such order. Notwithstanding any other provisions of this Act, an agreement pertaining to the protection of the interests of said employees may hereafter be entered into by any carrier or carriers by railroad and the duly authorized representative or representatives of its or their employees.

Mr. GOLDWATER. The point I refer to particularly reads:

> In its order of approval, the Commission shall include terms and conditions providing that during the period of four years from the effective date of such order such transaction will not result in employees of the carrier or carriers by railroad affected by such order being in a worse position with respect to their employment.

In other words, let us say that a bus company is taken over by a city. If the bus company practiced featherbedding, the city cannot discharge these employees for a period of 4 years, even though they are not needed.

I wish to make it clear to my colleagues in the Senate, so that they may understand this point. The amendment does perpetuate featherbedding. Let us say that the company has gone broke because of inefficiency, and the inefficiency is to be found in the operation of the vehicles or in the operation of the garage. The people there who are responsible for the inefficiency cannot be removed from their jobs for a period of 4 years. I suggest to my friend from Oregon and to my friend from Texas that this does violence to the concept of collective bargaining. It prohibits anything being done about these men for a period of 4 years. If we accept the Morse amendment today, we will accept a prohibition against the removal of any employees for any reason for a period of 4 years.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. TOWER. Mr. President, how much time do I have remaining on the amendment?

The **PRESIDING OFFICER.** Four minutes.

Mr. TOWER. I yield 2 minutes to the Senator from Ohio.

Mr. LAUSCHE. I have deep respect for the senior Senator from Oregon, but on this legal proposition I cannot accept the answer which he gave me. I repeat that he said that the contemplation here is to preserve the status quo. If we preserve the status quo, and a private company was formerly under the Taft-Hartley law, the Taft-Hartley law would apply. But if the company is taken over by a city, the Taft-Hartley law provides then when the city operates, the Taft-Hartley law shall not apply. The amendment of the Senator from Oregon provides that it shall apply. The conclusion is inescapable that whether the right is derived from the judgment of the Administrator, with which statement I do not agree, the right under the bill is derived from the declaration in the law that collective bargaining agreements shall continue if aid is to be granted, and the Administrator is barred from granting aid unless all the terms and conditions of the collective bargaining agreement shall be carried into effect in accordance with the judgment of the Administrator.

If a company is now privately operated, it is plain that it is subject to the Taft-Hartley law. If that company is taken over by a municipality, it would not be covered by the Taft-Hartley law. However, under the Senator's amendment it would be covered.

Mr. MORSE. I yield myself 5 minutes on the bill. First, I wish to say that municipalities are exempt under the Taft-Hartley law. Second, I wish to point out that preserving the status quo of the contractual arrangement means continuing the present collective bargaining relationship under the arrangement between the parties and the Administrator.

I wish to say to my friend from Arizona that the part of section 19(c) that he read in effect means, basically, that the job protections and standards refer to, first, dismissal allowances for employees who are deprived of employment; second, displacement allowances of employees who are displaced in minimum paying jobs; and, third, moving allowances for employees who are required to change their place of employment.

To my good friends, I say: You cannot have this both ways. You cannot say in one breath that you do not believe the bill should include any labor legislation, and in the next breath propose to follow a course of action which might adversely affect employment without giving the employee the comparable right which he would have had under section 5(2)(F) of the Interstate Commerce Act.

All I am saying is that whatever the arrangement is now—in comparable situations which might not have occurred without the bill, whether in terms of displacement allowances, or of moving allowances—such a severance arrangement is continued and collective bargaining rights are continued.

In effect, if the Senate follows the position of the Senator from Arizona and the Senator from Texas, it will be passing major labor legislation within this bill, and using the bill improperly as a vehicle for major labor legislation.

Let us consider the problems existing in present collective bargaining agreements. How shall we correct abuses and injustices that have developed? They will be corrected just as we are seeking to correct them in the maritime industry, in the railroad industry, and in a good many other industries where there are charges of make-work programs.

I hope that we shall not, at least separately and distinctly, without a single hearing on these questions having been held, pass a transit bill which could and surely would, if the Senator from Texas and the Senator from Arizona have their way, result in denying thousands of employees their precious, hard-earned benefits which free collective bargaining has brought to them over the years.

To continue my argument would be only a matter of constant repetition. What the amendment would do, in spite of all the attacks on it, would be to assure that existing collective bargaining rights would not be taken away from the workers. I think that issue ought to go to conference. My confidence in the chairman of the Senate conferees, the distinguished junior Senator from Alabama [Mr. SPARKMAN], and his associates is such that I am satisfied that they can work out any of the "bugs," so to speak, that may be shown to have developed in the bill at the conference stage.

The distinguished junior Senator from New Jersey [Mr. WILLIAMS], chairman of the subcommittee, will be a member of the committee of conference, as will the distinguished senior Senator from Pennsylvania [Mr. CLARK].

In my judgment, the Senate should, as a matter of public policy, adopt the Morse amendment, underwriting the basic principle that the Senate does not propose to take away from labor, in the mass transit bill, hard-earned collective bargaining rights achieved over the years.

I close by saying that I am making an argument for free enterprise in maintaining to the extent possible private ownership of transportation companies under free collective bargaining. I am standing here fighting for the economic freedom of employers and unions in this country to continue their collective bargaining arrangements without Congress creating a system of public ownership of transit systems which would override in a moment employee rights and interests established in decades of free negotiation.

In any event, cities cannot use Federal funds for that purpose unless a bill to acquire or take over privately owned transport systems is passed save for the exceptional cases of bankruptcy or receivership to which I have already referred.

We are debating a bill which will be of great assistance to one city after another.

But have we a bill, taking it in its totality, which will promote a solution, in many cities, of serious transport problems? I think we have. I am seeking to add to the bill an amendment which will protect the status quo of employer and employee relations. I am making a free enterprise argument. It is an argument which seeks to protect one of the most precious freedoms which American employers and American workers have, namely, the right of employees, through their representatives, to enter into free collective bargaining agreements with private employers and to have those rights preserved and protected.

Mr. WILLIAMS of New Jersey. The Senator from Oregon certainly can make a justification for the amendment far more eloquently than I can; but as a cosponsor of the amendment, I, too, wish to say a word.

First, I was surprised when the senior Senator from Ohio [Mr. LAUSCHE] spoke as he did. I thought he would come here this morning to shout "Hallelujah." But he did not address himself to the first part of the amendment. The other day, in debate, the Senator from Ohio said:

> The pending bill has the machinery to drive private transit systems out of existence.

In speaking of his own bill, he defended it by saying:

> It would stop the Fabianists from pushing the private enterprise system of mass transportation into public, nationalized operation.

Under this amendment, that objective is certainly served, I respectfuly submit to the Senator from Ohio.

I wish to go back some 600 man-hours ago to the time when we were at the beginning of our deliberations on the questions here involved. It seems to me we have two important operative facts.

One fact is, and was, that if the bill shall be enacted, it will be a significant stimulant to reemployment, to increase the number of employees in a very sick industry, the transit industry of the United States. We are all aware of the decline of employment in all the departments of mass transportation. The bill would provide the stimulant necessary to bring workers back to the railroads, back to rapid transit, back to the bus companies. That was an important fact with which we had to deal.

The other fact is that very few, although some, systems might be changed in a way that a few employees might be adversely affected. There could be readjustments; there could be a loss of collective bargaining rights and opportunities.

There is one clear principle which we have sought to preserve. We have sought to do everything possible in the bill to protect the workingman in the rights he has won. That is why we had section 19(c) in the bill. The Senator from Pennsylvania [Mr. CLARK] spelled out the protection there, and we believe we have honored our obligation not to affect working people adversely by the action of the proposed legislation. However, in this sick industry, where there has been a decline in employment, an industry in which transit workers do not know from day to day what will happen to their jobs, they were fearful that this assurance was not guaranteed.

So we labored and labored and labored. Now we are here with a measure that certainly meets the objective of preserving the hard-earned rights and benefits of working people in the transit industry. We have preserved them in a way which certainly furthers private enterprise as the instrument to provide better transportation in this country.

All of us know that over the years one of the men most significant in finding the solution to the mystery in labor-management problems has been the senior Senator from Oregon. I express my personal gratitude for his advice and counsel both in our deliberations in the Senate and in offering this amendment today.

Mr. TOWER. Mr. President, it is my understanding that the time of the Senator from Oregon has expired. I yield back the remainder of my time for the purpose of offering an amendment to the amendment proposed by the Senator from Oregon.

I offer my amendment and ask that it be read.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. Beginning on page 3, it is proposed to strike out all beginning with line 9 and through line 8 on page 4.

Mr. TOWER. Mr. President, I suggest the absence of a quorum; and I ask unanimous consent that the time required for the quorum call not be charged to the time available to either side.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered; and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. TOWER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT—APPROVAL OF BILLS

Messages in writing from the President of the United States were communicated to the Senate by Mr. Miller, one of his secretaries, and he announced that on April 3, 1963, the President had approved and signed the act (S. 1035) to extend the provisions of section 3 of Public Law 87-346, relating to dual rate contracts.

EXECUTIVE MESSAGES REFERRED

As in executive session,

The PRESIDING OFFICER laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

VISIT TO THE SENATE BY DELEGATION FROM THE ECUADORAN CONGRESS

Mr. SPARKMAN. Mr. President, I yield myself 1 minute on the bill.

The PRESIDING OFFICER. The Senator from Alabama is recognized for 1 minute.

Mr. SPARKMAN. Mr. President, at this time we are honored by a visit from a large delegation of Members of Congress from our sister Republic to the south, Ecuador. In a short time they are to be the guests of the Vice President at luncheon. Prior to the luncheon, he has brought them here, for a brief visit to the floor of the Senate.

Mr. President, I know that all of us join in extending to these distinguished guests a very warm invitation to be with us, and a very warm reception. We are delighted that they are visiting in our country. We appreciate very greatly the good relationships between Ecuador and the United States; and we know that these gentlemen will do much to cement further the strong bonds of friendship which our two countries enjoy.

Mr. TOWER. Mr. President, I should like to join the distinguished Senator from Alabama in welcoming our distinguished neighbors. We hope that they feel at home here, and we want them to be welcomed as further evidence of our very fine relationship with their great country. It is our distinct pleasure to welcome them here today. [Applause, Senators rising.]

URBAN MASS TRANSPORTATION ACT OF 1963

The Senate resumed the consideration of the bill (S. 6) to authorize the Housing and Home Finance Administrator to provide additional assistance for the development of comprehensive and coordinated mass transportation systems, both public and private, in metropolitan and other urban areas, and for other purposes.

Mr. TOWER. Mr. President, I suggest the absence of a quorum, and ask unanimous consent that the time required for the quorum call not be charged to the time available to either side under the agreement.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered; and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. TOWER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The question is on agreeing to the amendment of the Senator from Texas [Mr. TOWER] to the amendment of the Senator from Oregon Mr. [MORSE].

Mr. TOWER. Mr. President, on my amendment I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. TOWER. Mr. President, my amendment would merely strike from the Morse amendment the language on what has been referred to as the protective arrangements, and would preserve the language that is in the bill. I am not too happy with the language in the bill, as every Senator knows. But I think that the proposed language is infinitely worse. I am particularly concerned about subparagraph 2, relating to a continuation of collective bargaining in any situation in which it now exists, because I believe that the proposed language would fly in the teeth of several State laws. Probably it would make a number of States ineligible to qualify for aid under the provisions of the bill.

I am still concerned about subsections 3 and 4, because I do not believe, or I have not been satisfied, that those provisions do not perpetuate featherbedding. Let us examine this question. Subsection (3) states—

> (3) the protection of individual employees against a worsening of their positions with respect to their employment which shall in no event provide benefits less than those established pursuant to the provisions of section 5(2)(f) of the Interstate Commerce Act;—

which the Senator from Arizona [Mr. GOLDWATER] read a while ago. Subsection (4) states—

> (4) assurances of employment to employees of acquired mass transportation systems by the acquiring or operating entities, and priority of employment or reemployment of employees terminated or laid off;

It seems to me that this provision would seal into their jobs people who are no longer needed. For example, a motorman on a street railway who cannot drive a bus, when the street railway changes over to a bus operation rather than a streetcar operation, would fall in this group. The company would be compelled to keep him on his job. They would be compelled to keep him on the payroll even though his services were no longer needed.

I think this provision certainly should be eliminated and we should go back to the the original provision of the bill as worked out very carefully in the committee. As the Senator from Pennsylvania [Mr. CLARK] pointed out a while ago, there was a good deal of deliberation on it and a good deal of give and take in the committee. It was probably the nearest thing to a compromise that one could find.

This proposal is not a compromise, Mr. President. This is a capitulation to the demands of trade union leadership, to demands made the condition for supporting this bill.

If we are going to make the bill satisfactory to everybody, I should like to consult a few interested groups of national importance to see what their condition for supporting the bill would be. Perhaps we could please everybody. I have never seen a piece of proposed legislation which did please everybody, but apparently this is what we are trying to do.

It is pretty obvious that not everybody among the proponents of the bill is entirely happy with the Morse amendment. I think this is the most odious section of it, and certainly it should be stricken.

Mr. MORSE. Mr. President, I yield myself 1 minute.

The PRESIDING OFFICER. The Senator from Oregon is recognized for 1 minute.

Mr. MORSE. Mr. President, I feel that I made the case against the amendment of my good friend from Texas [Mr. TOWER] when I made my argument in support of my own amendment. I wish to emphasize one point I made in support of my own amendment.

Not only would it continue the status quo, but also it would not in fact use the bill as a vehicle for passing major labor legislation. The amendment of the Senator from Texas would do exactly that.

Let us consider this matter of severance pay which is involved in the problem raised by the Senator from Texas.

What does the so-called Washington agreement involve? It states:

> If deprived of employment: 60 percent of text period average ranging from 6 months' compensation for service from 1 to 2 years to 60 months' compensation for service 15 years and over, less other railroad compensation. Less than 1 year service: 60 days' lump-sum payment.

That is a very precious right which has been won by railway labor, known as the Washington agreement on this point. These rights are in existence. I am saying that they ought to be continued. I say that whatever the present situation is, it should be continued.

I repeat that the problem of featherbedding, the problem of made work, is very serious, but it does not arise under the amendment. If we wish to solve it legislatively, it ought to be handled in proposed legislation after full hearings on the problem.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. MORSE. We should not pass something here which would indirectly accomplish that purpose.

I yield to the Senator from Texas.

Mr. TOWER. I wish to ask the Senator a question. Was not the Washington agreement a voluntary agreement between the carriers and the unions?

Mr. MORSE. It is a part of a collective bargaining agreement, and I want it continued. However, it has become a cornerstone governing layoffs and position downgrading in the federally regulated transportation industries for many years. It finds expression in modified form in section 5(2)(F) of the Interstate Commerce Act and has been the basis for recommendations by Presidential emergency boards under the Railway Labor Act.

As the Senator from New Jersey [Mr. WILLIAMS], the chairman of the subcommittee, pointed out over and over again, there is a sick and dying industry in many parts of the country. The future of the transit companies in many cities is a pretty bleak future. We certainly do not have any right to destroy the rights of workers which have been worked out under collective bargaining agreements, through projects financed under this bill. We ought to preserve those rights.

Then, if there is a problem which calls for special legislation, we ought to consider it in hearings on the whole problem of made work, or featherbedding, or whatever the problem seems to be.

Mr. President, I am ready to yield back the remainder of my time.

The PRESIDING OFFICER. Does the Senator from Texas yield time?

Mr. CLARK. Mr. President, I should like to have 5 minutes in opposition to the Tower amendment.

Mr. MORSE. If it is going to be in opposition, the Senator ought to take some of my time.

Mr. CLARK. I was going to ask the Senator from Oregon for time, if he has time to give me.

Mr. MORSE. I am willing to yield the Senator time from the time on the amendment; otherwise, I am sure he could use some of the time on the bill.

Mr. TOWER. Mr. President, I believe the Senator from Oregon has ample time on the amendment.

Mr. MORSE. I do not intend to use any more time on the amendment myself, so I will yield to the Senator from Pennsylvania.

The PRESIDING OFFICER. The Senator from Pennsylvania is recognized for 5 minutes.

Mr. CLARK. Mr. President, I rise in opposition to the Tower amendment for the same reason that I opposed the Morse amendment.

In my opinion this bill should not be used as a vehicle either for increasing or for decreasing the rights of organized labor. As I said earlier today, as I would oppose a civil rights rider to this bill I oppose either a prolabor or an antilabor rider.

The purpose of subsection (c) on page 26 of the amendment in the nature of a substitute is to protect existing labor rights; not to increase them or to decrease them.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. CLARK. I realize that, in making this statement, my judgment is not in accord with the view of the Senator from Texas, to whom I now gladly yield.

Mr. TOWER. Actually, what my amendment would do is to strike out the labor provision of the Morse amendment, which would mean that the labor provision now in the bill would prevail. I would not touch that.

Mr. CLARK. May I ask the Senator a question?

Mr. TOWER. Yes.

Mr. CLARK. Perhaps I misunderstood our colloquy earlier this morning. I had thought that the net effect of the amendment of the Senator from Texas would be to strike from the bill subsection (c), line 6 on page 26, of the amendment in the nature of a substitute.

Mr. TOWER. No.

Mr. CLARK. Is that an incorrect understanding?

Mr. TOWER. The effect of my amendment would be to strike from the Morse amendment the protective-arrangements provision.

Mr. CLARK. What would that leave?

Mr. TOWER. That would leave the present subsection (c) in the bill. It would not touch that at all. In other words, rather than the Morse language substituting for the language in the bill the language in the bill would continue and prevail.

Mr. CLARK. Mr. President, then I oppose the Tower amendment for another and different reason. [Laughter.]

That is, because the Tower amendment would still leave in the Morse amendment those provisions which would make this bill relatively meaningless for the people of my State and for the people of many of the other States of the Union, for, in a very ingenious and able way, I make no criticism of his motivation, but nevertheless most ingeniously and ably the Senator from Texas would succeed, if his amendment were to prevail, in making it impossible for any public utility owned by a municipality, an authority, or a State to use Federal funds under this program to acquire a privately owned public utility.

This, I think is wrong. This, I think, would defeat one of the major benefits of the bill. Therefore, I am opposed to the amendment. In fact, what would happen would be that, except for completely inadequate exceptions and inclusions of sections (b)(1) and (b)(2) of the Morse amendment, the prohibition would continue, preventing the acquisition of private companies by companies operated by municipalities.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. CLARK. I yield to the Senator from Texas.

Mr. TOWER. My amendment would remove only the labor provision. It would not remove the other provisions with which the Senator is concerned. I suggest that we dismember this provision a little at a time. I would be glad to join with the Senator from Pennsylvania in removing other sections and doing a job of general surgery.

Mr. CLARK. I appreciate the Senator's consideration, but I say again his delicate surgeon's knife succeeds, if it does succeed, in taking out a part of the Morse amendment to which I have no serious objection, and leaving in the bill that part of the Morse amendment which I think would largely defeat the purpose of the bill. Therefore, I would like to murder the whole child and defeat the Morse amendment, lock, stock, and barrel, and go to conference with what I believe are the wise provisions of the bill that came out of the committee, with no provision against permitting a municipality to acquire a private company, where that was desirable, and it will be soon in my State, while at the same time giving every possible encouragement, as the provisions are written in the bill, to the continuation and to the health of the existing private properties so long as they can serve their people the way the mass transportation needs of their people require.

So, to recapitulate, I am opposed to the Tower amendment because the net result would be to leave in the Morse amendment those provisions in the bill which are inimical to the interests of many cities in my State, in that it would not permit a public body to acquire a private transit company with funds provided under this bill.

I yield back the remainder of my time.

Mr. TOWER. Mr. President, I simply wish to say to the Senator from Pennsylvania that I would very much like to have his vote on my amendment. If he will support my amendment, I will support him and try to defeat the whole provision. Of course, I am going to vote that way anyway.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. TOWER. I yield.

Mr. CLARK. It seems to me that is the kind of arrangement between Pennsylvania and Texas which should not be made on the floor of the Senate.

Mr. TOWER. I think the Senator is correct.

I yield to the Senator from Arizona.

Mr. GOLDWATER. Mr. President, I tried unsuccessfully the other day to amend the whole section out, not because, as I said, I am opposed to arrangements between cities and other organizations, but because of my fear of this pattern of preempting State law. Having failed in my effort to have that subsection amended out of the bill, I must say I greatly prefer that subsection to the one offered by the Senator from Oregon [Mr. Morse].

I think one feature of his amendment alone should cause all my colleagues apprehension, and I refer to the language beginning on line 24 of page 3 of his amendment: "which shall in no event provide benefits less than those established pursuant to the provisions of section 5(2)(f) of the Interstate Commerce Act."

Section 5(2)(f) prohibits the firing of any person for 4 years after a transfer has been made. This means a man can be totally inefficient, can be drunk on duty, can be a dangerous driver, can pile up a bad record, and yet the city cannot get rid of him because of the provision of the act to which the Senator's amendment refers.

I think this feature alone should cause my colleagues to vote for the Tower amendment.

As I have said, objectionable as the labor section is, I would much prefer to have the one prepared by the committee than the one offered by the Senator from Oregon.

I know he feels sincerely and honestly that this provision will not do damage to State law, but I have not been convinced, from the legislative history, and I am not sure he has been, that it will not. Doing damage to State law has become a habit in this body. I think we do violence to our oath to protect the Constitution when we constantly pass measures that destroy local and State law.

For that reason, I think the Morse amendment is an extremely dangerous amendment, one that would place the entire concept of States' rights in jeopardy. Therefore, I am urging my colleagues to vote for the Tower amendment.

Should the Tower amendment prevail, then we can go to work on the other part of it, if other Senators so desire.

I think the Senator from Texas has done a real service on the floor of the Senate in pointing out the weaknesses of the bill—and there are many of them—but particularly in this field, where there is so much danger of preemption of State law, and where we are hamstringing the rights of people, particularly management, when we tell them they must keep employees for 4 years after arrangements for transfer to a public transit system.

Mr. TOWER. I thank the Senator.

Mr. President, I am prepared to yield back the remainder of my time on the amendment.

Mr. WILLIAMS of New Jersey. Mr. President, no Senator on this side seeks recognition, and I therefore yield back the remainder of my time.

Mr. MORSE. Mr. President, I yield back the remainder of my time.

Mr. WILLIAMS of New Jersey. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. TOWER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The question is on agreeing to the amendment offered by the Senator from Texas [Mr. Tower] to the amendment offered by the Senator from Oregon [Mr. Morse]. The yeas and nays have been ordered.

Mr. DIRKSEN. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. DIRKSEN. Will the Chair restate the proposition before the Senate?

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Texas to the amendment offered by the Senator from Oregon. The yeas and nays have been ordered, and the clerk will call the roll.

Mr. DIRKSEN. If this is a parliamentary inquiry, I should like to have the Chair advise me whether I correctly understand that the amendment of the Senator from Texas would strike out the second half of the so-called Morse amendment.

The PRESIDING OFFICER. It would strike out that portion of the Morse amendment that is found on page 3, beginning in line 9, through line 8 on page 4. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from California [Mr. Engle], the Senator from Tennessee [Mr. Gore], the Senator from Washington [Mr. Magnuson], the Senator from Utah [Mr. Moss], the Senator from Florida [Mr. Smathers], and the Senator from Texas [Mr. Yarborough] are absent on official business.

On this vote, the Senator from California [Mr. Engle] is paired with the Senator from Utah [Mr. Bennett]. If present and voting, the Senator from California would vote "nay," and the Senator from Utah would vote "yea."

On this vote, the Senator from Washington [Mr. Magnuson] is paired with the Senator from Colorado [Mr. Domi-

Nick]. If present and voting, the Senator from Washington would vote "nay," and the Senator from Colorado would vote "yea."

Mr. KUCHEL. I announce that the Senator from Utah [Mr. Bennett], the Senator from Kansas [Mr. Carlson], and the Senator from Colorado [Mr. Dominick] are absent on official business.

On this vote, the Senator from Utah [Mr. Bennett] is paired with the Senator from California [Mr. Engle]. If present and voting, the Senator from Utah would vote "yea," and the Senator from California would vote "nay."

On this vote, the Senator from Colorado [Mr. Dominick] is paired with the Senator from Washington [Mr. Magnuson]. If present and voting, the Senator from Colorado would vote "yea," and the Senator from Washington would vote "nay."

The result was announced—yeas 23, nays 68, as follows:

[No. 38 Leg.]

YEAS—23

Allott
Byrd, Va.

NOT VOTING—9

Bennett
Carlson
Dominick
Engle
Gore
Magnuson
Moss
Smathers
Yarborough

So Mr. Tower's amendment to Mr. Morse's amendment was rejected.

Mr. MORSE. Mr. President, I move that the vote by which the amendment was rejected be reconsidered.

Mr. HUMPHREY. Mr. President, I move that the motion to reconsider be laid on the table.

The motion to reconsider was laid on the table.

Mr. HUMPHREY. Mr. President, on the question of agreeing to the Morse amendment, I ask that the yeas and nays be ordered.

The PRESIDING OFFICER. Is there a sufficient second?

The yeas and nays were ordered.

Mr. ROBERTSON. Mr. President, on the question of passage of the bill, I ask that the yeas and nays be ordered.

The PRESIDING OFFICER. Is there a sufficient second?

The yeas and nays were ordered.

Mr. JAVITS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from New York will state it.

Mr. JAVITS. Does the Morse amendment remain open to amendment, notwithstanding the ordering of the yeas and nays?

The PRESIDING OFFICER. Yes.

RATIFICATION BY NEBRASKA LEGISLATURE OF THE ANTI-POLL-TAX AMENDMENT

Mr. TOWER. Mr. President, I ask unanimous consent that the Senator from Nebraska [Mr. Hruska] be recognized, to make a statement, and that the time he uses not be charged to the time available to either side under the agreement.

The PRESIDING OFFICER. Is there objection? The Chair hears none; and it is so ordered.

Mr. HRUSKA. Mr. President, I take great pride in announcing that this morning the Nebraska unicameral Legislature ratified the proposed 24th amendment to the Constitution of the United States, the anti-poll-tax amendment, by a vote of 41 to 0, with two members absent, making it the 30th State to ratify the amendment.

Just a little more than 1 year ago, the Senate passed the joint resolution which permitted the States to ratify this amendment. At that time, my colleague, Senator Curtis, and I joined the Senator from Florida [Mr. Holland] and many other Senators in supporting the joint resolution. In brief, this proposal provides that the right to vote in elections of national officers shall not be denied on account of failure to pay any poll tax or other tax.

Thus, the unanimous approval by the Nebraska unicameral Legislature is most gratifying to me. It signifies the respect which Nebraskans have for the right to vote. Also, it is a tribute to the distinguished Senator from Florida [Mr. Holland] for the effective leadership he provided this very important amendment; and I wish to pay him that tribute, as I believe the Legislature of Nebraska did earlier today.

Mr. HOLLAND. Mr. President, under the same arrangement, may I be recognized for several minutes?

The PRESIDING OFFICER. Without objection, the Senator from Florida is recognized.

Mr. HOLLAND. Mr. President, first, I express my sincere thanks to the distinguished Senator from Nebraska for his very kind words about me. I wish to repeat that sentiment with reference to the unicameral Legislature of Nebraska. If the action it took today by unanimous vote is indicative of what can be expected of unicameral legislatures, perhaps there will be more of them in the days ahead.

Mr. President, I wish to pay my very appreciative thanks, in particular, to the Senators from Nebraska [Mr. Hruska and Mr. Curtis]. Both of them joined in sponsoring my resolution proposing this important amendment to the Constitution, and both of them voted for it. They have been exceedingly diligent in carrying this matter to the members of their State legislature and before the people of their State. It goes without saying that the favorable action taken today by the Nebraska Legislature depended greatly upon their effective leadership and action.

Therefore, Mr. President, I take this occasion not only to thank them, but also to say again that this action illustrates the completely bipartisan nature of the amendment and of the support it has received.

I thank my distinguished friends.

URBAN MASS TRANSPORTATION ACT OF 1963

The Senate resumed the consideration of the bill (S. 6) to authorize the Housing and Home Finance Administrator to provide additional assistance for the development of comprehensive and coordinated mass transportation systems, both public and private, in metropolitan and other urban areas, and for other purposes.

Mr. TOWER. Mr. President, I yield 15 minutes on the bill to the distinguished minority leader, the Senator from Illinois [Mr. Dirksen].

The PRESIDING OFFICER. The Senator from Illinois is recognized for 15 minutes.

Mr. DIRKSEN. Mr. President, I address my remarks particularly to the distinguished Senator from Oregon [Mr. Morse], the author of the pending amendment, on which the yeas and nays have been ordered, and on which we shall vote directly.

I am a little curious about a portion of the amendment which provides that certain conditions must be met if the assistance is to be received; and one of them is that the required facilities either be bankrupt or be in receivership, as declared by a court of competent jurisdiction.

Mr. President, now that we have reached that point, I wonder whether such a provision would act as a bailout of defunct property while operating in bankruptcy, in that one of the conditions for obtaining the assistance is that it go into bankruptcy. I gather that there are transportation systems which are operating on a thin edge. If I do not misunderstand this situation, such a provision would be an invitation in such circumstances simply to go into bankruptcy, and thus become eligible, upon compliance with the other conditions recited in the Morse formula.

The second condition is that the acquired property must be essential to a mass transit system. Why should we write into the bill a provision that a system can be bankrupt and in receivership as a condition for assistance under a policy bill dealing with mass transit? Such a provision intrigues me no end.

In the first part of the formula there is also a provision that the Secretary of Labor and the Administrator must act jointly on these questions. If I were writing the provision and were in support of the bill, I would be pretty careful about a joint operation and a joint determination, because I can see in such operation no end of trouble when we are dealing with a complicated subject such as mass transportation.

But the second part of the amendment, which would amend the language appearing on page 26, is even more interesting. I do not find a phrase or an expression that relates to the public interest.

For example, we find reference in the bill to protection of the interests of employees affected by such assistance or financing. There is no indication of the public interest. It will have to come from those who ride the systems. The question is, Is the sky the limit in order to provide protection?

Nothing is said in the bill about the public interest. The bill should be amended in line 16, after the word "financing," to include the words "to the extent that it is consistent with the public interest."

We read a little further in the second part of the amendment and we discover that there must be a preservation of the rights, privileges, and benefits, including the continuation of pension rights and benefits, of all beneficiaries. Many of the systems have established pension systems. Everyone knows that officers, directors, and higher echelon employees are always placed in a much higher pension category. What I should like to know is whether the president, the vice president, and the managing and executive personnel who may have pension benefits targeted on amounts such as $50,000, $60,000, or $70,000, would receive the benefits of public funds under the provision which provides that all beneficiaries shall be protected.

Mr. President, I will not vote any authority or any public funds for such purpose. The heads of transit systems may be skating on thin ice. Their pension rights may have been determined long ago. After a certain number of years, the sums are rather fancy. Yet the proposed language would require that the rights and benefits of all beneficiaries shall be preserved.

I call attention to another item which appears in the bill. On page 3, line 21, the provision would apply "under existing collective bargaining agreements, or otherwise."

I have always had a rather precise notion about the English language. But I invite anyone to explain what the words "or otherwise" mean. They may cover a multitude of sins before we are through.

Thus far I have heard no explanation on the floor of the Senate as to what to two words "or otherwise" may include.

Another provision on page 3 provides that:

> The protection of individual employees against a worsening of their positions with respect to their employment which shall in no event provide benefits less than those established pursuant to the provisions of section 5(2)(f) of the Interstate Commerce Act.

If I remember correctly, that if an employee works 2 years, he is entitled to an additional 2 years. If he works 4 years, he is entitled to a second 4 years.

Is the proposal a bundle of feathers? We recently got through with featherbedding. Three years ago I introduced a bill. The Judiciary Committee conducted hearings on it. The bill was designed to relieve some of our carriers of the massive expenses resulting from featherbedding.

We could not obtain action on the bill in this body. The other body would not act on the bill. It remained for the Supreme Court to look at the inequity of the situation. Yesterday an order was issued which is expected to provide as much as or more than $600 million, not in benefits, but in easing of the burdens of the carriers because of rigid featherbedding.

If Senators desire to read some enriching testimony, I suggest that they read the findings of the Commerce Commission of the State of North Dakota. At one time way stations were established along railroad lines. Their distance apart was measured by how far a team and wagon with a load of grain could travel to and from a farm in a given day. Many of those way stations were set 6 miles apart. That is where the country elevator was built. The operator of the station may still be there. The testimony shows that in many cases, for as much as 15 minutes a day, an employee receives a full day's pay. There was no relenting in that equity until a case went from the district court in Chicago to the Court of Appeals for the Fourth Circuit and then to the Supreme Court of the United States.

We will never save the carriers and enable the railroads or any kind of transit system in our country to operate efficiently, if we put that kind of burden on them.

Railroads such as the B. & O., the Pennsylvania, the Illinois Central, the Milwaukee System, and the Chicago & Northwestern are all operating transit systems and carrying commuters. I suppose the New York, New Haven & Hartford is in difficulty today largely on account of their commuter system. When we think of the transportation problem, we must think of the whole problem. Yet what is the approach?

Pending now before the Committee on the Judiciary is a bill which would freeze mergers until the 31st of December 1963. The bill was introduced by the distinguished Senator from Tennessee [Mr. KEFAUVER].

The Senator from Nebraska [Mr. HRUSKA] and I fought the bill to a standstill. There were hundreds of pages of hearings.

The bill was introduced again in the present Congress. A jurisdictional dispute developed, but the Committee on the Judiciary has jurisdiction and there will be hearings.

The New York Central Railroad and the Pennsylvania Railroad are begging, entreating, and supplicating the Interstate Commerce Commission to let them go through with their merger in order to impart health to those systems. If we will quit abusing them with a club, we shall not need the bill that is before us today, with its handouts.

In one breath we belabor the railroads with a club, and then we come along with a bag of sugar candy, as if that would do the job.

On page 4 of the Morse amendment another provision appears to which I should like to call attention:

> (4) assurances of employment to employees of acquired mass transportation systems by the acquiring or operating entities—

What is the general purpose of this bill, if it is not consolidation and efficiency? How will that be achieved, unless some jobs are abandoned in the process? How could people be assured? Suppose they are not needed. Suppose in the case of motormen 100 are lost. What will be done with them? Where will they be put?

This refers to assurances of employment by the operating entities and to priority of employment or reemployment of employees terminated or laid off. That is pretty loose language. I would hate to be confronted with that kind of responsibility, Mr. President if I were going to direct one of these mass transit operations.

Then there are to be paid training or retraining programs. What is to be the limit in terms of money? What is to be the limit in terms of the kind of retraining involved? Shall we go all over the whole field? Would that solve the problem? I have grave doubts.

This is filled with a lot of uncertainty. I must say that the language of the Magnuson proposal is not much better except of course that there is no provision that a bankrupt outfit could get the benefits of the bill.

That is as clear as crystal for anybody to read, "such company has, prior to such acquisition, been declared bankrupt." If that is not an open invitation to go into receivership I give up.

We have some of those situations out home but that does not mean that I have to bail them out with the taxpayers' money or ultimately with the money of the people who are to ride on these systems. That is the public.

I defy Senators to find a line in the Morse amendment that even mentions the public interest. Why that term has been glorified. It has been embroidered. It has been couched in eloquent language on this floor—the public interest.

I ask Senators to find that in the Morse amendment.

I do not want to go down that road. I am not going down that road.

The sensible thing would be not only to send this back to the committee but also to embrace a proposal offered yesterday to let the whole problem go to the Commerce Department, where it belongs, instead of to the Housing and Home Finance Agency, and to let that Department give some real study to it and come up with something quite worthwhile.

The PRESIDING OFFICER. The time of the Senator from Illinois has expired.

Mr. TOWER. Mr. President, I yield 3 more minutes to the Senator from Illinois from the time on the bill.

Mr. DIRKSEN. Finally, Mr. President, we ought to have a better estimate as to where lies, really, the end of the road. The Administrator himself before the committee estimated a cost of more than $9 billion for this program. His estimate falls far short of the mark. Year after year, under the impulses of inflation, wages and the costs of materials go higher and higher. I do not believe we could consummate that program finally for $20 billion, and I am not going to plow that long furrow until I feel reasonably sure where the end will be, or at least some kind of end, because this is going to be a gargantuan burden before we get through.

Mr. President, it seems to me that every dictate of prudence should persuade the Senate not only to defeat the Morse amendment but also to defeat the bill.

The **PRESIDING OFFICER.** The question is on agreeing to the amendment offered by the Senator from Oregon.

Mr. **MORSE.** Mr. President, I yield myself 2 minutes.

The **PRESIDING OFFICER.** The Senator from Oregon is recognized for 2 minutes.

Mr. **MORSE.** I have made my case against the argument of the Senator from Illinois already today. As to the first point the Senator raises, we have a great dilemma in this debate. There is great concern on the part of many in the Senate about using the bill to enable State governmental agencies to force the purchase of a transit company upon its private owners. We have taken the position that we are not going to be a party to that action. If there is a situation in which a transit company is going bankrupt, has gone bankrupt, or is in receivership, then we think the Administrator should be in a position to make the decision as to whether it is in the public interest for a city which wants to buy that kind of transit company to buy it.

My amendment would make that possible. I tried to make clear earlier today that my amendment would not make it possible for a city to force a transit company to sell when it did not want to sell by getting Federal money it could use in the purchase of that company.

I think that is a pretty good position for us to take. It is a position that meets the objections which many earlier made in respect to the bill.

Now, as to all the arguments which the Senator from Illinois has made as to what the bill would continue, I only repeat that it would continue the status quo. Whatever the labor relations situation is now, it should be continued. What the Senator from Illinois has really proposed is that, without an hour's hearing, we should pass within this bill major labor legislation. He has had much to say about a make-work program.

The **PRESIDING OFFICER.** The time of the Senator from Oregon has expired.

Mr. **MORSE.** Mr. President, I yield myself 1 more minute.

As I said earlier, we have problems about make-work programs. We shall have to handle them legislatively and administratively in the next months and a few years in this country, and that ought to be done as a result of legislation designed to handle the problem. We should not pass a transit bill which has a sleeper provision in it which would take away from labor, without any hearing whatsoever or any opportunity to consider proof, hard-won rights which have been won over the years through collective bargaining.

I repeat, as I close, the answer to the Senator from Illinois is that we would extend the status quo so far as transit companies are concerned. We still would have before us the problem of settling the labor problems by way of separate hearings and legislation.

Mr. **JAVITS.** Mr. President, will the Senator from Alabama yield 2 minutes to me, so that I may ask the Senator from Oregon a question?

Mr. **MORSE.** I should be glad to yield to the Senator from New York.

The **PRESIDING OFFICER.** Does the Senator from Alabama yield further time?

Mr. **SPARKMAN.** Mr. President, I yield 2 minutes from the time on the bill to the Senator from New York.

The **PRESIDING OFFICER.** The Senator from New York may proceed for 2 minutes.

Mr. **JAVITS.** I thank the Senator from Alabama.

I should like the Senator from Oregon to tell us one thing.

It seems to me that, apart from the clauses in the amendment relating to the acquisition of private companies, the amendment would add one thing to the labor clauses already in section 19(c) of the bill and that is the so-called Washington agreement, which is incorporated in section 5(2)(f) of the Interstate Commerce Act. I understand that that section has been made a part of the RECORD, but, to be sure, I ask unanimous consent that it may be included with my remarks at this point.

Mr. **MORSE.** I have already put that in the RECORD, but I think it should be included now.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

(f) As a condition of its approval, under this paragraph (2), of any transaction involving a carrier or carriers by railroad subject to the provisions of this part, the Commission shall require a fair and equitable arrangement to protect the interests of the railroad employees affected. In its order of approval the Commission shall include terms and conditions providing that during the period of 4 years from the effective date of such order such transaction will not result in employees of the carrier or carriers by railroad affected by such order being in a worse position with respect to their employment, except that the protection afforded to any employee pursuant to this sentence shall not be required to continue for a longer period, following the effective date of such order, than the period during which such employee was in the employ of such carrier or carriers prior to the effective date of such order. Notwithstanding any other provisions of this Act, an agreement pertaining to the protection of the interests of said employees may hereafter be entered into by any carrier or carriers by railroad and the duly authorized representative or representatives of its or their employees.

Washington agreement, May 21, 1936: Employees affected solely by or in anticipation of a "coordination." Does not apply to employees affected solely by other causes. Employee not regarded as deprived of employment in case of death, resignation, retirement, dismissal for cause, furlough because of reduction of forces due to seasonal requirements of service, or if not affected within 3 years of coordination.

Mr. **JAVITS.** The Senator from Arizona, when he argued this matter, said that would compel us to continue the employment of a man who might be a drunkard, who might be a bad driver, who might have some reason for being fired under the normal work rules.

As I understand the language, so that the language may be clear, the so-called Washington agreement uses the following operative words: that the employees shall not be "in a worse position with respect to their employment."

Does the Senator construe that to mean—this is the way I construe it—that all the normal work rules and practices in effect at present under collective bargaining would remain fully in effect? It would not mean that a man could not be fired for proper cause as he can under present conditions. It would merely mean that he shall not enjoy a worse tenure than he enjoys now under a collective bargaining agreement or any other agreement or arrangement.

Mr. **MORSE.** The Senator from New York has put more clearly and potently than has the Senator from Oregon exactly the position of the Senator from Oregon. That is what the amendment means.

Mr. **JAVITS.** Does the Senator mean that the only thing added by the labor aspect of the provision is the Washington agreement?

Mr. **MORSE.** That is correct.

Mr. **JAVITS.** Other than that, we are dealing with acquisition of private companies, and so forth?

Mr. **MORSE.** Yes.

Mr. **JAVITS.** The Senator has gone a long way to meet the worries of persons like myself in the way the amendment is drafted. I certainly am glad to associate myself in support of the amendment.

Mr. **TOWER.** Mr. President, I yield myself 1 minute from the time on the bill.

I point out that the inclusion of the reference to section 5(2)(f) of the Interstate Commerce Act is not the only change. I call the attention of Senators to protective arrangement No. 2. The bill as we now have before us contains the language: "the encouragement of the continuation of collective bargaining rights."

The Morse amendment reads: "the continuation of collective bargaining in any situation where it now exists."

That is an important and significant change.

Mr. **MILLER.** Mr. President, will the Senator yield to me?

Mr. **TOWER.** I yield 1 minute on the bill to the Senator from Iowa.

Mr. **MILLER.** Mr. President, I have at the desk an amendment, to the Morse amendment which I now call up and ask to have stated, and which I offer on behalf of myself and the Senator from Texas [Mr. Tower].

The PRESIDING OFFICER (Mr. Brewster in the chair). The amendment to the amendment will be stated.

The Legislative Clerk. It is proposed to insert, after the comma on line 14, page 3, of the Morse amendment, the following: "and not inconsistent with the laws of the State in which the project or a portion of the project is located,".

Mr. MILLER. Mr. President, this amendment by the Senator from Texas and myself is the same amendment we proposed 2 days ago to apply at page 26 of the main bill. We did it in an effort to make absolutely certain that the statements by the Senator in charge of the bill and some of the proponents of the bill, namely, that it was not intended that State law be usurped directly or indirectly by this legislation, would be effective.

I am happy to point out that the distinguished Senator from Alabama [Mr. Sparkman], who is handling the bill, voted for the amendment. He carried out his commitment, that it was his intention that the bill not supersede State law, by supporting the amendment. I regret to say that there were only 36 votes in support of the amendment. I suggest that some Senators who voted against the amendment might have had difficulty in voting against it in view of the statement made that it was not intended, directly or indirectly, to supersede State law.

All this amendment does is to make absolutely certain that where there is a State law which is inconsistent with the standards established by the Administrator and the Secretary of Labor, the State law will not be superseded or overridden.

It is all very well and good to say that a State does not have to take this aid; that it can go on with an inconsistent provision and not receive aid from the Federal Government. But I do not think that is fair, and it certainly is an indirect way of having Federal law supersede State law.

While some of us may not have great concern about State law being superseded in the areas itemized on page 3 of the Morse amendment, the language "without being limited to" opens it up to an unknown quantity.

All that the amendment which I have offered proposes to do is carry out what the Secretary of Labor expressed as an opinion as to what would be the case and, what the proponents of the main bill have stated is their intention.

The PRESIDING OFFICER. Does the Senator from Iowa yield back the remainder of his time?

Mr. MILLER. I shall be happy to yield the floor for questions or comments on my amendment. I do not wish to yield back the remainder of my time as yet.

Mr. MORSE. Mr. President, I hope the amendment to my amendment will be defeated, because the subject matter of the amendment was the subject of rather extensive debate earlier today, in which it was pointed out that the only time a transit company would be taken over would be in a case in which it is bankrupt, or is in receivership, or is fast growing defunct, and the Administrator feels it is in the public interest that it be taken over. Only in those situations could public money be made available by the Administrator for the takeover.

That provision protects the private enterprise system from having pressure put on it, vis-a-vis Federal funds, to force the private company to go out of business.

Earlier in the day we discussed the hypothetical case of a need to take over a company which has a collective bargaining agreement with its employees, but where there is a State law which prohibits the municipality, for example, from bargaining with the employees. We said that if such a situation should exist, in those limited cases—and they would be few and far between—Federal money could not be made available unless it was done by use of the Memphis formula. We discussed the Memphis formula. Also it might be done in line with the possible use of the Atlanta, Ga., case.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MORSE. I yield myself another 2 minutes.

We are still waiting to learn whether or not the Atlanta, Ga., case is an appropriate hypothetical case, because we have not been able to ascertain whether or not there is such a law in Georgia. But let us assume there is.

The Memphis formula involves a situation in which a transit line is publicly owned, but in which there is a law which prohibits collective bargaining with the union. However, use has been made of the device of establishing a private managerial commission to operate the line; and the private commission, under contract with the city, handles labor relations and can enter into collective bargaining with the employees.

I want to be very frank as I say this today: In rare cases in which local law prohibits collective bargaining, Federal money would not be available, because it would be in conflict with the policy of the bill.

I have just been informed that the Georgia law does not prohibit collective bargaining by the cities, and therefore the Georgia case has been removed from the debate.

The only situation we have is the hypothetical case that I have discussed, in which there might be a line that is defunct, or is going defunct, which the city wants to take over, and in which there is a State law which prohibits the municipality from having a collective bargaining agreement with the employees of the system, in the event the municipality takes over the private company, whereas the provision of the bill is that the agreement must be continued. But in that situation all a city needs is a good lawyer, such as the city of Memphis had. It established a private commission, under a contract by which the private commission operates the line and has an agreement with the employees.

I hope the pending amendment will be defeated, because it would cause great confusion.

Mr. MILLER. Mr. President, I yield myself 1 minute. The Senator from Oregon has pointed out that a singular type of situation might arise, but I suggest that the phrase "without being limited to" opens this subject up to an unknown quantity, and that the singular situation to which the Senator from Oregon has referred could be very widespread. I can see no harm to the legislation resulting from the adoption of the amendment. I think the fact that the other day there were 36 votes in favor of the amendment to the main bill, which was supported by the Senator in charge of the bill, pretty well speaks for itself.

I hope my amendment will be adopted.

I will not press for a yea-and-nay vote on the amendment.

Mr. SPARKMAN. Mr. President, I yield back the remainder of my time.

Mr. MILLER. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Iowa [Mr. Miller].

The amendment was rejected.

The PRESIDING OFFICER. The question now recurs on the amendment offered by the Senator from Oregon [Mr. Morse]. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from Tennessee [Mr. Gore], the Senator from Utah [Mr. Moss], the Senator from Florida [Mr. Smathers], and the Senator from Texas [Mr. Yarborough] are absent on official business.

Mr. KUCHEL. I announce that the Senator from Utah [Mr. Bennett], the Senator from Kansas [Mr. Carlson], and the Senator from Colorado [Mr. Dominick] are absent on official business.

If present and voting, the Senator from Utah [Mr. Bennett] and the Senator from Colorado [Mr. Dominick] would each vote "nay."

The result was announced—yeas 52, nays 41, as follows:

[No. 39 Leg.]

Yarborough

So Mr. MORSE's amendment was agreed to.

Mr. MORSE. Mr. President, I move that the Senate reconsider the vote by which the amendment was agreed to.

Mr. HUMPHREY. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. LONG of Louisiana. Mr. President, I call up my amendment 22 and ask that it be read.

The VICE PRESIDENT. The amendment will be stated.

The LEGISLATIVE CLERK. On page 10, between lines 21 and 22, it is proposed to insert the following new subsection:

> (d) No part of any appropriated funds may be expended pursuant to authorization given by this Act for any technological research or development activity unless such expenditure is conditioned upon provisions determined by the Administrator, with the approval of the Attorney General, to be effective to insure that all information, uses, products, processes, patents, and other developments resulting from that activity will (with such exceptions and limitations as the Administrator may determine after consultation with the Secretary of Defense to be necessary in the interest of the national defense) be made freely and fully available to the general public. Nothing contained in this subsection shall deprive the owner of any background patent relating to any such activity of any right which that owner may have under that patent.

Mr. LONG of Louisiana. Mr. President, I yield myself 5 minutes.

On pages 9 and 10 of the bill provision is made for a considerable amount of research and development to be done by Government financing. My amendment follows the precedent which Congress has followed on other occasions with respect to the Department of Agriculture, the Department of the Interior, the coal research bill, the helium gas research bill, the Atomic Energy Commission, and the practice in the Federal Aviation Agency, which provides that when Federal money is spent upon research, the benefits of that research will be made fully available to the people of the country.

My amendment is designed to prevent the sort of thing which occurs in some departments, when a contractor is permitted to have a private patent upon the fruits of the research and either charge a higher fee or deny the benefits of the patent completely to the people of the country in general.

So the purpose of the amendment is to make certain that in spending research money, the benefits of the research will be made available to all the people of the country and to all communities which are sought to be benefited by the bill.

To my knowledge, this proposal was not considered by the committee. I believe that if it had been considered by the committee, the committee would have included in the bill language to cover this situation, just as the Committee on Interior and Insular Affairs, the Committee on Agriculture and Forestry, and other committees have cared for this type of proposal in considering measures relating to research.

I believe the managers of the bill will agree to accept the amendment. I hope that it will be agreed to.

Mr. SPARKMAN. Mr. President, as I understand, a similar amendment has been added to several pieces of legislation in recent years. I am willing to accept the amendment; I think it is a good one.

Mr. LONG of Louisiana. I believe it has been added to every piece of legislation authorizing research that has been passed by Congress.

Mr. SPARKMAN. As I understand, that is correct.

Mr. KEFAUVER. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. KEFAUVER. Several Senators have been considerably alarmed by the fact that language similar to this is in the Space Agency Act—the act creating NASA. Whereas contractors receive, on a cost-plus basis, 7 percent for doing research and development, the act intends that the fruits of the research, in the form of patents, should be the property of the United States. However, the Administrator of NASA has apparently been trying to promulgate rules which would enable him to give patents to the contractors, in addition to the 7 percent they receive on a cost-plus basis. The Senator from Louisiana has taken the lead in opposing that practice, and I have joined him. However, hearings were called for when Congress was not in session, and no one from the legislative branch was present to protest.

Is the amendment of the Senator from Louisiana worded so that there will not be a repetition of what is sought to be done by the Space Agency in connection with patents?

Mr. LONG of Louisiana. I am familiar with the problem in NASA. In that instance, the Administrator of the Agency has the power to waive patent rights if he finds such action to be in the national interest. What the Administrator of NASA proposes to do is to find that a monopoly is in the national interest as a general rule; and to waive patent rights in general in all cases in which it can be established in advance that patent rights should be waived.

The language of my amendment is more closely drawn. The language in the NASA Act was a compromise. I believe it satisfies no one. The language of this amendment is drawn strictly on the principle that the public is entitled to the full benefit of information derived from Government research.

Mr. KEFAUVER. Is it not true that NASA, having failed to have the legislation amended so that it could give away patent rights, is attempting to do so by regulations?

Mr. LONG of Louisiana. I regret to say that that seems to be the situation.

Mr. KEFAUVER. I congratulate the Senator from Louisiana upon his amendment. It is drawn so that there will not be a repetition of that kind of action.

Mr. LONG of Louisiana. I believe that to be the case.

Mr. ANDERSON. Mr. President, I desire to compliment the Senator from Louisiana upon his diligence in this field and to thank him for offering the amendment.

Mr. MAGNUSON. Mr. President, will the Senator from Louisiana yield 2 minutes to me?

Mr. LONG of Louisiana. Mr. President, I yield 2 minutes to the Senator from Washington.

Mr. MAGNUSON. Mr. President, as I understand, with all amendments disposed of, the bill now contains five amendments which were recommended by the Committee on Commerce.

Mr. SPARKMAN. The Senator is correct.

Mr. MAGNUSON. I desire to take this opportunity to express my deep appreciation to the subcommittee on Surface Transportation for its expeditious handling of the bill in the Committee on Commerce. I especially wish to thank the distinguished Senator from South Carolina [Mr. THURMOND], chairman of the subcommittee, who was opposed to the bill and will vote against it.

I pay my sincere compliments to the distinguished Senator from Nevada [Mr. CANNON] for his remarkably fine presentation of the bill in so short a time; and to Mr. Levin, our able assistant, who helped us all the way.

I urge the Senate to pass the bill, so that it may accomplish the purpose for which it was introduced.

Mr. THURMOND. Mr. President, will the Senator from Texas yield me 3 minutes?

Mr. TOWER. I yield 3 minutes to the Senator on the bill.

The PRESIDING OFFICER. The Senator from South Carolina is recognized for 3 minutes.

Mr. THURMOND. Mr. President, as I stated in my individual views in the Commerce Committee report on this legislation, I am opposed to enactment of the urban mass transit legislation. This proposal deals primarily with transportation, and yet the Commerce Committee was allowed slightly less than 2 weeks to consider it. The field of transportation falls entirely within the realm of responsibility of the Commerce Committee. During this short period, hearings were held by the Surface Transportation Subcommittee and every attempt was made to amend the bill so as to make it more consistent with a strong and vibrant national transportation policy.

The basic objective of our Nation's transportation system is, in the words of President Kennedy, "to assure the availability of the fast, safe, and economic transportation services needed in a growing and changing economy to move people and goods at the lowest cost consistent with health, convenience, national security, and other broad public objectives." This pronouncement by the President is certainly the objective which we all seek to achieve for our Nation's transportation system. As is usually the case, however, although there is no disagreement as to the basic objective in mind, there are many and varied opinions as to the method of achieving this objective. Last year, the Secretary of Commerce, Hon. Luther H. Hodges, in a hearing before the Senate Commerce Committee, stated the basic principle of the Department of Commerce in striving to achieve this goal. He said:

> We believe that this basic objective can and must be achieved primarily by continued reliance on unsubsidized, privately owned facilities, operating under the incentives of private profit.

Mr. President, I wholeheartedly subscribe to the underlying principle contained in this statement, and it is my belief that this urban mass transit legislation fails to meet the test prescribed by the Secretary of Commerce.

There is no constitutional authority for the National Government to enter this field of activity, which is purely local in nature. There have been very few attempts to justify this activity under the Constitution for the obvious reason that any argument must fall of its own weight. Certainly it does not fall within the scope of the commerce clause of the Constitution, and the welfare clause was never intended to cover expenditures for such activities as this. Had the welfare clause been intended to cover such a broad area, there would have been no necessity for the specific enumeration of delegated powers to Congress, which are found in article I, section 8 of the Constitution. Also, had the welfare clause been intended to cover such a broad scope, the 10th amendment would have been meaningless, for the National Government would have had all powers under the welfare clause and there would have been no powers to reserve to the States and to the people.

The urban mass transit proposals would violate the organizational structure of our federated system of government. Municipalities are subdivisions of States, although the States are not subdivisions of the National Government. The Congress should not deal directly with a subdivision of a State. If the pending bill shall be enacted, it will mean that the State governments will be bypassed and the local communities will be required to place more reliance on the National Government. This would, in effect, accomplish the same purpose which the creation of the Cabinet position of the Department of Urban Affairs, which was defeated in the last session of Congress, would have accomplished. It would erode the principles upon which our Federal system is based and relegate the State governments to a position inferior to the National Government in questions affecting municipalities and urban areas.

The Federal aid made available under the terms of the bill would be advanced directly to the local municipalities for their use as they saw fit, as long as they complied with the regulations issued by the Administrator of the HHFA. This would, of necessity, result in Federal control to a large extent over the transit systems of municipalities and urban areas. The funds would be made available to these municipalities and urban areas only on the condition that they complied with strict Federal regulations, without deviation. Such National Government intervention would result in complete control over this aspect of local governmental affairs. It is easy to visualize how complete control over this one area could be expanded over many other areas which would otherwise be under the control of the local governmental unit. Compliance with almost any request would be virtually assured by the threat of withholding funds for transit systems.

Mr. President, I submit that the subsidy program would set a precedent and would merely be the forerunner of what could be expected later. Without a doubt, such programs would be extended to cover interstate carriers and would increase National Government control to such an extent that the only alternative would be the complete nationalization of transportation systems.

Urban mass transit is not a national question. It is a local one, and should be left for local solution and local control. Municipalities can sell bonds, exempt from taxation by the National Government, to finance their own transit systems. All that this requires is that the citizens of the local areas recognize their problem and display the willingness to solve it locally. It would be unjust to saddle the entire economy with the tax burden which would be required upon approval of this legislation. The present state of our Nation's economy dictates the need for less Federal expenditures rather than more. While it is impossible to foresee the exact amount of expenditures which would result from enactment of this measure, it is quite apparent that the total could reach the $10 billion mark, or possibly more.

Even if the National Government had jurisdiction to act in this field, and this authority is completely lacking, the funds which would be required are simply not available. After viewing the problem objectively, it is apparent that the United States cannot afford to spend this huge sum, considering the present state of our fiscal affairs.

Mr. President, very little research has been conducted in the area of urban mass transportation. The testimony before the Surface Transportation Subcommittee reveals a startling lack of knowledge in the field. Coupled with this is a sparsity of information as to the practical aspects of this plan. It would be foolish for Congress to authorize this vast expenditure of funds for programs which have never been investigated, and whose effectiveness has not been demonstrated and cannot be assured.

Mr. FONG. Mr. President, speaking relative to Senate bill 6, I want to say there is no doubt that a serious transportation problem does exist. The rapid growth of our cities has spawned many new suburban complexes, unsightly freeways, and inadequate and outdated mass transit facilities. Our population continues to increase steadily, and Americans are stepping up their migration from rural to urban areas. These trends both point up and aggravate the problem of urban mass transportation.

I sympathize deeply with the millions of commuters who must daily spend several hours battling clogged highways and traffic jams.

Opponents of this measure are critical that the entire program is placed under the Federal Housing Administrator who is empowered to determine which plans the Government will underwrite and which it will not. It leaves too much to the arbitrary whim and discretion of the Administrator.

They also contend that enactment of this measure would be another attempt to solve municipal problems at the Federal level and would be another long step toward domination of essentially local responsibilities by the Central Government.

Many urban communities have already indicated a preference to resolve their transit problems without Federal grants. For example, voters in the San Francisco Bay area last year approved a $792-million bond issue to finance an entirely new transit system without outside help. In Los Angeles, plans are already underway to finance a costly monorail system almost entirely from fare-box revenues. And so it goes, in many other cities as well—Boulder, Colo.; Cleveland, Ohio; Chicago, Ill.; the Greater St. Louis area in Illinois and Missouri.

For me, I am not overly concerned about these criticisms to the measure. However, I am greatly concerned with our financial plight and our large numbers of unemployed people.

In such a situation, every Member of Congress is obliged to set up priorities to determine which of the many worthwhile measures proposed before the Congress he can, consistent with fiscal responsibility, and in good conscience support.

We must be very careful to husband our resources, so that those resources which are available to meet our domestic problems must be applied only to those problems which are most pressing.

The domestic problem which looms as most critical is our ailing economy—large numbers of Americans who are unemployed, our shaky fiscal situation. The President himself has called this America's No. 1 problem; he has recognized this in the proposed budget for fiscal 1964, which calls for a reduction in Federal expenditures in those areas not related to national defense.

In spite of the limited 3-year authorization of $375 million called for in the mass transit bill, there is little doubt that the program will cost billions of dollars over the next decade, with no end in sight. A report prepared for the Secretary of Commerce and the Housing Administrator has estimated that capital requirements alone in the next 10 years would total nearly $9 billion.

Once the program is started, very few city administrations with a real or imagined transit problem will be able to resist the appeal of a free handout from Washington, no matter how able they might be to solve the problem on their own.

It would be fiscally irresponsible to talk about committing the Government to spending $9 billion, at a time when our national budget faces a deficit of at least $8.8 billion in the current fiscal year, and at least $11.9 billion in fiscal 1964.

It would be financially disastrous to balloon the Federal debt beyond the present high level of $300 billion, and add to the high interest costs the Federal Government already is paying on this tremendous indebtedness.

It would be economically unsound to enact at this time legislation which would substantially increase domestic expenditures on a matter which, while serious, is considerably overshadowed by the problems of our lagging economy.

The plight of our economy requires that a substantial tax cut be enacted this year, a reduction sizable enough to invigorate our national economy. A reasonable scale of priorities does not justify enactment of this $375 million bill which eventually would cost $10 billion and would threaten passage of a tax cut measure indispensable to strengthen our economy.

I should also point out that if this bill is enacted into law, my own State, Hawaii, would be required to pay all out of proportion to the benefits it would derive from Federal grants. Figuring on the basis of population, Hawaii's nearly 700,000 citizens would have a $37 million bill over the next 10 years. The total assets of the Honolulu Rapid Transit Co., Ltd., according to the 1961 figures appearing in the Manual of Hawaii Securities, was valued at less than $5 million. Based on these figures, the $37 million that would be taken away from the people of Hawaii would be sufficient to replace the assets and facilities of the Honolulu Rapid Transit Co. seven times over.

I am quite sure that Hawaii's transit problems can be solved for far less than the $37 million that this legislation will take from us. This, however, is not the overriding reason I am voting against this measure.

The primary reasons I am voting against this proposal are because of our great deficit and our need to cut taxes. I feel strongly that we must have a large tax cut this year to reinvigorate our economy and to cut down our large unemployment. For these reasons, I do not feel that I can at this time support the measure now under consideration.

Under more favorable economic circumstances, when we have recovered our economic vitality, reduced our unemployment, and at a time when we can again enjoy a forward surge along all economic fronts, the mass transit bill might more reasonably be considered. But under our present national economic stress, a national fiscal policy for sound economic growth requires that there be greater selectivity of our new nondefense spending programs.

The VICE PRESIDENT. If there be no further amendment to be proposed, do the Senators who are in charge of the time yield back the remainder of the time available to them?

Mr. SPARKMAN. I yield back the remainder of the time under my control.

The VICE PRESIDENT. The question is on agreeing to the amendment of the Senator from Louisiana.

The amendment was agreed to.

Mr. TOWER. Mr. President, I shall yield back most of my time.

Let me say that I do not think the bill will be defeated — unfortunately — although I have labored in this vineyard for 4 days now, in an effort to obtain its defeat.

I believe everyone should understand what is at issue here. The question is not whether there is need for improvement of mass transportation facilities. We can assume that there is such need. The question is not whether there will be increased utilization as a result of such improvement. The issue here is that once more the Federal Government is invading the responsibilities of the people in their capacity as citizens of the local communities. We are constantly and steadily reducing the people of the country to a state of dependency on the Federal Government, to the extent that one day they will be completely subordinate to the Federal Government. We are weakening the moral fiber of our people by destroying their sense of local responsibility and initiative.

What else are we doing? At a time when we are piling deficit upon deficit and at a time when we are mortgaging the future of generations yet unborn, we are spending still more money—$750 million in this case.

Mr. President, I submit that it is both economically unsound and immoral for us to saddle our children and their children with such debts that we may have things for ourselves. That is the basic consideration which is involved in this case; and perhaps some day the people will judge the actions we take in this Chamber on that basis.

Mr. President, I yield back the remainder of the time under my control.

The VICE PRESIDENT. All remaining time has been yielded back.

The question now is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, and was read the third time.

The VICE PRESIDENT. The question is, Shall the bill pass?

On this question, the yeas and nays have been ordered.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that I may proceed for 2 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, we have spent 4 arduous days on this measure. I desire to take this occasion to commend the chairman of the subcommittee, the distinguished Senator from Alabama [Mr. SPARKMAN], for the managerial skill he has, as usual, displayed in the handling of the bill.

The Senator from New Jersey [Mr. WILLIAMS] is also entitled to high commendation, for his original sponsorship of the bill, and for his tireless efforts to amend it so as to assure its adoption.

The Senator from Pennsylvania [Mr. CLARK] worked assiduously to bring to the floor of the Senate a bill which would benefit the urban areas of the country.

The distinguished Senator from Nevada [Mr. CANNON] has contributed mightily, because of his work in connection with the Commerce Committee amendments.

I extend praise also to the chairman of the Commerce Committee, the Senator from Washington [Mr. MAGNUSON].

I believe a great deal of credit should go to the Senator from Oregon [Mr. MORSE] for the skillful and talented way in which he handled the very difficult amendment which has been considered and approved by the Senate. As usual, he has displayed great skill, and discrimination in connection with these matters.

I also wish to commend the distinguished Senator from Ohio [Mr. LAUSCHE], who, although he was not in favor of the bill, made his fight, and then accepted the verdict the Senate rendered. I would say that in a sense he is responsible for bringing to the floor of the Senate a better bill, because of his initiative in having the bill considered by the Commerce Committee, after it had once been cleared by the Banking and Currency Committee.

Mr. President, I would be remiss in the performance of my duty if I did not commend and compliment the distinguished Senator from Texas [Mr. TOWER], who has led the opposition to the bill during the last 4 days, and who has comported himself with dignity and restraint. Certainly he has performed in a way which does credit to the Senate and to himself.

Lastly, let me extend my appreciation, on behalf of those who support this measure, to the distinguished chairman of the Committee on Banking, the Senator from Virginia [Mr. ROBERTSON]. While he has never favored the bill, he interposed no objection to early hearings on it in his committee, and in fact displayed great courtesy by assisting in the expeditious handling of the matter.

Mr. DIRKSEN. Mr. President, will the majority leader yield?

Mr. MANSFIELD. I yield.

Mr. DIRKSEN. I wish to ask the majority leader about the program for the remainder of today and the remainder of the week.

However, first I should observe that the debate on the bill was kept on a high and a constructive note, and there was probably an absolute minimum of speeches on extraneous matters, not related to the measure before the Senate.

I, too, salute all the members of the two committees; and I give a particular salute to my genial and able friend, the Senator from Texas [Mr. TOWER], who has handled himself with extraordinary skill, and who very ably did his homework before coming to the floor to make his observations on this measure.

Mr. MANSFIELD. Mr. President, I agree with everything the distinguished minority leader has said.

Mr. DIRKSEN. Mr. President, now I should like to ask the distinguished majority leader what he contemplates for the remainder of today and for the remainder of the week, and, in view of a rather interesting event which will take place on Monday in this city, whether he has any plans for the schedule for that day.

Mr. MANSFIELD. Mr. President, in reply let me say there will be no further business before the Senate today, except speeches and the like, with the possible exception of consideration of some noncontroversial nominations and immigration bills, following completion of our action on the pending measure; and it is anticipated that then the Senate will adjourn until Monday morning.

ORDER FOR ADJOURNMENT TO 9 A.M., MONDAY

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate concludes its session today, it adjourn until 9 a.m. on Monday.

The VICE PRESIDENT. Without objection, it is so ordered.

AUTHORIZATION FOR ARMED SERVICES COMMITTEE TO FILE REPORT ON MILITARY PROCUREMENT BILL

Mr. RUSSELL. Mr. President, if the Senate is to adjourn from today to Monday, I hope we may obtain unanimous consent that the Committee on Armed Services may report H.R. 2440, the procurement bill, so it can be available for consideration by the Senate.

The VICE PRESIDENT. Is there objection? Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, that is another bill which we would like to bring up next week.

LEGISLATIVE PROGRAM

Mr. MANSFIELD. Mr. President, it is intended to have the Senate take up, later today, the wilderness bill, although no other action will be taken today on that measure. The distinguished Senator from New Mexico [Mr. ANDERSON], the distinguished Senator from Idaho [Mr. CHURCH], and the distinguished Senators from Colorado [Mr. ALLOTT and Mr. DOMINICK] have all been informed, and have given their approval to having the Senate take up the bill this afternoon and to having the consideration of the bill begin sometime Monday. That is our hope.

However, as the minority leader has noted, Monday is a special day, because it marks the beginning of the American League baseball season; and I understand that the Washington Senators and some other team will have a game, that day, and that there will be the usual festivities attendant to that.

So we shall begin our session on Monday at 9 a.m., in the hope that there will be debate on the wilderness bill, or on the off chance that, if not, we shall perhaps be able to take up the nominations to the Communications Satellite Corp.

Mr. DIRKSEN. Mr. President, if the distinguished Senator from Montana will yield further, and if this is a fair question, I am wondering when he proposes to schedule the so-called youth opportunities bill. It was reported this week from the Committee on Labor and Public Welfare.

Mr. MANSFIELD. I hope we can take it up on Tuesday, or upon completion of the wilderness bill.

Mr. DIRKSEN. Mr. President, in the best of grace and spirit, let me say that I always ask the majority leader, whenever opportunity affords, whether he can give us some comfort and solace regarding a possible recess in the Easter season, when the joys of spring are everywhere, the delights of the cherry blossoms somehow tantalize the eye and the taste, and the spirit of resurrection is upon the earth as the swelling buds burst into life, and the jonquils, the tulips, and the hyacinths spring forth in all their beauty.

However, thus far, I have received no real comfort from my friend, the distinguished Senator from Montana; but I hope this spirit is having an impact upon his affable genius, and that he can give us some comfort.

Mr. MANSFIELD. Well, Mr. President, there is a possibility that there will be some comfort and some solace, but it depends on how rapidly we get our work done. If the work is done, some comfort will be forthcoming.

Mr. RUSSELL. That is invoking the carrot and the stick.

Mr. DIRKSEN. I should like to ask the majority leader one further question. How many Easter eggs must go into the administration basket in order that we might earn our vacation?

Mr. MANSFIELD. Mr. President, my comment is "No comment."

COMMITTEE MEETING DURING SESSION OF THE SENATE NEXT MONDAY

Mr. BIBLE. Mr. President, will the majority leader yield, so that I may make a unanimous-consent request?

Mr. MANSFIELD. I yield.

Mr. BIBLE. I understand that the Senate will convene next Monday at 9 o'clock a.m.

Mr. MANSFIELD. The Senator is correct.

Mr. BIBLE. The Subcommittee on Public Lands has scheduled hearings on an important national park bill, in which the two Senators from Missouri are vitally interested. Arrangements have been made to hear two witnesses from Missouri on Monday at 10 o'clock. I ask unanimous consent that the Public Lands Subcommittee be authorized to meet during the session of the Senate on Monday morning.

Mr. DIRKSEN. Mr. President, I shall interpose no objection.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it so ordered.

AUTHORIZATION TO FILE COMMITTEE REPORTS DURING ADJOURNMENT

Mr. HUMPHREY. Mr. President, I ask unanimous consent that the Committee on Interior and Insular Affairs be authorized to file certain reports during the recess or adjournment of the Senate.

The VICE PRESIDENT. Without objection, it is so ordered.

URBAN MASS TRANSPORTATION ACT OF 1963

The Senate resumed the consideration of the bill (S. 6) to authorize the Housing and Home Finance Administrator to provide additional assistance for the development of comprehensive and coordinated mass transportation systems, both public and private, in metropolitan and other urban areas, and for other purposes.

The VICE PRESIDENT. The bill having been read the third time, the question is, Shall it pass? On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from Tennessee [Mr. GORE], the Senator from Utah [Mr. MOSS], the Senator from Florida [Mr. SMATHERS], and the Senator from Texas [Mr. YARBOROUGH] are absent on official business.

On this vote, the Senator from Tennessee [Mr. GORE] is paired with the Senator from Utah [Mr. BENNETT].

If present and voting, the Senator from Tennessee would vote "yea," and the Senator from Utah would vote "nay."

On this vote, the Senator from Texas [Mr. YARBOROUGH] is paired with the Senator from Colorado [Mr. DOMINICK].

If present and voting, the Senator from Texas would vote "yea," and the Senator from Colorado would vote "nay."

I further announce that if present and voting, the Senator from Florida [Mr. SMATHERS] would vote "nay."

Mr. KUCHEL. I announce that the Senator from Utah [Mr. BENNETT], the Senator from Kansas [Mr. CARLSON], and the Senator from Colorado [Mr. DOMINICK] are absent on official business.

If present and voting, the Senator from Kansas [Mr. CARLSON] would vote "nay."

On this vote, the Senator from Utah [Mr. BENNETT] is paired with the Senator from Tennessee [Mr. GORE].

If present and voting, the Senator from Utah would vote "nay," and the Senator from Tennessee would vote "yea."

On this vote, the Senator from Colorado [Mr. DOMINICK] is paired with the Senator from Texas [Mr. YARBOROUGH].

If present and voting, the Senator from Colorado would vote "nay" and the Senator from Texas would vote "yea."

The result was announced—yeas 52, nays 41, as follows:

So the bill (S. 6) was passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Urban Transportation Act of 1963".

FINDINGS AND PURPOSES

SEC. 2. (a) The Congress finds—

(1) that the predominant part of the Nation's population is located in its rapidly expanding metropolitan and other urban areas, which generally cross the boundary lines of local jurisdictions and often extend into two or more States;

(2) that the welfare and vitality of urban areas, the satisfactory movement of people and goods within such areas, and the effectiveness of housing, urban renewal, highway, and other federally aided programs are being jeopardized by the deterioration or inadequate provision of urban transportation facilities and services, the intensification of traffic congestion, and the lack of coordinated transportation and other development planning on a comprehensive and continuing basis; and

(3) that Federal financial assistance for the development of efficient and coordinated mass transportation systems is essential to the solution of these urban problems.

(b) The purposes of this Act are—

(1) to assist in the development of improved mass transportation facilities, equipment, techniques, and methods, with the cooperation of mass transportation companies both public and private;

(2) to encourage the planning and establishment of areawide urban mass transportation systems needed for economical and desirable urban development, with the cooperation of mass transportation companies both public and private; and

(3) to provide assistance to State and local governments and their instrumentalities in financing such systems, to be operated by public or private mass transportation companies as determined by local needs.

SEC. 3. (a) In accordance with the provisions of this Act, the Administrator is authorized to guarantee qualified revenue bonds or, where the Administrator has determined that such guaranteed revenue bonds would not provide the financial assistance required by the applicant, to make grants or loans (directly, through the purchase of securities or equipment trust certificates, or otherwise) to assist States and local public bodies and agencies thereof, and mass transportation companies both public and private, in financing the acquisition, construction, reconstruction, and improvement of facilities and equipment for use, by operation or lease or otherwise, in mass transportation service in urban areas and in coordinating such service with highway and other transportation in such areas. Assistance may be provided for land and improvements acquired or constructed in advance of such use, if the Administrator obtains adequate assurance of repayment of the assistance where the land and improvements are not in fact put to the proposed use within a reasonable period of time. Eligible facilities and equipment may include land (but not public highways), buses and other rolling stock, and any other real or personal property needed for an efficient and coordinated mass transportation system. No guarantee of revenue bonds, grant or loan shall be provided under this section unless the Administrator determines that the applicant (which in no case shall be a private company) has or will have (1) the legal, financial, and technical capacity to carry out the proposed project, and (2) satisfactory continuing control, through operation or lease or otherwise, over the use of the facilities and equipment. The applicant shall, with respect to private mass transportation companies, give full consideration to the exercise of such continuing control through the appropriate existing governmental regulatory agency authorized to issue to the operating company, in the form of certificates of public convenience and necessity, franchises, or other indicia of operating authority, the authority to operate as a private mass transportation company. No such funds shall be used for payment of ordinary governmental or nonproject operating expenses.

(b)(1) No financial assistance shall be made available under this Act to any State or local public body or agency thereof for the purpose, directly or indirectly, of acquiring any interest in, or purchasing any facilities or other property of a private mass transportation company, or for the purpose of constructing, improving, or reconstructing any facilities or other property acquired, after the effective date of this Act, from any such company; unless (A) such company has, prior to such acquisition, been declared bankrupt or placed into receivership by a court of competent jurisdiction, or (B) the Administrator finds that such assistance is essential to a program, proposed or under active preparation, for the acquisition of mass transportation facilities or property which are supplementary to the service provided by an existing publicly owned or operated mass transportation system, and (C) in either situation under A or B, the Administrator and the Secretary of Labor, acting jointly in accordance with the provisions of section 19(c) of this Act, find that the project to be assisted complies with the requirements set forth therein.

(b)(2) No financial assistance shall be made available under this Act to any State or local public body or agency thereof for the purpose of providing by contract or otherwise for the operation of mass transportation facilities or equipment in competition with, or supplementary to, the service provided by an existing mass transportation company unless (A) the Administrator finds that such assistance is essential to a program, proposed or under active preparation, for a unified or officially coordinated urban transportation system as part of the comprehensively planned development of the urban area, (B) the Administrator finds that such program, to the maximum extent feasible, provides for the participation of private mass transportation companies and (C) the Administrator and the Secretary of Labor, acting jointly in accordance with the provisions of section 19(c) of this Act, find that such program complies with the requirements set forth therein.

(c) No Federal assistance under this Act shall be extended to any State or local public body or agency thereof to assist any private mass transportation company unless the Administrator is assured that the State or States and the local public bodies or agencies thereof in the area covered by a proposed project have afforded the company every feasible relief, compatible with their own fiscal responsibilities, including, but not necessarily limited to, relinquishment of real property taxes, personal property taxes and franchise taxes; and no Federal assistance shall be extended under this Act to any State or local public body or agency thereof to assist a public mass transportation company or any division or segment of its operations when one or more other divisions or segments are operating profitably unless the Administrator is assured that the transfer of funds from one division or segment to another would not be compatible with the maintenance of a coordinated mass transportation system in the area covered by the proposed project.

(d) No loan shall be made under this section for any project for which a grant is made under this section, except grants made for relocation payments in accordance with section 16(b). Loans under this section shall be subject to the restrictions and limitations set forth in paragraphs (1), (2), and (3) of section 202(b) of the Housing Amendments of 1955. The authority provided in section 203 of such amendments to obtain funds for loans under clause (2) of section 202(a) of such amendments shall (except for undisbursed loan commitments) hereafter be exercised by the Administrator (without regard to the proviso in section 202(d) of such amendments) solely to obtain funds for loans under this section.

(e) Section 203(a) of the Housing Amendments of 1955 is amended by inserting before the period at the end of the third sentence a semicolon and the following: "except that notes or other obligations issued by the Administrator to the Secretary of the Treasury to obtain funds to provide financial assistance under section 202(a)(2) (as modified by section 3(d) of the Urban Mass Transportation Act of 1963) shall bear interest at a rate determined by the Secretary of the Treasury on the basis of the current average yield on outstanding marketable obligations of the United States of comparable maturities as of the last day of the month preceding the issuance by the Administrator of the notes or other obligations".

SEC. 4. Except as specified in section 14, no Federal financial assistance shall be provided pursuant to section 3 unless the Administrator determines that the facilities and equipment for which the assistance is sought are needed for carrying out a program, meeting criteria established by him, for a unified or officially coordinated urban transportation system as a part of the comprehensively planned development of the urban area, and are necessary for the sound, economic, and desirable development of such area. Such a program shall encourage, to the maximum extent feasible, the participation of private enterprise. Where facilities and equipment are to be acquired which are already being used in mass transportation service in the urban area, the program must provide that they shall be so improved (through modernization, extension, addition, or otherwise) that they will better serve the transportation needs of the area.

GUARANTEED BOND PROGRAM

SEC. 5. (a) The Administrator, upon application of a State, local public body or agency thereof, is authorized, in accordance with the provisions of this Act—

(1) to guarantee the payment of so much of the interest and the repayment of so much of the principal on the revenue bonds of such State, local public body, or agency thereof as would, but for such guarantee, be unpaid when due; and

(2) upon such terms as he may prescribe, to make commitments to guarantee the payment of interest and principal of any such revenue bonds prior to the date of execution or sale thereof.

(b) Each contract of guarantee made under this Act shall run to, and shall be for the benefit of, the owners of such revenue bonds.

(c) The faith and credit of the United States is solemnly pledged to the payment of so much of the interest and to the repayment of so much of the principal on each revenue bond guaranteed or committed to be guaranteed under this Act as would, but for the guarantee provided for by this Act, be unpaid, when due.

(d) The Administrator shall not enter into any contract of guarantee (or of commitment to guarantee) under this Act if such contract, when taken together with other contracts of guarantee outstanding under this Act, would guarantee the payment of bonds exceeding $375,000,000.

(e) The Administrator shall charge in connection with every contract of guarantee under this Act a premium equal to one-quarter of 1 per centum of the face value of the bonds so guaranteed.

Sec. 6. To be eligible for a guarantee under this Act, any revenue bond shall—

(1) expressly state on its face that the State, local public body, or agency thereof issuing said bond has waived the normal status of said bond as exempt from the provisions of the Federal income tax laws, and the interest on any bond expressing such waiver shall not be exempt from taxation under the Federal income tax laws;

(2) be issued for the purpose of securing funds for a program (as described in sections 3(a) and 4) approved by the Administrator, and at least 25 per centum of the financing of such program shall be by bonds or securities not guaranteed under this Act, so that the federally guaranteed portion shall not constitute more than 75 per centum of the total cost of the program;

(3) bear interest at an average interest rate approved by the Administrator and have a maturity date not in excess of fifty years;

(4) be determined by the Administrator to be of such sound value or so secured as reasonably to assure the punctual payment of principal and interest on the date or dates such payments are due and payable; and

(5) be issued under a trust indenture duly entered into between the State, local public body, or agency thereof and a corporate trustee approved by the Administrator containing all of the provisions required by section 7 of this Act and such other provisions as may be required by the Administrator and as may be agreed upon between such State, local public body or agency thereof and the trustee.

Sec. 7. (a) A trust indenture or supplemental trust indenture under which revenue bonds guaranteed under this Act are issued shall include provisions satisfactory to the Administrator—

(1) requiring the State, local public body, or agency thereof to insure that the mass rapid transit system or those portions thereof financed with the proceeds of the bonds is properly operated, kept at all times in good repair, working order, and condition, and that all lawful claims for labor, materials, and supplies or other charges are discharged and paid;

(2) requiring the State, local public body, or agency thereof to insure that the rates, fares, tolls, rentals, or other charges in connection with the services and facilities furnished from the mass rapid transit system, or any part thereof, financed from part or all of the proceeds of the bonds, are at least sufficient to pay the principal of and interest on the bonds as they become due and payable, together with all expenses of operation, maintenance, and repair of the system;

(3) requiring the State, local public body, or agency thereof to punctually pay or cause to be paid from its revenues the principal of all guaranteed revenue bonds and the interest thereon on the date or dates, at the place or places, and in the manner specified in the bonds; and

(4) providing for the systematic accumulation of revenues for the payment of the principal of all guaranteed revenue bonds and the interest thereon, which provisions shall be designed to assure that the State, local public body, or agency thereof, or the trustee of the trust indenture or supplemental trust indenture under which the guaranteed revenue bonds were issued, shall have accumulated revenues on or before the fifteenth day prior to the date or dates on which any installment of principal or interest becomes due and payable sufficient to pay in full such installment of principal or interest.

(b) Any such trust indenture or supplemental trust indenture shall also include provisions satisfactory to the Administrator requiring that in the event the State, local public body, or agency thereof has not, on the fifteenth day prior to the date or dates on which any installment of principal or interest becomes due and payable, accumulated, in the manner provided in paragraph (4) subsection (a) of this section, revenues sufficient to pay in full such installment of principal or interest, the State, local public body, or agency thereof, or the trustee of the trust indenture or supplemental trust indenture under which the guaranteed revenue bonds were issued, shall forthwith make and serve upon the Administrator a written demand for the amount of money needed to pay in full such installment of principal or interest, less the amount of revenues then accumulated for the payment of that installment of principal or interest. Such written demand shall be accompanied by a note made payable to the Federal transit revenue bond guarantee fund, created by section 10 of this Act, which shall constitute a binding obligation of the State, local public body, or agency thereof, as determined by the Administrator, and shall be in a principal amount equal to the amount of money demanded of the Administrator. Such note shall mature on or before a date six months following the date established for the retirement of the guaranteed revenue bond issue or, in case any prior note or notes are then held by the Secretary, on or before a date six months following the date of maturity of the prior note of latest maturity. Such note shall bear interest at a rate one-quarter of 1 per centum per annum higher than the average net interest cost of the entire guaranteed revenue bond issue, and shall be payable at maturity: *Provided*, That in no event should the interest rate of the notes so obtained be less than the interest rate accruing on Federal borrowings, as determined by the Secretary of the Treasury on the obligations of the United States of comparable maturities as of the last day of the month preceding the issuance of the notes. Nothing in this section shall preclude the Administrator from taking any remedial action otherwise available.

Sec. 8. Within ten days from the date of any demand made by a State, local public body, or agency thereof or trustee pursuant to the trust indenture provision required by section 7 of this Act, the Administrator shall pay to the trustee of the trust indenture or supplemental trust indenture under which the guaranteed revenue bonds were issued the amount of money specified in the demand, which money shall be applied by the trustee to the payment of the installment of principal or interest (or both) for which such money was demanded. Any money required to be paid by the Administrator to the trustee pursuant to this section shall be paid in funds good to the trustee on the payment date.

Sec. 9. The Administrator may, by rule or regulation, require States, local public bodies, or agencies thereof having outstanding revenue bonds guaranteed under this Act to submit to the Administrator from time to time such reports as in the opinion of the Administrator are necessary or desirable to enable the Administrator to anticipate in advance possible demands which may be made upon the Administrator for moneys required to be paid by the Administrator under section 8 of this Act.

Sec. 10. There is created a Federal transit revenue bond guarantee fund (hereinafter referred to as the "fund") which shall be used by the Administrator as a revolving fund for carrying out the provisions of this Act relating to the guarantee of revenue bonds and for the administrative expenses in connection therewith. All premiums and earnings on the assets of the fund shall be credited to the fund. Any moneys required to be paid by the Administrator under section 8 of this Act, and all administrative expenses in connection with the guarantee of revenue bonds under this Act, shall be paid from the fund; and there is authorized to be appropriated to the fund such sums as may be necessary to make such payments. The faith and credit of the United States is solemnly pledged to the payment of all moneys required to be paid by the Administrator under section 8 of this Act. Moneys in the fund not needed for current operations under this Act shall be deposited with the Treasurer of the United States to the credit of the fund or invested in bonds or other obligations of, or guaranteed as to principal and interest by, the United States.

Sec. 11. The Administrator is authorized and directed to make such rules and regulations as may be deemed necessary or appropriate to carry out the purposes and provisions of this Act: *Provided*, That no provisions of this Act shall be construed to authorize the Administrator to regulate in any manner the mode of operation of any mass rapid transit system or the rates, fares, tolls, rentals, or other charges fixed or prescribed by any State, local public body, or agency thereof.

Sec. 12. The limitations and restrictions on the powers of national banking associations contained in paragraph "Seventh" of section 5136 of the Revised Statutes, as amended (12 U.S.C. 24), as to dealing in, underwriting, and purchasing for their account investment securities shall not apply to revenue bonds of a State, local public body, or agency thereof which are guaranteed by the Administrator under this Act.

GRANT PROGRAM

Sec. 13. (a) The Administrator shall estimate what portion of the cost of a project to be assisted under section 3 of this Act cannot be reasonably financed from revenues—which portion shall hereinafter be called "net project cost". The Federal grant for such a project shall not exceed two-thirds of the net project cost. The remainder of the net project cost shall be provided, in cash, from sources other than Federal funds, and no refund or reduction of that portion so provided shall be made at any time unless there is at the same time a refund of a proportional amount of the Federal grant. In determining net project cost for any project to be assisted under section 3, any estimate of revenues shall not be reduced by any amount to be allocated as a reserve for replacement of equipment or facilities. No grant shall be made for any project pursuant to section 3 unless the Administrator determines that (1) there exists a commitment from non-Federal sources to supply the remainder of the net project cost, and (2) the Federal Government's interest in the project is adequately protected in the event of a default or a failure to complete such project.

(b) To finance grants under this Act there is hereby authorized to be appropriated at any time after its enactment not to exceed $75,000,000 for fiscal years 1963 and 1964; $150,000,000 for fiscal year 1965; and $150,000,000 for fiscal year 1966. Any amount so appropriated shall remain available until expended; and any amount authorized but not appropriated for any fiscal year may be appropriated for any succeeding fiscal year. The Administrator is authorized, notwithstanding the provisions of section 3648 of the Revised Statutes (31 U.S.C. 529) as amended, to make advance or progress payments on account of any grant made pursuant to this Act.

(c) Any application under section 3 for a grant to assist any project for the provision of mass transportation service in an urban area shall include a schedule of fares, determined by the Administrator to be economically sound, and upon the basis of which the Administrator shall make his estimate of net project cost. If, at any time after the making of such grant while any revenue obligations issued to finance the project are outstanding, a change is effected in such schedule which the Administrator determines will substantially reduce revenues from the project and lessen the chances for an economically sound operation, he shall so notify the recipient of such grant. Thereafter, the Administrator shall not extend any assistance under any law administered by the Housing and Home Finance Agency (except pursuant to a commitment entered into prior to such notice) to finance in whole or in part any project to be undertaken in such area, until he determines that such schedule has been so revised, or that other action has been so taken, as to permit an economically sound operation.

EMERGENCY PROGRAM

SEC. 14. Prior to July 1, 1966, Federal financial assistance may be provided pursuant to section 3 where (1) the program for the development of a unified or officially coordinated urban transportation system, referred to in section 4, is under active preparation although not yet completed, (2) the facilities and equipment for which the assistance is sought can reasonably be expected to be required for such a system, and (3) there is an urgent need for their preservation or provision. The Federal grant for such a project shall not exceed one-half of the net project cost: *Provided*, That where a Federal grant is made on such a one-half basis, and the planning requirements specified in section 4 are fully met within a three-year period after the execution of the grant agreement, an additional grant may then be made to the applicant equal to one-sixth of the net project cost. The remainder of the net project cost shall be provided, in cash, from sources other than Federal funds, and no refund or reduction of that portion so provided shall be made at any time unless there is at the same time a refund of a proportional amount of the Federal grant.

RESEARCH, DEVELOPMENT, AND DEMONSTRATION PROJECTS

SEC. 15. (a) The Administrator is authorized to undertake research, development, and demonstration projects in all phases of urban mass transportation (including the development, testing, and demonstration of new facilities, equipment, techniques, and methods) which he determines will assist in the reduction of urban transportation needs, the improvement of mass transportation service, or the contribution of such service toward meeting total urban transportation needs at minimum cost. He may undertake such projects independently or by contract (including working agreements with other Federal departments and agencies). In carrying out the provisions of this section, the Administrator is authorized to request and receive such information or data as he deems appropriate from public or private sources.

(b) The Administrator may make available to finance projects under this section not to exceed $10,000,000 of the mass transportation grant authorization provided in section 13 (b), which limit shall be increased to $20,000,000 on July 1, 1964, and to $30,000,000 on July 1, 1965. In addition, notwithstanding the provisions of section 4 of this Act or of section 103(b) of the Housing Act of 1949, the unobligated balance of the amount available for mass transportation demonstration grants pursuant to the proviso in such section 103(b) shall be available solely for financing projects under this section.

(c) Nothing contained in this section shall limit any authority of the Administrator under section 602 of the Housing Act of 1956 or any other provision of law.

(d) No part of any appropriated funds may be expended pursuant to authorization given by this Act for any technological research or development activity unless such expenditure is conditioned upon provisions determined by the Administrator, with the approval of the Attorney General, to be effective to insure that all information, uses, products, processes, patents, and other developments resulting from that activity will (with such exceptions and limitations as the Administrator may determine after consultation with the Secretary of Defense to be necessary in the interest of the national defense) be made freely and fully available to the general public. Nothing contained in this subsection shall deprive the owner of any background patent relating to any such activity of any right which that owner may have under that patent.

RELOCATION REQUIREMENTS AND PAYMENTS

SEC. 16. (a) No financial assistance shall be extended to any project under section 3 unless the Administrator determines that an adequate relocation program is being carried on for families displaced by the project and that there are being or will be provided (in the same area or in other areas generally not less desirable in regard to public utilities and public and commercial facilities and at rents or prices within the financial means of the displaced families) an equal number of decent, safe, and sanitary dwellings available to those displaced families and reasonably accessible to their places of employment.

(b) Notwithstanding any other provision of this Act, financial assistance extended to any project under section 3 may include grants for relocation payments, as herein defined. Such grants may be in addition to other financial assistance for the project under section 3, and no part of the amount of such relocation payments shall be required to be contributed as a local grant. The term "relocation payments" means payments by the applicant to individuals, families, business concerns, and nonprofit organizations for their reasonable and necessary moving expenses and any actual direct losses of property except goodwill or profit, for which reimbursement or compensation is not otherwise made, resulting from their displacement by the project. Such payments shall be made subject to such rules and regulations as may be prescribed by the Administrator, and shall not exceed $200 in the case of an individual or family, or $3,000 (or if greater, the total certified actual moving expenses) in the case of a business concern or nonprofit organization. Such rules and regulations may include provisions authorizing payment to individuals and families of fixed amounts (not to exceed $200 in any case) in lieu of their respective reasonable and necessary moving expenses and actual direct losses of property.

COORDINATION OF FEDERAL ASSISTANCE FOR HIGHWAYS AND FOR MASS TRANSPORTATION FACILITIES

SEC. 17. (a) In order to assure coordination of highway and railway and other mass transportation planning and development programs in urban areas, particularly with respect to the provision of mass transportation facilities in connection with federally assisted highways (including the acquisition of land and the acquisition or construction of improvements in advance of such use), the Administrator and the Secretary of Commerce shall consult on general urban transportation policies and programs and shall exchange information and otherwise cooperate with respect to the planning, financing, and construction of proposed projects in urban areas.

(b) In order to be assured that proposed projects will not unnecessarily disrupt or otherwise have a deleterious effect (of a temporary or permanent nature) upon rail or motor carriers currently engaged in interstate commerce and subject to regulation by the Interstate Commerce Commission, the Administrator shall consult with the Chairman of the Interstate Commerce Commission with respect to proposed projects affecting interstate transportation, and the Administrator and the Chairman of the Interstate Commerce Commission shall exchange information and otherwise cooperate with respect to such projects.

GENERAL PROVISIONS

SEC. 18. (a) In the performance of, and with respect to, the functions, powers, and duties vested in him by this Act, the Administrator shall (in addition to any authority otherwise vested in him) have the functions, powers, and duties set forth in section 402, except subsections (c)(2) and (f), of the Housing Act of 1950. Subject to the provisions of section 10, funds obtained or held by the Administrator in connection with the performance of his functions under this Act shall be available for the administrative expenses of the Administrator in connection with the performance of such functions.

(b) To insure that small business concerns are given an equitable opportunity to share in all procurement aspects of any project for which a loan or grant is made under this Act, the Administrator shall cooperatively develop with the Small Business Administration within four months after the effective date of this paragraph a small business contracting program to be applicable to all such projects. The program shall contain such provisions as may be necessary to (1) enable small business concerns to have an equitable opportunity to compete, either directly or as subcontractors, for contracts and procurements for property and services awarded in the implementation and effectuation of the purposes of this Act, and (2) enable the Small Business Administration to obtain from the local public bodies and mass transportation companies such reasonably obtainable information concerning contracts and procurement, including subcontracts thereunder, awarded in the implementation and effectuation of the purposes of this Act.

(c) All contracts for construction, reconstruction, or improvement of facilities and equipment in furtherance of the purposes for which a loan grant, or guarantee is made under this Act, entered into by applicants under other than competitive bidding procedures as defined by the Administrator, shall provide that the Administrator and the Comptroller General of the United States, or any of their duly authorized representatives, shall, for the purpose of audit and examination, have access to any books, documents, papers, and records of the contracting parties that are pertinent to the operations or activities under such contracts.

(d) As used in this Act—

(1) the term "States" means the several States, the District of Columbia, the Commonwealth of Puerto Rico, and the possessions of the United States;

(2) the term "local public bodies" includes municipalities and other political subdivisions of States; public agencies and instrumentalities of one or more States, municipalities, and political subdivisions of States; and public corporations, boards, and commissions established under the laws of any State;

(3) the term "Administrator" means the Housing and Home Finance Administrator;

(4) the term "urban area" means any area that includes a municipality or other built-up place which is appropriate, in the judgment of the Administrator, for a public transportation system to serve commuters or others in the locality taking into consideration the local patterns and trends of urban growth; and

(5) the term "mass transportation" means transportation by bus or rail or other conveyance, either publicly or privately owned, serving the general public and moving over prescribed routes, but does not include charter or sightseeing service, or aircraft or steamship service (other than ferrying service).

(e) There are hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, the funds necessary to carry out all functions under this Act except loans under section 3. All funds appropriated under this Act for other than administrative expenses shall remain available until expended.

(f) Except as otherwise provided in this subsection, contracts for grants under section 3 (other than relocation payments in accordance with section 16(b)) for projects in any one State shall not exceed in the aggregate 12½ per centum of the amount of grant funds appropriated under the authority contained in section 13(b). The Administrator may make additional contracts for such grants (subject to the limitations prescribed in section 13(b)) aggregating not to exceed 10 per centum of the amount appropriated, but such additional contracts for grants for projects in any one State shall not exceed in the aggregate 1 per centum of the amount appropriated. In the case of any project undertaken in two or more States, in accordance with a duly approved compact or other agreement, the Administrator may apply the foregoing limitations by allocating any portion of the grants contracted for such project to any one or more of such States.

(g) The Administrator shall make an annual report to the President for submission to the Congress on the administration of this Act. Such report shall indicate to whom financial assistance has been extended pursuant to this Act, the purposes for which such assistance is to be utilized, and the amounts involved, and may include such other information, comments, and recommendations as the Administrator deems appropriate.

(h) The first sentence of section 814 of the Housing Act of 1954, as amended (42 U.S.C. 1434), is amended by—

(1) inserting after "grant,", the first place it appears, the following: "guaranteed revenue bond issue,";

(2) inserting after "grant,", the second place it appears, the following: "guaranteed revenue bond issue (including the revenues from which the bonded indebtedness is to be repaid),"; and

(3) inserting after "grant,", the third place it appears, the following: "guaranteed revenue bond issue,".

LABOR STANDARDS

SEC. 19. (a) The Administrator shall take such action as may be necessary to insure that all laborers and mechanics employed by contractors or subcontractors in the performance of construction work financed with the assistance of loans or grants under this Act shall be paid wages at rates not less than those prevailing on similar construction in the locality as determined by the Secretary of Labor in accordance with the Davis-Bacon Act, as amended. The Administrator shall not approve any such loan or grant without first obtaining adequate assurance that these labor standards will be maintained upon the construction work.

(b) The Secretary of Labor shall have, with respect to the labor standards specified in subsection (a), the authority and functions set forth in Reorganization Plan Numbered 14 of 1959 (15 F.R. 3176, 64 Stat. 1267 5 U.S.C. 133z–15), and section 2 of the Act of June 13, 1934, as amended (48 Stat. 948, 40 U.S.C. 276c).

(c) It shall be a condition of the granting of any assistance or the financing of any project under this Act that fair and equitable arangements are made, as determined jointly by the Administrator and the Secretary of Labor, to protect the interests of employees affected by such assistance or financing. Such protective arrangements shall include, without being limited to, such provisions as may be necessary for (1) the preservation of rights, privileges, and benefits (including the continuation of pension rights and benefits of all beneficiaries) under existing collective bargaining agreements or otherwise; (2) the continuation of collective bargaining in any situation where it now exists; (3) the protection of individual employees against a worsening of their positions with respect to their employment which shall in no event provide benefits less than those established pursuant to the provisions of section 5(2)(f) of the Interstate Commerce Act; (4) assurances of employment to employees of acquired mass transportation systems by the acquiring or operating entities, and priority of employment or reemployment of employees terminated or laid off; and (5) paid training or retraining programs. The contract for the granting of any such assistance shall specify the terms and conditions of such protective arrangements.

AIR POLLUTION CONTROL

SEC. 20. In providing financial assistance to any project under section 3, the Administrator shall take into consideration whether the facilities and equipment to be acquired constructed, reconstructed, or improved will be designed and equipped to prevent and control air pollution in accordance with any critera established for this purpose by the Secretary of Health, Education, and Welfare.

Mr. SPARKMAN. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. HUMPHREY. Mr. President, I move to lay that motion on the table.

The PRESIDING OFFICER. The question is on agreeing to the motion to lay on the table.

The motion to lay on the table was agreed to.

Mr. SPARKMAN. Mr. President, I ask unanimous consent that the bill, as passed by the Senate, be printed.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. WILLIAMS of New Jersey subsequently said:

Mr. President, I had the high honor to be the principal sponsor of the mass transportation bill which has just passed the Senate. I did not take the time during the debate, but I should like to do so now, to say that the bill was a very complicated procedural and substantive measure which was considered over many weeks, if not months. It was complicated by the fact that both the Committee on Banking and Currency and the Committee on Commerce had jurisdiction. We encountered very complex problems. The staffs of other committees were included in our discussions.

The Senate employees presented one of the finest examples of the highest dedication of staff personnel in the Senate. Their willingness to work all day and literally all night was an example of the finest public service. I want the record to reflect that sentiment. So many persons worked on the preparation of the bill that I shall not mention any names; but they included the staffs of the Committee on Banking and Currency, the Committee on Commerce, and the Committee on Labor and Public Welfare, and members of the staffs of many Senators.

TRANSACTION OF ROUTINE BUSINESS

By unanimous consent, the following routine business was transacted:

REPORT OF SECRETARY OF HEALTH, EDUCATION, AND WELFARE ON PLACEMENT AND FOSTER CARE OF DEPENDENT CHILDREN—MESSAGE FROM THE PRESIDENT

The VICE PRESIDENT laid before the Senate the following message from the President of the United States, which, with the accompanying report, was referred to the Committee on Finance:

To the Congress of the United States:

Pursuant to section 155 of Public Law 87–543, I transmit herewith a report of the Secretary of Health, Education, and Welfare regarding experience under subsection (a) of that section.

JOHN F. KENNEDY.

THE WHITE HOUSE, *April 4, 1963.*

EXECUTIVE COMMUNICATIONS, ETC.

The Vice President laid before the Senate the following communication and letters, which were referred as indicated:

DISTRICT OF COLUMBIA CHARTER ACT

A communication from the President of the United States, transmitting a draft of proposed legislation to provide an elected mayor, city council, and nonvoting Delegate to the House of Representatives for the District of Columbia, and for other purposes (with an accompanying paper); to the Committee on the District of Columbia.

STOCKPILING, STORAGE, AND DISTRIBUTION OF ESSENTIAL FOODSTUFFS

A letter from the Secretary of Agriculture, relating to a proposed bill transmitted to the Senate on March 25, 1963, "to provide for the stockpiling, storage, and distribution of essential foodstuffs, including wheat and feed grains, to assure supplies to meet emergency civil defense needs, and other purposes," advising that enactment of the proposed legislation would be in accord with the President's program; to the Committee on Agriculture and Forestry.

Plans for Works of Improvement in Various States

A letter from the Director, Bureau of the Budget, Executive Office of the President, transmitting, pursuant to law, plans for works of improvement in the States of Florida, Iowa, Missouri, New Mexico, North Carolina, Pennsylvania, West Virginia, and South Dakota (with accompanying papers); to the Committee on Agriculture and Forestry.

Report on Reapportionment of Appropriations

A letter form the Director, Bureau of the Budget, Executive Office of the President, reporting, pursuant to law, that two appropriations to the executive branch for the fiscal year 1963 had been reapportioned on a basis which indicates the necessity for supplemental estimates of appropriation; to the Committee on Appropriations.

Amendment of Title 10, United States Code, Relating to Disposition of Certain Nationals of the United States in Foreign Countries

A letter from the Secretary of the Army, transmitting a draft of proposed legislation to amend title 10, United States Code, to provide for the disposition of certain nationals of the United States in foreign countries who are alleged and determined to be of unsound mind, and dangerous to persons or property, and for other purposes (with an accompanying paper); to the Committee on Armed Services.

Amendment of Federal Civil Defense Act of 1950, To Authorize Certain Amounts Received by Way of Reimbursement for Medical Supplies and Equipment

A letter from the Secretary of Health, Education, and Welfare, transmitting a draft of proposed legislation to amend the Federal Civil Defense Act of 1950, as amended, to authorize certain amounts received by way of reimbursement for medical supplies and equipment to be used to purchase other medical supplies and equipment (with an accompanying paper); to the Committee on Armed Services.

Report on National Industrial Reserve

A letter from the Assistant Secretary of Defense, Installations and Logistics, transmitting, pursuant to law, a report on the National Industrial Reserve, dated April 1, 1963 (with an accompanying report); to the Committee on Armed Services.

Housing for the Elderly

A letter from the Administrator, Housing and Home Finance Agency, Washington, D.C., transmitting a draft of proposed legislation to provide additional housing for the elderly (with accompanying papers); to the Committee on Banking and Currency.

List of Real Property Exempt From Taxation in the District of Columbia

A letter from the President, Board of Commissioners, District of Columbia, transmitting, pursuant to law, a list of real property exempt from taxation in the District of Columbia, for calendar year 1961 (with an accompanying report); to the Committee on the District of Columbia.

Reports on Real Property Exempt From Taxation in the District of Columbia

A letter from the President, Board of Commissioners, District of Columbia, transmitting, pursuant to law, reports on real property exempt from taxation in the District of Columbia, for the calendar year 1961 (with accompanying reports); to the Committee on the District of Columbia.

Amendment of Section 7 of Administrative Expenses Act of 1946, To Provide for the Payment of Certain Travel Costs

A letter from the Chairman, U.S. Civil Service Commission, transmitting a draft of proposed legislation to amend section 7 of the Administrative Expenses Act of 1946, as amended, to provide for the payment of travel cost for applicants invited by a department to visit it for purposes connected with employment (with accompanying papers); to the Committee on Government Operations.

Report on Review of Overpricing of Target Seeking Systems for the Bomarc Missile Under Contract With the Boeing Co., Seattle, Wash.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the review of overpricing of target seeking systems for the Bomarc missile under Department of the Air Force negotiated contract AF 33(600)-38098 with the Boeing Co., Seattle, Wash., dated March 1963 (with an accompanying report); to the Committee on Government Operations.

Report on Proposed Contract Relating to Drainage Work on Crooked River Project, Oregon

A letter from the Assistant Secretary of the Interior, transmitting, pursuant to law, a proposed contract relating to proposed drainage work on the Crooked River project, Oregon (with an accompanying paper); to the Committee on Interior and Insular Affairs.

Reports Relating to Visa Petitions

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, reports concerning visa petitions approved by that Service, according the beneficiaries of such petitions first preference classification (with accompanying papers); to the Committee on the Judiciary.

Suspension of Deportation of Certain Aliens

Two letters from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders suspending deportation of certain aliens, together with a statement of the facts and pertinent provisions of law as to each alien and the reasons for ordering such suspension (with accompanying papers); to the Committee on the Judiciary.

Extension of Juvenile Delinquency and Youth Offenses Control Act of 1961

A letter from the Secretary of Health, Education, and Welfare, transmitting a draft of proposed legislation to extend for 3 years the provisions of the Juvenile Delinquency and Youth Offenses Control Act of 1961 (with an accompanying paper); to the Committee on Labor and Public Welfare.

Plans for Works of Improvement in Maryland and Kentucky

A letter from the Director, Bureau of the Budget, Executive Office of the President, transmitting, pursuant to law, plans for works of improvement on Upper Rock Creek, Md., and Buck Creek, Ky. (with accompanying papers); to the Committee on Public Works.

JOINT RESOLUTION OF CALIFORNIA LEGISLATURE

The VICE PRESIDENT laid before the Senate a joint resolution of the Legislature of the State of California, which was referred to the Committee on Public Works, as follows:

Assembly Joint Resolution 15

Resolution relative to memorializing Congress to enact legislation authorizing flood control appropriations to the Yuba County Water Agency

Whereas the Yuba County Water Agency was created by special act of the Legislature of the State of California, approved June 3, 1959, to develop and promote the beneficial uses and regulation of the water resources of Yuba County, including flood control; and

Whereas the people of Yuba and Sutter Counties have been subjected to devastating floods; and

Whereas the flood experienced during the Christmas season, 1955, was of particular severity, requiring three major evacuations from the Marysville-Yuba city area and causing loss of lives and millions of dollars of property; and

Whereas the Yuba County Water Agency has completed studies and has proceeded expeditiously and at great expense to the taxpayers of Yuba County to develop the water resources of the Yuba River for the conservation of water for agriculture, domestic, and recreational uses, for the generation of power, and for flood control; and

Whereas it is the policy of the Congress of the United States as manifested in many enactments adopted by the Congress over the years to allocate to flood control, on a nonreimbursable basis, such costs of construction of a project as may be found to be proper for the purposes of flood control under criteria established by the appropriate agencies of the United States; and

Whereas authorization for flood control appropriations is essential to the economic feasibility of the Yuba River development as proposed by the Yuba County Water Agency: Now, therefore, be it

Resolved by the Assembly and Senate of the State of California, jointly, That the legislature memorialize the Congress of the United States to enact legislation authorizing flood control appropriations to be made to the Yuba County Water Agency under appropriate criteria established in such legislation; and be it further

Resolved, That the chief clerk of the assembly be hereby directed to transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States.

REPORT ENTITLED "ORGANIZATION OF FEDERAL EXECUTIVE DEPARTMENTS AND AGENCIES"—REPORT OF A COMMITTEE (S. REPT. NO. 110)

Mr. McCLELLAN. Mr. President, as chairman of the Committee on Government Operations, I am filing a report on behalf of the Committee on the Organization of Federal Executive Departments and Agencies, depicting the number of Federal employees assigned to the Executive Office of the President, the 13 departments and to the 50 independent agencies of the Federal Government, as of January 1, 1963.

The 2,462,262 employees reported by the executive branch of the Government compares to 2,418,864 reported on January 1, 1962; an increase of 43,469 during the calendar year 1962. For security reasons no employees of the Central Intelligence Agency are reported.

During the last 2 years, the Executive Office of the President reduced its personnel by 1,215, due primarily to the transfer of 1,106 civil defense employees from OCDM to the Department of Defense in 1961. The 13 executive departments reported total net increases of 57,643 in 1961 and 32,342 in 1962. The independent agencies showed net increases totaling 17,955 in 1961 and 11,127 in 1962. These increases reflected a total of 117,852 more employees in the executive branch of the Government than was reported on January 1, 1961.

The total of 2,462,262 employees reported by the executive branch represents an increase of 501,233 over the number employed as of January 1, 1950, the low since World War II, and prior to the Korean conflict. During the last 16 years, beginning on January 1, 1947, when this committee released its first report, there has been an overall net increase of 199,637 employees.

The increases of 43,469 in the departmental total during 1962 were reported by the Department of Defense, 7,330; Health, Education, and Welfare, 4,879—attributed largely to the amendments to the Social Security Act, totaling 12,903 in the last 2 years, bringing about an increase of more than 100 percent since the Department was created in 1953; Agriculture, 5,109; Interior, 4,496; Treasury, 3,457; Post Office, 2,591; State 1,210; Commerce, 1,167; Labor, 1,151; and Justice, 952.

The independent agencies reported a net increase of 11,127 in 1962, which with the increases of 17,955 reported in 1961, aggregate a total of 29,082 new employees during the past 2 calendar years. In 1962, the largest increases were reported by the National Aeronautics and Space Administration, 6,724; the Federal Aviation Agency, 2,048; the General Services Administration, 1,403; the Housing and Home Finance Agency, 1,365; the Panama Canal Company, 520; and the U.S. Information Agency, 493. Thirteen of the executive agencies reported decreases in personnel during calendar year 1962: Veterans Administration, 3,047; Tennessee Valley Authority, 520; and the remaining 11 reported a combined total decrease of 209 employees.

As of January 1, 1962, 174,178 civilian employees of the executive branch were engaged in oversea activities, of which 61,523 were American citizens and 112,655 were nationals of other countries. This was a decrease of 704 American citizens and an increase of 3,182 foreign nationals over those reported on January 1, 1962.

The employment statistics contained in the report were developed by the committee staff, based on information furnished by officials of the executive branch, to accompany a chart outlining the organization of the major components of the Government, both of which are being released by the committee today.

I ask that the report be printed.

The PRESIDING OFFICER (Mr. Brewster in the chair). The report will be received and printed, as requested by the Senator from Arkansas.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. HAYDEN:

S. 1269. A bill for the relief of the Arizona Milling Co., of Phoenix, Ariz.; to the Committee on the Judiciary.

By Mr. McGOVERN:

S. 1270. A bill to amend the Packers and Stockyards Act, 1921, to strengthen independent competition by providing for competitive enterprise in the retail sales of meat, meat food products, livestock products, and other food items; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. McGovern when he introduced the above bill, which appear under a separate heading.)

By Mr. METCALF:

S. 1271. A bill to amend section 18 of the Railroad Retirement Act of 1937 to restore free transportation on any railroad carrier subject to that act for individuals receiving annuities or pensions under that act, and for their dependents, and for other purposes; to the Committee on Labor and Public Welfare.

By Mr. JAVITS:

S. 1272. A bill for the relief of Viktor Jaanimets; to the Committee on the Judiciary.

(See the remarks of Mr. Javits when he introduced the above bill, which appear under a separate heading.)

By Mr. GRUENING (for himself, Mr. McGovern, Mr. Bartlett, Mr. Kuchel, and Mr. Mundt):

S. 1273. A bill to establish in the Department of the Interior a Gold Procurement and Sales Agency, and for other purposes; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. Gruening when he introduced the above bill, which appear under a separate heading.)

By Mr. SCOTT (for himself, Mr. Byrd of West Virginia, and Mr. Randolph):

S. 1274. A bill to amend the Area Redevelopment Act so as to provide preference in the awarding of certain Government contracts to contractors in areas of substantial and persistent unemployment; to the Committee on Banking and Currency.

(See the remarks of Mr. Scott when he introduced the above bill, which appear under a separate heading.)

By Mr. KUCHEL (for himself and Mr. Moss):

S. 1275. A bill to clarify the relationship of interests of the United States and of the States in the use of the waters of certain streams; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. Kuchel when he introduced the above bill, which appear under a separate heading.)

By Mr. FULBRIGHT (by request):

S. 1276. A bill to amend further the Foreign Assistance Act of 1961, as amended, and for other purposes; to the Committee on Foreign Relations.

(See the remarks of Mr. Fulbright when he introduced the above bill, which appear under a separate heading.)

By Mr. MAGNUSON (for himself and Mr. Jackson):

S. 1277. A bill to establish a system for the classification and compensation of professional engineering, physical science, and related positions in the Federal Government, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. PELL:

S. 1278. A bill to provide that the National Bureau of Standards shall conduct a program of investigation, research, and survey to determine the practicability of the adoption by the United States of the metric system of weights and measures; to the Committee on Commerce.

(See the remarks of Mr. Pell when he introduced the above bill, which appear under a separate heading.)

PREVENTION OF MONOPOLY IN THE MEAT INDUSTRY

Mr. McGOVERN. Mr. President, I have been concerned for several years about the growing concentration of power and monopolistic practices in livestock, meat and poultry marketing. This problem has been made more acute by the recent sharp decline in cattle and beef practices. Throughout the meat and poultry industry the vertical integration of retailing with wholesaling, transportation, manufacturing, processing, and production including livestock feeding has added to the concentration of economic power. In addition, the acquisition by large corporate food chains of competing retailers and manufacturing and processing plants is a further threat to independent business.

For these reasons I am today introducing a bill to amend the Packers and Stockyards Act of 1921 to strengthen competition by preventing packers from entering retail business or cattle feeding and likewise prohibiting large retailers from entering the packing business or feeding. Similar legislation has been introduced in the other body by the distinguished gentleman from California [Mr. Roosevelt]. This bill, I am convinced, would be a great help to livestock feeders and poultry growers in preventing the use of feedlots and packinghouses to depress prices.

In a letter to the Committee on Agriculture of the House of Representatives in 1961, Assistant Secretary of Agriculture John P. Duncan, Jr. wrote:

> The Department agrees with the objective of the bill and strongly supports the principle of strengthening competition in all areas of livestock, meat and poultry marketing. It recognizes that the extent of the influence and control that may be exercised over the livestock and poultry industry by integrated packing and retailing operations can very definitely affect that competition. This is a very real problem area in this industry as reflected in the views and fears expressed to the Department by producer and industry groups alike.

I feel confident that some of my colleagues will wish to join me in sponsoring this legislation. I ask unanimous consent that the text of the bill be printed at this point in the Record and that it may lie on the table for 1 week, so that those who wish to do so may add their names.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the Record, and lie on the desk, as requested by the Senator from South Dakota.

The bill (S. 1270) to amend the Packers and Stockyards Act, 1961, to strengthen independent competition by providing for competitive enterprise in the retail sales of meat, meat food products, livestock products, and other food items, introduced by Mr. McGovern, was received, read twice by its title, referred to the Committee on Agriculture and Forestry, and ordered to be printed in the Record, as follows:

Be it enacted by the Senate and House of Representatives of the United States of

America in Congress assembled, That title II of the Packers and Stockyards Act, 1921, is amended by inserting immediately after section 202 thereof the following new section:

"Sec. 202A. (a) It shall be unlawful for any packer whose gross sales were more than $30,000,000 during the preceding calendar year, or for any person engaged in the business, manufacturing or preparing livestock products for sale or shipment in commerce, or in wholesale marketing in commerce of meats, meat food products, livestock products, dairy products, poultry, poultry products, or eggs, whose gross sales were more than $30,000,000 during the preceding calendar year, to engage in the business of selling at retail meats, meat food products, livestock products, dairy products, poultry, poultry products, or eggs, and shall not engage in the business of feeding livestock, but nothing in this section shall preclude any person from engaging in such retail business if (1) his operations as a packer are limited solely to meat preparation operations customary in the conduct of such retail business, such as the slicing or grinding of meat, the breaking of carcasses, or the fabricating of meat cuts, or (2) he is primarily engaged in wholesaling dairy products or eggs and his retail operations are limited to the retail sale of such products through home delivery routes or company operated dairy stores. The gross sales referred to above shall include the sales of all corporations, partnerships, associations, and individuals owned or controlled in any manner whatsoever, in whole or in part, through stock ownership or otherwise, by such packer or person, or by the owners, officers, directors, agents, or employees of such packer or person.

"(b) A violation of this section which occurs on more than one day shall be considered a separate violation for each day on which such violation occurs.

"(c) Whoever violates this section shall be fined not more than $50,000, or imprisoned not more than one year, or both.

"(d) For the purposes of the Act entitled 'An Act to supplement existing laws against unlawful restraints and monopolies, and for other purposes,' approved October 15, 1914 (38 Stat. 730), and the Federal Trade Commission Act, this section shall be considered to be an antitrust law."

VIKTOR JAANIMETS

Mr. JAVITS. Mr. President, it will be recalled that when Chairman Khrushchev was here some years ago he came over on a vessel called the *Baltika*. In New York Harbor Viktor Jaanimets, a seaman on that vessel, sought asylum here in the United States. Since then I have been trying to get his admission here regularized. For that purpose I send to the desk a private bill for the relief of Viktor Jaanimets.

I ask unanimous consent that there may be printed in the Record as a part of my remarks a newspaper story from the Utica, N.Y., Observer Dispatch, explaining the situation in detail, and what animated Mr. Jaanimets to make his break for freedom, together with an article published in the New York Sunday News of September 17, 1961.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the articles will be printed in the Record as requested by the Senator from New York.

The bill (S. 1272) for the relief of Viktor Jaanimets, introduced by Mr. Javits, was received, read twice by its title, and referred to the Committee on the Judiciary.

The articles presented by Mr. Javits are as follows:

[From the Utica, N.Y., Observer Dispatch, Sept. 24, 1961]

Ex-Red Likes His Freedom

(By Jules Loh)

New York.—Each evening after work Viktor Jaanimets goes through approximately the same routine. Many would consider it inordinately dull.

He enters his $17-a-week second-story walkup with his own door key, makes a couple of cold meat sandwiches, gets a beer from the refrigerator, flicks on his small radio and sits down at the slightly wobbly kitchen table.

If the night is warm he might take in a picture show. It doesn't matter much what's playing; it's air conditioned, and Jaanimets hasn't yet got a good hold on the language anyway. Sometimes he stretches out on the bed, opens his bilingual dictionary, and tries to snatch from the radio announcer's rapid spiel some of the words he's struggling to master.

To Jaanimets, handsome, blond, 30-year-old bachelor, this seemingly lackluster routine is pure contentment—well worth risk of a man's life.

Not for a moment, he says, has he regretted his daring feat of a year ago October 10. That was the day he ditched his shipmates from Nikita Khrushchev's yacht, the *Baltika*, and made it to safety after a frantic search for someone who could understand his tongue.

Only Khrushchev's shoe-pounding demonstration at the United Nations during the same week matched the Jaanimets incident for headlines.

Speaking through Interpreter John Jaan Tiivel, Secretary General of the Estonian National Committee, Jaanimets said he was glad the hustle and bustle of his first months in the United States was over and at last he could lose himself in the anonymity of New York's millions.

To the countless requests for Jaanimets' presence at meetings of patriotic organizations, for speeches, for interviews, the former seaman asks Tiivel to "tell them, politely, no."

This Tiivel does gladly. He, for one, doesn't feel Jaanimets takes enough precaution against the possibility of being kidnaped by Soviet agents.

It sounds dramatic, but according to Tiivel and others who work closely with defectors the eventuality is not farfetched, especially as regards someone with the propaganda value of Jaanimets, a member of Khrushchev's handpicked crowd.

Jaanimets, smiling, says, "I can take care of myself." Looking at him you get the impression that he can, at least physically. He is a lithe and leathery 175 pounds, stands 5 feet 10.

On the advice of others, he rented his apartment under an assumed name and believes his landlord is not aware of his identity.

It is his own idea, however, to keep secret his address and his place of employment and to avoid striking up acquaintance with persons unknown to his relatively small circle of friends at the Estonian House, a social and cultural club for Estonian-Americans.

Jaanimets works as a machinist (the craft he learned in an Estonian trade school) at a small manufacturing plant headed by one of the more than 200 persons who offered him a job.

He started at $80 a week, has had two $10 raises since, and regards himself a wealthy man. Last month he bought a car and now is taking driving lessons.

"In the Soviet system it would take 5 to 7 years to get a car after you applied," he said. "I was amazed that all you have to do here is walk in and buy one. Also, there it would take many years' salary.

"As for having my own room," said Jaanimets, "I never had a room of my own since the Russian occupation in 1940.

"You need a permit to get a room, and when I applied in Tallinn (his hometown in Estonia) they told me to apply in Leningrad (the *Baltika's* home port); in Leningrad, they told me to apply in Tallinn."

More than his newfound wealth, Jaanimets said his greatest delight in America—one that he hasn't quite gotten used to—"is just doing what you like, saying what you like, going where you like." It was obvious he wasn't trying to impress, nor say something he thought he might be expected to say.

Jaanimets said he had anticipated there would be reprisals against his family in Tallinn, a widowed mother, a sister, and three brothers. Recently he learned "through Estonian sources" his brother had been jailed for a time and released. He knows no further details.

Naturally this saddens him. But he said "everyone has to live his own life and fight for his own freedom. I'm sorry for my family, but I can't help it."

Naturally, too, Jaanimets is somewhat lonely. But there are the soccer games at the Polo Grounds and the Friday night dances at the Estonian House and he vehemently dismisses as a foolish idea any notion he might ever have regretted the choice he made a year ago.

His main goal now is American citizenship. Senator Jacob Javits, of New York, has submitted a private bill now pending in the Senate Judiciary Committee, which would grant Jaanimets citizenship immediately rather than through the normal 5-year process.

Jaanimets went to sea in 1950 and was assigned to the *Baltika* in 1956, after careful screening. Because its crew was exposed at times to life outside the Iron Curtain, political indoctrination lectures were conducted twice weekly by an officer with a higher rank than the captain.

Jaanimets said he had planned to escape for 3 years before he finally pulled it off. Once in London and again in Stockholm he came close, but each time something happened to upset his plan.

The opportunity didn't come for him in New York until his third leave after the ship docked September 19.

"It's not easy," he explained. "You're always being spied on. There are spies on spies on spies." His own assignment was to spy on his shipmates to guard against smuggling.

Baltika seamen went ashore in groups of five, ostensibly "to protect each other from American thugs," and were not allowed to take cameras "because we were told we would be arrested as spies."

About an hour before his October 10 shore leave was to end, Jaanimets told his four companions he wanted to buy some hair tonic. He went into a large department store and quickly ducked out another door.

"I wasn't sure whether someone would overtake me," he said. "I just took a chance." Had he been caught, he said, the penalty would have been death.

He tried to hail a cab, but the cabbie couldn't make out what he wanted and drove off. Jaanimets began walking fast, not running. Several blocks away he slipped into a bar and ordered a beer. He tried to buy some cigarettes from a machine, and when it became obvious he couldn't figure out how to work it an American seaman, 50-year-old Brian Quinn, offered to help.

"He kept repeating, 'Estonian, not Russian,'" said Quinn, "and I finally figured out he was in some sort of trouble."

Quinn called the Estonian House and handed the phone to the frightened sailor.

"That moment was the start of my new life," Jaanimets said.

[From the New York (N.Y.) Sunday News, Sept. 17, 1961]

How It Feels To Be Free—"I Go Where I Want," Says Viktor Jaanimets a Year After Jumping Khrushchev's Ship—But He Still Looks Over His Shoulder

(By John Gregg)

At about 5:45 every summer morning a young, blond-haired man stepped out the front door of his brownstone apartment building somewhere in Manhattan and turned up the block in a fast trot. Dressed in light trousers, cotton T-shirt, and leather sandals he jogged around the corner, down the avenue and around the next corner. The only other life on the street was around a curbside newspaper stand and a beat cop swinging his nightstick.

The sprinter was Viktor Jaanimets. Remember him * * * the Estonian sailor who pushed the World Series off the front page last October when he jumped Khrushchev's ship, the *Baltika*, tied up in the East River? Today he is Refugee Jaanimets, an apprentice toolmaker in a metropolitan-area factory, and the early-morning lap around the block has been part of his daily regimen—until recently, that is.

"I stopped it when a policeman gave me a suspicious look one morning, like I might be a thief or a crazy man," Jaanimets told me when I met him last week at the Estonian House, 243 East 34th Street. "Now I do calisthenics in my room."

NO LONGER CENTER OF POLITICAL STORM

In the eye of an international hurricane less than a year ago, Viktor Jaanimets, 30 in July, now lives alone—and quietly—in a two-room apartment somewhere in the city. He rises every morning at 5:30 sharp and turns his radio on in the living room. (Viktor likes listening to American music and the newscasts and already has a favorite station.)

Then he does his exercises—pushups, kneebends and some other gymnastics. At 7 a.m. he leaves for work. There is no Jaanimets listed on a mailbox in the foyer. Only his closest friends know where he lives or where he works. He has taken a different name and none of the other tenants in the building, not even his landlord, knows him as Viktor Jaanimets, the former Estonian seaman.

The FBI has told him to be careful. Friends have cautioned "Keep your head out of the limelight, Viktor, or someone will chop it off." And Jaanimets himself is naturally guarded in all he says and does. Meetings with reporters—and there have been few since the first of the year—are arranged through John Tiivel, secretary of the Estonian National Committee, at the Estonian House.

Jaanimets will speak on the evils of Soviet communism as readily as he'll eat an Estonian pancake, but is reluctant to discuss anything having to do with his personal life. He insists that this attitude does not stem from fear. But when a man has been raised under the heel of oppression, maybe fear—and cunning—are too deeply imbedded to be shucked off within a year.

Viktor Jaanimets was only 9 years old when Soviet troops occupied his city, Tallinn, a port on the Gulf of Finland and capital of Estonia. Except for 3 years under the Nazis during World War II, Estonia has been under Russian control since 1940.

"You have no idea what it is like," Jaanimets began. Two lines across his forehead deepened into furrows from the strain of speaking English and the intensity of his feeling. Then he lapsed into Estonian, which Tiivel translated.

"The secret police are so efficient over there, if a lonely shoemaker in a cobblestone alley thinks only once, 'We will overthrow them.'—he cannot sleep that night; the next day he will be taken away. The younger Russians are ready to kill their mothers and fathers for the ideal—communism."

When Viktor was 15 his father died. His mother was left with two sons older than Viktor and a daughter younger. Two years later, Viktor joined the Russian merchant marine and worked for several years on coastal freighters plying the Baltic Sea.

In 1956 he joined the crew of the *Molotov*, a Soviet passenger liner which made regular runs between Leningrad and London, frequently mooring at Stockholm, Copenhagen, and Helsinki.

"One day in 1957, we woke up and found the ship had been renamed the *Baltika*," Jaanimets noted with grim humor, for Vyacheslav M. Molotov, the Stalinist leader, had fallen into disgrace.

Viktor considered jumping ship in London, but was afraid English authorities might turn him back to the Russians. Finally, on September 19, 1960, the *Baltika* tied up alongside pier 73, at the foot of 25th Street and the East River with passenger Khrushchev aboard.

While the Soviet Premier aired his socks in the U.N. General Assembly, Jaanimets was given three shore leaves. His third began at 10 a.m. on October 10, when he left the ship with two Russian girls—chambermaids aboard ship—a Russian sailor and an Estonian officer, who was in charge of the group. They were ordered to stay together.

LOVE WITH STRONG DOSE OF PROPAGANDA

"We were told not to see any movies, for fear we might lose some of our political indoctrination," Viktor said. "In Russia, there is more politics in a film romance than kissing."

Jaanimets was wearing a black wool suit he'd bought in Leningrad for 1,600 rubles ($400), a little over 2 months' salary for a first-class oiler. His shoes had cost him the equivalent of $93. The only way a Russian seaman could beat the cost of living was through the black market, and that's the business they had in mind when the two Estonians and three Russians began hiking downtown to shop in stalls and stores on Orchard Street.

Some of them bought a particular kind of tapestry evidently well known to Baltic sailors. Almost as thick as rugs, they are woven in such hues as green, gold, purple and scarlet, with designs showing grazing deer or fan-tailed peacocks. A tapestry bought for around $5 on the lower East Side sells for 1,100 rubles ($725) in the Leningrad black market, according to Jaanimets.

Carrying their treasure, the two girls and three men started back in the general direction of their ship on foot. Their tour took them through some of the worst slum areas in New York, sights which still impress Jaanimets. "People here should be penalized more for such littering," he says. "If a man wants to throw garbage into the street, let him pay for the privilege."

The party crossed the Bowery, skirted Greenwich Village and stopped on the southeast corner of 14th Street and 5th Avenue, in front of Lane's Department Store. It was about 3 p.m. They were due back aboard the *Baltika* in an hour. The girls asked if they could buy a few things before they returned. The Russian sailor wanted to take a look at some woolen scarves, and Jaanimets said he'd like to buy some hair oil. The Estonian officer consented, but he was too tired to ride herd on them inside the store.

"I'll wait here," he told them wearily. "Hurry up."

The four walked through the 14th Street entrance and the girls immediately took the escalator to the second floor. The Russian spotted a counter display of shawls and set off in that direction. Jaanimets strode diagonally across the store. He hesitated for a moment in front of the double glass doors opening onto Fifth Avenue, then he bolted through them.

He hurried westward—away from the Baltika. Then he zigzagged downtown, across one block, down the next. He knew his fellow crewmen at Lane's would hunt for him; they would be punished for coming back to the ship without him.

To this day, the Estonian refugee does not know which streets he hurried through. He hailed a cab and repeated to the driver "Estonian House," words he had heard over the Voice of America radio broadcast, but the driver didn't understand and Jaanimets walked away.

ESTONIAN ODYSSEY CONTINUES INTO BAR

A couple of hours later he entered a bar and grill on South Street, near the Battery, all the way down at the southern tip of Manhattan. There he met an old Irish seaman who understood some Russian and helped him phone the Estonian House. The Irishman was asked to bring Jaanimets to the house on 34th Street immediately by cab. The two left the bar.

The old sailor evidently thought it a reckless waste to hire a taxi, because he led the refugee to a South Ferry-First Avenue bus. To Jaanimets' utter horror, the bus took them uptown alongside the East River docks, heading right for Pier 73 and the Baltika. He was about to leap out the rear door, when the vehicle turned inland.

Only 3 hours later the Estonian sailor who jumped Khrushchev's ship was on the seventh floor of the News Building telling his story.

Jaanimets was granted political asylum, and for 3 months he lectured across the United States: Kansas City, Chicago, Minneapolis, Milwaukee, Los Angeles and San Francisco, which he calls "the white city," because it is so clean and many of the buildings are surfaced in white stone or stucco.

With John Tiivel as his interpreter, he told how the Soviets had crushed resistance within Russia and her satellites. "There will never be a spontaneous rebellion in Russia," he told them. "The people are flattened with fear and propaganda. The constant hammering of propaganda is unbelievable. No one stands up against it forever. Even a stone will crumble if it is struck enough times by drops of water."

In February of this year, Viktor got a job as an apprentice toolmaker and holds the same job today. Anyone who regards the slogan "America, the land of the free" as a tired cliche ought to see Jaanimets' grin when he talks of freedom.

"I can go where I want," he almost shouted, tossing his hand into the air. "I go to Broadway, see a movie any time I like. No one tells me what to believe, what to think, not to talk to people, where to go, where not to go."

Sometimes he comes home from work late, having put in a few hours of overtime. "I turn on the radio again, open a bottle of beer, light a cigarette and lean back in my chair with my feet up on the wall," he says. "That's the way I relax."

STILL STRUGGLING WITH HIS ENGLISH

Often in the evening he studies English from an Estonian-English dictionary and a Russian-English grammar. He has had no professional instruction so far, but plans to take a class this fall. Right now he speaks the language haltingly and there is much he doesn't yet understand, but what he does speak is grammatically perfect, with very little accent.

On Friday nights, after work, Viktor often drops by the Estonian House for dinner, a bottle or two of beer at the bar, and some continental-style dancing. The kitchen there is run by Mrs. Ada Parlin, who operated the only Estonian restaurant in New York, the Four Seasons on 34th Street, until her building collapsed into a neighboring excavation pit last December.

"Viktor likes my Estonian pancakes," she said, "but his favorite seems to be my mulgikapsad—a sauerkraut dish prepared with crushed barley and meat." Estonian pancakes are thick and fluffy, like a souffle, and Mrs. Parlin serves them with a topping of lingenberries and melting butter.

Viktor has bought a small standard-shift car, the first he has ever owned. He has a learner's permit and on weekends a friend on Long Island teaches him how to drive.

He is still classified by the Department of Immigration and Naturalization as a "refugee parolee," who is required to report to their office at least once a year and to notify them of any change in address.

On April 18, Senator JACOB JAVITS introduced a bill to have the Estonian's status changed to that of a refugee with permanent residence. With this classification, he could apply for citizenship within 5 years. But the Senate hasn't yet acted on JAVITS's bill.

"We are hoping they will take care of Jaanimets before Congress adjourns at the end of September," said Tiivel. "We have had experience with this kind of bill before. They are always the last ones considered before a session ends. So we still have hope. Viktor wants very much to become a U.S. citizen."

THE NEED TO INCREASE U.S. GOLD PRODUCTION IS CLEAR

Mr. GRUENING. Mr. President, more than a year ago I suggested that it was time to subsidize the Nation's gold mines in the public interest.

On February 12, 1962, I said:

> Nearly 30 years have gone by since our Government took a realistic look at the costs involved in gold mining. The expense in some instances is many times that of 1934, when the price of gold last was adjusted.

Commenting on the need to boost domestic gold production, I cited statistics appearing in the 1960 Minerals Yearbook which showed the United States producing 1,679,000 ounces in 1960, as opposed to U.S.S.R. figures of 11 million estimated ounces.

I suggested then that this should concern all of us.

Regrettably, there has been no marked change in the situation.

According to the 1961 Minerals Yearbook:

> U.S. mine production of recoverable gold in 1961 was 1.5 million ounces valued at $54.2 million, a decrease in production of 7 percent from 1960. This output was the lowest since 1885, except for 4 years (1943–46) during and immediately following World War II.

The "1961 Minerals Yearbook" further states:

> World gold production rose for the eighth successive year to a new high of 47.7 million ounces, valued at $1.7 billion.

Can the need for the United States to increase its gold production capability be made more clear? How clear must be the handwriting on the wall?

The writers of the gold report in the "1961 Minerals Yearbook" have no bias. They have given to us, and, I might add, to all of the world, the sorry story of U.S. gold production. It is not, I suggest, a pretty picture.

The report states bluntly:

> The decline in domestic production reflected curtailed operations in some areas and continuing unfavorable economic conditions owing to rising costs in relation to the fixed price of gold.

I found it revealing to read that the consumption of gold in domestic arts and industries, although decreasing slightly, nevertheless managed to be substantially higher than the amount produced. The domestic arts and industries consumed 2.8 million ounces or about 1.2 million ounces more than domestic mine production.

Just how clear does the handwriting have to be?

World production of gold continues to soar. In less than 10 years it has risen from 35.6 million troy ounces to 47.7 million troy ounces.

The minerals yearbook says domestic mine production decreased "principally because of first, a decline in placer mining in Alaska and California; and, second, a lower output of gold-bearing copper ores in Utah and Montana. And except for small increases in production in Arizona and Colorado, all the major gold-producing States recorded lower outputs." Alaska, sadly, dropped from third to fifth place among gold-producing States.

Mr. President, I ask unanimous consent to place in the RECORD at this time a table showing mine production of recoverable gold in the United States, by States, over the past 10 years. It should be observed that in the majority of cases production declined. The 1952–56 total was 1,879,233 troy ounces. The 1961 total was 1,548,270 troy ounces.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE 5.—*Mine production of recoverable gold in the United States, by States*

[Troy ounces]

State	1952–56 (average)	1957	1958	1959	1960	1961
Alaska	240,288	215,467	186,435	178,918	168,197	114,216
Arizona	122,743	152,449	142,979	124,627	143,064	145,959
California	235,241	170,885	185,385	145,270	123,713	97,644
Colorado	105,241	87,928	79,539	61,097	61,269	67,515

---

[1] In addition to countries listed, gold is also produced in Austria, Bulgaria, China, Czechoslovakia, East Germany, Hungary, Indonesia, Rumania, and Thailand, but production data are not available; estimates for these countries are included in the total. For some countries accurate figures are not possible to obtain, owing to clandestine trade in gold (as, for example, in former French West Africa).

[2] This table incorporates some revisions. Data do not add exactly to totals shown because of rounding where estimated figures are included in the detail.

[3] Imports into the United States.

[4] One year only, as 1956 was first year of commercial production.

[5] Estimate.

[6] Refinery production.

[7] Exports.

[8] Average for 1953–56.

[9] Output from U.S.S.R. in Asia included with U.S.S.R. in Europe.

[10] Estimate according to Minerais et Metaux (France), except 1961.

[11] Purchases. Production may be greater.

[12] Including gold in lead concentrates exported amounting to: 5,526 ounces, 1952–56 (average); 9.192 ounces in 1957; 11,951 ounces in 1958; 10,391 ounces in 1959; 8,963 ounces in 1960; and 521 ounces in 1961.

Compiled by Augusta W. Jann and Richard W. Peters, Division of Foreign Activities.

Mr. GRUENING. Mr. President, it will be seen in the table that the U.S.S.R. production estimate has been increased by 1 million troy ounces, or from 11 to 12 million ounces.

How clear does the handwriting have to be?

According to the minerals yearbook report, technology is important. It has, for example, reduced operating costs and extended the life of the older mines in the Union of South Africa. And, as the lay person might guess, production in the Union of South Africa increased in the 10-year period from 13,499,069 troy ounces to 22,941,561 troy ounces.

The handwriting again is clear.

I shall have more to say as to the urgent need for domestic aids with which to help our miners, hard-working Americans who would not have needed such aids had the Federal Government been realistic.

On March 16, 1962, I suggested that gold is a weapon and that because it is we should arm. Our national gold balance, as reported by U.S. Treasury, indicates that we have not armed.

U.S. gold reserves have dwindled by nearly $1 billion from February 12, 1962, to September 5, 1962, when the figure dribbled away from $16,788,000,000 to $15,878,000,000. They have been $24,771,000,000 in August 1949, an alltime high.

Yes; the handwriting is clear.

Mr. President, I ask unanimous consent that there be placed in the RECORD at this point in my remarks a table showing by the week the dwindling of U.S. gold reserves from September 5, 1962, to the present. These figures have been supplied by the Legislative Reference Service of the Library of Congress and come from U.S. Treasury sources.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Week ending:	*Total amount of gold*
1962:	
Sept. 5	$16,098,000,000
Sept. 12	16,093,000,000
Sept. 19	16,067,000,000
Sept. 26	16,068,000,000
Oct. 3	16,068,000,000
Oct. 10	16,067,000,000
Oct. 17	16,067,000,000
Oct. 24	16,052,000,000
Oct. 31	16,006,000,000
Nov. 7	15,977,000,000
Nov. 14	15,978,000,000
Nov. 21	15,978,000,000
Nov. 28	15,978,000,000
Dec. 5	15,977,000,000
Dec. 12	15,978,000,000
Dec. 19	15,978,000,000
Dec. 26	15,978,000,000
1963:	
Jan. 2	15,978,000,000
Jan. 9	15,978,000,000
Jan. 16	15,963,000,000
Jan. 23	15,928,000,000
Jan. 30	15,928,000,000
Feb. 6	15,928,000,000
Feb. 13	15,928,000,000
Feb. 20	15,928,000,000
Feb. 26	15,927,000,000
Mar. 6	15,878,000,000
Mar. 13	15,878,000,000
Mar. 20	15,878,000,000
Mar. 27	15,878,000,000

Source: Federal Reserve Bulletins, Legislative Reference Service.

Mr. GRUENING. Mr. President, during the 87th Congress a variety of bills were introduced by Senators concerned with the decline of the mining industry. I was a cosponsor of Senate Joint Resolution 44 introduced by the Senator from California [Mr. ENGLE], who is most knowledgeable both on the mining and economic aspects of gold. The resolution offered as a tentative approach a $35 an ounce subsidy for each ounce of newly mined domestic gold. The proposal did not increase the price of gold, and was in no way, shape, or manner related to any change in the price of gold.

Interesting and informative hearings were held on Senate Joint Resolution 44. The ominous defects of existing controls which have placed the gold mining industry in a straitjacket were discussed and noted.

Under Secretary of the Treasury for Monetary Affairs Robert V. Roosa, speaking for Secretary of the Treasury Dillon, testified on June 8, 1962, at the hearing on Senate Joint Resolution 44. He offered no solution to the crisis in which the gold mining industry found, and still finds, itself. He said that the Department of the Treasury had carefully studied earlier hearings on the proposed domestic subsidy, but had not changed its view that a subsidy would upset this Nation's monetary system. He said:

> An understandable, compassionate effort, in the spirit of which we can all share, to assist a relatively few people to keep or obtain employment in the gold mining industry—desirable as employment there would be, or their employment, in any event—that effort, instead of helping those in the gold mining industry, would, in our considered and deliberate judgment, disrupt the monetary system upon which not only their own livelihood, but also that of all the rest of us, depends.
>
> To us, it seems there is no compensating advantage in the promise that subsidies would produce a vast enlargement of the existing gold stock. The fact is that even if productive capacity would achieve the most optimistic estimate of the Department of Interior, American facilities could not in less than a century add—these are additions—to our gold production the amount of gold contemplated by the present terms of Senate Joint Resolution 44. But even if that total could by some alchemy be produced within a single year, it could not begin to offset the losses to the world economy that would be created by devaluation of the dollar. And in blunt, simple terms, if the U.S. Government should add an unprecedented subsidy to the official $35 price for gold, such action would be construed by the rest of the world as evidence that devaluation was underway.
>
> I would be glad to discuss further any aspects of this question relating to the function of gold in the world's monetary system, along whatever lines the chairman and members of this committee may wish to pursue. But I would stress, before we begin, that I can give you full assurance, based on intimate, continuous, extensive contact with financial officials of most of the leading countries of the world that a step of the kind contemplated by this resolution would be regarded as synonymous with a declaration of intent to devalue the dollar of the United States. That is why the Treasury Department is opposed to this resolution.

Mr. President, the members of the Senate Interior and Insular Affairs Subcommittee asked Secretary Roosa if he could suggest ways in which the mining crisis could be lessened and to date there have been no constructive comments coming from the Department of the Treasury.

It is obvious that little if any thought has been given to this enormously important problem. Perhaps more will be given in future days.

As chairman of the Minerals, Materials, and Fuels Subcommittee of the Senate Committee on Interior and Insular Affairs, I have scheduled hearings April 9 and 11 to explore more fully the problems which face the mining industry. One of the areas to be explored will concern the gold mining crisis.

Of course, the then adamant, continuing refusal of the Department of the Treasury to realize that domestic gold production was a matter not to be coupled with balance of payments or the monetary aspects of gold, did not help the mining industry. And I detect as yet, I regret to say, no change in the attitude of the Department of the Treasury. Its attitude is not based on party principles. Its resistance was the same under the Eisenhower administration as to date it has been under the Kennedy administration.

But we are another Congress. We have new opportunity to take steps to correct the inequities which plague the mining industry, generally, and the gold mining industry in particular. Inequity is perhaps too weak a word. Injustice is probably more apt. Under our supposedly free enterprise system, gold is the only commodity compelled to sell at a price established 29 years ago, and compelled to limit its sales to one purchaser, the Government of the United States.

I am, therefore, in an effort to remedy this unfair, unjust and uneconomic situation, today introducing a bill which would establish in the Department of the Interior a Gold Procurement and Sales Agency. The bill directs the Secretary to survey the domestic gold mining industry and determine the troy ounce price—up to $105 per troy ounce which should be paid to domestic producers. The Gold Procurement and Sales Agency would be instrumental in achieving maximum production of gold from U.S. mines.

The Gold Procurement and Sales Agency proposed would, first, be the only Agency authorized to buy gold from domestic producers and sell it for nonmonetary purposes within the United States, its territories and possessions, and the Commonwealth of Puerto Rico; second, pay to domestic producers, for all gold mined after December 31, 1963, the price determined by the Secretary of the Interior; third, annually resurvey the domestic gold mining industry to determine whether the price paid to such producers for gold should be modified. The purchase price of domestically mined gold for the next succeeding calendar year shall be the price as so determined, or $105 per troy ounce, whichever is less; fourth, sell gold for defense, industrial, professional, artistic, and other nonmonetary uses at a price equivalent to that which was paid for the purchase of gold during the month prior to the sale; and, fifth, transfer to the Treasury Department any domestically mined gold not disposed of under the preceding clauses; and the Treasury Department shall reimburse the Gold Procurement and Sales Agency at the rate of $35 per ounce or such other amount as is, at the time of transfer, the monetary value of gold in accordance with applicable statutes and treaties.

The bill suggests an approach both realistic and reassuring. This proposed legislation was first introduced in the 87th Congress by Congressman Harold T. Johnson who has again reintroduced it this year. I am pleased to introduce it today on behalf of myself, my colleague from Alaska [Mr. Bartlett], the Senator from South Dakota [Mr. McGovern], the Senator from California [Mr. Kuchel], and the Senator from South Dakota [Mr. Mundt].

Mr. President, I ask unanimous consent that the bill be printed in the Record at this time.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the Record.

The bill (S. 1273) to establish in the Department of the Interior a Gold Procurement and Sales Agency, and for other purposes, introduced by Mr. Gruening (for himself and other Senators), was received, read twice by its title, referred to the Committee on Interior and Insular Affairs and ordered to be printed in the Record, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior shall make a survey of the domestic gold mining industry and determine the price, not to exceed $105 per troy ounce, required to be paid to domestic producers in order to achieve maximum production of gold from mines in the United States. The result of the survey, together with the Secretary's determination of the price necessary to accomplish the aforementioned objective, shall be reported to the President of the Senate and the Speaker of the House of Representatives not later than December 31, 1963.

Sec. 2. Effective January 1, 1964, there is established in the Department of the Interior the Gold Procurement and Sales Agency which shall be headed by a Director, who shall be appointed by the President of the United States, with the advice and consent of the Senate, and shall receive an annual salary of $20,000.

Sec. 3. The Good Procurement and Sales Agency shall, on and after January 1, 1964—

(1) be the only agency authorized to buy gold from domestic producers and sell it for nonmonetary purposes within the United States, its territories and possessions, and the Commonwealth of Puerto Rico;

(2) pay to domestic producers, for all gold mined after December 31, 1963, the price determined by the Secretary of the Interior in accordance with section 1 of this Act;

(3) annually resurvey the domestic gold mining industry to determine whether the price paid to such producers for gold should be modified. The report of the agency shall be transmitted to the Secretary of the Interior who shall, not later than December 31 of each year, advise Congress of the price he has determined to be necessary to meet the objective of section 1 of this Act. The purchase price of domestically mined gold for the next succeeding calendar year shall be the price as so determined, or $105 per troy ounce, whichever is less;

(4) sell gold for defense, industrial, professional, artistic, and other nonmonetary uses at a price equivalent to that which was paid for the purchase of gold during the month prior to the sale under the preceding clauses of this section; and

(5) transfer to the Treasury Department any domestically mined gold not disposed of under the preceding clauses; and the Treasury Department shall reimburse the Gold Procurement and Sales Agency at the rate of $35 per ounce or such other amount as is, at the time of transfer, the monetary value of gold in accordance with applicable statutes and treaties.

Sec. 4. There are hereby authorized to be appropriated such sums as may be necessary for the administration of this Act, including funds for the Gold Procurement and Sales Agency to absorb the difference between the purchase price of domestically mined gold and the sale of any quantities thereof to the Treasury Department at the rate fixed by this Act.

Sec. 5. Nothing contained herein shall be construed to repeal, supersede, or modify existing provisions of law relating to the monetary system of the United States or to interfere with the right of the Treasury Department to obtain gold from sources other than domestic producers.

Sec. 6. The term "domestic" as used in this Act refers to the United States, its territories and possessions, and the Commonwealth of Puerto Rico.

Mr. GRUENING. Mr. President, it is significant that the approach incorporated in this bill has been endorsed by the Legislature of the State of Alaska. The Alaskan resolution passed the house on March 20 and the senate on March 22.

The members of the Alaskan Legislature believe the proposal "will provide the incentive for a great new gold-mining development." Further, the bill has the endorsement of the Mining Advisory Committee of the Western Governor's Conference.

Mr. President, I ask unanimous consent that the text of house joint resolution 17 be printed in the Record at this time.

There being no objection, the joint resolution was ordered to be printed in the Record, as follows:

House Joint Resolution 17

Joint resolution relating to pending Federal legislation on gold-mining development, in the Legislature of the State of Alaska, third legislature, first session

Be it resolved by the Legislature of the State of Alaska:

Whereas gold production in our Nation, now at an alltime low, is essential to the stability of the monetary system of the United States; and

Whereas use of gold for industrial and commercial purposes has increased to more than 3 million ounces annually and is still increasing; and

Whereas mining production of gold has been only 1,500,000 ounces, the deficit being made up by sales from the Nation's monetary reserve; and

Whereas it is evident that the gold miners of this Nation need higher prices to produce gold; and

Whereas an increase in the dollar price of gold may interfere with international monetary policy, but incentive payments for newly mined gold from domestic gold mines would not; and

Whereas such an incentive would reopen closed gold mines and restore lost jobs, particularly in the State of Alaska which is in need of such an industrial incentive to bring back a great Alaskan industry; and

Whereas the passage of H.R. 1095 now pending before Congress will provide the incentive for a great new gold-mining development and still protect the monetary stability of the United States; and

Whereas H.R. 1095 has been endorsed by the mining advisory committee of the Western Governor's Conference;

Be it resolved, That the Congress of the United States is respectfully urged to take favorable action on H.R. 1095; and be it further

Resolved, That copies of this resolution be sent to the Honorable John F. Kennedy, President of the United States; the Honorable Lyndon B. Johnson, Vice President and President of the Senate; the Honorable John W. McCormack, Speaker of the House of Representatives; the Honorable Wayne Aspinall, chairman, House Committee on Interior and Insular Affairs; the Honorable Henry M. Jackson, chairman, Senate Committee on Interior and Insular Affairs; and members of the Alaskan delegation to Congress.

Passed by the house March 20, 1963.

Bruce Kendall,
Speaker of the House.

Attest:

Patricia R. Slack,
Chief Clerk of the House.

Passed by the senate March 22, 1963.

Frank Peratrovich,
President of the Senate.

Attest:

Evelyn K. Stevenson,
Secretary of the Senate.

Certified true, full, and correct.

——— ———,
Governor of Alaska.
Patricia R. Slack,
Chief Clerk of the House.

Mr. GRUENING. Mr. President, I have, during the past year, stressed the urgency for the Congress to move ahead—if the executive department fails to act. Crucial problems face us. To name but a few, they are: First, declining gold reserves; second, an industry crippled by a fixed gold price which does not pay for the production let alone provide for a profit; third, daily closing of mines; fourth, decrease of dredging operations; fifth, inadequate Federal assistance for the miner or miners; sixth, continuing waste of a great industry coupled with expeditious need to find new mining methods; seventh, reeducation of miners in an age of automation; and, eighth, inadequate supply of gold for national defense and space efforts. These are but a few of the problems which must be solved.

Mr. President, on June 25, 1962, I placed in the Congressional Record a table showing how the cost of living in our Nation had increased while the price of gold remained stationary. The comparison today is equally valid.

Mr. President, I ask unanimous consent that the chart be inserted in the RECORD at this time.

There being no objection, the chart was ordered to be printed in the RECORD, as follows:

Cost of living increases while the price for gold remains stationary

Commodity	1934 price	1962 price [1]	Percent price increase
Bread, loaf, 1 pound	7 cents, A. & P	21.1 cents, CPI	201.42
Milk, quart	13 cents, Nationwide	24.9 cents, CPI	91.53
Flour, 5 pounds	27 cents, A. & P., Pillsbury	56.2 cents, CPI	108.14
Chicken, 1 pound	29 cents, fryers	40.4 cents, CPI	93.31
Pork chops, 1 pound	27 cents, A. & P., center cuts	87.4 cents, CPI	223.70
White potatoes:			
5 pounds	15 cents, Idaho baking		
10 pounds	15 cents, regular A. & P	55.8 cents, A. & P., CPI	272.00
Corn	2 No. 2 cans, 23 cents, Piggly-Wiggly	1 No. 303 can, 20.2 cents, CPI	75.65
Tomatoes	1 medium can, 8 cents A. & P	No. 303 can, 15.8 cents, CPI	97.50
Eggs, 1 dozen	29 cents, A. & P	2 for 85 cents, A. & P. (large size)	46.55
Apples	3 pounds, cooking, 17 cents, Delicious	1 pound, 13.7 cents, CPI	1.94
Cheese, 1 pound, American	21 cents, A. & P	49 cents, sliced, A. & P	133.33
Lard, 1 pound, Crisco	19 cents, A. & P	36 cents, A. & P	89.47
Coffee, 1 pound	19 cents, A. & P., 8 O'clock	Pound can, 71.2 cents	274.74
Butter, 1 pound	31 cents, A. & P	76.2 cents, CPI	145.81
Man's winter suit	$25, Hecht's	$55-$115, Hecht's	120.00
	$23.50 Raleigh's	$69.50-$135, Raleigh's	195 74
Woman's everyday dress	$2.95 Palais Royal	$3.99, Woodward & Lothrop budget store	35.25
Car, Chevrolet	$625, Master 6 sedan, Taylor Motor Co	$2,402.94, Biscayne 6 sedan, Hicks Chevrolet	284.46
Room and board	$35 a month	$90 a month	157.14
Canned spaghetti, 15½-ounce can	5 cents, Phillips	2 for 29 cents, Safeway, Franco-American	190.00
California oranges	2 dozen, 49 cents	74.5 cents a dozen CPI	204.07
Season ticket to National Symphony, 8 concerts	$3	$6 plus $5 dues, Prince Georges series	272.72
Ground beef, 1 pound	18 cents, Piggly-Wiggly	51.5 cents, CPI	186.11
Electric iron	$1.95, Kann's Universal	$7.77, Sears', Kenmore	298.46
Jewelry:			
Gold bead necklace	$70, Galt & Bros., Inc	$100	[2] 30.00
Gold cuff links	$50, Galt & Bros., Inc	$65	[2] 30.00
14-carat gold ring	$50, Galt & Bros., Inc	$60	[2] 30.00
Man's hat	$5, $4	$9.95, $11.95, Hecht's	139.00
Lamb, 1 pound	21 cents	49 cents, Safeway, shoulder cut	133.33
Men's shoes	$5, Hecht's	$17.95, Hecht's average price	259.00
Wilson Line (ride to Mount Vernon)	50 cents, round trip	$2.75, round trip	450.00
Rye or bourbon, case of 12 quarts	$11.95, Star Liquor Co	$38, Star Liquor Co	217.99
Calves liver, 1 pound	17 cents, Swifts	$1.39, Safeway	717.65
New home in Foxhall Village, Washington, D.C., 7 rooms	$8,950-$9,250	$32,500-$50,000	[2] 253.10

[1] Consumer Price Index (CPI), U.S. Department of Labor, January 1962. Prices for 1934 obtained from the Washington Post (September 1934). Remaining prices were obtained from personal phone contact, stores listed above have headquarters in Washington, D.C.

[2] Approximate.

NOTE.—Mining equipment cost has increased 190 percent since 1934 according to information supplied by the industry.

Mr. GRUENING. Mr. President, I believe the gold mining industry suffers unique and flagrant discrimination, unfortunately.

It is perfectly obvious that we must mine more gold to replenish depleted stocks. When shoes wear out, the consumer buys a new pair or has them repaired. According to information supplied by the Legislative Reference Service, two firms supply 57 percent of all gold mined today in the United States. Seventeen firms supply 35 percent and the remaining 8 percent is supplied by an estimated 500 firms or individuals. It is obvious that individual efforts have reached the point of near extermination. Production figures in Alaska for example indicate that in 1940 the then territory produced approximately $26.5 million in gold. That figure in 1961 was approximately $4 million.

Let us, therefore, pay attention to the many warning signs before us before time runs out.

AMENDMENT OF AREA REDEVELOPMENT ACT TO PROVIDE PREFERENCE IN THE AWARD OF CERTAIN CONTRACTS

Mr. SCOTT. Mr. President, for myself, and the Senators from West Virginia [Mr. BYRD and Mr. RANDOLPH] I introduce for appropriate reference a bill to amend the Area Redevelopment Act so as to provide preference in the awarding of certain Government contracts to contractors in areas of substantial and persistent unemployment.

I ask unanimous consent that the bill be allowed to lie on the desk until Monday, April 8, for additional cosponsors.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD, and lie on the desk, as requested by the Senator from Pennsylvania.

The bill (S. 1274) to amend the Area Redevelopment Act so as to provide preference in the awarding of certain Government contracts to contractors in areas of substantial and persistent unemployment, introduced by Mr. SCOTT (for himself and other Senators), was received, read twice by its title, referred to the Committee on Banking and Currency, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Area Redevelopment Act is amended by redesignating section 29 as section 30 and by adding a new section 29 as follows:

"GOVERNMENT CONTRACTS

"SEC. 29. (a) As used in this section—

"(1) the term 'Government agency' means an executive or military department, and any commission, independent establishment, corporation wholly or partially owned by the United States which is an instrumentality of the United States, or other agency, in the executive branch of the Government.

"(2) the term 'Government procurement contract' means a contract to which a Government agency is a party for the procurement for the use of the Government of articles, materials, or supplies or of research or development services.

"(b) For the purposes of this section, the areas designated as redevelopment areas in accordance with section 5(a) of this Act shall be classified by the Secretary at the beginning of each year into six categories in accordance with the relative rates of unemployment for such areas as determined by the Secretary of Labor for the preceding calendar year. The category of areas having the lowest rate of unemployment shall be designated as Class 1, and the remaining categories shall be designated as Classes 2 to 6 in the order of increasing rates of unemployment therein.

"(c)(1) Notwithstanding any other provision of law, for the purpose of determining the successful bidder on any Government procurement contract to be awarded on the basis of competitive bidding there shall be deducted from the price bid or offered by any bidder whose place or places of business for the purpose of performing at least 75 per centum of the work under the contract is in a redevelopment area an amount determined in accordance with the following table:

"Classification of area:	*Rate of reduction (percent)*
1	2
2	4
3	6
4	8
5	10
6	12

"(2) Where a bidder has places of business for the purpose of performing a contract in two or more redevelopment areas, the rate of reduction provided in paragraph (1) shall be adjusted in accordance with regulations of the head of the contracting agency, giving due weight to the portions of the work to be performed in each such area.

"(d) In any case in which Government procurement contracts are awarded on a basis other than competitive bidding, the head of the contracting agency shall weigh the various factors upon the basis of which the contract is awarded in such a way as to give to prospective contractors whose place or places of business for the purpose of performing the contract is in one or more redevelopment areas, as nearly as may be possible, a degree of preference comparable to that which is accorded bidders from such areas under subsection (c) in the case of contracts awarded on a competitive bidding basis.

"(e) The provisions of this section shall not apply to any contract with respect to which the President finds and declares that such application is inconsistent with the national interest. Any such finding and declaration, together with the reasons therefor, shall be published in the Federal Register."

FEDERAL-STATE WATER RIGHTS: NOW IS THE TIME FOR CONGRESSIONAL ACTION

Mr. KUCHEL. Mr. President, I introduce, for appropriate reference, on behalf of myself and the Senator from Utah [Mr. Moss], a bill to clarify the relationship of interests of the United States and of the States in the use of the waters of certain streams.

One of the vexing and unsolved problems which directly confronts western America—indeed, the entire Nation—is the continuing, often embittered, jurisdictional dispute between Federal and State governments over the waters of many of our country's streams. How can our precious waters best be conserved and developed and controlled and put to maximum beneficial use by our people? One direct, and relatively simple, means of making the solution far more possible is to eliminate the jurisdictional battle, or, at any rate, some of it, which exists between Washington and our State capitals.

I shall not repeat here a detailed history of all the judicial, executive, and legislative actions by which we have arrived at the present situation. Suffice it to say that the present status of the law—in many respects the uncertainty of that status—is found objectionable by many responsible individuals and groups. I shall describe that status more fully in a moment.

The overall problem of Federal-State relationships in regard to water has many ramifications. Some espouse a doctrine of paramount Federal rights in almost every respect. It has been suggested, for example, that the United States should specify all aspects of water development, control and use which it might ever wish to assert and let the State operate on what, if anything, remains. I reject that theory as being in derogation of many proper State and local interests and better abilities to determine local needs. Such a theory is likely to lead to less, not more, beneficial utilization of our water resources.

Contrariwise, it has been suggested by some proponents of State supremacy in regard to water that all Federal water activities be subjected to State control. I also reject this theory. It would unduly impair and cripple the constitutional responsibilities of the Federal Government which, over the years, has constructed important and imposing water projects to serve the people.

I think it is because of such risks to the national interest that some of the past proposed legislation in this field has lacked sufficient support and has failed of enactment. But this does not mean that no legislation is needed, nor does it mean that sound legislation, based on principles of fairness to individuals and recognizing the proper roles of both the State and Federal Government, will not be supported in all significant quarters.

I said that it is not my purpose here to provide a history, but it is necessary to describe briefly the essential nature of those several aspects of the total situation which I feel must be remedied at this time. By this you will see that the bill we proposed is not a panacea for all questions in the complex field of Federal-State relationships in regard to water. Rather, it proposes immediate action on only the most pressing issues, upon which I believe men of good will may agree.

WATERS RISING ON FEDERAL LANDS

The spark which ignited the present apprehension among many of us is the *Pelton Dam* decision by the U.S. Supreme Court in 1955 (*Federal Power Commission* v. *Oregon,* 349 U.S. 435). That decision, as is asserted by agents of the United States, and as is feared by various individuals and States, has far-reaching implications for States, such as mine, which have significant water resources arising on reserved or withdrawn lands belonging to the United States.

By the Desert Land Act, March 3, 1877 (19 Stat. 377), the Congress provided, inter alia, that after certain appropriations of water for desertland—

> All surplus water over and above such actual appropriation and use, together with the water of all, lakes, rivers, and other sources of water supply upon the public lands and not navigable, shall remain and be held free for the appropriation and use of the public.

Based on this and other provisions of Federal law, it has been generally assumed that the mere fact that nonnavigable water arises upon any U.S.-retained lands would not affect the rights to the control and use of that water acquired by persons or by State and local governmental entities, so long as such rights are otherwise in accord with State law. In other words, it was assumed Congress said that regardless of what power the Federal Government may have over water arising upon "the public lands and not navigable" such water was free for use by anyone under State law.

Many relied upon such an interpretation, and it was even expressed in *California Oregon Power Co.* v. *Beaver Portland Cement Co.,* 295 U.S. 142, 163–4 (1935) as follows:

> Following the act of 1877, if not before, all nonnavigable waters then a part of the public domain became publici juris, subject to the plenary control of the designated States, * * * with the right in each to determine for itself to what extent the rule of appropriation or the common-law rule in respect of riparian rights should obtain.

But, the Pelton Dam decision, to the contrary, defined the term "public lands" in the Desert Land Act to mean only those lands "unqualifiedly subject to sale and disposition" and said Congress did not mean to permit appropriation of water arising on lands withdrawn or reserved from entry for private acquisition. This would apply to vast acreages of watershed in many States as, for example, in my State of California where a great percentage of the total area of the State falls into this category of federally owned and withdrawn or reserved lands.

Without the Desert Land Act being applicable to withdrawn or reserved lands, it would necessarily follow that it is at least unclear as to whether any State-based right, accruing after the withdrawal or reservation, to the use of water arising on such lands could be valid as against a Federal undertaking to control or use such water. It has been said, in *Winters* v. *United States,* 207 U.S. 564, 577 (1908):

> The power of the Government to reserve the waters and exempt them from appropriation under the State laws is not denied, and could not be.

The resulting assertions and fears are that the United States has, in effect, a priority of appropriation of all the previously unappropriated water arising upon the reserved or withdrawn Federal lands, said priority arising no later than at the date of the relevant withdrawal or reservation. This theory has cast grave uncertainty on the reliability of individual and non-Federal public appropriations of water made after such withdrawals or reservations. In most of the relevant situations, the pertinent withdrawals or reservations were effected before the non-Federal appropriations upon which those of the West have proceeded to rely in developing water resources. Many of these reservations, as for forests, came around the turn of the century and there was also a general withdrawal of all Federal lands in 1934.

This is not a problem of interest to my State only, but let me give a concrete example of the need for congressional action on this subject. Not the least of the water development projects depending upon water affected by this situation is California's State water plan, now coming into fruition. If the just described fears as to the validity of the appropriation of water upon which this plan depends, water arising upon earlier withdrawn or reserved Federal lands, are not set at rest then the success of the plan is in danger. It is feared, also, that the interest charges to the people of California upon the bonds financing the plan could be significantly higher to offset the risk to the State's asserted rights possible by reason of Federal claims to control and use the water.

I agree with the Senator from Utah [Mr. Moss] that there is no basis in the actual holdings of pertinent court decisions to compel a conclusion that such infirmities as have been raised do exist under a proper interpretation of present law. Therefore, the California project and other private and non-Federal public interests similarly affected should not be open to doubt.

The fact is, however, that assertions are made by agents of the United States, as in the United States answering brief, pages 64–65, August 14, 1961, *Arizona* v. *California*, U.S. Supreme Court original No. 8, which give rise to apprehension that the described infirmities might become law. There the Federal Government contended:

> The rights of the United States to use the waters on the public domain, being property rights, may be acquired by others only as authorized by Congress (citations). As observed above, the Desert Land Act is such an authorization with respect to nonnavigable waters on the public lands in certain States. But this act is not applicable with respect to waters upon reserved lands (citing Pelton Dam case). Nor is there any other Federal statute which has transferred these proprietary rights from the United States.

We have seen in the tidelands controversy that unsettling assertions made by counsel cannot be ignored for they may ultimately become case decisional law and require legislative rectification.

Let us act now to allay the existing fears caused by such assertions. Let us avoid now the possibility of an adverse judicial decision. This we can do by exercising the proper role of Congress in defining its will as custodian of the property of the United States under article IV, section 3, paragraph 2 of the Constitution. The judicial and executive branches, the States and the people, are entitled to statutory recognition of previously unquestioned vested rights, which will permit continued maximum development of our water resources for the benefit of our people.

CONSUMPTIVE USES PREFERENCE

I move now to a second issue of this total question of Federal power over interests in water, an issue as to which I also feel Congress should act at this time. The West is an arid region where water, the lifeblood of any society, is particularly dear because of its increasing scarcity. There the consumptive uses made of it take on a very special significance. Most Western States' laws say that among competing uses, consumptive uses are considered more important than nonconsumptive.

I propose that Congress recognize this situation by a general provision of law relating to all works hereafter constructed by or under the authority of the United States with respect to waters lying wholly or partly west of the 98th meridian. Such a salutary provision now exists as to federally constructed projects in the sphere of flood control and navigation generally in the West. This is by virtue of subsection 1(b) of the Flood Control Act of 1944 (58 Stat. 888–89), said subsection sometimes being known as the O'Mahoney-Millikin amendment. Such provision says, in essence, that uses for nonconsumptive purposes as, for example, by diversion or other control for navigation, shall be subordinate to beneficial consumptive uses, present or future, such as for domestic, municipal, stock water, irrigation, mining, or industrial purposes, as to waters arising in States lying in whole or in part west of the 98th meridian.

The Congress has been writing such a provision into irrigation and reclamation bills on a project-by-project basis. I propose we make it general law as to all Federal projects affecting waters of the West. By doing this, I do not propose to affect the authority of the United States or its licensees to construct works, nor do I mean to touch conflicts between navigation or power functions and other nonconsumptive functions such as preservation of fish and wildlife. I do feel we should enunciate a general congressional policy that consumptive uses are preferred to nonconsumptive uses in the West. This would assure our Western States that the Congress, too, acknowledges the wisdom of the preference which they have found most suitable to their situation. It would remove a potential area of Federal-State conflict.

FEDERAL RIGHTS UNDER STATE PROCEDURE

A third form of congressional action which I suggest, and which would also make general an existing beneficial provision of law now applicable in one area of Federal water activity, would be to extend one rule derived from the Reclamation Act of 1902 (32 Stat. 388) to any right, under State law, claimed by the United States to the beneficial diversion, storage, distribution, or consumptive use of water. Our bill would provide that whenever the Federal Government claims such a right under the laws of any State, it must play the game by the rules, and initiate and perfect such right in accord with the procedure established by the laws of that State. The United States, it seems clear to me, should follow the same steps required of others, if it wishes to compete for rights established under State appropriation procedures.

Such a provision would not deny the central government any power it now has to acquire water rights other than by State law.. It would apply only when the United States claims an appropriative right under State law. If that is the basis of its claim, rather than, for example, when proceeding by condemnation, should not the Federal Government conform to the administrative procedure of the State for its establishment of such a right? We would then avoid such a regrettable situation as arose in *United States* v. *Fallbrook Public Utility District* (165 F. Supp. 806, (S.D. Cal. 1958)), protracted litigation which I am now informed may be susceptible of satisfactory solution. In that case, the judge describes the U.S. contention on this point as follows (p. 829):

> That California's statutory application and permit procedures for the acquisition of an appropriative water right are police regulations which are inapplicable to the United States, with the result that, even if all other water users must comply with such procedures in order to acquire a valid appropriative right, the United States can obtain the right merely by taking and using the water.

I am told that the Justice Department may now be adopting, in that case, a position consistent with the principle I am here proposing. In any event, the approval of our legislation would bring to an end this kind of dispute.

COMPENSABILITY AND ORDERLY PROCEDURE

Finally, Mr. President, there is a fourth matter requiring the Congress' immediate attention. What I propose here is only that which the Bill of Rights indicates justice requires. The fifth amendment to the United States Constitution provides, among other things, that:

> No person shall * * * be deprived of * * * property, without due process of law.

This should mean that one shall be compensated by the Federal Government for the value of property of which he is deprived by his Government's water project activity, in precisely the same fashion as when the Government takes his property for a post office site. It also should mean that, in following due process, the Government should initiate judicial proceedings before implementing its plan to acquire or impair said property and in such proceedings there should be fixed the extent of compensation. Those constitutional provisions are clear and fair, but, unhappily, they have not always been followed in water rights matters.

First, there has developed, under case law, the theory of a navigational servitude which is to the effect that all navigable waterways, broadly defined to include most of our major streams and their tributaries, are subject to preeminent Federal control under the commerce clause of the Constitution (*United States* v. *Twin City Power Co.*, 350 U.S. 222 (1956)). I do not quarrel with that power of control, but I do differ with some extensions of the navigation servitude argument where they result in vested water rights being noncompensable when the servitude destroys their value. This argument was made by the United States but rejected in a reclamation project case because there the court found a congressional intent in the Reclamation Act to compensate deprived owners of water rights, regardless of what the power might be to do otherwise (*United States* v. *Gerlach Live Stock Co.*, 339 U.S. 725 (1950)).

It has also been held that section 27 of the Federal Power Act (41 Stat. 1063) requires compensation by a Federal licensee acting under that act if said licensee interferes with water rights vested under State law (*Federal Power Commission* v. *Niagara Mohawk Power Corp.* (347 U.S. 239); *Henry Ford & Son, Inc.* v. *Little Falls Fibre Co.*, 280 U.S. 369 (1930)).

It has, however, been held that when the United States wreaks similar damage under navigation and flood control projects it need not pay compensation (*United States* v. *Willow River Power Co.*, 324 U.S. 499 (1945)). The result is that the Federal Government may proceed with impunity in impairing vested water rights in the course of nonreclamation or nonpower oriented projects on broadly defined navigable waters, even though such rights would be compensable by State-law standards (*United States* v. *Twin City Power Co.*, supra, pp. 227–228).

I propose we change this situation by providing that when either the United States, or any entity acting under its authority, takes, in any degree, in the course of any project in regard to navigable or nonnavigable waters, a state-protected water right, just compensation must be paid. It is only fair that the public, generally, through the Federal Treasury, rather than just the aggrieved water rights owner, bear the cost of the particular project, presumably constructed in the interest of all the people. So it is with post office sites, so it should be with water projects. There is no reason for a difference between the incidence of any Federal power over our waters and any other Federal power under the Constitution.

But that is only half of this particular problem. Unfortunately, even in instances where compensation by the United States is already required, as for example, in regard to the same reclamation project involved in the Gerlach case, the Justice Department has claimed the right to seize the affected water unilaterally, as by closure of a river, and put the deprived owners of affected vested water rights to the remedy of a suit in the court of claims. This is known as forcing resort to proceedings in inverse condemnation. As a lawyer, I judge this to be a deplorable tactic. The bill we introduce today should prevent such tactics in the future.

Compensation and orderly procedure should remove a great percentage of the friction in disputes between the Federal Government and those holding water rights recognized under State law. Yet the constitutional powers of the Federal Government would not be impaired. The relative cost of acquiring such rights would be small compared to the total cost of such projects, though just compensation is immensely important to the individuals and non-Federal public agencies involved.

I believe this bill goes a long way toward solving many of the existing or potential problems in the matter of Federal-State water rights. This bill is adapted from my S. 2636, 87th Congress, which, in turn, resulted from the very beneficial exploratory hearings on this subject held by the Senate Interior Committee in 1961. When I introduced that bill I said that I was introducing it for study as an initial step toward solving some of the many problems in this complex field. The verbiage of the pending bill is the result of extensive study and recommendations by many eminent water lawyers. It carries the endorsement of the Western Water Law Symposium conferees at the recent meeting of the National District Attorney's Association. I hope it will be uniformly supported by all those interested in this important field, even though it does not purport to solve all problems in this field.

Section 1 carries the thrust of the bill and, I believe, accomplishes all four of the proposals I have discussed here today. Paragraph 1 repeals, in effect, the definition of "public lands" which was enunciated in the Pelton Dam decision. It protects water rights assumed to be validly based on State appropriation and riparian doctrines in accord with the Desert Land Act and the interpretation in the Beaver Portland Cement Co. case.

Paragraph 2 enunciates the policy of preference for consumptive uses as against nonconsumptive uses, west of the 98th meridian.

Paragraph 3 provides that if the United States claims a water right under State law, it must perfect it under State law.

Paragraph 4 assures compensation for the taking of vested water rights. The word "vested" does not necessarily mean presently perfected rights—State law will, as it should, control in each case. This paragraph also requires affirmative judicial action by the United States. It should prevent acts of seizure by the Federal Government.

Section 2 of the bill includes several saving provisions for the protection of both the Federal interests and State and individual interests in particular circumstances. Paragraph 1 of section 2 provides that if the United States is under statutory limitation to acquiring water rights under State law, such limitation continues in effect. Paragraph 2 preserves the effect of treaties. Paragraph 3 preserves the effect of compacts, adjudicated matters, Indian rights, existing rights of others than the United States, accomplished Federal rights for governmental purposes, and later-acquired Federal rights authorized by an act of Congress or State law.

Different from S. 2636, the present bill does not include a provision by which the United States could be unwillingly joined in water litigation between two or more States. Under present law, it is necessary for the Attorney General to intervene on behalf of the United States if the Federal Government is to be bound by such suits. I believe that section 3 of my former bill was a good provision but some objections to it have been raised and, in order to present a bill suited for wide support, I have not included such a waiver of sovereign immunity.

Another difference in this new bill is that we make it clear that in protecting vested water rights we are protecting the beneficial diversion or storage of water, as well as truly consumptive uses.

Other changes from former S. 2636 are minor.

Mr. President, I think this bill we introduce today provides a vehicle for accomplishing many of the aims sought by the Senate Select Committee on Water Resources, on which I was privileged to serve as vice chairman. At page 65 of our report we asked for "clarification of the Federal position in connection with water rights." I think this bill would go a long way toward providing a sound basis for continued Federal, State, local, and individual water uses. It would also assure a more healthy climate of mutual confidence, respect, and cooperation in which our Federal Government and State and other interests can join in mutual water planning and development for the future.

This bill deserves the wholehearted support of the Congress.

Mr. President, I ask unanimous consent that the bill may remain at the desk through next Wednesday, and I hope that we may be able to obtain coauthorship from Senators on both sides of the aisle.

I also ask unanimous consent that the text of the bill may be printed in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD and will lie on the table through next Wednesday, as requested.

The bill (S. 1275) to clarify the relationship of interests of the United States and of the States in the use of the waters of certain streams, introduced by Mr. KUCHEL (for himself and Mr. Moss), was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (1) The withdrawal or reservation of surveyed or unsurveyed public lands, heretofore or hereafter made, shall not affect any right to the use of water acquired pursuant to State law either before or after the establishment of such withdrawal or reservation.

(2) The provisions of section 1(b) of the Flood Control Act of 1944 (Act of December 22, 1944, 58 Stat. 888–89, as amended, 33 U.S.C. sec. 701–1 (1958)) shall apply to all works hereafter constructed by or under the authority of the United States with respect to waters arising within States lying wholly or partly west of the ninety-eighth meridian.

(3) Any right claimed by the United States to the beneficial diversion, storage, distribution, or consumptive use of water under the laws of any State shall be initiated and perfected in accordance with the procedure established by the laws of that State.

(4) No vested right to the beneficial diversion, storage, or consumptive use of any waters, navigable or nonnavigable, which is recognized by the laws of the State or States in which such waters are diverted or used as compensable if taken by or under the authority of the State, shall be taken by or under authority of the United States without compensation; and where such rights are acquired otherwise than by agreement with the owner, they shall be taken by proceedings in eminent domain under the laws of the United States or of the State or States affected.

SEC. 2. Nothing in this Act shall be construed as—(1) Modifying or repealing any provision of any existing Act of Congress requiring that rights of the United States to the use of water be acquired pursuant to State law; (2) Permitting appropriations of water under State law which interfere with the provisions of international treaties of the United States; or (3) Affecting, impairing, diminishing, subordinating or enlarging (a) the rights of the United States or any State to waters under any interstate compact or exising judicial decree, (b) any obligations of the United States to Indians or Indian tribes, or any claim or right owned or held by or for Indians or Indian tribes, (c) any water right heretofore acquired by others than the United States under Federal or State law, (d) any right to any quantity of water used for governmental purposes or programs of the United States at any time prior to the effective date of this Act; or (e) any right of the United States to use water which is hereafter lawfully initiated in the exercise of the express or necessarily implied authority of any present or future Act of Congress or State law when such right is initiated prior to the acquisition by others of any right to use water pursuant to State law.

TO AMEND FURTHER THE FOREIGN ASSISTANCE ACT OF 1961, AS AMENDED, AND FOR OTHER PURPOSES

Mr. FULBRIGHT. Mr. President, by request, I introduce for appropriate reference a bill to amend further the Foreign Assistance Act of 1961, as amended, and for other purposes.

The proposed legislation has been requested by the President and I am introducing it in order that there may be a specific bill to which Members of the Senate and the public may direct their attention and comments.

I reserve my right to support or oppose this bill, as well as any suggested amendments to it, when the matter is considered by the Committee on Foreign Relations.

I ask unanimous consent that the bill may be printed in the RECORD at this point.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1276) to amend further the Foreign Assistance Act of 1961, as amended, and for other purposes, was received, read twice by its title, referred to the Committee on Foreign Relations, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Foreign Assistance Act of 1963".

PART I

Chapter 1—Policy

SEC. 101. Chapter 1 of part I of the Foreign Assistance Act of 1961, as amended, is hereby redesignated "Policy" and section 101, which relates to short title, is hereby deleted.

Chapter 2—Development assistance

Title II—Development grants and technical cooperation

SEC. 102. Title II of chapter 2 of part I of the Foreign Assistance Act of 1961, as amended, which relates to development grants and technical cooperation, is amended as follows:

(a) In section 212, which relates to authorization, strike out "1963" and "$300,000,000" and substitute "1964" and $257,000,000", respectively.

(b) Amend section 214, which relates to American schools and hospitals abroad, as follows:

(1) In subsection (a) strike out "use, in addition to other funds available for such purposes, funds made available for the purposes of section 211 for" and substitute the word "furnish".

(2) In subsection (b) strike out "to use" and "foreign currencies accruing to the United States Government under any Act, for purposes of subsection (a) of this section and for" and substitute "to furnish" before the word "assistance".

(3) Add the following new subsections (c) and (d):

"(c) There is hereby authorized to be appropriated to the President, in addition to other funds available for such purposes, such amounts as may be necessary from time to time to carry out the purposes of this section, which amounts shall remain available until expended."

"(d) The President is authorized to use, in addition to other funds available for such purposes, foreign currencies accruing to the United States Government under any Act, for purposes of this section."

Title III—Investment guaranties

SEC. 103. Title III of chapter 2 of part I of the Foreign Assistance Act of 1961, as amended, which relates to investment guaranties, is amended as follows.

(a) Amend section 221(b), which relates to general authority, as follows:

(1) In the first sentence after "wholly owned" insert "(determined without regard to any shares, in aggregate less than 5 per centum of the total of issued and subscribed share capital, required by law to be held by persons other than the parent corporation)".

(2) In paragraph (1) strike out "$1,300,000,000" in the proviso and substitute "$2,500,000,000".

(3) In paragraph (2) strike out "$180,000,000" in the third proviso and substitute "$300,000,000".

(4) In paragraph (2) strike out "1964" in the fourth proviso and substitute "1965".

(b) Amend section 222(a), which relates to general provisions, by striking out "section 221(b)" and substituting "sections 221(b) and 224".

(c) Amend section 222(b), which relates to general provisions, by striking out "section 221(b)" in both places it appears and substituting "sections 221(b) and 224".

(d) Amend section 222(d), which relates to general provisions, to read as follows:

"(d) Any payments made to discharge liabilities under guaranties issued under sections 221(b) and 224 of this part, sections 202(b) and 413(b)(4) of the Mutual Security Act of 1954, as amended, and section 111(b)(3) of the Economic Cooperation Act of 1948, as amended (exclusive of informational media guaranties), shall be paid first out of fees referred to in section 222(b) as long as such fees are available, and thereafter shall be paid out of funds, if any, realized from the sale of currencies or other assets acquired in connection with any payments made to discharge liabilities under such guaranties as long as such funds are available, and thereafter shall be paid out of funds heretofore appropriated for the purpose of discharging liabilities under the aforementioned guaranties, and thereafter out of funds realized from the sale of notes issued under section 413(b)(4)(F) of the Mutual Security Act of 1954, as amended, and section 111(c)(2) of the Economic Corporation Act of 1948, as amended, and finally out of funds hereafter made available pursuant to section 222(f)."

(e) Amend section 222(e), which relates to general provisions, to read as follows:

"(e) All guaranties issued prior to July 1, 1956, all guaranties issued under sections 202(b) and 413(b)(4) of the Mutual Security Act of 1954, as amended, and all guaranties heretofore or hereafter issued pursuant to this title shall be considered contingent obligations backed by the full faith and credit of the Government of the United States of America. Funds heretofore obligated under the aforementioned guaranties (exclusive of informational media guaranties) together with the other funds made available for the purposes of this title shall constitute a single reserve for the payment of claims in accordance with section 222(d) of this part."

(f) Amend section 224, which relates to housing projects in Latin American countries, as follows:

(1) In subsection (b) strike out "$60,000,000" and substitute "$150,000,000".

(2) Strike out subsection (c).

Title VI—Alliance for Progress

SEC. 104. Title VI of chapter 2 of part I of the Foreign Assistance Act of 1961, as amended, which relates to the Alliance for Progress, is amended as follows:

(a) Amend section 251, which relates to general authority, as follows:

(1) In subsection (e) strike out "economical" and substitute "economically".

(2) In subsection (f) strike out "Agency for International Development" and substitute "agency primarily responsible for administering part I".

(b) Amend section 252, which relates to authorization, as follows:

(1) Insert the following after the words "available until expended": ": *Provided,* That any unappropriated portion of the amount authorized to be appropriated for any such fiscal year may be appropriated in any subsequent fiscal year during the above period in addition to the amount otherwise authorized to be appropriated for such subsequent fiscal year. The funds appropriated pursuant to this section".

(2) Strike out "and which" before ", except for".

(3) Insert following "1963" the second time it appears the words "and not to exceed $100,000,000 of the funds appropriated pursuant to this section for use beginning in fiscal year 1964".

Chapter 3—International organizations and programs

SEC. 105. Section 302 of the Foreign Assistance Act of 1961, as amended, which relates to international organizations and programs, is amended by striking out "1963" and "$148,900,000" and substituting "1964" and "$136,050,000", respectively.

Chapter 4—Supporting assistance

SEC. 106. Section 402 of the Foreign Assistance Act of 1961, as amended, which relates to supporting assistance, is amended by striking out "1963" and "$415,000,000" and substituting "1964" and "$435,000,000", respectively.

Chapter 5—Contingency fund

SEC. 107. Section 451 of the Foreign Assistance Act of 1961, as amended, which relates to the contingency fund, is amended by striking out "1963" and substituting "1964".

PART II

Chapter 1—Policy

SEC. 201. Chapter 1 of part II of the Foreign Assistance Act of 1961, as amended, is hereby redesignated "Policy" and section 501, which relates to short title, is hereby deleted.

SEC. 202. Chapter 2 of part II of the Foreign Assistance Act of 1961, as amended, which relates to military assistance, is amended as follows:

(a) In section 504(a), which relates to authorization, strike out "the fiscal years 1962 and 1963" and "$1,700,000,000 for each such fiscal year, which sums" and substitute "fiscal year 1964" and "$1,405,000,000, which", respectively.

(b) In section 510(a), which relates to special authority, strike out "1963" in the first and second sentences and substitute "1964".

PART III

Chapter 1—General provisions

SEC. 301. Section 611(b) of the Foreign Assistance Act of 1961, as amended, which relates to completion of plans and cost estimates, is amended by striking out "circular A-47 of the Bureau of the Budget" and substituting "the Memorandum of the President dated May 15, 1962".

Chapter 2—Administrative provisions

SEC. 302. Chapter 2 of part III of the Foreign Assistance Act of 1961, as amended, which relates to administrative provisions, is amended as follows:

(a) Amend section 624, which relates to statutory officers, as follows:

(1) In subsection (a)(2) strike out "two" and substitute "one".

(2) In subsection (a)(3) strike out "nine" and substitute "ten".

(3) In subsection (b) strike out "paragraphs (2) and" and substitute "paragraph".

(b) Amend section 622(b), which relates to experts, consultants, and retired officers, as follows:

(1) Strike out the entire first sentence.

(2) In the second sentence strike out "Nor shall such service" and substitute "Service of an individual as an expert or consultant under subsection (a) of this section shall not".

(c) In section 631, which relates to missions and staffs abroad, add the following new subsection (c):

"(c) The President may appoint any United States citizen who is not an employee of the United States Government or may assign any United States citizen who is a United States Government employee to serve as Chairman of the Development Assistance Committee or any successor Committee thereto of the Organization for Economic Cooperation and Development upon election thereto by members of said Committee, and, in his discretion, may terminate such appointment or assignment, notwithstanding any other provision of law. Such person may receive such compensation and allowances as are authorized by the Foreign Service Act of 1946, as amended, not to exceed those authorized for a chief of mission, class 2, within the meaning of said Act, as the President may determine. Such person may also, in the President's discretion, receive any other benefits and perquisites available under this Act to chiefs of special missions or staffs outside the United States established under this section."

(d) Amend section 635, which relates to general authorities, by adding the following new subsection (k):

"(k) Any cost-type contract or agreement (including grants) entered into with a university, college, or other educational institution for the purpose of carrying out programs authorized by part I may provide for the payment of the reimbursable indirect costs of said university, college, or other educational institution on the basis of predetermined fixed-percentage rates applied to the total, or an element thereof, of the reimbursable direct costs incurred."

(e) Amend section 637(a), which relates to administrative expenses, by striking out "1963" and "$53,000,000" and substituting "1964" and "$57,250,000", respectively.

Chapter 3—Miscellaneous provisions

SEC. 303. Section 644(f) of the Foreign Assistance Act of 1961, as amended, which relates to definition of defense services, is amended by inserting "including orientation" after "training" the first time it appears.

SEC. 304. Section 645 of the Foreign Assistance Act of 1961, as amended, which relates to unexpended balances, is amended to read as follows:

"SEC. 645. UNEXPENDED BALANCES.—Unexpended balances of funds made available pursuant to this Act, the Mutual Security Act of 1954, as amended, or Public Law 86-735 are hereby authorized to be continued available for the general purposes for which appropriated, and may at any time be consolidated, and, in addition, may be consolidated with appropriations made available for the same general purposes under the authority of this Act."

PART IV—AMENDMENTS TO OTHER LAWS

SEC. 401. The Act to provide for assistance in the development of Latin America and in the reconstruction of Chile, and for other purposes (Public Law 86-735, 22 U.S.C. 1942 et seq.), is amended as follows:

(a) In section 2 strike out "$500,000,000" and substitute "$700,000,000".

(b) Insert following the enacting clause "That this Act may be cited as 'the Latin American Development and Chilean Reconstruction Act' ".

SEC. 402. Section 231 of the Trade Expansion Act of 1962 (Public Law 87-794, approved October 11, 1962) is amended as follows:

(a) Insert "(a)" before the words "The President shall".

(b) Add the following new subsection:

"(b) The President may extend the benefits of trade agreement concessions made by the United States to products, whether imported directly or indirectly, of a country or area within the purview of subsection (a), when he determines that such treatment would be important to the national interest and would promote the independence of such country or area from domination or control by international communism, and reports this determination and the reasons therefor to the Congress."

A METRIC SYSTEM OF WEIGHTS AND MEASURES

Mr. PELL. Mr. President, one of the most striking paradoxes in this modern aerospace age is our continued adherence to an antediluvian system of weights and measures. The United States, with other English-speaking countries stubbornly clings to a vestigial organ of inches and pounds which came into being with the birth of this Nation, and over the dedicated opposition of Thomas Jefferson who at least was able to give us a sensible currency system based on the tens of the metric system.

More incomprehensible is the fact that we cannot even meet with the British on common ground in this matter. Our gallon is not the British gallon; our ton is not the British ton, and there is little likelihood that these fraternal twins will ever be transformed into identical ones.

The most persuasive argument for the adoption of a metric system of weights and measures is that it would translate an antiquated system into one that is readily understandable, easy to work, and used by most of the nations and peoples of the world. It is a simple system based upon multiples of 10. Its adoption would facilitate both our domestic and our international commerce. It would provide us with a uniform system of standard measurements. And many segments of our society use the metric approach and have for many years, notably the medical and pharmaceutical professions, the military, and as I mentioned before, the financial world.

At the very least, we should be willing to conduct a comprehensive study to determine the feasibility of changing over to the metric system. The bill I am sponsoring, which is identical to that introduced in the House by the Honorable GEORGE P. MILLER of California, would authorize the National Bureau of Standards to conduct a program of investigation, research and survey to determine whether the adoption of the metric system of weights and measures by the United States would be practical. As such, I consider it a worthwhile and eminently desirable endeavor.

I ask unanimous consent to have the text of this bill printed in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1278) to provide that the National Bureau of Standards shall conduct a program of investigation, research, and survey to determine the practicability of the adoption by the United States of the metric system of weights and measures, introduced by Mr. PELL, was received, read twice by its title, referred to the Committee on Commerce, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the National Bureau of Standards (hereinafter referred to as the "Bureau"), in the exercise of its functions under the Act of March 3, 1901, as amended (15 U.S.C. 271 and the following), and other provisions of law, shall conduct a program of investigation, research, and survey to determine the desirability and practicability of the adoption in the United States of the metric system of weights and measures.

SEC. 2. In the conduct of the program described in the first section of this Act, the Bureau may—

(1) conduct extensive comparative studies of the standards of weights and measures used in scientific, engineering, manufacturing, and commercial areas and in educational institutions, and the advantages of each in its respective field;

(2) cooperate with other governmental agencies and private organizations in determining the economic advantages of a general change to the metric system in the United States or of a change to such system in specific fields;

(3) cooperate with foreign governments in determining the advantages in international trade and commerce, and in military and other areas of international relations, to be derived from a universal standardized system of weights and measures; and

(4) investigate the attitudes of the departments and agencies of the Federal Government and of the several States with respect to possible practical difficulties which might be encountered in accomplishing a change in the system of weights and measures for use generally or in specific fields or areas in the United States.

SEC. 3. The Bureau shall submit to the Secretary of Commerce for transmission to the Congress annual reports, and within three years after the date of the enactment of this Act, a full and complete report of the findings made in the conduct of the program described in the first section of this Act, together with such recommendations as it considers to be appropriate and in the best interests of the economic development and national security of the United States.

SEC. 4. There are authorized to be appropriated such sums as may be necessary to carry out this Act.

AUTHORITY FOR COMMITTEE ON LABOR AND PUBLIC WELFARE TO FILE REPORT ON SENATE BILL 1 DURING RECESS

Mr. CLARK. Mr. President, I ask unanimous consent that the report of the Committee on Labor and Public Welfare on S. 1, the youth employment bill, may be filed tomorrow, despite the fact that the Senate will be in recess. I have cleared this matter with the ranking Republican member.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE WILDERNESS BILL—EXTENSION OF TIME FOR FILING MINORITY VIEWS

Mr. HUMPHREY. Mr. President, I ask unanimous consent that the time for filing minority views on Senate bill 4, the wilderness bill, be extended to midnight on Friday.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL COSPONSOR OF BILL

Mr. METCALF. Mr. President, I ask unanimous consent that at the next printing of the bill (S. 138), to redesignate Big Hole Battlefield National Monument and revise boundaries, the name of the senior Senator from Montana [Mr. MANSFIELD] be added as a cosponsor.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXTENSION OF HEAD-OF-HOUSEHOLD BENEFITS TO CERTAIN WIDOWS AND WIDOWERS—ADDITIONAL COSPONSOR OF BILL

Mr. McCARTHY. Mr. President, I ask unanimous consent that the name of the Senator from Kentucky [Mr. COOPER] may be entered as a cosponsor of the bill (S. 35) to extend head-of-household benefits to certain widows and widowers which I introduced.

The PRESIDING OFFICER. Without objection, it is so ordered.

LOANS WITHOUT DISCRIMINATION ON REAL ESTATE BY FINANCIAL INSTITUTIONS—ADDITIONAL COSPONSOR OF RESOLUTION

Under authority of the order of the Senate of March 28, 1963, the name of Mr. CASE was added as an additional cosponsor of the resolution (S. Res. 118) concerning loans without discriminatory provisions, on real estate by financial institutions, submitted by Mr. SCOTT (for himself and other Senators) on March 28, 1963.

NOTICE OF POSTPONEMENT OF HEARING ON S. 63, AND S. 1057, PUBLIC DEFENDER BILLS

Mr. EASTLAND. Mr. President, on behalf of the Committee on the Judiciary, notice is hereby given that the public hearing scheduled for 10:30 a.m., Tuesday, Wednesday, and Thursday, April 9, 10, and 11, 1963, in room 2228, New Senate Office Building, on S. 63, a bill to provide for representation of indigent defendants, and S. 1057, a bill to promote the cause of criminal justice by providing for the representation of defendants who are financially unable to obtain an adequate defense in criminal cases in the courts of the United States, has been postponed until further notice.

NOTICE OF HEARINGS ON STATE OF DOMESTIC MINERALS INDUSTRY

Mr. GRUENING. Mr. President, I am certain that all Members of Congress and indeed all Americans are aware of the fundamental importance of minerals to our Nation's security and economic development. The essentiality of adequate supplies of metals and mineral fuels, such as oil, gas, and coal to our civilization is so self-evident as to be axiomatic.

Yet for a number of years past our domestic mining industry has been deteriorating, according to consistent reports received by the Senate Interior Committee. More and more, for current needs we are depending upon foreign sources and ocean-borne transportation of materials without which we could not defend ourselves or grow as a nation.

In an effort to get the facts and find ways of remedying this situation, the Subcommittee on Minerals, Materials, and Fuels of the Interior Committee is scheduling hearings, beginning April 9, on the state of our domestic minerals industry. The subcommittee has invited Secretary Udall to appear before it as the first witness and present the situation with his recommendations for remedial action by the Government where any such action is indicated.

As chairman of the Minerals, Materials, and Fuels Subcommittee, I wish to invite Members of the Senate who have special interest in or special knowledge of our domestic mining industry to meet with us and take part in our seeking to get the facts and to find solutions for the problems.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. LONG of Louisiana:

Address entitled "American Agriculture in a Changing World," delivered by Senator McGOVERN before the 29th Annual Convention of the Independent Bankers Association, at New Orleans, La., on March 26, 1963.

FOREIGN AID

Mr. JAVITS. Mr. President, the opposition to the foreign aid program is placing strong emphasis on weakness, waste, and errors in its administration, and in this way serves an important function which I think will result eventually in a stronger, more effective program. But while we focus on this emphasis, we should not minimize or ignore the substantial impact that the foreign aid program has on our domestic economy in terms of the jobs, the industry, and the business development here in the United States and to be developed as these newly developing nations become more developed. Upstate New York has a very large stake in this program and generally in the development of American trade abroad, and the extent of the impact of this program on a particular upstate county has been the subject of a research project since last year. The project is being conducted by the Maxwell Graduate School of Citizenship and Public Affairs of Syracuse University, under a grant from the Rockefeller Foundation, and will be completed in June. The project is directed by Gerard J. Mangone. I ask unanimous consent to print in the RECORD the interim report of the project, entitled "The Department of State and Onondaga County: American Foreign Policy at the Grassroots," issued in March 1963.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

THE DEPARTMENT OF STATE AND ONONDAGA COUNTY: AMERICAN FOREIGN POLICY AT THE GRASS ROOTS

(An interim report to the Rockefeller Foundation, March 1963—a research project directed by Gerard J. Mangone)

FOREIGN RELATIONS AND THE CITIZEN

The hypothesis of this study of foreign policy at the Maxwell Graduate School of Syracuse University is that the philosophy, programs, and conduct of American foreign relations impinge more profoundly upon the daily lives of U.S. citizens than they realize. It is our feeling that the daily activities of the Department of State in policy formulation and its implementation, both at Washington and abroad, touch the immediate interests of the community in employment, prices, profits, health, housing, travel, recreation, and education.

The purpose of the Maxwell study is to examine one facet of foreign policy rarely treated in detail; namely, the impact of foreign policy on one county. The study is attempting to describe in concrete terms some of the effects of America's defensive stature and outreach abroad upon business and the social patterns of a community. It is to be illustrated by examples of how national responses to world events have brought about changes in Onondaga County and its urban centers of Syracuse.

The study is intended to make both the general American public and the attentive elite of policy leaders aware of the particular impact of American foreign policy at the local level, so that a popular criticism of U.S. foreign policy can be more intelligent, responsible, and dynamic. World plans and national programs ought to be regularly reviewed for their effect upon a man's daily life.

ONONDAGA COUNTY: A TYPICAL COMMUNITY?

A "typical" American community is a delightful abstraction, but impossible to denote. Recognizing this difficulty, however, we have selected Syracuse and Onondaga County as a good area for analyzing the impact of foreign policy. Its diverse, yet fairly well-balanced economy presents many opportunities for tracing the effect of foreign policy upon business, trade, commerce, finance, and agriculture. Its population, too, by size, variety of occupations, and ethnic origins roughly approximates national averages for the so-called American community.

In 1960 Onondaga County had a population of 432,028 in the area of 792 square miles, making it the 74th largest county in the United States by population. The county population grew by almost 25 percent in the decade from 1950 to 1960, with the chief increase taking place in the suburbs of the principal city, Syracuse.

The median age of the population is 30 years, half a year older than the U.S. median. The 106,065 families in the county have a median income of $6,691, somewhat higher than the United States as a whole. Foreign born make up 7.3 percent of the population, while 20.1 percent of the residents had one or both parents born abroad.

Syracuse is a hub of political, economic, and social activities for this part of New York State. Offices of the city, county, State, and Federal Government are located within its limits. Its location at the intersection of major interstate highways, access to main railway lines, possession of an excellent airport, and proximity to Lake Erie and the St. Lawrence Seaway make Syracuse a natural administration and distribution point for central New York, so that much wholesale and retail trade flows through Syracuse. Many national companies maintain regional offices in Syracuse to be in contact with local business firms. Several of the largest manufacturers in the Syracuse area are General Electric, Carrier Corp., Bristol Laboratories, New Process Gear Co., of Chrysler Corp., and Solvay Process Division of Allied Chemical Corp. Many other smaller and equally well-known manufacturers are located in the city and suburbs, including some with national or international outlets.

Syracuse is also the home of several institutions of higher education, including Syracuse University, LeMoyne College, the New York Upstate Medical Center, the State College of Forestry, and Onondaga Community College.

Onondaga County contains 252,000 acres devoted to agriculture. Dairy farms predominate, with a number of truck gardens and orchards. Mining is also represented in Onondaga County, with principal products including lime, salt, cement, crushed stone, sand and gravel, and clay.

Realistically no study can hope to show all of the effects of foreign policy upon a people. For example, the pride or anger that an American citizen feels about a foreign economic assistance program is very difficult to quantify, although it certainly exists. Personal insecurity over nuclear weapons testing or anxieties for people or property in Cuba or the Congo, in Berlin or Vietnam cannot truly be measured. Patriotism has its ups and downs, closely tied to foreign policy decisions, but it would be very tricky to compare one man's love of country with another's.

We have selected, however, aspects of community life that are clearly affected by decisions in Washington; namely, business activity, education, immigration, and international exchange.

BUSINESS AND FOREIGN POLICY: BROTHERS IN ECONOMIC GROWTH

To show how American foreign policy influences a local economy, we are taking into account the economic structure of Onondaga County and illustrating some changes in the last decade.

The value added by manufacture in Onondaga County in 1958 was about $586 million. Since World War II the structure of manufacturing in the county has shifted toward the electrical and nonelectrical machinery and chemical industries. While the number employed in manufacturing has remained roughly constant, fewer employees work in the production line and more have white-collar positions.

In 1958 Onondaga County had a labor force of 169,537, of which 4.2 percent were unemployed. Roughly one-third were employed in manufacturing, followed by those in wholesale and retail trade. Substantial numbers were also employed in transportation, communications, public utilities, educational services, construction, finance, insurance, real estate, public administration, and agriculture. The numbers employed in manufacturing and transportation, communications, and public utilities have remained about constant during the past decade, while the number in agriculture has declined.

The greatest increases in employment in Onondaga County have come in services, construction, education, and Government, which is similar to the national American pattern.

NATIONAL SECURITY POLICY

The impact of America's defense posture on Onondaga County's economy has been very great. Over $220 million in military prime contracts were awarded to county firms in 1960. One of the most rapidly growing industries in the Syracuse area has been the manufacture of electrical machinery, in part due to its receipt of a substantial share of defense contracts awarded to the county. The value added by manufactures in electrical machinery increased from $51,686,000 in 1947 to $230,294,000 in 1958. National corporations, spurred on by military contracts, have added or developed subsidiary firms in Onondaga County, while some existing local firms have taken on new products to supply defense goods and services.

Some of the principal defense products manufactured in Onondaga County have included ammunition, lighting fixtures, blowers, exhaust and ventilating fans, air conditioning units, fabricated pipe and pipe fittings, radar and related detection apparatus, communication equipment, guided missile parts and auxiliary equipment, and laboratory, scientific and engineering instruments.

Many prime contracts for defense have been subcontracted, both because of regulations set forth by Congress designed to stimulate small business and because large companies often lack the specialized skills or equipment to complete a complicated defense mechanism alone. When a local firm received a contract for a component of the Minuteman missile, for example, it subcontracted a portion of the work to another local firm which could provide some highly technical equipment. Not all subcontracts have remained within the county, but, on the other hand, prime contracts awarded elsewhere have been subcontracted to firms in Onondaga County. One local manufacturer received several contracts from west coast firms.

Money coming into the county from defense contracts may pass through many hands before leaving the community. Local defense contractors buy many needed supplies and services from local businesses. General Electric, a large producer of highly technical defense equipment, has made purchases from over 800 local firms, and each of these in turn has bought from other local businesses.

Nearly all of the labor supply employed in defense work lives within Onondaga County. Roughly 90 percent of the employees of General Electric live within the county, while the rest reside close by and patronize businesses within the Syracuse area. A local resident assisting on some small part of the Gemini space capsule buys groceries, has his car repaired, attends a local movie, pays property taxes, and spends his paycheck for many other goods and services within the community.

Military prime contracts have also been awarded for research and development as well as for the purchases of hardware, construction, and miscellaneous services. Some of the contracts for research and development have been awarded to educational institutions. For example, during the fiscal year 1962 the Syracuse University Research Institute received $2,527,644 from the Department of Defense for research. It is estimated that over 90 percent of this money remains in the county on the first round, coming to local residents as wages and salaries or payment for goods and services rendered.

ARMED FORCES IN ONONDAGA COUNTY

Military units stationed within the county have been authorized to purchase much of their day-to-day need of supplies and services locally, bringing profits to county businessmen. Military and civilian personnel working for the Armed Forces within Onondaga County have been paid out of Federal funds and have spent their pay locally. In 1962 the 26th Air Division at Hancock Field had an annual payroll of about $9.5 million. Reserve and National Guard units also have brought money into the county through the procurement of supplies locally, construction of facilities, employment of maintenance personnel and watchmen, and payment to Regular and Reserve military personnel.

Certain secondary benefits have accrued from the presence of military installations in Onondaga County. For example, the extension of the runways at Hancock Field to accommodate jet airplanes, justified as a military necessity and paid for by Federal expenditures, has also benefited civilian use of the airport.

FOREIGN MILITARY ASSISTANCE

The foreign military assistance channeled through the Department of Defense has added to the economic impact of national security policy on the county. Orders for military supplies under this type of foreign assistance are generally placed with the individual branches of the American Armed Forces for procurement. A second type of foreign military assistance funds are appropriated directly to the President and are handled through the Agency for International Development. These also have resulted in contracts to local firms.

VETERANS

A legacy from the past defense policies is the presence of many military veterans in the county. There are roughly 60,000 veterans of the Spanish-American War, both World Wars, the Korean war, and peacetime campaigns in Onondaga County. Our national responsibility to those who have had to make direct sacrifices to maintain national security has brought an estimated $7.5 to $10 million in direct payments to veterans annually within the county, in addition to other indirect benefits. Over 700 people have been employed in veterans facilities locally, such as the Veterans' Administration hospital, which has an annual payroll of $4.4 million. Construction of veterans facilities has brought additional funds to the county.

TRADE AND ECONOMIC AID POLICY

Onondaga County firms have carried on a modest but healthy trade with many foreign countries. During 1960, Onondaga County's direct exports abroad mounted to more than $35.4 million and included air conditioning equipment, drycleaning and laundry equipment, vacuum cleaners, centrifugal blowers and exhausters, oil field machinery and equipment, chemicals, drugs, wiring devices, electronic equipment, radio and television transmitters and receivers, car and truck transmissions, and automotive lighting equipment.

Contracts totaling $1.4 million for economic aid, moreover, were awarded to Onondaga County firms through the Agency for International Development and it predecessor, the International Cooperation Administration, during the years 1954 to 1961. The principal products in these agreements included drugs, air conditioning equipment, rice and coffee hullers, and typewriters.

Foreign trade and economic aid have also had an indirect impact on local business through products which were components of finished goods that were eventually exported. Thus, a local firm making automotive lighting equipment has fulfilled an order for a truck manufacturer which in turn exported the trucks under a foreign aid agreement.

TARIFFS, IMPORTS, AND LOCAL BUSINESS

Several important products manufactured in Onondaga County have been protected by American tariffs. In some cases, nevertheless, the tariff rates have not been sufficient to prevent extensive penetration of domestic markets by foreign producers. For example, the chinaware industry in Onondaga County has been protected by a 51 percent ad valorem duty against imports of fine china, but finds this rate insufficient to protect its markets from displacement by inexpensive imports from Japan, Great Britain, and Germany.

Despite new investment, increased efficiency, and development of new product design, both employment and production in the industry have declined in the past decade.

The reduction of American tariff rates and the increased efficiency of postwar production have changed marketing conditions. Various countermeasures have been taken by local firms to compete for both domestic and international markets. For example, one Syracuse plant has invested in the newest machinery available, and it can now compete successfully with foreign firms having a lower per unit labor cost of production. Another firm has built up a foreign subsidiary to compete on international markets and, if necessary, on domestic markets as well. Since this particular product is not widely used in the United States, production abroad has had little influence on local employment. Another firm, driven off the international markets by inexpensive substitutes, has taken on a new line of production and has increased local employment and investment.

Since reciprocal tariff rates are only one consideration for an American firm seeking to develop new markets abroad, local firms have been rather reserved in their support of the Trade Expansion Act of 1962, which was heralded as a catalyst to better world trade. Local manufacturers mentioned quota systems, licensing restrictions, and dollar shortages in their marketing areas abroad as obstacles as great or greater than tariff barriers in developing their export trade.

Imports of raw materials are very important to local manufacturing. These imports have included manganese, chromite, nickel, cobalt, tungsten, graphite, rubber, industrial diamonds, iodine, mercury, quinidine, sisal, and jute. Some imports come to the county by an indirect route, first being transformed into alloys or other special products before purchase by local manufacturers.

Imports also have a very direct impact on business and consumers after they pass through wholesale and retail distributors. Many of these imports, such as bananas or coffee, are so commonplace that they are rarely thought of as foreign. A survey of local machine tool wholesalers, liquor distributors, retail department stores, and automobile dealers revealed that an average of 5 percent of their merchandise originated abroad. These foreign goods offer the consumer a wider choice of commodities than domestic suppliers provide. Substantial savings can be obtained by the consumer on some goods that cannot be produced domestically at comparable prices. However, tariff levels or prices seem less important to the flow of imports to Onondaga County than consumer demand. A decided preference for American goods because of their durability, their American styling, or the availability of service exists, and even the lower prices of foreign goods cannot offset these advantages.

IMMIGRATION: FOREIGN POLICY AND NEW NEIGHBORS

The determination of the number and types of immigrants to be accepted into a state is an important aspect of national foreign policy. This has been especially true of the United States which has received so many millions of people from other lands in the last two centuries. Not only is the overall level of immigration set by acts of Congress, but also the pattern of the immigrant population according to ethnic origin.

The flow of new residents from abroad to a community, determined in part by national policy, has a distinct impact on that community in residential housing and neighborhood character, skills and employment, social clubs and activities, perhaps even in crime rates or welfare benefits.

The largest group of foreign born and native born of foreign or mixed parentage in 1960 was the 29,554 Italians, followed in descending order by Canadians, Germans, Poles, English, Irish, Russians, Austrians, and Asians. Immigration to Onondaga County has come in waves, beginning with the English, Irish, and Germans, later followed by the Italians and more recently by East Europeans, predominantly Poles and Russians. The last available census of aliens registered in Onondaga County in 1958 reflected both the existing immigration laws and the special pressures from certain foreign groups to enter the United States.

The Immigration and Naturalization Act of 1952, like previous statutes since 1924, set a rather restrictive policy on immigration into the United States. Many of the immigrants to Onondaga County were initially blocked by the quota system, but they have been able to come by other legislation, such as the Refugee Relief Act of 1953, or by Presidential order, such as the Hungarian "parolees." Others have avoided the quota system by marrying American citizens or obtained preferred status for immigration through critical skills.

Whereas the decision to admit immigrants or refugees is a matter of national policy, a large burden of integrating them into the American way of life falls on the community. For example, about 38,000 Hungarian refugees were admitted into the United States during 1956 and 1957. Approximately 165 of them came to Onondaga County. These newcomers arrived with little clothing or money, in need of housing and employment, and often with no knowledge of English. To the community fell the task of filling these immediate needs.

Policy decisions reflected in immigration legislation have many effects on a community. For instance, each immigrant is required to have a sponsor who guarantees that the new arrival will not become a public charge. In Syracuse, such organizations as the Syracuse Area Council of Churches, Catholic Charities, and the Jewish Family Service, who often take upon themselves the responsibility for the welfare and success of immigrants. One of these organizations has indicated that it cost about $1,000 to resettle each Hungarian refugee it handled in the community.

Other positive effects of immigration policy have been the economic skills which the immigrants contributed to Onondaga County, their community interest, and their hard work. A random survey of immigrants to Onondaga County during the past decade disclosed that their average income was about $5,700 and that 80 percent of them owned their homes, were above the national average in both categories.

On the negative side, some immigrants have also increased the economic and social problems of the community through their clustering in one residential area, or by adding to the competition for employment, or even contributing to the difficulties of law enforcement. For example, a check of police records revealed that a number of the Hungarians who came to Onondaga County in 1957 had been arrested for various offenses, a few of them felonies.

FOREIGN POLICY AND ITS EFFECT UPON EDUCATION

The enlarged international responsibilities of the United States in world affairs, particularly in maintaining American national security, have had a considerable impact on higher education in Onondaga County. An increasing demand for people who can speak foreign languages, who know the history, culture, and problems of particular areas of the world, or who have skills vital to defense or the conduct of America's affairs abroad has caused the Federal Government to take an unparalleled interest in education.

The National Defense Education Act, for example, has created graduate fellowships and loan funds for students learning critical skills. In 1962 national defense loans made by LeMoyne College, Syracuse University, and the New York State College of Forestry to students in these institutions amounted to more than $319,000. Enlarged military manpower requirements, moreover, due to America's defense strategy in the present world have given Reserve officer training programs at universities a new importance. The Army and Air Force officer training programs at Syracuse University cost the Federal Government over $300,000 in 1960, a large part of which went to students and was spent in the county.

Men and women who have served in the U.S. Armed Forces often qualify for veterans' educational benefits. These mature students add to the growth of the universities with its concomitant economic and social impact upon the community.

Beginning with the decisions of Washington to assist underdeveloped nations, local educational institutions have been called upon to undertake specific programs for the Federal Government in foreign policy areas. These have included training of Peace Corps personnel for overseas duty, the teaching of management skills for officials from emerging nations for the Agency for International Development, and seminars for foreign specialists in radio and television sponsored by the Department of State. For example, the two training programs in Syracuse for the Peace Corps brought over $200,000 in contracts for educational facilities, staff, medical expenses, administration, and housing accommodations, all within the community. No less important was the influx of the Peace Corps volunteers to the community and the increased awareness of the local citizenry about American objectives abroad.

In response to America's growing foreign policy needs, many philanthropic foundations have come to support new and necessary programs and projects in local colleges and universities, enabling these to broaden and improve curriculums and to undertake research in crucial areas. An excellent illustration of this cooperation in Onondaga County is the new Master of International Public Administration program at the Maxwell School of Syracuse University. The training at Syracuse is to be financed with the assistance of the Ford Foundation, while overseas internships in U.S. Government agencies are to be supported by funds granted by the Department of State and originating from the sale of surplus commodities abroad under Public Law 480.

Clearly, foreign policy has a considerable impact on the patterns of education in America. Other less direct, but equally real effects of America's national response to a changing world are observable in Onondaga County. These include, for example, the development of new research interests, higher faculty pay, new courses in world events and foreign policy in high schools, and an increased awareness of the important role of foreign policy among faculty members at all levels of education.

INTERNATIONAL EXCHANGE PROGRAMS

An international education or exchange program, formulated in Washington or encouraged by Federal agencies, touches the local community in many ways. In addition to sharing skills with foreign visitors, the American citizen—in his home, his job, his school, or elsewhere—comes into direct contact with the ideas and values of a citizen from another country.

One man in Syracuse meeting one man from Tanganyika can have a personal exchange of opinions far more valuable than many books, movies, and other informational materials sent across 7,000 miles of land and water. American foreign policy goals include economic and social assistance to development in many foreign nations. Tens of thousands of students, businessmen, and government officials come to the United States each year to learn American techniques and skills. More than a thousand exchange visitors from over 70 countries have come to Onondaga County alone during 1962. These visitors have been sponsored by local businesses, educational institutions, hospitals, and community organizations.

About 675 participants from 38 countries have come to Syracuse to attend the International Management Development program at Syracuse University since 1951. This program is sponsored by the Agency for International Development in Washington, but the impact of the cross-cultural exchange is on Onondaga County.

Carrier International has brought more than 90 sales personnel and technicians from its offices, agencies, and customers around the world to its Syracuse plant in the past year for training and the interchange of ideas. More than 35 young doctors from various nations are serving their residencies in hospitals in Onandaga County, learning specialties badly needed in their home countries.

Another type of exchange has been organized in Onondaga County by the American Field Service. Twenty-six young high school students from 22 nations have been "adopted" by American families and attend secondary schools in the Syracuse area. Each school sponsoring a foreign student, as well as learning from a new friend from Ethiopia or the Philippines, can nominate American students to go abroad for the summer, perhaps to live with a family in Denmark or Japan.

Foreign visitor exchange programs, originating from foreign policy considerations in Washington, call forth a response from the local community. There are seven community organizations in Onondaga County involved in hosting or assisting foreign visitors, and this does not include the many church groups and social clubs which also help out. One, the World Affairs Council, has organized a home hospitality program serving short-term foreign visitors whose itineraries are planned by Washington. These visitors, whose professional purpose in coming to Syracuse might be to view American methods in the administration of secondary education or in the manufacture of electronic equipment, stay with local families and learn in the best intimacy American ideas about manners and politics.

International exchange is an integral part of foreign policy which requires a wholehearted community participation in order to be successful. The impressions which the foreign participants take home about the United States will be formed not on a grand scale, but through their close contacts with citizens in communities such as Onondaga County.

SUMMARY: FUTURE RESEARCH DIRECTIONS

This interim report is an indication of the progress made by the Maxwell research project toward relating national foreign policy decisions to the daily economic and social life of a county in the United States. The report so far has been based on information developed from 14 individual research topics, each concerned with the examination of a particular aspect of American foreign policy and Onondaga County.

The present research design calls for the integration of these studies into a final monograph. The information already available is to be supplemented with further data and interpretation, the whole work to be completed by the summer of 1963.

CONGRESSIONAL REFORM

Mr. JAVITS. Mr. President, our colleague, the Senator from New Jersey [Mr. CASE], today delivered a most provocative speech before the American Society for Public Administration, which is holding its 1963 national conference here in Washington. His subject was congressional reform, and he discussed issues which should be of paramount interest to every Member of this body. I urge my colleagues to read this significant speech, which I ask unanimous consent to have printed in the RECORD at this point.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

PARTIAL TEXT OF REMARKS PREPARED FOR DELIVERY BY SENATOR CLIFFORD P. CASE AT THE 1963 NATIONAL CONFERENCE OF THE AMERICAN SOCIETY FOR PUBLIC ADMINISTRATION, WASHINGTON, D.C., APRIL 4, 1963

Congress has been getting a black eye with the general public.

In part, this is because of the misdeeds of a few Members. Congress has, perhaps reluctantly, begun to do things about this and some of us would like to see a lot more done about giving the public facts about congressional travel and expenses, about contacts with regulatory and contracting agencies, about financial interests and sources of income and gifts. Putting things on the record is the best way to set the record straight and keep it straight.

In part, the decline of Congress results from a growing feeling that it is not adequately responsive to the needs of our Nation and in the minds of some, is not responsive at all.

As many of you know, I am a strong proponent of congressional reform. There are other Members of our legislative body who share this concern, but I venture that the man in Washington who needs congressional reform most and should want it most is President Kennedy.

He would be something less than human if he did not feel growing frustration as his messages citing urgent needs to the Congress are often met initially with indifference, delay, and subsequent discard. As a man who urges that we get the country moving, he must feel pangs of despair as Congress twiddles and twaddles over his proposals for a tax cut, for an education bill, for medical care for the aged, for more medical schools, and a whole host of bills. A clear indication of the degree of his frustration is the fact that two of his major bills of the last Congress have not even been revived this year—the Department of Urban Affairs and the reform of unemployment compensation standards, a subject dear to him as a Senator from Massachusetts.

Virtually none of the President's current proposals have even reached a committee vote, much less a vote in the House of Representatives or the Senate. I do not suggest that these bills are the best or only answers to our problems, but I submit that the President of the United States, elected by all the people, be he Democrat or Republican, is entitled to a vote, up or down, on his major proposals.

Here we are in the 4th month of the congressional session, approaching the Easter recess, which only a few years ago was considered the halfway mark in congressional sessions. The new Congress has passed only one public law of any consequence—an extension of the draft. Not 1 of the 12 major appropriation bills has cleared both Houses.

Last year, Congress dragged its weary way into October before adjourning. At the present rate, we will have to rush in order to conclude any substantial amount of business before we switch to a new calendar. And the longer it takes us to buckle down to work the longer it will take us to develop solutions.

Americans who are now suffering for lack of jobs, medical care or adequate education will suffer all the longer because Congress fails to face the issues. Delay leaves public officials and administrators at all levels of government, as well as private agencies, uncertain about how to prepare programs. Several have written me, for example, inquiring about the chances for action on the library construction features of the administration's omnibus education bill. They have plans to make and budgets to prepare and so it is understandable that they should like to know.

What can be done about revitalizing Congress?

Greater urbanization of Congress is inevitable in the long run. Recent Supreme Court decisions have opened the way for fairer representation for our urban and suburban areas. Three-fourths of our Nation's citizens now live in metropolitan areas of the country. They are entitled to an adequate voice in the State legislatures and in the national legislature. Surely we should be spending as much determining what the dangers of air pollution are as we do in finding how to develop more uses for more peanuts.

The Supreme Court's view that the Constitution guarantees "one person, one vote" means that in time the tide will turn in favor of increased metropolitan influence in Congress. But it may be many years before the Court decisions have an important effect on the actual operations of our political system.

Meanwhile, as a complementary effort, and in its own right, we must proceed with dispatch to modernization of Congress.

There has been no comprehensive attempt to update congressional procedures since the enactment of the LaFollette-Monroney Congressional Reorganization Act in 1946. Since then, our Nation has gained two new States, has increased its population by 50 million, and has moved into an entirely new range of international and national problems.

In the last Congress we were very slipshod in the way we got our work done, and much of it didn't get done at all. There is a real danger that the public will lose confidence in the ability of the Congress to meet the problems of the 20th century.

I have introduced, with Senator CLARK, a bill creating a Commission on Congressional Reorganization, modeled on the Hoover Commission, to study the present organization of the Congress and the functioning of the legislative process.

The bill provides for the appointment of a 12-man Commission—3 Members of the Senate, 3 Members of the House of Representatives, and 6 "individuals in private life who are specially qualified by training and experience to contribute to the solution of problems of public administration or the functioning of legislative bodies."

I do not believe that the procedures of Congress should be considered the exclusive concern of the Members of Congress. The electorate has a substantial stake in the functioning of the legislative procedures, and we should try to obtain the best possible counsel we can in bringing them up to date.

The bill would require the Commission to study at least 12 major problem areas. I should like to take a few minutes to discuss some of the many interesting suggestions which have been made for dealing with each of the problem areas. In putting them forward, I do not mean to imply that they are all my ideas or that I necessarily would support them as remedies for the problems cited. But, I do think it would be helpful to give attention to some techniques not now used for expediting the business of the Congress.

The first problem area listed in my bill is the scheduling of measures for consideration and action. Legislation is now very slow in coming to a vote during the early months of a session of Congress, with an inevitable end-of-session pileup. It makes no sense that a subcommittee chairman or a single member of a committee, chairman because of longevity, can block even consideration of an important bill.

Here are some of the suggested remedies: Setting a deadline for committee action on bills recommended by the executive branch and on nominations and treaties submitted by the executive branch; scheduling congressional committee meetings on Mondays, Wednesdays, and Fridays, and sessions of the full House and Senate on Tuesdays and Thursdays, and, as necessary, on Saturdays; extending appropriations bills to cover 2-year periods so that Congress may concentrate on legislation in one session of Congress and on appropriation in the second session, with due provision for consideration of emergency legislation.

The second problem area is the structure, staffing, and operation of congressional committees. The role of seniority in appointment to committees and especially in selection of chairmen should be reexamined. Clarification and modification of committees' jurisdictions is overdue. Rules of procedure, particularly for convening investigations and handling of witnesses should be enacted to cover all committees. The role of the House Rules Committee should be reconsidered.

Third, the workload of the Congress and its committees: Private immigration and claims bills constitute a heavy drain on the time which Congress should be devoting to national issues. More of this responsibility could be placed in the Immigration and Naturalization Service and the courts. Of course, home rule for the District of Columbia would remove many municipal burdens from our national legislative body, to the benefit of both.

Fourth, congressional rules and floor procedures: Revision of Senate rule 22, the so-called cloture rule, would end the power of a small minority to prevent action by a majority. Adopting a Senate rule of germaneness affecting the offering of amendments as well as the right to use of the floor for irrelevant discussion would expedite Senate sessions. Joint hearings of House and Senate committees on topics of mutual interest would save time for Congressmen and witnesses. Electronic voting in both chambers could save time. Installation of a public address system in the Senate would facilitate its work and the public's understanding of what goes on.

Fifth, conflicts of interest of Members of the Congress: The prestige of and confidence in the Congress could be improved by adoption of legislation dealing with conflicts of interest of its Members and their relationship with Federal agencies.

Sixth, the term of office of Members of the House of Representatives: Lengthening the term of Members of the House would add prestige to service in the House and reduce the time now spent in campaigning. Another proposal which could be examined is the setting of a uniform primary date close to the general election, facilitating legislative action and reducing the time taken from legislative activities for campaign purposes.

Seventh, communications, travel, and other allowances of Members of the Congress: Regulations assuring prompt and effective reporting on legislative expenses, including individual and committee travel, should be considered.

Eighth, the financing of congressional election campaigns.

Ninth, the duties of Members of Congress incident to the appointment of postmasters and the making of appointments to military service academies and other Government agencies: Congress could eliminate politics by placing post office appointments exclusively under civil service and handling nominations to the various academies by civil service examinations.

Tenth, the legislative oversight of the administration of laws: We need a more systematic and effective method of seeing to it that the intent of Federal law is carried out.

Eleventh, the strengthening of the congressional power of the purse: We need to improve congressional functions of raising and spending public funds.

Twelfth, the operation and effectiveness of existing laws with respect to lobbying.

While I have related several suggestions, some of them undoubtedly from members of your organization, more important at this moment than the details of these and other suggestions is the mobilization of public interest in the need for reform. If we once can get a reorganization commission appointed, I am confident that it will include some of the best brains in our Nation and that its members will give very careful attention to these and other problems in making their recommendations to the Congress.

I emphasize the need for public interest because realistically speaking, congressional reform is always an uphill fight for it is stalled by the very congressional inertia and self-interest about which many of us have been complaining. The interest and initiative of organizations such as yours is key to building public concern.

POLICY REGARDING MILITARY AWARDS AND BENEFITS

Mr. METCALF. Mr. President, in the February 1963 issue of the Jewish Veteran, the national legislative director of the Jewish War Veterans of the United States devotes his column to the many distinctions drawn by our Government between hot and cold war duty.

Mr. Felix Putterman a World War II oversea combat veteran and former congressional staff member says that among these distinctions are "a number that are artificial and arbitrary at best." He lists these and proposes constructive steps which can and should be taken. Among the latter is enactment of the GI bill of rights.

Mr. President, I ask unanimous consent that Mr. Putterman's excellent Capitol Corridors column be entered in the RECORD at this point.

There being no objection the article was ordered to be printed in the RECORD as follows:

The other day the Army awarded the Air Medal, a high honor indeed, to a noncom for giving aid to casualties while in helicopter flight over combat areas in South Vietnam. While this was still another incident in a long series of quiet American bravery in the sullen swampland and jungles of southeast Asia, it serves as a reminder that this is still a part of what is euphemistically called peacetime duty.

Hardly a week goes by without an announcement of casualties and deaths among U.S. servicemen on the hot front of the cold war. Yet as far as recognition and benefits are concerned, there is no distinction made between garrison duty here at home and service abroad on this razor-edge exposed nerve of the struggle between freedom and tyranny.

President Kennedy has taken an initial step in asking the Congress for legislative authority to award medals, the Medal of Honor, Distinguished Service Cross, Navy Cross, Air Force Cross, and Silver Star, now restricted to heroic service in active combat with an enemy of the United States during wartime. Such legislation is consistent with the President's action of last April when Mr. Kennedy issued an Executive order to establish eligibility for the award of the Purple Heart to cold war casualties.

Many distinctions are drawn by the Government based upon the supposed differences between hot and cold war duty. Among these are a number that are artificial and arbitrary at best.

Servicemen carrying out the national commitment in Berlin, on the armistice line in Korea, in Laos and the agony of Vietnam cannot purchase national service life insurance. If they lose a limb, they are not eligible for the special automobile available to World War II and Korean veterans. The benefits of a GI bill are as yet unattainable. Their eligibility for service-connected disability compensation is severely limited by much stricter presumptions of pre-service fitness than predecessors of Korea and World War II. After discharge, veterans of Vietnam, Berlin, etc., are not eligible for the same pension given war veterans totally and permanently disabled by reason of non-service connected cause.

Apparently, the Government's distinction between hot and cold war has not inhibited insurance companies. There have been a number of complaints from parents and widows that policies held on deceased sons and spouses are not being paid because the death occurred on a hazardous mission overseas. An insurance company refused to pay double indemnity for an accidental death to the widow of a warrant officer lost in a transport crash in Laos 2 years ago. A number of dependents have been trapped in this whiplash between the Government's artificial distinction of what comprises wartime duty and the private insurance companies' strict views on accidental death.

Obviously, the situation beggars a sensible, rational, and humane solution. The Congress can take a constructive step in the right direction by adopting the President's proposal on awards. The logical next step would be an adjustment of our entire schedule of benefits to bring in deserving veterans who have been exposed to hazardous duty.

The term "hazardous duty" should be interpreted in a limited sense so that the administration could not be accused of creating an all-encompassing Mother Hubbard for every peacetime serviceman. Finally, the GI bill for which Senator RALPH YARBOROUGH has been leading a valiant and almost lonesome fight should be moved up high on the agenda of a Congress which may have time on its hands while waiting around a goodly portion of next summer for the tax bill to be reported out into daylight from the inner recesses of the Senate Finance Committee.

Admittedly the GI bill is expensive—not extravagant—but expensive. It is inconceivable that the talents of our most "fiscally responsible" Members of Congress cannot be used for something positive rather than merely being "agin" every spending proposal. One contribution would be a GI bill of rights, carefully drawn to limit, if necessary, its benefits to those cold war vets enduring the hazards of perilous duty while plugging the leaky dikes of the free world.

What is right is right. At the expense of some of our finest young men, the Government Treasury and private insurance companies have been eating their cake and having it as well.

YOUTH EMPLOYMENT ACT

Mr. JORDAN of Idaho. Mr. President, the subjects of full employment, manpower training, and youth employment will receive a justifiable amount of attention in Congress this session. The first measure affecting these subjects, S. 1, Youth Employment Act, is slated to come to the Senate floor for debate in a few days. I should like to direct the attention of my colleagues to the comments of Congressman TOM CURTIS, of Missouri, who is the senior minority member of the Joint Economic Committee and a ranking member of the House Ways and Means Committee. He is highly qualified to discuss this Nation's most serious economic problem, which is unemployment.

Several months ago, Congressman CURTIS presented a thought-provoking analysis of our unemployment problem in a book, "87 Million Jobs—A Dynamic Program To End Unemployment." Currently, a series of four newspaper columns based on the book is being distributed.

I serve with Mr. CURTIS on the Joint Economic Committee and feel that his ideas are sound and his recommendations offer a refreshingly new approach to a solution of our chronic unemployment problem. Instead of placing reliance upon the administration's panaceas of fiscal and monetary policy to increase aggregate demand, instead of spending vast sums to make work for obsolete skills, Congressman CURTIS offers a bold and imaginative program, including upgrading workers' skills, which hits at the specifics of unemployment. I am associated with many of these views of Congressman CURTIS which are incorporated in the Minority Report of the Joint Economic Committee. In my opinion, this four-part condensation of Mr. CURTIS' program entitled, "A Job for Every American," is a valuable analysis and I ask unanimous consent that it be included in the RECORD at this point.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

STATISTICAL FOG HIDES FACT OF LABOR SHORTAGE IN UNITED STATES

(Unemployment, which according to the Labor Department accounted for 6.1 percent of the labor force for the 30-day period ending February 15, is a problem which continues to bedevil the Government economists. Following is the first article in a series by a man who takes a different view—that it is a shortage of men, not jobs, that troubles America. Congressman CURTIS, Republican, of Missouri, is an expert on the Nation's economy, serving on both the Joint Economic Committee and the House Ways and Means Committee.)

WASHINGTON, MARCH 23.—America can have full employment. It can have full employment without resorting to Treasury-financed projects whose effect is temporary and in the long run bad for the wage earner.

Long months of listening to expert testimony before the Joint Economic Committee of the House and Senate has convinced me of this. Careful study of our economic history for the past decades has confirmed this testimony.

I am also convinced that we are headed for serious trouble unless we understand the real nature of our unemployment and employment dilemma today.

The basic dilemma, ignored by well-meaning men who think in terms of theory rather than of reality, is this: Today there are as many jobs going begging in the United States as there are persons unemployed and looking for work. Any economist will tell you that it is not jobs that this country needs but people to fill them. If this sounds impossible, look at the evidence.

TURN TO THE CLASSIFIEDS

It takes no Harvard degree to read the daily newspaper. But turn to the classified ads and measure what takes more space, the help wanted or situation wanted columns. In most cities and most cases, there are more jobs being offered than there are people asking for jobs. Talk to the employment agency people. They will tell you the same story. U.S. Employment Service offices, which handle but a small part of the Nation's job placement, listed 596,287 job openings in January. A year ago, there were roughly as many, or 586,755. And last June, at a time when the job market is flooded by students seeking summer employment, there were 726,753 positions going "a-begging."

These figures may seem pretty puny when compared with Bureau of Labor Statistics statements that there are close to 6 million people unemployed today. An unemployment beyond the normal drift of people from job-to-job is bad. But the Bureau of Labor Statistics figures don't reflect the true unemployment picture, and won't until new means are devised.

At the present time, anyone who says he is looking for a job is listed as unemployed. A housewife who would like to fatten up the family income but can find no work to suit her is listed as unemployed. The national figure, moreover, is based on a sampling of 33,000 families in a nation of 180 million.

But the flimsiness of Bureau of Labor Statistics figures is not the point. What is truly important to Americans is the paradoxical picture of job hunger in the midst of job plenty. And how does this come about? Very simply, the trade unions, which have a legitimate concern in the interests of their members, feel that whatever the beneficial impact of automation may be, the process must be halted if some members of a particular union are hurt.

WORKER SABOTAGE

It was the industrial revolution which made a liar of Karl Marx and introduced us to our present economic plenty. But at the time, the "Luddites" in England and their friends in France believed that the introduction of machinery was depriving them of jobs. So they attempted to destroy the machines. In France, the workers threw their shoes (sabots) into the works, from which we get the word "sabotage."

Today, to use but one example, certain unions refuse to permit the automation of our newspaper industry. As a result, a few men can hold onto their jobs temporarily. But one newspaper after another fails or must merge with a competitor because, under outdated methods, production costs exceed income. And when a newspaper fails, this means that printers, compositors, stereotypers, reporters, secretaries, and truckdrivers lose their jobs. You can apply this example to textiles, to steel, or to many other industries.

The solution is not to block progress. Improved production techniques not only create jobs but allow this country to compete in the world market—thereby bringing prosperity to this country.

The way to match up the unfilled jobs with the unemployed wage earners is dual. In some cases, the worker must be brought to the job. That is, if his particular skill is no longer needed in Massachusetts, then means must be created to help him get to Missouri or South Carolina or wherever his abilities are in short supply.

ROOM AT THE TOP

The second way to match the job to the man is in giving displaced workers the necessary skills to meet a changing technology. One of the facts that we have discovered in recent years is that the unskilled worker is needed less and less by American industry. Those unions which are made up of the so-called "blue collar" workers are steadily declining in membership, while the skilled and white collar workers today make up more than 50 percent of the labor force. This shift in employment patterns explains the rise in America's average wage. Under our system, there is more room at the top than at the bottom.

Therefore, if the United States is to have anything near full employment, there must be a systematic effort on the part of labor, management, and the Government to give the worker at the bottom of the ladder the skills which will make him necessary to industry. The unskilled worker is first fired and last hired.

But there must be flexibility. The man who says "I've been a cottonpicker—or you name it—all my life, and I'm not going to change now," is doomed to longer and longer periods of unemployment. The man who says, "There's no future here for me, so I'll learn the trade that is needed," will go far.

But any Government program which attempts to alleviate unemployment by creating make-work for the unskilled is merely pouring its money down a rathole. For once the make-work project has been completed, the unskilled worker is back where he started. If trained to new skills, he can find a place for himself in industry, thereby contributing to the Nation's economic good. At the same time, he ceases to be an unemployment statistic and becomes a man at work.

MORE JOBS A WORKERS' MIRAGE IF ACCOMPANIED BY INFLATION

WASHINGTON, MARCH 24.—At a time when our labor force was considerably smaller, President Truman was willing to accept as permanent an unemployed army of 4 million. This was and is a defeatist proposition.

It is important that this country achieve maximum employment, with jobs for all who are willing and able to work. Anything else wastes one of our major national resources.

But it is equally important that full employment not be accompanied by inflation. Rising prices rob those in the lower income brackets. If the paycheck buys less each year, the attainment of full employment becomes a hollow achievement. It is then simply a way of spreading poverty—or at least a lower standard of living—not a means of building prosperity.

Since the war, the Government has attempted to meet the unemployment problem by Government spending. But once committed to these programs of spending, the Government becomes an addict. As inflation increases, lowering the purchasing power of the dollar, the Government must spend more. As unemployment rises, the Government again is committed to greater expenditures. The two, combined, lead to a kind of vicious circle which puts the national economy in greater peril each year.

The labor unions, faced by the diminishing purchasing power of their members, call for higher wages which lead to higher prices which lead to a situation pricing American industry out of the world market which leads to greater unemployment which leads to more Government spending. This is a long sentence, but the point it makes is obvious.

FLOOR ON WAGES

Prof. Gottfried Haberler of Harvard has found three basic causes for inflation:

(1) Unions are able to maintain a floor on wages but have refused to impose a ceiling on pay increases. Caught in a wage-price squeeze, industry must inflate its prices or perish.

(2) Business lacks the muscle of organized labor and cannot meet it on equal terms in collective bargaining.

(3) Unions are not subject to antitrust regulations. Labor is a monopoly; business is not. Therefore, in any contest over wages, the unions are bound to win.

It is natural that unions wish to improve the positions of their members. This aim is established in the laws of the land. What is questionable, however, is action forcing large wage increases yearly or every other year—increases so large that they must result in inflationary price rises. The facts are that wages have been forced up at an average rate of 3 to 3½ percent a year while production has been rising about 2 percent. Prices have multiplied up to 1½ times due to this cause alone.

UPGRADING PRODUCTIVITY

A program of upgrading the productivity of the labor force, through increased skills and productivity, would have an anti-inflationary effect and benefit both management and labor. Real wages would rise as a result of superior performance, and this would keep costs down and maintain stable prices. The individual worker would be better off and the community would benefit from a price structure based on a reduction of unit-cost. The United States also would be in a more competitive position in world markets.

In Britain, wage settlements in excess of productivity, however attractive they may seem to those getting them, have been responsible for the general weakness of that nation's economy. Thus, the Economist—a highly respected center-to-left British publication—laments the "Collective bludgeoning" by unions, under which workers exact more money "before they have earned it," with the result that there is an inflationary weakening of Britain's economic position.

The Organization for European Economic Cooperation (OEEC) also agreed that Britain's current economic problems are due to this anti-productive wage-push. The OEEC found it significant that economic growth, which President Kennedy tells us is so important, was "less vigorous" in Britain and the United States in past years. It might have added that both countries have suffered from a serious loss of international confidence in the strength of their currencies.

Inflation is a fact of life in present-day America. Yet the unemployment which some economists tell us it will cure remains with the United States. In fact, it has become fashionable to speak of "hard core" unemployment. This hard core is in unskilled labor—or in labor whose skills are no longer needed. The coal miner is an example of this latter category. The answer is economic stability, an increase in productivity through new and advanced methods of work, and a systematic effort to train labor in new skills.

RETURN TO PICK AND SHOVEL?

The quality as well as the quantity of jobs must be reflected in our consideration in order to avoid some future day in which a man may be elected President by wildly proclaiming that he will abolish machinery and "create" all the new jobs needed by returning us to the pick and shovel economy in building roads and homes, to hand production in building automobiles. That is precisely the promise which, ultimately, our current clinging to the past in our employment considerations gives us.

Today, West Germany has one of the most modern industrial plants in the world. It employs the best and most modern techniques of automated production. Yet West Germany has so many jobs that it must import workers from neighboring countries. What has projected West Germany to the forefront of industrial nations has been the efficiency of its plant, the productivity of its labor force, and the resultant anti-inflationary forces it has released.

In contrast, the United States has attempted to turn back the economic clock to the point where even Dr. Walt Whitman Rostow, a leading spokesman of the New Frontier, concedes that much of our industrial plant is obsolete.

Private Sector, Not Government, Creates Economic Growth in the United States

Washington, March 25.—When most Americans talk privately about their jobs, the ones they have, want, or may have lost, they usually do it with native good sense. At the level of public debate, however, there are vested notions and emotions that make straight talk about America's jobs virtually impossible.

One of these notions is that public works, public spending are the only answer to unemployment. Forgotten is the fact that heavy public spending in the first 7 years of the Roosevelt administration hardly made a dent in the great depression or in unemployment. In 1933, there were some 12 million people out of work. Until the manpower needs of wartime production and the draft became felt, the unemployment figure fluctuated around 10 million. All the Public Works Administration (PWA) programs conceived by earnest New Dealers failed to solve the program.

Another notion, prevalent among the younger citizens of this country, is that only strong and highly centralized government can protect the people from something called a "market economy"—horrible sounding, but another way of describing the necessary and natural application of economic laws. Every year there are torrents of arguments that the greedy private sector—anything from General Motors to the man who owns the local candy store—is gobbling up our substance while the public sector—or government—goes begging. State and local governments, though presumably public, are somehow lumped in with the nasty private sector.

SOVIET PRODUCTIVITY STATIC

In these arguments we are offered "statistics" which show that whereas the Soviet Union is growing like a weed, the United States is withering on the vine. The facts, of course, show that productivity, one of the real measures of a nation's growth, has remained almost static in the Soviet Union since 1913; that where less than 10 percent of the American labor force produces a superabundance of food, it requires 50 percent of the labor force in the Soviet union to produce scarcity rations.

But it is simply not true that we have been starving the public sector in the United States. A glance at the facts shows just the contrary. For instance, social insurance grew almost 300 percent between 1950 and 1960, at a time when the gross national product (GNP) rose only 80 percent. Federal financing of research has grown from $1 billion to $7 billion in that period. Total education outlay jumped from $9 billion to $24 billion. We have, in fact, been building classrooms at a far greater rate than what President Kennedy has called for. Yet some still call for an ever-increasing centralism and the gradual starvation of the private sector.

But what does this mean? Vast centralism means, concretely, vast taxes to pay for Federal projects and undertakings, a slower rate of economic growth—since Government produces nothing—as resources are diverted into the bureaucracy, and delay in attending to many of our national problems.

OBSOLESCENT PLANT

Outstanding among the last named, of course, is that of coming to grips with effective ways of upgrading our work force, to the end that technological progress is not slowed because we have insufficient workers. Another outstanding result of vast centralism is the growing inability of an obsolescent American industrial plant to compete for world markets, thereby aggravating the unemployment problem. This competition, rather than modernization and automation, is what puts American wage earners out of work.

The United States cannot avoid a fairly large Federal Government operation. The military threat of communism and our complex relations to our allies necessitate a substantial Federal establishment. But the piling of questionable spending programs on top of these really vital ones can only cause a great and perhaps dangerous dilution of national energies.

Recognition of this has even produced the irony of lectures by European officials on the need for Washington to put its fiscal house in order. At a recent meeting of the International Monetary Fund, the French warned the easy-spending nations on the need for a "sound policy to ward off the recurrence of inflationary pressure." And the Germans emphasized the well-known principle that a workable international monetary order required "monetary discipline at home."

FOREIGN GOLD HOLDINGS

These nations had more than a mere academic interest in the economic health of the United States. They hold dollar balances in large quantities as part of their monetary reserves, and so have an enormous interest in measures to help protect the dollar. And they are aware that U.S. prodigality has brought about an imbalance of payments for us, drained away our gold reserve, and we have arrived at a point where our hoard at Fort Knox does not cover the claims of foreign nations.

There have been many attempts to sweep the balance-of-payments problem under the carpet. But it ties in directly to the question of heavy Federal spending, of high budgetary deficits, of the national economic health and of employment.

None of these questions can be solved by increasing the Federal budget. Government spending—the discredited pump priming of the depression years—does not equip a single man with the skills required to take one of the many new jobs created by our advancing technology, by automation. It can buy time, at an exorbitant price, but only individual training or retraining can buy any real guarantee of real work and real income.

Job Clearinghouse, Tax Prods Would Push Employment Upward

Washington, March 26.—Our dynamic economy has created a demand for so many skills of so many new and different sorts that today we have, in amazing fact, developed large labor shortages. In short, our economy is not sluggish but is suffering from growing pains and will continue to do so until a farsighted economic policy in and out of the Government prevails.

The skill requirements of our economy are snowballing. The Department of Labor recently estimated that about 5,000 new job titles will be added to its dictionary of occupational titles in the decade of the sixties. During the same period some 8 percent to 10 percent of current job titles will become obsolete. Since technological growth creates a demand for more jobs than it makes obsolete, our basic task as a Nation is to find ways and means to meet new demands.

The cost, surprisingly, is bound to be relatively low and in a sense self-liquidating. Work at higher skills pays more, which enlarges the tax base. Also success in this endeavor will reduce the incentive to featherbedding, which fear of technological unemployment frequently generates. The resulting greater productivity will also serve to expand the tax base. Billions now spent in all manner of Government programs to conceal unemployment in the fog of inflation could be saved and Federal taxes accordingly cut to the bone.

Government is not a copartner of the people. It is their servant, and Government jobs should be created only insofar as the private sector calls for them. The concept of the State as an entity with its own volition cannot exist in a free society.

PROGRAM OUTLINED

What must be done by Government to aid in the task of finding people for the unfilled jobs today?

(1) Urgently necessary are answers based on an analytical, nationwide study of the skills of the future, emerging skills of the present and obsolescent skills of the past. Such answers are needed so that we do not retrain men, as indeed today we are doing, in skills which are outmoded or unnecesary.

(2) To this end, there should be established a national clearinghouse for the classification of these skills and their needs on a geographical basis.

(3) Information gathered by the clearinghouse should be classified as to levels of remuneration by skill categories, length of retraining periods, and other relevant data.

(4) This information should be used by the Armed Forces, especially in connection with their vocation guidance.

(5) The clearinghouse information should be made available to educational bodies. This would instruct those in charge of our education with the new technological needs.

(6) We should pay relatively less attention to old-fashioned narrow training and place more emphasis in the schools on fundamental subjects. For it is the basic subjects which provide the future working population with a strong springboard to sound skill in youth, plus occupational flexibility after they have entered the labor force. Vocational schools, moreover, should not be allowed to continue as the dumping ground for students with discipline problems.

TAX REVISION

On the Federal level, these steps should be taken to accelerate the process of job escalation which will make employed workers of the unemployed:

(1) A change is needed in the tax laws. At present our tax laws actually impede the retraining process which is so necessary. Cost of improving one's present skill is deductible even if it's obsolete. Cost of learning a new skill is not deductible.

(2) The tax laws penalize a man who can get a lucrative but temporary job at some distance from his home. The law says that his "legal residence" is where he works, not where he lives. To take the good temporary job, he must relocate his family or take a tax loss. And it should be recalled that 70 percent of all Americans own their own homes.

(3) Unemployment insurance, as presently administered, impedes retraining. If a man loses his job, he can draw unemployment benefits so long as he does nothing to make himself eligible for another and better job. That is to say, if his job is "obsolesced out" and he tries to go to school to learn another skill, he is dropped from the unemployment insurance rolls. The system, moreover, penalizes companies which seek to retrain workers they have been forced to lay off.

(4) In our rapidly growing economy, machinery becomes obsolete before it wears out. Our tax laws, however, are geared to the old concept of wear, not of obsolescence. As a result, the lag in depreciation allowances is now estimated to be some $4 to $6 billion behind replacement needs. And slow replacement has an adverse effect on the creation of new jobs as well as the upgrading of old ones.

With faith in ourselves, and perseverance in job escalation without federalization, we can succeed in attaining a future of full employment. We can do so while strengthening our freedom, not through decisions which trickle down from an apex of authority in Washington, but from actions originating in the broad base of the pyramid of America's economic and political strength—a free people.

GEORGE E. BARCLAY

Mr. EDMONDSON. Mr. President, on April 23, 1963, Mr. George E. Barclay, regional supervisor of the Branch of Wildlife Refuges, will retire after more than 30 years service. Mr. Barclay has been regional supervisor for the area, which includes Oklahoma since 1939. During this time, he played a major role in the development of all wildlife refuges in our region. In particular, his role in the development of Oklahoma's Washita National Wildlife Refuge, Tishomingo Refuge, and our Great Salt Plains Refuge will always be remembered and appreciated by Oklahomans.

George Barclay located and made original recommendations that the Washita Wildlife Refuge be established in western Oklahoma. Under his direction, a master plan of development and management was recently completed.

Mr. Barclay's interest and hard work eventually led to a cooperative agreement with the Oklahoma Department of Wildlife Conservation for the development and management of Oklahoma's Tishomingo Refuge near Lake Texoma. This area has become one of the Southwest's most popular recreational areas with hunting, fishing, boating, and many other attractive features—not the least of which is Lake Texoma lodge.

Finally, George Barclay guided development of our Great Salt Plains Refuge near Enid, Okla. This area is known as one of the finest places in Oklahoma for waterfowl hunting. Much of the area's reputation can be attributed to the hard work which Mr. Barclay did to improve and enlarge this refuge.

In addition to these other projects, Mr. Barclay has guided the Wichita Mountains Wildlife Refuge near Lawton, Okla., to a position of national prominence.

On behalf of myself and other Oklahomans, I would like to publicly thank George Barclay for his many years of service and wish him a most enjoyable retirement—well deserved.

SENATE YOUTH PROGRAM

Mr. PELL. Mr. President, the 102 young men and women from high schools in our 50 States and the District of Columbia have now been back in their classes for some time after their participation in the first Senate youth program.

Theirs was a unique and rewarding experience, inasmuch as it brought these young people, two from each State and the District of Columbia, into a close association, with the U.S. Senate, specifically, and with the Federal Government generally for the period of a week.

I can say without qualifications, based on my own experience with the study group, shared with some of my colleagues of the advisory committee and with Senator JOHN SHERMAN COOPER as cochairman, that the project gave these future voters and participants in politics and Government a rewarding insight into the difficult, challenging, and always interesting operation of our Government as it involves us here in the Senate.

As one who has had many young people from Rhode Island as interns in his own office, a figure rapidly approaching 100, I feel we should do all we can for those of a younger age who will someday succeed us in the responsibilities and privilege of governing.

I am happy to have had a part in this most worthwhile endeavor. Many contributed their time, talent, and efforts. We are very grateful to them.

A tribute in this regard belongs to the William Randolph Hearst Foundation, which initiated this program; to Senators and their staffs, to the various branches of the executive department, to the American Political Science Association, and to the directors and superintendents of education in the various States.

OPPORTUNITIES FOR ALL

Mr. DODD. Mr. President, a few weeks ago our distinguished senior colleague from Oregon, Senator MORSE, delivered the annual Frank Jacoby lecture at the University of Bridgeport in Bridgeport, Conn.

The purpose of this annual lecture is "to further the brotherhood of man and the equality of man regardless of race, color, or creed."

Senator MORSE's address was a notable contribution to the achievement of that purpose. His theme was the denial of adequate employment opportunities to the American Negro. In clear and concise terms, he gave an unforgettable outline of the size and shape of the discrimination picture. It was a real honor, and I may say a treat, for the people of Bridgeport to have the opportunity to hear Senator MORSE, and because his address was so memorable, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OPPORTUNITIES FOR ALL

(Address of Senator WAYNE MORSE, annual Frank Jacoby lecture, University of Bridgeport, Bridgeport, Conn., Mar. 27, 1963)

It was with a great deal of pleasure that your kind invitation to be here today was accepted, for it is indeed an honor to be included in the illustrious group of speakers who have appeared here in the past as Frank Jacoby lecturers.

And the pleasure was enhanced when I noticed that my friend and next door neighbor in the Senate Office Building, Senator GOLDWATER, was last year's speaker. Our office space is a good deal closer than we generally are politically. But now it can be said that I, as a liberal, am 1 year behind the Senate's most noted conservative.

Though the two of us often differ politically, we do believe in the "brotherhood of man."

Yet to believe is not enough. And Frank Jacoby recognized that when he established this lecture. He stated that the purpose of the lecture was "to further the brotherhood of man and the equality of man regardless of race, color, or creed."

The belief in the brotherhood of man is not a once-a-year affirmation. To believe it we must practice it, each and every day.

Today, I would like to address myself to some of the efforts being made to further the brotherhood of man, and their relationship to the economic problems that beset our country.

Since 1954 our Nation has heard much of civil rights. It hardly seems possible that nearly 9 years have passed since the Supreme Court declared that separate but equal schools were inherently unconstitutional. Since that time our Nation has been torn over Little Rock, New Orleans, and Oxford, Miss.

When viewed over the past 10 years, great strides have been made in civil rights for colored Americans. But, when placed in the perspective of the opportunities and rights which are enjoyed by others and which we believe are the inheritance of everyone, it would seem that we have hardly moved at all.

In just the past few months a number of events have occurred that should give us all hope. While the U.S. Senate was filibustering over the use of the filibuster—a device used to kill civil rights legislation—the South demonstrated that in some places it was ahead of the Senate.

For in South Carolina, a Negro was admitted peaceably to Clemson College; in Mississippi, James Meridith returned to classes; in North Carolina, Governor Terry Sanford announced that the States had a responsibility to provide jobs—good jobs—for Negroes.

It is this last incident—Governor Sanford's announcement—that is of particular interest to me. It deserves to be of interest to all Americans not only because of the injustice that is done the colored citizen, but the high price the white community pays itself for this discrimination. The United States today faces a great challenge in trying to rejuvenate our economy. The domestic program of the administration now pending in the Congress is designed primarily to stimulate our economic growth from its present sluggish pace and its high rate of chronic unemployment.

In the last Congress, we adopted the Manpower Retraining Act, with programs of reeducating the unemployed in skills that are needed in today's labor market.

In this Congress, we are being asked to adopt a substantial tax cut, a measure I wholly endorse to attack the same problem on a much bigger scale. Our Senate Labor Committee is in the process of reporting out a Youth Conservation Corps bill, having for its purpose the provision of useful and needed conservation work for the jobless youths.

Testimony in support of the bill brought out that among teenage male jobseekers, about 10 percent of the whites are unable to find work, but 21 percent of the colored boys are unable to find work.

This whole vicious circle of school dropouts and lack of opportunity for them in the labor market is bad enough among our white population, but the added element of discrimination makes it twice as bad among our colored population.

From my own observation of this problem in the District of Columbia—and I am a member of the Senate District Committee—I know that thousands of Negro youth who are prevailed upon to finish high school and learn a trade are then thrown into a social situation that simply denies them the chance to work at that trade. Such a youth may find work only as a janitor, a busboy, or laborer, or he may not bother to work at all. And many others are discouraged from learning a trade at all, much less a profession.

Of the total labor force, only 1 in 10 is colored; yet 1 of 5 unemployed is colored. Of the chronically unemployed—that is over a long period of time—one in four is colored.

When the economic belt is tightened, as comedian Dick Gregory likes to say, the Negro is the first notch. The Negro in America—along with some other minority groups—is the lowest man on the economic totem pole of our Nation.

Because he does not have economic security, he is least able to survive an economic setback. Thus, an illness, however slight, can wipe out what small savings that do exist. A brief job layoff, for seasonal adjustments or plant conversion, can mean the relief lines again.

Being economically vulnerable has other disadvantages, too. And most of these disadvantages are far more serious.

For instance, many of you undoubtedly read of the action taken in LeFlore County, Miss. There, when it became apparent that a civil rights group might manage to register the remaining 99 percent of the county's Negroes who were not registered to vote, the county in retaliation cut off its distribution of surplus food which benefited mainly the Negroes. The reason given officially by the county was a lack of funds for distribution.

The effect of this action was important, for without the surplus food, the 37,000 Negroes could not survive, for their average income in LeFlore County was a little better than $300 per year.

By denying the surplus food provided for free by the Federal Government, the Negroes were faced with two choices: one was to vote and starve; the other was to maintain the status quo—no vote but at least the stomachs were partly filled.

To the observer of the American scene, it appears that the Negro has made great economic advances since the end of the Second World War. In absolute terms this is true, for the Negroes are now receiving higher wages under better working conditions at a greater variety of jobs than ever before.

The Second World War taught the Negro skills he would never have learned in his segregated school. For many, it was the only chance they would ever have to learn trades denied to their race in peacetime conditions.

After the war, the GI bill of rights increased the educational level of the Negro, it eased his entrance into the professions, and it trained his future leaders.

All of these advances are notable when compared to the previous decade, but relative to the economic progress of our Nation as a whole, the Negro's advance is not comparable to that the rest of us have enjoyed.

In Atlanta, Ga., while per capita income for white citizens was going up 44 percent, it was rising only 25 percent for colored people during the same period. In our Nation as a whole, the median income of the Negro is today nearly $2,000 less per year than that earned by the white. The sad fact is that the Negro worker earns only 65 percent of the income earned by the white worker.

Job discrimination in industry is the biggest impediment to the economic advancement of the Negro. Today the Negro can find work in government and in the professions. But American industry has not responded as well. The practices of both unions and management have been such that there are more Negroes in the United States today with doctorate degrees than there are Negro plumbers or electricians.

In Washington, D.C., last Friday the Secretary of Labor announced that he would seek an injunction if the contractors and unions constructing a gymnasium at Negro Howard University did not cease their discrimination and hire Negro workers.

It is not incredible that a Negro cannot even find employment in the construction of a building at a university that was and is dedicated to his education.

But all the blame does not lie with the unions. For if the labor movement has been reluctant to end discrimination, management has certainly not been eager.

There can be no doubt that many of our national corporations engage in token employment of colored workers in order to satisfy the rules against discrimination in defense industries, just as many school districts resort to token integration to satisfy the constitutional requirement of equal treatment.

As I have indicated, with little opportunity for advancement, the rate of dropout from high schools is twice as high for Negroes as for whites. We cannot afford to continue this waste of talent merely because of the color of skin involved.

Among Negroes over the age of 25, the average number of years of education is less than eight. Think of that. Less than an elementary education. Of course, in recent years this figure has improved remarkably so that the age group between 25 and 29 averages around 11 years of education.

One-fourth of the Negro dropouts remain unemployed until they reach the age of 25 or over, when the rate drops to slightly better than one-fifth.

The entire Nation pays for this situation in lost production, in welfare, and institutional costs. I have stressed that because race discrimination is one of the key factors in the education, the unemployment, and the slow growth rate problems—yes, even the tax cut—to which so much of our legislative program is addressed. It is far from the only factor; but it is certainly one of them.

As a nation we have failed to make this land the land of economic opportunity for all. As long as we continue to fail, we will remain a Nation fighting the cancer that results from discrimination, rather than enjoying the blessings of brotherhood.

Over one-tenth of our Nation is nonwhite. For this group the American dream is all too frequently just a dream, never to be a reality.

The right to vote on an empty stomach is not a right at all; the right to attend school and to learn to read with no economic future is not a right; the right to equal treatment at libraries, swimming pools and lunch counters is no right at all without the right to earn a decent living.

The right to economic opportunity overshadows in importance almost all other rights, yet in the past few years our attention as a nation has been directed to the more dramatic struggles in civil rights, such as voter registration, school integration, freedom rides, and apartment dwellings.

But when the United States operates in the world arena, it does not subordinate economic freedom to such an insignificant role. Time and time again we hear our leaders in foreign affairs emphasize the need for establishing economic freedom among the nations of the world.

Our foreign policy experts maintain that once an underdeveloped nation has a sound economic base upon which it can develop, there will be little or no need for concern as to that nation's political future. A sound economy, they claim, almost guarantees a sound political future.

And I think they are right. But the same argument should be applied to the economic rights of minorities within our country. But it is not done.

The hope that our country held out to the millions in the past was a hope that could, with work, dedication, and more work, be realized. Over the years our Nation has welcomed wave after wave of immigrants—and as the years progressed they or their descendants have found their hopes fulfilled.

But within our midst is a group which for 100 years has sought in vain for the opportunity to hope. And that hope has yet to arrive—and is even farther from being fulfilled. The only reason the arrival of that hope has been delayed is the accident of color which is the most conspicuous difference any minority group can have.

Yet all the Negro has asked for over the years is the right to have the same opportunity, the same chance, the right to receive the same treatment.

But for the past 100 years we have continued to ignore the Negro while welcoming to our midst new arrivals from other lands. The failures must cease. We must immediately undertake the task of making the Negro an equal partner by providing him with the skills he needs, with the opportunity he seeks.

The movement toward Freedom Rides, sit-ins, and all their various manifestations, was to be expected. We should expect it to continue, and to expand. This element of the American population is expressing an overdue determination to enjoy its natural rights. Certainly, equal opportunity will grow in all areas as specific discriminations are overcome.

And I think this will be healthy for the Nation, and for the economy. The dire predictions, for example, that an executive order against restrictions in certain federally financed housing would depress the construction industry are not being borne out. The home construction business appears headed for another prosperous year.

Frank Jacoby was an admirable man. Having had his American dream come true, he knew that others must have the opportunities he did, if our country was to fulfill its dream. He also knew that city and State and Nation are built by the exercise of opportunities.

Because we are our brother's keepers—an article of faith I do not question—we must see that all of us enjoy that dream of opportunity.

THE EDUCATIONAL AND CULTURAL EXCHANGE PROGRAM

Mr. FULBRIGHT. Mr. President, I wish to draw the attention of my colleagues and of the public generally to what I consider a remarkably interesting and significant document. I refer to the report to Congress by the U.S. Advisory Commission on International Educational and Cultural Affairs, of the Department of State, entitled "The Effectiveness of the Educational and Cultural Exchange Program."

This report, the first submitted by the newly reconstituted U.S. Advisory Commission, set up under Public Law 87-256 of September 1961, was called for under that same legislation, informally designated as the Fulbright-Hays Act. The Commission was directed to make "a special study of the effectiveness of past programs with emphasis on the activities of a reasonably representative cross section of past recipients of aid." The idea and the language, which were gladly accepted during Senate debate, were suggested by the senior Senator from Ohio, and might well be termed the "Lausche amendment." Here I want to pay tribute to my colleague on the Foreign Relations Committee for his foresightedness; he wrought better than we knew at the time. I say this because, although there have been many and varied reports on the exchange programs in the past, the present one appears unique in its scope, thoroughness, and significance.

The fact is that the report is a ringing endorsement of not only the concept of the exchange program, but also of its implementation and results. Indeed, as stated in the report:

> The Commission was frankly surprised, though gratified, at the wealth, variety, and convincing character of the evidence supporting the conclusion that the program is effective.

I might stress here the distinguished composition of the group which conducted the study. Members of the Commission are appointed by the President on a nonpartisan basis, as directed by Public Law 87-256, and it is clear that we can have the utmost confidence in their ability and fairmindedness.

Mr. President, at this point I ask unanimous consent for insertion in the Record of a listing of the Commission members.

There being no objection, the list was ordered to be printed in the Record, as follows:

MEMBERS OF THE UNITED STATES ADVISORY COMMISSION ON INTERNATIONAL EDUCATIONAL AND CULTURAL AFFAIRS

Walter Adams, professor of economics, Michigan State University.

James R. Fleming, publisher, Fort Wayne Journal-Gazette.

Luther H. Foster, president, Tuskegee Institute.

Rev. Theodore M. Hesburgh, president, University of Notre Dame.

Walter Johnson, professor of history, University of Chicago.

Franklin D. Murphy, chancellor, University of California at Los Angeles.

Mabel M. Smythe, principal, New Lincoln High School, New York, N.Y.

Roy E. Larsen (vice chairman), chairman, executive committee, Time, Inc.

John W. Gardner (chairman), president, Carnegie Corp. of New York.

Mr. FULBRIGHT. Mr. President, I prefer to have the report speak for itself, and shall ask to have a summary of it placed in the Record following my remarks. The report in its entirety is being printed as a House document and will be available to all those interested. However, there are a few matters to which I would like to give particular emphasis.

First, as I and others have often done in the past, the Commission stresses the fact that many of the effects of educational and cultural exchange programs are intangible; insofar as some of these can be measured, their full implications can only be seen over a long period of years. Surely one may expect quite a time to elapse before some struggling and perhaps wild-eyed student turns into a cabinet minister sympathetic to our view of the world. In order to allow for the limitations of existing instruments of research, the Commission deliberately sought to use the widest possible variety of techniques of inquiry.

Second, the report concentrates on the actual exchanges conducted by the State Department and the U.S. Information Agency. Within this frame of reference, the basic concern was to discover the overall impact on the foreign student of his experience in the United States. In other words, the Commission could not and did not undertake the virtually impossible task of assessing the multitude of Government and private programs which generally are lumped together under the heading of educational and cultural exchange. At the same time, I believe the report amply covers the most meaningful and interesting element in such programs.

In the third place, in describing the Government program, the Commission quite rightly stresses the great contribution to it made by private individuals and organizations in this country, not to mention the binational centers abroad. It is this extensive participation by the public which gives rise to the report's statement that the program is "in a sense conducted by the American people themselves." It has notably created a very broad base of public enthusiasm and support.

Fourthly, I would point out that the Commission—quite properly, in my view—did not content itself with an assessment of the strengths and weaknesses of the program, but also made numerous recommendations for future improvements. I hope my colleagues will give particular attention to those suggestions.

Finally, I believe the concluding paragraph of the résumé of the report is one which should be quoted in full and given the widest possible circulation. It reads as follows:

> In sum, the American people can feel pride and deep satisfaction that, although some improvements are yet to be made, the program has proved so effective to their purposes, and has established itself as a basic ingredient of the foreign relations of the United States. There is no other international activity of our Government that enjoys so much spontaneous public approval, elicits such extensive citizen participation, and yields such impressive evidences of success. In a time when most international activities seem almost unbearably complex, hazardous and obscure in outcome, the success of educational exchange is a beacon of hope.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point the summary of the report by the U.S. Advisory Commission on International Educational and Cultural Affairs.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY

The U.S. educational and cultural exchange program has become a basic aspect of this country's relations with almost every part of the world. It is a program conceived and in a sense conducted by the American people themselves as a direct personal expression of their good will and good intent toward the people of other nations. As such, it embodies what all of us as Americans feel are the common human interests which we share with people all over the globe, including our passionate belief in education and in the freedom of intellectual inquiry, and our mutual hopes of peace.

The U.S. Advisory Commission on International Educational and Cultural Affairs was asked by Congress to appraise the effectiveness of this program with special reference to foreign students, leaders, teachers, and others who have come to the United States on State Department grants.

After conducting what we believe is the most broadly based survey yet made of the program both overseas and in the United States, we present the following conclusions:

1. Testimony is overwhelming from all sources that the program as a whole is effective. The Commission was frankly surprised, though gratified, at the wealth, variety, and convincing character of the evidence.

Out of 53,000 foreign grantees brought to the United States since 1949, there were perhaps unavoidably some cases of poor selection, of bad programing and placement. There were a few grantees who left with—possibly came with—negative, even hostile attitudes, or who for various reasons were unable to benefit from their experience here. But these instances, we find, are the fractional minority; the balance of evidence is overwhelmingly on the side of success. The evidence is also conclusive that the program has proved itself an essential and valuable part of America's total international effort. The basic concept of the program, its potential in accomplishing a wide variety of essential and desirable ends was overwhelmingly endorsed.

2. There is impressive testimony that the exchange program increases mutual understanding. The great majority of all types of persons queried, from American ambassadors to foreign and U.S. university heads, cite increased understanding of America and Americans as one of the most outstanding results of the program, and better understanding between the United States and other nations as one of its chief and clearly demonstrated values. Returned grantees name increased understanding of Americans as one of the most important results of their stay in the United States.

3. Evidence is abundant that the exchange program has succeeded in helping dispel among foreign visitors many misconceptions and ugly stereotypes about the American people. Experience in this country, even for visitors on a short study tour, is remarkably effective in communicating a favorable impression of the American character and customs broadly conceived. Particularly singled out for comment by grantees were the vitality of American thought, the American sense of drive and organization, and a group of warm, personal qualities differing notably from the stereotyped qualities which grantees apparently had expected to find.

4. The exchange program does not bring about a uniformly favorable point of view on all aspects of the American scene; the reaction of former grantees varies considerably with the country from which they have come, and with the particular aspect inquired about. In general, grantees from European countries were most critical; those from Latin America the most laudatory. For example, only 11 percent of grantees from Britain as compared with 86 percent from Argentina and Guatemala commended the economic system of the United States. Only 10 percent from Sweden, as compared to 72 percent from Colombia reported favorable opinions of the U.S. political system. Among all aspects of American life, America's scientific development received the highest commendation from former grantees as a whole; American race relations the lowest.

5. The program has been outstandingly successful in providing a valuable educational experience to foreign grantees. Although their average visit to the United States lasted less than a year, a high proportion of returned grantees report that they have benefited substantially from their experience in the United States—most notably in increased knowledge in their professional field and in the visit's favorable influence on their work and career. Only 2 percent found this influence other than favorable. Three-fourths of the grantees say their stay in the United States increased their confidence in their work; and half or more say it had a good effect on their professional title and standing.

6. The evidence is significant, though somewhat less conclusive, that the grantee's U.S. visit has also benefited his home country, by enabling him to transmit to it valuable news ideas, skills, knowledge, and attitudes. Nearly three-fourths of the returned grantees report that they have proposed or put into practice an idea which was based on what they learned in the United States and designated to benefit their profession, their own organization and their community at large.

7. The program has effectively established channels of communication between the people in other countries and the United States. Broader perspectives, a wider international outlook were repeatedly cited as important results of the program both by grantees and by prominent persons abroad and in the United States who are familiar with it. Furthermore, well over two-thirds of all returned grantees occupy positions in which they can readily communicate their broadened perspectives—whether as teachers, journalists or top level administrators. The great majority of all former grantees both in the United States and abroad keep up significant contacts with friends and professional colleagues discovered during exchange visits.

8. In increasing mutual understanding, in demonstrating American character and achievements, in furthering the grantee's own development and career and the strengthening of his country, the exchange program has effectively supported one of the Nation's most basic international objectives—of helping support strong, free societies able to work together, in mutual trust and understanding, on the grave issues of our time.

Thus the program as a whole has been found effective. The Commission feels, however, that it can be made even more effective if the following improvements are introduced:

THE FOREIGN AND AMERICAN GRANTEE

1. Too often foreign students, whether chosen by governmental or private exchange programs, are drawn from favored social and economic status groups, particularly in the underdeveloped countries where public education is not yet widespread. We recommend that the exchange program make a concerted effort to seek out and select more "have nots" with particular promise and talent, so that, in keeping with this country's traditions, an American exchange experience never becomes a privilege restricted to the elite. Where necessary to avoid accentuating a bias toward upper-income groups, we recommend that the English language proficiency requirement for U.S. study be relaxed, provided that intensive English language training is given prior to the student's taking up studies in the United States.

2. Similarly, in keeping with American traditions, the United States must clearly identify itself with the forces of constructive change and progress in the developing countries. We recommend that the exchange program make a particular effort to seek out and select those candidates abroad who are sufficiently vigorous and restless to help promote desirable social and economic change. This may mean in some countries choosing more rising young adults, including some who are locally considered radical, left-wing, or politically dissident. They must be given the opportunity to learn that there is a democratic road to reform.

3. To assure better quality foreign students for private exchange programs, we recommend that more field selection centers be set up on a regional basis overseas, under private sponsorship, to assist U.S. universities and private agencies in choosing properly qualified students; and to help the students select the university or college best suited to their needs.

4. To assure better placement and programing of foreign students and visitors in the United States, we make two major comments: (a) The private agencies which, under contract to the Department of State, handle programing and placement of foreign students and visitors, have made an immensely important contribution to educational exchange. However, we recommend that a special study be made of these private contract agencies to determine their present effectiveness and examine how they might more fully adapt themselves to the enormous growth in exchange in recent years; (b) Personal visits with American families are considered by foreign visitors one of the most significant and memorable parts of the U.S. experience. Returned grantees, especially from the developing countries, repeatedly express the need for more personal contacts and visits with Americans in a U.S. trip. We recommend that all programs for all foreign visitors provide more time and arrangements for meeting a wide cross section of American families.

5. There is pervasive testimony that, with many outstanding exceptions, the quality of American professors and lecturers selected for oversea grants is not as high as it should be. We recommend two remedies: (a) a substantial increase in the very low salaries now offered to professors and lecturers, even if this means sharply reducing the number

of grantees, as well as an allowance for travel for the grantees' dependents; (b) increased use of direct recruitment of qualified candidates. Oversea requests for American professors and lecturers should not be filled if first-rate persons are not available.

POLICY AND ADMINISTRATION

6. Not enough attention has been paid to the role, quality, and status of the Cultural Affairs Officer who carries out the educational exchange program overseas. A special study should be made of this Cultural Affairs Officer, and the bearing that the administration of the educational and cultural program abroad by USIA may have on his work and career.

7. Fiscal starvation was frequently cited as a recurrent weakness of the program, which undermines its effectiveness. Testimony is almost universal that the program as a whole has been underfinanced. A special study should be made of the problems created for the program and the limitations placed upon it by the heavy reliance on foreign currencies. Further, two financial problems demand immediate remedy: (a) Funds should be provided at once for dependents' travel in order to secure better caliber American professors and lecturers for oversea grants, and (b) the present ludicrously low official hospitality allowances available to the State Department should be increased so that at least a minimum of official hospitality and courtesies may be extended to foreign visitors.

8. Better coordination among the various Government agencies involved in exchange of persons continues to be the highest priority objective for improvement of the program. The Assistant Secretary of State for Educational and Cultural Affairs has initiated important steps to coordinate the many diverse programs; but much remains to be done. The Assistant Secretary should continue actively to secure further coordination of these programs not only in Washington but at U.S. embassies abroad.

9. The character of the exchange program in any given country must be determined by the needs and character of that country, and not by a formula applied indiscriminately to a group of countries. One country may require special emphasis on teachers, another on leaders, etc. Thus, country-by-country planning is essential, both in Washington and the field. At U.S. embassies abroad, we urge our Ambassadors to give the strong leadership that is essential to a well planned and coordinated country program.

10. In the developing countries, the exchange program should, where possible and in keeping with the character of the program, directly concern itself with the strengthening of their educational and social institutions—helping to produce attitudes and leadership making for progress, and to build up local universities and educational agencies. Third-country training and exchange should be used much more fully by both Government and private agencies which are able to do so.

11. The new enthusiasm for work with developing nations should not lead to neglect or downgrading of the educational and cultural programs with Europe. The vitality of the new Europe, the crucial importance of our allies, and Europe's continuing close cultural ties with the developing nations all underscore the need for continued effort in that area.

12. Coordination of the approach and procedures of the various Government agencies vis-a-vis the universities is urgently needed on the problems of educational exchange and development. The Assistant Secretary of State for Educational and Cultural Affairs should continue to take all feasible steps to assure such coordination, and also to bring the universities more closely into the planning phase of oversea educational programs. Further, to relieve the financial pressure upon universities which receive foreign students and which are now called upon for considerable unreimbursed financial outlay, the Commission endorses the proposal that "cost of education" grants be paid to them for all Government-sponsored foreign students.

In sum, the American people can feel pride and deep satisfaction that, although some improvements are yet to be made, the program has proved so effective to their purposes, and has established itself as a basic ingredient of the foreign relations of the United States. There is no other international activity of our Government that enjoys so much spontaneous public approval, elicits such extensive citizen participation, and yields such impressive evidences of success. In a time when most international activities seem almost unbearably complex, hazardous and obscure in outcome, the success of educational exchange is a beacon of hope.

SUCCESSFUL PRIVATE FORESTRY

Mr. MORSE. Mr. President, I ask unanimous consent to have two resolutions passed at the recent Oregon Logging Conference in Eugene, Oreg., printed at this point in the Record.

There being no objection, the resolutions were ordered to be printed in the Record, as follows:

Resolution No. 6: Taxation

The Oregon Logging Conference for a quarter of a century has supported every public policy which aids in the development of a permanent timber supply. Among these was the enactment by Congress of the Bailey amendment of 1944 which recognized that to be successful, private forestry must have capital for investment over the long periods necessary to produce a mature timber crop. Since then more progress has occurred in forestry in Oregon and the Nation than in all our previous history. The present administration now proposes to sever this strong right arm of American forestry. The Oregon Logging Conference therefore calls on the Oregon congressional delegation to resist this ill-advised effort to destroy private forestry by opposing it vigorously.

Robert Cross,
Secretary-Manager.

Resolution No. 9: Wilderness Legislation

Whereas the House Committee on Interior and Insular Affairs has last year, after long and comprehensive studies, developed a substitute wilderness bill which offers the best hope yet of providing congressional protection for a substantial acreage of carefully selected roadless wilderness; and which does not at the same time unduly restrict usage of natural resources vital to the developing public land States of the West; and which establishes for the first time uniform procedures for all public land withdrawals; and

Whereas the provisions of this legislative proposal have been maligned and misinterpreted in order to discredit the possibility that any new and different legislative approach to wilderness protection could be desirable and in the public interest: Therefore

The Oregon Logging Conference respectfully urges each and every Member of Congress to familiarize himself personally with the actual provisions of the House Interior Committee amendment to H.R. 776 (Committee Print No. 25) in 1962 and to evaluate the worth of the proposal on its intrinsic merits rather than on the emotional appeals of special-interest groups who do not want it to be considered at all; to recognize that that pure wilderness which will endure longest is that which is most carefully selected and does not project unnecessarily into the mainstream of advancing civilization with its growing demands for other benefits from the land.

The Oregon Logging Conference urges the Oregon congressional delegation to appear before the Senate Interior Committee on February 28 and oppose S. 4 as inimical to the economy of Oregon and support a wilderness bill containing the provisions similar to those recommended by House Interior Committee in 1962.

Very truly yours,

Robert Cross,
Secretary-Manager.

ELECTRICAL INTERTIE BETWEEN PACIFIC NORTHWEST AND PACIFIC SOUTHWEST—RESOLUTIONS

Mr. MORSE. Mr. President, I ask unanimous consent to have printed at this point in the Record four resolutions I have received in support of legislation to take the first steps necessary for an electrical intertie between the Pacific Northwest and the Pacific Southwest. One is from the Central Electric Cooperative of Redmond, Oreg.; one from the Umatilla Electric Cooperative Association of Hermiston, Oreg.; one from the Hood River County Pomona Grange No. 8; and another from the Bandon Common Council, City of Bandon, Oreg.

There being no objection, the resolutions were ordered to be printed in the Record, as follows:

Certificate

I, Leonard Aldrich, secretary of Umatilla Electric Cooperative Association of Hermiston, Oreg., do hereby certify that the following is a true and correct excerpt from the minutes of a meeting of the board of directors of said corporation, duly called and held on February 13, 1963, at which a quorum was present and voting and that said resolution was duly made and has not been amended, altered, or repealed:

RESOLUTION

Whereas there is a bill known as H.R. 994 that has been introduced in the House of Representatives in Congress for the purpose of preserving preference rights to power generated from Federal hydroelectric projects in the Northwest; and

Whereas there is also under consideration the construction of a high-voltage tieline over which power may be transmitted from the Northwest to the Southwest and possibly other areas; and

Whereas it is necessary that the agencies now receiving power from Federal hydroelectric dams in the Northwest, who have no generation of their own, require a continuing source of power: Now, therefore, be it

Resolved, That the Umatilla Electric Cooperative Association at a meeting of its board of directors held in a regular session on February 13, 1963, does urge and request that House bill No. 994 be enacted into law in order that its preference rights to federally generated power may be preserved; and be it further

Resolved, That a copy of this resolution be sent to the Oregon representatives in Congress.

In witness whereof I have hereunto set my hand and the seal of the Corporation on this 13th day of February 1963.

[seal] Leonard Aldrich,
Secretary.

Central Electric Cooperative, Redmond, Oreg.

Whereas recent technological advancements and economic considerations make it inevitable that an electrical intertie between the Pacific Northwest and the Pacific Southwest will be constructed; and

Whereas it is desirable that safeguards be established so that electric consumers in the Pacific Northwest will have first call on electric energy generated at Federal hydroelectric plants in that region and that electric consumers in other regions have reciprocal priority; and

Whereas such safeguards are not now present under Federal law or existing power purchase contracts but should be established prior to the construction of either a public or private intertie; and

Whereas there has been introduced in the House of Representatives, 88th Congress, 1st session, H.R. 994 and in the Senate of the United States, Senate bill No. 1007, which establishes a guarantee that power generated in the Northwest Region shall be reserved for such region; and

Whereas this organization has reviewed the above mentioned bills and concurs in the legislation as set forth: Now, therefore, be it

Resolved, That the board of directors of Central Electric Cooperative, Inc., of Redmond, Oreg., hereby request Congress to enact necessary legislation in accordance with H.R. 994 and Senate bill 1007, and that copies of this resolution be sent to the Oregon representatives in Congress and the congressional committees that may consider such legislation.

State of Oregon,
County of Deschutes, ss:

I, Alva R. Teater, hereby certify that I am the duly appointed, qualified and acting president of Central Electric Cooperative, Inc., and that the foregoing is a true and correct copy of a resolution adopted by the board of directors of said cooperative at a regular meeting of said board held February 21, 1963, at which meeting a quorum was present and acted throughout.

In witness whereof, I have hereunto set my hand and affixed the seal of the cooperative this 14th day of March 1963.

[SEAL] A. R. Teater,
President.

Umatilla Electric Cooperative Association Resolution

February 16, 1963.

Whereas the Federal Government has pioneered in building Bonneville and many other multiple-purpose dams in the Northwest, and has invested millions of dollars in the economy of the area; and

Whereas there is an abundance of low-cost electricity generated at these dams, this being of great benefit to farmers, cities, and industry alike; and

Whereas there is a surplus of electricity throughout most of the year and as there is a ready market for this in California: Therefore be it

Resolved, That we go on record favoring the building of a California intertie by the Federal Government so that BPA can sell all surplus power not needed in this area, this will enable the Bonneville system to run full capacity, thus adding enough revenue so that the Government will be paid back all money advanced to build the system and we can continue to enjoy the present low rates we now have for electricity here in the Northwest; and be it further

Resolved, That a copy of this be sent to Oregon State Grange and to the Oregon delegation in Congress.

[SEAL] Walter Wells,
Master, Hood River County Pomona Grange No. 8.
Alyuna C. Routson,
Secretary, Hood River County Pomona Grange No. 8.

Passed by Hood River County Pomona Grange No. 8, February 16, 1963.

Resolution No. 63–4

Whereas two extra-high-voltage electrical interconnections between the Pacific Northwest and Pacific Southwest have been recommended by the President in his fiscal 1964 budget; and

Whereas Bonneville Power Administration has received six non-Federal proposals for construction of all or parts of the necessary tielines or lines, thereby confirming the feasibility, desirability, and inevitability of such an interconnection; and

Whereas important benefits would accrue to both regions by virtue of such an interconnection, including an improvement in Bonneville Power Administration's financial condition, which would be reflected in BPA rates; and

Whereas ground rules have not yet been established to govern and facilitate the exchange of surplus power between the two regions, and to assure that such interconnection will not impair the power supply of any region; and

Whereas such ground rules legislation has been introduced in the Senate by Senator Henry M. Jackson and in the House by Congressman Jack Westland and Congresswoman Julia Butler Hansen, and is supported by the President and the Secretary of the Interior: Now, therefore, be it

Resolved, That city of Bandon, Oreg., endorses the construction of an extra-high-voltage line or lines between the Pacific Northwest and Pacific Southwest provided (1) that ground rules legislation substantially of the type introduced by Senator Jackson, Congressman Westland and Congresswoman Hansen be passed by Congress and signed by the President; (2) that one or both of the necessary tielines be constructed by the Federal Government; and (3) that capacity in any non-Federal tieline between the Pacific Northwest and Pacific Southwest be made available to Bonneville Power Administration at a cost comparable to Federal costs; and be it further

Resolved, That copies of this resolution be sent to the Secretary of the Interior, to the chairman of the Appropriations and Interior Committees of the House and Senate, and to the Members of the Oregon congressional delegation.

——— ———,
Mayor.

Attest:

R. V. Backlund,
Deputy City Recorder.

THE NATION'S INTERNATIONAL PROBLEMS

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the body of the Record the text of an address which I delivered on March 13 before the Foreign Relations Commission of the American Legion, in Washington, D.C.

There being no objection, the address was ordred to be printed in the Record, as follows:

Speech of Senator Wayne Morse Before the Foreign Relations Commission of the American Legion, Washington, D.C., Headquarters Auditorium, March 13, 1963

It is an honor and a pleasure for me to be with you today to discuss some of the Nation's international problems, because this organization was born of international problems and of American involvement in them.

All of your members, and many millions more of American men, have served your Nation by leaving your homes, families, and personal careers, to protect our Nation's security. By historical and geographic chance, American participation in war in the last century has occurred elsewhere than in the continental United States. In a real sense, we were able to defend the United States and protect her vital interests in areas beyond our own territory, and thus we were spared the mass loss of life than the physical devastation that befell our enemies in those wars.

Yet the story of war today has just about closed the door on the possibility that we could ever again participate in a major war without the wives, children, and grandchildren of all of us being just as vulnerable and just as likely to become casualties as any man in uniform. That is perhaps the great new factor which has entered into our military and international thinking since the end of World War II. The introduction of missile systems to deliver nuclear warheads has wiped out the geographic protection which two oceans afforded this country for some 160 years.

Our own genius for industrial production has also made us a prime target for nuclear weapons. No nation with aggressive intentions or with a plan for preemptive war can select any other nation than the United States for its principal target. Our population and productive capacity are also heavily concentrated, as they are in any nation of industrial development.

Moreover, the present state of military technology has brought such a heavy development on offensive capacity that no nation is able to defend itself against nuclear attack. By defend I mean to protect a sufficiently large percentage of its people and industry to enable a continuation of national policy for an indefinite period.

Even with the heavy dominance of the United States in nuclear delivery capability, we are unable to prevent a very high level of destruction here at home. Estimates published last fall in London by the Institute of Strategic Studies attributed between 450 and 500 intercontinental missiles to the United States, and about 75 to the Soviet Union. It attributed 250 medium-range missiles to us, and 700 to the Soviet Union. This class of missile has a range of 700 to 2,000 miles.

While we have a heavy preponderance of bombers and surface ships, the Soviet Union has a heavy preponderance of conventional submarines, and is putting more and more nuclear-powered submarines into service. Last fall, Russia was believed to have 12 nuclear subs; this week, the British placed the estimate at 20. This is still fewer than we have, but it is a signal that the many advantages we appreciate in our nuclear submarines carrying Polaris missiles are also appreciated by the Communists. One advantage we believe we still maintain is our ability to fire Polaris missiles from underwater, while the Soviet subs are assumed to have to surface to fire their missiles. But the range and mobility and deception that goes with craft that can remain underwater for indefinite periods must also be attributed to the Soviets.

If it is assumed that by striking first, we could knock out even as high as 85 percent of Russia's nuclear capacity, the remaining missiles alone, exclusive of bombers, could deliver several dozen nuclear warheads on the United States because there is no effective defense against missiles. Moreover, Soviet ICBM's can carry a 10-megaton warhead, compared to the 3- and 4-megaton warheads carried by our own ICBM's. There is no operational antimissile missile. There will be someday, and then there will another severe shift in military arrangements and in international affairs, because military technology makes policy, almost as much as a policy calls military technology into being.

But today we live in a world where we are highly vulnerable, where we cannot attack without being attacked, and we cannot destroy on a large scale without being destroyed. The same applies to the Soviet Union.

This knowledge affects a great deal of the foreign policy of both countries. It affects both of us with reference to Cuba.

Today there is in this country a furor over Cuba that rivals 1898. It continues despite the fact that the primary and direct threat to the security of the United States has been removed. It was removed last October by a firm, wise, and judicious action by the President of the United States, and it was removed without war. This last point, so all important to the Nation, is largely ignored by the President's political critics, many of whom do not seem to be satisfied with any bloodless victory over communism.

This is not to say that the use of the quarantine was not a military action or even that it was not an act of war, because it certainly was the first and it was probably the second. But the installation of missiles in Cuba aimed at the United States was a direct and urgent threat to the basic security of the Nation. It was a clear and present danger, the removal of which justified the risk we took that the situation would erupt.

Since then, we have also obtained the removal of approximately 5,000 of the 22,000 Soviet troops believed to have been in Cuba in October. The Russians have stated that "several thousand more" will be removed by mid-March, and we know that there is ample Soviet shipping in Cuban waters to take out that many.

It is the position of the United States that this withdrawal must be pressed as fast as possible.

Yet it is evident to everyone that the element of crisis which made our action of last fall essential is no longer present in Cuba. Even the remaining 17,000 Russians there are not there to invade or otherwise threaten the United States itself. The rumors of missiles located in caves continue to be heard, but missiles require complex installations for launching which no longer exist. The construction of underground, hard missile sites such as we have for our Minuteman missiles cannot be conducted without vast construction operations that would be readily visible to our surveillance aircraft.

The demands now being made for a renewed blockade to force the removal of the remaining Russians, or the downfall of the Castro government, are being made on behalf of an objective that no longer involves a clear and present danger to the United States. These demands are also asking for an action that undoubtedly will receive a different response from last October. No one really knows what the response to a new blockade would be, one imposed by us, but not in defense of our own vital security.

This is why I support President Kennedy in his pursuit of the removal of those forces by all means short of an act of war. This does not mean that some further action in the nature of a blockade will never be necessary. But there is a great variety of other methods, diplomatic and economic, that must be utilized first. I have heard all the evidence from the intelligence sources that other Members of Congress have used to justify military action in Cuba, and it is my strong conviction that none of it tells of the kind of threat to the United States that must always be present before we use the military forces that could quickly lead to the nuclear destruction of our cities and our homes.

One reason I say that is because there are means we can employ to quarantine Cuba as a source of Communist infection in the hemisphere, and many of them are in operation. Basically, however, the application and enforcement of any hemispheric measures to forestall Communist underground activity requires the cooperation of the other nations of the hemisphere, whether the source of that activity is Cuba, the Soviet Union, or Communist China. We have underway in the Organization of American States measures to make that kind of quarantine effective. Today, it is much more difficult for Cuba to conduct its subversive activities in the Western Hemisphere than it was 15 months ago, before the Punta del Este Conference which set up these procedures.

Another reason why I believe that our policy toward Cuba should exclude direct military action for the present is because the Communist threat in the Western Hemisphere is a homegrown one, and it exists no matter what becomes of Fidel Castro and his government. As a symbol, Castro has already lost most of his attraction for the people of Latin America. But the conditions of degradation and poverty and hopelessness which can form the backbone of Communist takeover exists in many other nations. Haiti is one; another is Peru, and the potential is present in several others, including even Brazil. One of the most conservative of Brazilian political leaders, Carlos Frederico Lacerdo, Governor of the State of Guanabara, has warned the United States that Brazil is in for troubles which will dismay the United States and that there is probably nothing we can do about it.

Latin America is a region of exploding population confronting an ancient, semifeudal social and economic structure. The real issue in Latin America is not whether that structure can be preserved, because it cannot; the question is whether it can be altered in a reasonably peaceful way.

The United States will, for an unkown period ahead, be confronted with turmoil in Latin America. It is a condition we cannot control, but we may be able to affect.

Plunging ourselves and much of the rest of the world into nuclear war is not the way to control communism anywhere. War of that dimension will mean the breaking up of governmental structures in every nation. World War I was a strain that brought the collapse of czarist aristocracy in Russia; it reduced France to a state of passivity which made resistance in World War II impossible.

World War II enabled Communist armies to overrun eastern Europe and mainland China. It was not our State Department, or our diplomacy which brought that about, it was the chaos of war. Communism excels at making the most of a period of unrest and change; it is hard to imagine a condition that would offer it more opportunities than a world wracked by nuclear war, even if the destruction of the Soviet Union was virtually complete.

In the last 2 years, we have developed within our Armed Forces an ability to respond to situations with something less than full-scale nuclear war. But we are never sure how much any conflict will escalate when it involves a head-on meeting of the two nuclear giants.

I believe that President Kennedy and his administration have shown a remarkable capacity to judge where our vital interests lie and how they can be protected with a minimum of danger to our people. It is here where true statesmanship lies. He deserves our confidence and support in his pursuit of that policy.

THE PRESIDENT'S COMPREHENSIVE EDUCATION PROGRAM

Mr. MORSE. Mr. President, basic to our understanding of the compelling forces behind the President's comprehensive education program, the National Education Improvement Act of 1963, is an appreciation of the difficult financial position of States and local governments. The Wall Street Journal in its March 7 edition contained an article headlined, "Governments of States, Localities Lift Outlays Far Faster Than United States." The subheading on this article was, "Surge in School-Age Children, Migration to Cities Cited: Non-Federal Payrolls Soar."

The article, which appears under the byline of Mr. Alfred L. Malabre, Jr., staff reporter of the Wall Street Journal, sets forth the cold problems of economics involved in the financing of State and local government. Mr. Malabre points out that the dramatic State and local rise in taxation stems from population trends of the post World War II era. There has been a sharp increase in persons of school age in our population and a massive migration of the families to the cities and towns of our Nation from the farms. He correctly points out that in the last 10 years enrollment in public elementary and secondary schools has soared by nearly 50 percent and is now above 40 million. This increase in the school-age population is much higher than the population as a whole, which in the same span of time increased but 20 percent.

Complicating the problem has been the cost-per-pupil increase which is now 70 percent above the 1952–53 school year figure. This cost-per-pupil rise is accounted for in part by the 75 percent increase in capital outlay for school construction and in operation and maintenance costs, including teachers' salaries.

The sheer magnitude of the rise in public school expenditure is shown by the following table in the article cited above:

School year	Total cost	Cost per pupil
1954–55	$9.8	$275
1958–59	14.3	350
1962–63	19.5	432

NOTE.—The total cost figures are in billions.

It is against this background and against the background in the growth of State and local debt reflected in the following table also appearing in the Wall Street Journal article, that we must assess the degree to which this Congress will meet its responsibilities in the field of education:

[Figures are in billions]

	State	Local	Federal
1946	$18	$102	$2,034
1954	61	185	1,713
1962	118	325	1,630

In my judgment, the statistics cited in the article constitute an exceedingly strong argument in favor of increased Federal participation in the financing without control of our American school system.

Mr. President, I ask unanimous consent that the article to which I have alluded be printed in the RECORD at this point in my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal, Mar. 7, 1963]

SPENDING GIANTS: GOVERNMENTS OF STATES, LOCALITIES LIFT OUTLAYS FAR FASTER THAN UNITED STATES; SURGE IN SCHOOL-AGE CHILDREN, MIGRATION TO CITIES CITED; NON-FEDERAL PAYROLLS SOAR; RISING TAXES AND RESISTANCE

(By Alfred L. Malabre, Jr.)

Spending by State and local governments has increased nearly 400 percent since World War II.

The increase is greater by far than the postwar rise of Federal expenditures. It has triggered a steep climb in State and local tax rates and, despite mounting taxpayer resistance, is continuing unabated.

"State and local spending constitutes about the only area where we economic forecasters can always predict correctly what's going to happen next," says William M. Burke, a senior economist at the National Industrial Conference Board (NICB).

The table traces the sweeping climb of non-Federal spending in the postwar era, and also shows the much tamer Federal increase (up 69 percent since 1946). Dollars are in billions and the years are fiscal periods ending June 30.

	State	Local	Federal
1946	$6.2	$7.0	$66.5
1954	15.8	17.8	77.7
1962	29.2	33.0	112.2

The extrasteep climb of State and local spending, compared with Federal spending, reflects partly the fact Federal expenditures were abnormally high in 1946, from lingering World War II expenses.

REFLECTS POPULATION SHIFTS

But the dramatic State and local rise stems also from basic postwar population trends: A sharp increase in persons of school age and a massive migration of families to cities and towns from the country.

"There's no question that State and local governments are bearing the brunt of the school-age population bulge, as well as of the increasing concentration of persons in urban centers," says Robert W. French, president of the Tax Foundation Inc., a research organization.

In the last decade, enrollment in public elementary and secondary schools has soared by nearly 50 percent to above 40 million. Total U.S. population has increased only 20 percent in the same span.

Costs per pupil are rising rapidly; they are up 70 percent since the 1952–53 school year. Teachers' salaries, on average, have climbed at about the same pace. And the expense of school construction keeps mounting; capital outlays, up 75 percent in a decade, will top $3 billion for the first time this year.

BURDEN OF SCHOOL COSTS

State and local governments pay for about 96 percent of public school costs, reports the National Education Association. The table below outlines the rise of public school expenses and of yearly costs per pupil. The total cost figures are in billions.

School year	Total cost	Cost per pupil
1954–55	$9.8	$275
1958–59	14.3	350
1962–63	19.5	432

School costs will continue to mount, talks with educators suggest. Government projections indicate 25.4 percent of the 1970 population will be of school age (5-17). That's up slightly from the 1960 school-age rate of 25.2 percent and well above 1950's 20.3 percent level.

"Education costs, I'm afraid, have nowhere to go but up and up some more," says an NEA official.

The increasing concentration of families in urban centers is driving up the expenses of non-Federal governments. Some 70 percent of the population is bunched in towns and cities today, compared with only 64 percent in 1950, Government figures show, and experts foresee no reversal of this trend.

The urban concentration is causing sharp increases in costs of such largely non-Federal services as police, sanitation, and firefighting facilities.

"On the farm, there was no need for a big, professional police force or fire department," notes NICB's Mr. Burke. "But in the city, you can't do without them."

HUGE COST OF SERVICES

The Federal Government, of course, maintains some key urban services, such as certain prisons and health facilities. These make up only a fraction of Federal spending, however; as the table below shows, such services are a major expense for State and local authorities. Figures are in billions.

Service	Federal support	State and local support
Police		$2.0
Fire		1.1
Prisons	$0.1	.8
Health and sanitation	1.0	6.1

Non-Federal Government payrolls are expanding much faster than the Federal one. Since 1954, the number of civilians employed by the Federal Government has increased by 5 percent, to about 2.5 million, while the State and local job force has leaped nearly 40 percent, to almost 7 million.

In government, the increase of non-Federal spending outpaces the rise of State and local tax receipts. In fiscal 1962, State and local tax revenues amounted to about $44 billion, far less than the non-Federal spending total of $62.2 billion. Federal grants-in-aid and funds from nontax sources helped close the gap.

State and local debt is piling up rapidly. The table below, computed from Government data by the Tax Foundation, shows the climb of per capita public debt at State and local levels, as well as the reduction of per capita Federal debt.

	State	Local	Federal
1946	$18	$102	$2,034
1954	61	185	1,713
1962	118	325	1,630

Above $80 billion for the first time last year, total State and local government debt is now a quarter the size of the Federal debt. In 1950, it was less than a tenth the Federal total.

Official concern is increasing over the pileup of non-Federal debt.

Gov. James Rhodes of debtridden Ohio, for instance, not long ago fired more than 3,000 recently hired State employees, ordered all State departments to cut spending back about 10 percent and requested all State employees to work on Lincoln's and Washington's birthdays.

Many States, at the same time, are considering sharp tax boosts this year.

Before Nebraska's legislature, for example, are proposals to eliminate some property tax exemption and institute a personal income tax. Other possibilities facing Nebraska taxpayers: A gas tax boost of up to 8 cents per gallon and a new 2 percent sales tax.

The 47 State legislatures meeting this year are expected to consider measures that would add $1.5 billion to the States' tax bills, the Tax Foundation estimates.

Tax collections in many States would receive an added boost, if the Kennedy administration's proposal to reduce Federal tax rates becomes law. In 19 States, Federal tax payments may be deducted from income subject to State taxation. And in many States curbs on personal deductions, proposed by the administration, would mean similar curbs on State tax deductions, without any offsetting cut in State tax rates.

The following table breaks down the major sources of State and local revenues. The percentages are based on Department of Commerce data.

Source of revenue:	*Total percent*
Property tax	33
Sales tax	21
Income tax	5
Vehicle tax	3
Corporation tax	2
Other	36

The most rapidly rising source of State tax revenues: Receipts from taxes levied on tobacco sales, now above the $1 billion mark and twice the 1956 total.

The relentless climb of State and local spending is encountering increased taxpayer opposition in some areas.

Example: Residents of Ridgewood, N.J., one of New City's wealthiest suburbs, recently rejected school board plans to boost sharply the community's school budget. The voters later approved a school budget scaled down by $151,422.

Despite such taxpayer efforts, however, overall non-Federal governmental spending—and taxes—will surely keep mounting, most experts agree. Expressing the view of many, NICB's Mr. Burke says: "So long as the need for education facilities and for municipal services continues to grow, State and local taxpayers will have to keep digging deeper into their pockets."

ELIMINATION OF POVERTY IN THE UNITED STATES—TODAY'S HEALTH AND EDUCATION NEEDS

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the RECORD two speeches delivered by Wilbur J. Cohen, Assistant Secretary of Health, Education, and Welfare, in Portland, recently. The first one is entitled "The Elimination of Poverty in the United States," delivered before the Oregon State Conference on Social Welfare in Portland on March 25. The second one is entitled "Today's Health and Education Needs," and was given at a luncheon meeting of the City Club of Portland on March 22.

There being no objection, the speeches were ordered to be printed in the RECORD, as follows:

THE ELIMINATION OF POVERTY IN THE UNITED STATES

(By Wilbur J. Cohen)

At a time when the United States has the greatest economic capacity, by far, in the history of the world, there could hardly be a national goal more urgent than the elimination of poverty by a democratic free enterprise society.

This conference, concerned with advancing the welfare of the people of Oregon, has a special capability in contributing to this goal.

America's annual gross national product is at its highest level of $552 billion because of our ability to produce more than three times as much per worker in a 40-hour week as could be produced in a 70-hour week in our grandfather's day. But our unemployment rate, now around 6 percent, is much too high. Almost one-fifth—including unemployed and underemployed—of our 186 million people are living on a bare subsistence level or less.

This is the paradox: Hard-core poverty endured by 15 to 20 percent of our neighbors while the Nation as a whole enjoys relative prosperity.

Most poverty in the past has been basically the result of the fact that there simply was not enough to go around. This is still true in most of Africa, Asia, and South America. In the underdeveloped countries in which two-thirds of the world's population lives, a large number of people will always be poor so long as there is no increase in the production of goods and services.

But in America, our capacity to produce is not what prevents us from eliminating poverty.

A 20th century English philosopher, Alfred North Whitehead, said that most of the terrible sufferings that accompanied the industrial revolution were not caused by the steam engine or the power loom. Instead they were the consequences of a giant step in technical innovation with no corresponding step at all in social, political, or economic innovation. Today, in the age of automation, the same deficiencies are the root of our trouble.

Our great problem is to organize our economy so the Nation can make full use of its huge technical capacity and its wealth of potential human resources. In that connection a most important immediate step in helping to reduce the present and future extent of unemployment is the passage of a tax-reduction bill.

The miraculous progress our country has made promises the possibility of improved material abundance, good health, and more leisure time for all. An unfortunate byproduct of change, however, is man's difficulty in making the necessary changes in his social, economic, and political institutions in the face of such whirlwind development.

Change does not go step by step, pausing to allow us time to adjust to each step. Rather, it is an ever-steepening curve upward and presents not only the task of adjusting to today's world but, at the same time, of preparing for tomorrow's.

Our urban centers grow larger and larger. Where there was farmland yesterday, a community has blossomed—tied to a cultural core perhaps 10, 15, or even 20 miles away.

And the core—the central city—is also undergoing change. Blight, delinquency, social ills, violence—these stand in dreary contrast to high-rise luxury apartments, efficient new office buildings, huge public housing projects, and the ever-widening freeways linking the center with its semiautonomous satellite communities.

Our people are mobile as no people before them—making the Nation their home. They are increasingly interdependent. And with automation, the market for muscle and sheer strength is waning—the demand for skill, technique, and knowledge booming.

The Oregon State Conference on Social Welfare, bringing together representatives of voluntary and public agencies and interested laymen, is typical of the American effort to improve the lives of its people. The elimination of poverty is a worthy cause to which the public-private partnership can devote its joint efforts.

In this spirit, I would like to review for you some of the recent actions taken by the Federal Government in the fields of health, education, and welfare.

During the past month the President has sent to the Congress five special messages outlining his recommendations for improving the health, education, and welfare of the people of our great Nation.

Three of these messages are especially significant because they represent areas of concern on which for the first time a President has sent a special message to the Congress. They deal with mental health and mental retardation, youth, and aging. In addition, the President sent special messages on education and health, as he did in each of the 2 previous years.

These messages represent a progressive and fiscally responsible program for the domestic improvement of the general welfare of all our people. The program is in keeping with the constitutional authority for the Congress "to provide for the common defence and general welfare of the United States."

They set forth both general goals and specific priorities.

HEALTH PROPOSALS

All of you are well aware of this administration's profound commitment to the health of the Nation. In his special health messages to the Congress, this year and last, President Kennedy stressed that progress must be made in strengthening all the indispensable elements of a sound health program, "people, knowledge, services, facilities, and the means to pay for them."

Medical science exists to serve people. As long as the products of medical science are not available to the people who need them because they cannot afford to pay for them or because we lack professional personnel or because our patterns of delivery are outmoded or for whatever reason—then we are failing in our central purpose.

Bills on which we hope for prompt and favorable action in the current session of Congress include a carefully developed program of Federal assistance for the education of more physicians, dentists, nurses, and public health personnel, and Federal grants for the construction of community mental health centers and community mental retardation centers.

We also look forward to favorable action on a broad program to combat mental retardation which would include a doubling of the annual authorizations for grants for maternal and child health and crippled children's programs and the provision of project grants to stimulate public awareness of the problem and the development of comprehensive plans for dealing with it.

I believe that we have made significant advances in the health and medical fields. As I look back over the almost 30 years that I have been studying medical economics, I believe we are beginning to see some important changes in the financing, organization, and availability of medical services to assure that the powerful potential of American medical services is to be realized for all our people. I hope—and know—that you will be leaders in this effort.

We made a good start in health legislation in 1961 when the Community Health Services and Facilities Act was passed. The additional Federal funds authorized by this legislation are helping States and communities to develop new and improved community health services, to build more nursing homes, and to provide better care in the homes of patients, as well as in nursing homes.

But this is only a start. We are still sadly lacking a satisfactory means whereby older people can purchase the basic hospital services essential to their health. People over 65 have medical costs twice as high as those of young people, yet their annual income, on the average, is only half as large. During any year they can expect to spend three times as many days in the hospital as younger people. One-half of all the aged does not have any kind of hospitalization insurance, and a high proportion of those who have it receives only small benefits under limited conditions.

Older people need this protection, not as a gift or charity but as a statutory right, earned by their own efforts during their productive years. To make this possible, the President has asked the Congress to add a hospital insurance program for aged persons to the Social Security System. For those now over 65 who have not had an opportunity to participate in the social security program, the President has recommended that the cost of their coverage be paid from general tax revenues. The coverage of all the aged for hospital insurance should reduce the long-run cost to the States for medical assistance to the needy, under the Kerr-Mills Act.

The President has stressed that his insurance program is not a program of socialized medicine. Every person would choose his own doctor, his own hospital. The proposed insurance program would simply be a means of paying for health services, not a means of providing them.

Oregon can be proud of the leadership it has contributed to this fight for hospital insurance for our aged. Senators Morse and Neuberger and Representatives Ullman and Green have introduced the bill in the Congress. I know of no other State delegation where two-thirds of its members have sponsored this important bill.

Let us turn now to a second major factor in the health equation—the availability of adequate health services and facilities. You in the welfare field have been troubled by an array of problems in financing medical care. Today, when hospitals have more to offer people than ever before, when lifesaving miracles are commonplace, hospitals are beset by soaring operating costs, soaring construction costs, obsolescence, and personnel shortage.

A considerable part of this problem is directly traceable to the swift upward spiral of hospital expense for the consumer. In 1946, at the end of World War II, the average cost of hospital care per patient-day was $9.39. In just 5 years, it had climbed to $16.67. Since 1950 it has more than doubled that figure—rising to $32.23 per patient-day in 1960 and $34.98 in 1961. If this rate were to continue, the average daily hospital costs are likely to be $60 to $65 a day by 1970.

At the same time, some hospitals are filled and have waiting lists, while others have too many empty beds. For certain facilities, such as long-term care and community-based mental health centers, we continue to be plagued by critical shortages. Some patients get more expensive care than they need, while others in desperate need do without. In some small cities, hospital facilities are sufficient. In some large cities, they are out of date and require modernization and rehabilitation.

We must reexamine our total hospital needs, resources, and objectives for the coming decade. To encourage such appraisals, the President has recommended legislation to authorize planning grants to public and other nonprofit organizations to assist in developing comprehensive, areawide plans for the construction and operation of all types of health facilities.

One important task before all of us is to organize our facts to combat the attacks on the financial soundness of the social security system. These attacks, inspired by some persons in private insurance and organized medicine, seek to discredit this Nation's basic social insurance system as part of their campaign to defeat health insurance for the aged through social security.

These groups have a right to oppose the addition of hospital insurance for the aged through social security, but we should not permit them to tear down existing institutions, so necessary to our free society, in their attacks on the financial integrity of our social security system.

The old-age, survivors, and disability insurance program has always been fully supported by the social security contributions paid by covered employees and their employers. It has never received a subsidy from general revenues.

The most recent Advisory Council on Social Security Financing said in January 1959 in a report of its findings: "The Council finds that the present method of financing the old-age, survivors, and disability insurance program is sound, practical, and appropriate for this program. It is our judgment, based on the best available cost estimates, that the contribution schedule enacted into law in the last session of Congress makes adequate provisions for financing the program on a sound actuarial basis."

YOUTH PROGRAMS

One of the areas in which the Kennedy administration is giving continued emphasis this year is the expansion of opportunities for youth—in the field of employment, training, education, and for participation in our national destiny.

It is difficult to see how a high school student can gain a sense of responsibility and participation in this Nation's economy when he is consistently denied jobs on account of his youth. The problem is the more acute for minority youth who encounter discrimination on account of race as well as because of their age. And the situation becomes all the more critical when teenagers, tempted to drop out of high school, feel an understandable futility about staying in school in the face of such widespread unemployment among their peers.

The administration has already begun an intensive effort to see that jobs are available to young people—particularly in urban environments—and also to see that youth know more about these opportunities. The U.S. Employment Service is making special counseling services available in urban areas of high youth unemployment. The manpower Development and Training Act of 1962 also has important implications for youth employment in that it provides training of workers whose skills have become obsolete because of economic or technological change.

A singularly important part of the President's youth program is the Youth Employment Act of 1963. One of the provisions of this bill would give employment opportunities to some 40,000 youths in their home communities, with Federal funds financing half their wages. Another provision, for a Youth Conservation Corps, would take about 15,000 jobless youths off the streets and give them employment in our national parks and other places where their services are needed.

Finally, the third portion of the President's youth program has enormous symbolic significance because it challenges youth to participate with dedication in this Nation's mission as leader of the free world.

The major aspect of this program is the Peace Corps. Although it has been operating just 2 years, it has won world renown. As youthful ambassadors to foreign lands, the younger members of our Peace Corps have built a tremendous reservoir of goodwill for us and have had their own lives enriched. The Peace Corps program is for citizens aged 18 or over—there is no upper age limit—who wish to take an active part in what President Kennedy called "a long twilight struggle * * * a struggle against the common enemies of man; tyranny, poverty, disease or war itself." One of the great benefits of a domestic version of the Peace Corps—the National Service Corps, now under serious consideration by the Congress—would be to increase citizen interest and participation in social welfare.

THE PRESIDENT'S EDUCATION PROGRAM

In a special message to the Congress (Jan. 29, 1963), President Kennedy vigorously outlined a bold and realistic program for American education.

It is the belief of this administration that the doors to the schoolhouse, to the library, and to the college lead to the richest treasures of our open society: The power of knowledge; the training and skills necessary for productive employment; the wisdom, the ideals, and the culture which enrich life; and the creative, self-disciplined understanding of society needed for good citizenship in today's changing and challenging world.

The administration's program includes Federal aid for elementary, secondary, and higher education. It emphasizes improvements in both the quality and quantity of education. It is the most comprehensive and creative education program advanced by any President of the United States. It is fitting and proper that Oregon should again be in the lead here with both Senator Morse and Representative Green having introduced the National Education Improvement Act of 1963.

The proposals represent a careful reevaluation of national needs and national priorities.

Increasing the quality and availability of education is vital to both our national security and our domestic well-being. A free nation can rise no higher than the standard of excellence set in its schools and colleges. Ignorance and illiteracy, unskilled workers, and school dropouts are failures of our educational system. They breed failures in our social and economic system—delinquency, unemployment, chronic dependence, a waste of human resources, a loss of productive power and purchasing power, and an increase in tax-supported benefits.

The loss of only 1 year's income because of unemployment is more than the total cost of 12 years of education through high school. Failure to improve educational performance is thus not only poor social policy; it is poor economics.

Only 10 percent of our adults had a high school or college education at the turn of the century. Today such an education has become a requirement for an increasing number of jobs.

Yet nearly 40 percent of our youths is dropping out before graduating from high school; only 43 percent of our adults has completed high school; only 8 percent of our adults has completed college; and only 16 percent of our young people is currently completing college.

Improved education is essential to give new meaning to our national purpose and power in the new age of science and space. In the last 20 years, mankind has acquired more scientific information than in all previous history. Ninety percent of all the scientists that ever lived is alive and working today.

The twisting course of the cold war requires a citizenry that understands our principles and problems. It requires skilled manpower and brainpower to match the power of totalitarian discipline. It requires a scientific effort which demonstrates the superiority of freedom. And it requires an electorate in every State with sufficiently broad horizons and sufficient maturity of judgment to guide this Nation safely through whatever lies ahead.

From every point of view, education is of paramount concern to the national interest as well as to each individual.

The growing demands of modern education make it necessary to expand Federal aid to education beyond the limited number of special educational programs which Congress has enacted over the years. We can no longer afford the luxury of endless debate over all the complicated and sensitive questions raised by each new proposal on Federal participation in education. To be sure, these are all difficult problems—but this Nation has not come to its present position of leadership by avoiding hard problems. We are at a point in history when we must face and resolve these problems.

A century's experience with Federal aid to land-grant colleges has demonstrated that Federal financial participation can assist educational progress and growth without Federal control. In the last decade, experience under the National Science Foundation, with the National Defense Education Act, and with programs for assisting federally affected school districts has demonstrated that Federal support can benefit education without leading to Federal control over curriculum.

Education is and always must be a local responsibility. It thrives best when nurtured at the grassroots of our democracy. But in our present era of economic expansion, population growth, and technological advance, State, local, and private efforts are insufficient. These efforts must be reinforced by national support, if American education is to yield a maximum of individual development and national well-being.

The program for American education proposed by President Kennedy offers Federal assistance without Federal control. It provides for economic growth, manpower development, and progress toward our educational and humanitarian objectives. It encourages the increase of the knowledge, skills, attitudes, and critical intelligence necessary for the preservation of our society. It will help keep America strong and safe and free. The President has strongly recommended it to the Congress for high-priority action. He asks your support for this vital measure.

These proposals dealing with youth and education which I have outlined are part of a bold attempt to strengthen the role of youth in society, to assure to each and every child (1) the opportunity to prepare for adulthood; (2) the opportunity for gainful and productive employment; (3) the opportunity to use his abilities to the maximum; and (4) the opportunity to participate in our national destiny.

A PROGRAM FOR SENIOR CITIZENS

At the other end of the age scale we have almost 18 million senior citizens for whom the President has also proposed a dynamic program. On February 21 he delivered a message on aiding our elderly citizens.

In this message, in addition to hospital insurance for the aged, the President called for a new grant program to help public and voluntary organizations develop various services for older people which cannot be financed by any of the existing grant programs. Grants would also be authorized for research, demonstration, and training projects leading to new or improved programs to aid older people and for the construction, renovation, and equipment of public and nonprofit multipurpose recreational centers for the elderly.

Other measures proposed include tax reforms which would lower the Federal income tax liabilities of older people by about $790 million; changes in the old-age survivors, and disability insurance program which would raise the maximum earnings base from the present $4,800 to $5,200 and thus bring higher benefit payments to those who retire in the future; measures to increase employment opportunities for older people; more support for senior citizens' housing and for the construction of nursing homes; and improvements in the program of medical assistance for the indigent aged, as well as in old-age assistance.

The President's proposed homefront peace corps would give mature and retired people an opportunity to serve at home much as the Peace Corps serves abroad.

"Our national record in providing for our aged is a proud and hopeful one," the President said, "but it can and must improve. We can continue to move forward—by building needed Federal programs—by developing means for comprehensive action in our communities—and by doing all we can, as a Nation and as individuals, to enable our senior citizens to achieve both a better standard of life and a more active, useful, and meaningful role in a society that owes them much and can still learn much from them."

PUBLIC WELFARE CHANGES

Public welfare turned to a new course with the historic Public Welfare Amendments of 1962. When we consider how that course was shaped, we realize again how vital it is to any major welfare undertaking to have the cooperation of public and private welfare agencies and the support of the community.

You will recall that nearly 2 years ago, the Department of Health, Education, and Welfare sought advice from a distinguished group of persons on what the Federal Government could do to increase the effectiveness of public welfare, and particularly public assistance programs.

The recommendations of this ad hoc committee and other advisory groups were foundation stones on which the later administrative actions and legislative proposals were built. Other building blocks included a special report on steps which could be taken within existing legislation, the counsel of State administrators of public welfare, the positions taken by numerous organizations in or closely related to welfare, and the wealth of experience developed in the States and localities over the last few years.

Probably never before in the history of public welfare in this country had a more comprehensive reexamination taken place.

The administrative directives which took effect last year were aimed at developing constructive approaches to getting people off assistance where possible and to restoring personal independence to the great majority who are too old or ill or disabled to be self-supporting or who are still in childhood. They centered attention on the family unit and our need to help make it a more stable and stimulating environment for children. They were designed for tightening and streamlining agencies' procedures, so that assistance is available—as intended—only to those who are eligible for it.

Then came the 1962 public welfare amendments adopted by the Congress with support from all quarters. When the President signed that measure into law in July he called it "the most far-reaching revision of our public welfare program since it was enacted in 1935."

To go after the causes of dependency—and do something about them—is a difficult task. How nearly we realize our goal will depend upon whether full advantage is taken in States and localities of the Federal legislative and administrative changes and of the additional Federal funds now available.

Oregon has a number of distinct advantages in its public welfare endeavors. You have two schools of social work—one undergraduate, the other graduate—which have the faculty and the experience to provide vitally needed leadership and training opportunities in public welfare. Another rich resource is the large number of persons in the State in both public and private welfare—laymen and professionals—who understand this field and have the ability and willingness to make creative contributions to it.

If all these strengths are mustered, there is no reason why Oregon cannot have a public welfare program which points the way for other States in promoting family well-being, preventing the children now living in deprived circumstances from growing up without the capacity for self-support, and assuring the wise use of public money for the best interests of the whole community. Oregon's participation in the present nationwide review of eligibility in the aid to families with dependent children program is helping the Federal Government carry out its on-going responsibility to see that public assistance funds are being spent for the purposes intended by law.

The new public welfare legislation emphasizes the importance of expanding and strengthening services in a number of ways.

It provides for the doubling of Federal funds for child welfare services over the next 7 years from the present $25 million annually to $50 million.

It specifically earmarks some of the child welfare funds for day-care services for the children of working mothers—$5 million in 1963 and $10 million in 1964 and each year thereafter.

It provides that the State must extend its child welfare services with a view to making available by July 1, 1975, child welfare services in all political subdivisions of the State.

It provides for coordination between the services provided under the child welfare program and the dependent children program "with a view to provision of welfare and related services which will best promote the welfare of such children and their families."

It provides that in the assistance categories there be the development and application of a program of welfare and related services for each child who receives assistance as may be necessary in the light of the particular home conditions and other needs of such child.

It provides for increasing the Federal financial share from 50 to 75 percent for the social services and training.

Public welfare has a legal responsibility to provide the kinds of social services required to assure that each needy child has a family life which encourages him to grow up to responsible adulthood. We believe that the law should be administered on the basis that children should not be made to suffer for the sins of their parents.

This means that all available social services should be used to improve any home situation which appears to threaten a child's well-being. It means that, if these efforts fail, other provisions should be employed, including protective payments to an interested third party capable of handling the assistance grant in the best interests of the child or arrangements for foster or institutional care with Federal sharing in the cost if removal from home is necessary.

Most emphatically it means that aid cannot be denied an eligible needy child because of unsatisfactory home conditions so long as the child is left in that home. This principle, laid down in a ruling by former Secretary Flemming, continued by former Secretary Ribicoff, and ratified by the Congress last year and again this year is firmly fixed now in the basic Social Security Act. It is a principle of humanity and decency.

Families receiving public assistance are by definiton facing serious problems: Poverty; the breakup of the family unit because of desertion, divorce, separation, or death; unemployment; poor health; limited education; lack of skill for homemaking and child care; and social isolation.

Such families can benefit from intensive services which bring frequent visits and consultation from welfare workers and the application of the full range of community services and resources—social, vocational, educational, health—as individual or family need may direct.

Under the law as it existed prior to the 1962 enactment, States with approved plans for public assistance were entitled to 50-percent Federal participation in expenditures they made for administration of their programs, including costs of services to applicants and recipients. Under the new amendments, States may receive 75-percent Federal participation in certain expenditures for services and for staff training. Services may also be provided for persons who are likely to become applicants for assistance or for those who recently have been recipients of assistance.

Starting this July 1, to qualify for any 75-percent reimbursement for services or for staff training, each State will have to provide a minimum content of services prescribed by the Department of Health, Education, and Welfare. Some additional services beyond this minimum may be matched at the 75-percent rate if a State chooses to provide them. From last September until July 1, the identified services can be reimbursed at the 75-percent rate without providing the minimum content of services. The general standards required for 75-percent reimbursement of service costs call for a caseload not in excess of 60 cases per worker, for at least 1 supervisor for 5 caseworkers, and for visiting to families and adults with specific problems as often as may be necessary but in any event at intervals not exceeding 3 months.

We know that at the outset some States will be unable to meet the ultimate standards fully, and provision is made for progressive steps. For the tooling-up period prior to next July 1, a State may, upon proper justification, still be entitled to 75-percent Federal participation in properly identified services and training expenditures even though the standards are not fully met. During this period, a State that does the best it can with available resources and has a definite plan for going forward with an improved service program will get reimbursed at the 75-percent rate for those specified services which it actually does provide and, in addition, will get 75 percent for its training activities. After July 1, 1963, a State will have to provide certain prescribed services if it is to receive any 75-percent participation.

For a limited period, after July 1, 1963, a State may have temporary standards which are different and less exacting than those ultimately required. But standards will have to be strengthened progressively so that not later than July 1, 1967, every State will have to meet fully the following:

1. Provide that the full range of prescribed services under a given title shall be available to all families and adults with the defined special problems or needs.

2. Provide for caseload and case supervisory standards that insure time and case supervision necessary for the effective provision of services, namely, not to exceed 60 cases per worker and 5 workers for 1 case supervisor (or the equivalent where mixed service and nonservice cases are carried).

For an initial period up to July 1, 1964, cost-allocation methods are provided which are designed to minimize the work required of States in identifying those activities which are subject to the 75-percent rate. Only those costs for staff directly involved in providing services and the cost of purchase of services from other State agencies are subject to the 75-percent rate. The policy permits States to make functional direct charges of the entire cost of personnel services and travel of caseworkers and casework supervisors whose assigned caseloads include only cases with specified problems, without the necessity for a special showing of the amount and kind of work actually performed on these cases. This direct-charge method for services would also be applicable to States electing to include all families receiving aid to families with dependent children. States not utilizing the functional direct-charge method are given a choice of two simplified methods for claiming that portion of their expenditures which is subject to 75-percent reimbursement.

The new law clearly sets forth the important new policy that the training of public assistance personnel employed or preparing for employment in the State or local agency will be reimbursed at 75 percent instead of the previous 50 percent. Under the instructions implementing this new provision, we will pay 75 percent of the cost of any of the following:

1. State or local staff development services.
2. Agency training sessions in which the content deals with public assistance such as the cost of operating training centers, payment to outside experts to conduct special courses, and expenses of staff while attending such training.
3. Field instruction units including both salaries and rental of space.
4. Educational leave including salary and educational costs paid to the employee or to an educational institution.

The significance of the change from 50- to 75-percent reimbursement can easily be underestimated unless one stops a moment to figure out the real importance of the change. Under the 50-percent provision a State receives 1 Federal dollar for each dollar the State puts up. But under the 75-percent provision the State receives 3 Federal dollars for 1 State dollar. Thus, with the same amount of State funds, the total available for services and training can be doubled.

To promote family stability, the new legislation continues for 5 years last year's experimental program of aid to families with dependent children payments when the father is willing and able to work but unable to find a job—a breakaway from the traditional concept of help only upon the absence of the father from the home, a concept that encouraged many frantic and desperate unemployed fathers to desert their families so that they could obtain AFDC payments.

The new provisions for work training for jobless parents can offer them opportunities to learn new skills or conserve those habits and talents which they already have and, at the same time, be contributing members of society. For the minority of assistance recipients able to work, this is an important step forward.

The new legislation also provides for the funding of demonstration projects, introduces incentives to work by allowing certain income, and improves the adequacy of payments.

In formulating Federal legislative proposals and priorities for 1963, the administration has been guided by these general principles:

1. Public welfare must continue to become more service-oriented. It must put renewed emphasis on rehabilitation. It must emphasize prevention of dependency.

2. Public welfare must provide services to persons before, during, and after receipt of assistance.

3. Public welfare must coordinate its services more effectively. An important step in this direction was taken at the Federal level in January when the Welfare Administration was created as a major operating unit of the Department of Health, Education, and Welfare. All the Department's programs that have a major welfare component are now brought together as an operating entity so that there will be greater coordination of the services of the Bureau of Family Services, the Children's Bureau, the Office of Aging, the Office of Juvenile Delinquency and Youth Development, and the Cuban refugee program. As you know, Dr. Ellen Winston, former public welfare commissioner of North Carolina, is the new Commissioner of Welfare. One of her major objectives is to strengthen the services all these programs can offer to States.

4. Public welfare must be more community conscious—more public relations conscious. It must explain more effectively to the taxpayer what it is doing and why—and why it is not doing many things that are necessary. It must explain to welfare recipients what welfare is and what it is trying to do.

5. Public welfare must reexamine its operations, reassess its present methods, and simplify its bookkeeping to put the needs of welfare recipients and the prevention of dependency foremost in the minds of every person in the agency. This may mean discarding some fond notion somebody may have held for years and elevated into a principle. I do not think there is a principle—if it is sound—which cannot stand a new, cold, hard scrutiny; if it cannot stand such a scrutiny, probably it wasn't so sound to begin with.

6. Public welfare must be more experimental, more creative, more research minded.

CHANGES IN OLD-AGE ASSISTANCE

The specific proposals which President Kennedy has recommended in old-age assistance are as follows:

1. The States would be permitted to make old-age assistance payments to third persons concerned with the welfare of the OAA recipients when the recipients, because of physical or mental condition, are unable to manage their money. State agencies would closely supervise these cases.

2. The Federal provisions relating to OAA would be amended to require that States establish an agency to set standards for rental housing occupied by recipients of old-age assistance. This provision would become effective July 1, 1966. It is similar to a provision adopted by Congress in 1950 relating to institutions.

3. To help the Federal-State public welfare programs meet more adequately the needs of people, it is proposed that the Social Security Act be amended to prohibit a residence requirement of more than 3 years (out of the last 9) as of January 1, 1968, and of more than 1 year as of January 1, 1970.

4. It is proposed that the 42-day limitation in titles I and XVI of the Social Security Act be deleted. This would enable the States to initiate or continue assistance to persons who are patients in general medical institutions because of a diagnosis of tuberculosis or psychosis without limitation as to the time they may be in such an institution.

5. As a condition of plan approval for old-age assistance and medical assistance for the aged, each State would be required to make available medical services for CAA recipients at least equal to those available under MAA. Nothing in the proposal would prevent a State from having more care under old-age assistance than medical assistance for the aged.

All this legislative, financial, and administrative encouragement to more and better services is a tremendous challenge to public welfare personnel, to legislators, to social workers in public and private agencies, and to schools of social work. Will Oregon accept this challenge? We in the Department hope it will. We offer our wholehearted cooperation to make this new effort a success.

It is going to require more staff, more money, and the cooperation of the State agency, the Governor, the legislature, the press—and you.

There is no magic in the use of social services to bring new strength to dependent persons. And we cannot expect quick results, however much we might hope for them. It will not be possible within a few months to realize the full potentials of rehabilitation services. Yet, I am sure that the enthusiastic support which has been inspired by these objectives will mean measurable progress in the near future.

Twenty years ago Franklin D. Roosevelt, in his famous "Four Freedoms" speech, said there is nothing mysterious about the foundations of a healthy, strong democracy. He said: "The basic things expected by our people of their political and economic systems are simple. They are: equality of opportunity for youth and for others; jobs for those who can work; security for those who need it; the ending of special privilege for the few; the preservation of civil liberties for all; the enjoyment of the fruits of scientific progress in a wider and constantly rising standard of living. These are the simple and basic things that must never be lost sight of in the turmoil and unbelievable complexity of our modern world. The inner and abiding strength of our economic and political systems is dependent upon the degree to which they fulfill these expectations."

Many new gains, many advances have been made in the two decades since these words were spoken. But the gains we have made only point the way to others that must be won if poverty and dependency are to be abolished and the basic human expectations of the American people are to be fulfilled in a democratic, free enterprise society.

Today's Health and Education Needs

(By Wilbur J. Cohen)

I am glad to come here as an official of the Federal Government to speak to an organization whose predominant concern is the social and economic problems of its community.

There is nothing strange about this at all. To me it simply points up the fact that we have learned that our communities, acting alone, cannot solve all their own problems.

A community cannot, for instance, by itself cleanse the polluted water that flows into or through it. It cannot raise the educational level of the people moving into it. It cannot, by itself, effectively prevent the introduction of disease from sources beyond its control. It cannot effectively control the adulterated foods and unsafe drugs that are produced beyond its boundaries.

Thus, we have learned that many of our community problems call for planning, study, and even action, on the part of all the communities in a given area or in the Nation. It is quite logical, therefore, that communities are working with the States and the Federal Government to act in their joint and common interests.

This concept is especially reflected in the work of the Department I represent—the Department of Health, Education, and Welfare. Much of what we do is done in partnership with State and local governments and involves problem areas of national concern or of such scope or complexity that Federal leadership and assistance is needed.

As an example, consider the health of the people of Portland. Good health is their most valued possession, for without good health nothing else matters very much.

The Department's work in the field of health is twofold. On the one hand, we seek ways to maintain good health by preventing those conditions which are detrimental to health. On the other hand, we seek ways to improve the health of those who are ill or injured.

There are many ways we go about this job.

Day in and day out our people in the Public Health Service work to keep disease from being brought into the United States—and thus into Portland. There is a constant tight screening of the people crossing our borders. Precautions are taken to keep disease from being introduced into this country through imported food stuff, manufactured items, and animals.

Our Food and Drug Administration guards the health of all Americans—including the people of Portland—by assuring us of the purity and safety of our food and drugs no matter where they are produced.

Our environment—the air we breathe, our water, the places we work and play—has a great deal to do with our health. Here, too, the Department—along with States and local communities—is working to provide better waste treatment to assure a pure and plentiful supply of water; to rid the air of the pollution that interferes with our health, safety, comfort, and enjoyment; to guard against overexposure to radioactive substances being released as we begin to make use of nuclear energy.

We work toward assuring communities that the facilities they need are available—adequate hospitals and nursing facilities in sufficient numbers, teaching facilities, up-to-date diagnostic and therapeutic equipment, and the supplies to back up the facilities.

The Department is responsible for providing leadership, guidance, and funds to the States so that they may assist handicapped citizens in finding a new way of life through vocational rehabilitation.

The Department, through its National Institutes of Health, is investing more than half a billion dollars a year in intensive research to help many realize the age-old dream of conquering disease. Under concentrated attack are such major problems as heart disease, arthritis, cancer, mental illness, blindness, and a host of other maladies that have plagued mankind throughout history.

Yet despite all that the Federal Government, the States, local communities, and private organizations and individuals are doing, we are still faced with formidable problems in our drive for better health.

President Kennedy, in his message of February 7 to the Congress on health, said: "Each improvement raises our horizons; each success enables us to concentrate more on the remaining dangers, and on new challenges and threats to health. Some of these new challenges result from our changing environment, some from new habits and activities. The Federal Government has stimulated much of the recent progress in medical research, without interference with scientific, academic, or individual liberty. Our task now is to be equally decisive in putting this knowledge into practice."

In effect, the President is suggesting to the Congress that the Federal Government give greater recognition to its responsibilities in the field of health; especially with respect to many of the health problems now upon us or which will be upon us unless something is done.

For example, even to retain our present ratio of physicians and dentists to population will require, over the next 10 years, a 50-percent increase in the number of people graduated from our medical schools and a 100-percent increase in the number of dental graduates.

Unless we face up to this situation now, there will be more than 2,000 people per family physician by 1970—as compared with 1,300 people per family physician in 1950.

To prepare for our future, President Kennedy recommends that the Federal Government assist in the financing of the construction and expansion of teaching facilities for the medical, dental, and other health professions and Federal financial assistance for students in these fields.

HOSPITAL CONSTRUCTION

Just as essential as professional people to our health is adequate health facilities in which they may put their knowledge into practice.

For 16 years, the Federal Government has been assisting financially in the construction of health facilities through the Hill-Burton Act.

Here in Portland, for example, over $1 million in Hill-Burton funds were used in the construction of your $4 million Emanuel Hospital and School of Nursing. Hill-Burton will also pay $246,000 toward the addition to your Providence Hospital. Altogether, almost $5 million in Hill-Burton funds have been spent on 14 different medical-facility construction projects in Portland.

But, despite the addition of 275,000 hospital beds to this country's medical facilities with assistance from Hill-Burton funds, there is still a serious shortage, in part brought about by our rapidly expanding population.

President Kennedy has recommended, therefore, that the Hill-Burton Act, which is due to expire June 30, 1964, be extended for 5 years. And, in recognition of the problems of deterioration and obsolescence many of our older hospitals face, the Hill-Burton Act should be modified so that Federal financial assistance would be provided for modernizing or replacing old hospitals and other health facilities.

I spoke earlier of the work our Food and Drug Administration does in protecting our health. It could do an even better job for us if its authority was broadened, as President Kennedy recommended in his health message, to require proof of both safety and effectiveness of therapeutic devices before marketing and to require cosmetics to be tested and proved safe before they are marketed. This, and similar authority, would complement the additional powers given the FDA last year under the Kefauver-Harris drug control amendments which set higher standards of safety, honesty, and efficacy in the manufacture and sale of prescription drugs and new drugs of all kinds.

AIR POLLUTION

Another health problem of concern to the Department is the steady rise in the extent to which the rapid changes in technology and the accelerating movement of the population into metropolitan areas expose the population to health hazards. Every day, actions by individuals, by industry, and by government shape and change man's environment—and increase our responsibility for seeing that such actions are taken with due consideration of their health effects.

This is especially true of air pollution. Air pollution has been linked to a considerable number of human ailments—especially in older people. In addition, the garbage and wastes and byproducts we discharge into our air cause about $11 billion dollars worth of damage every year in the United States.

President Kennedy has requested legislation authorizing HEW to intensify its research into the causes, effects, and control of air pollution; to provide financial assistance through project grants to local air pollution control agencies so that they can initiate or improve their control programs; to study the interstate or nationwide significance of air pollution; and to take action to abate interstate air pollution along the general lines of the existing water pollution control enforcement measures.

Senator MAURINE NEUBERGER has introduced a bill (S. 1009) which would carry out the President's recommendations.

MENTAL ILLNESS AND MENTAL RETARDATION

Not all health problems, of course, are physical, as was pointed out by President Kennedy in his special message to the Congress on mental illness and mental retardation—the first such presidential message in the history of this Nation.

The heart of the program President Kennedy recommends to combat mental illness is the concept that many forms and degrees of mental illness can be prevented or ameliorated more effectively through community-oriented preventive, diagnostic, treatment, and rehabilitation services. This is a departure from the traditional view that such services could best be provided by a mental institution.

Specifically, the proposals relating to mental illness are designed to launch a national mental health program that takes into account not only current needs in existing facilities and programs but also the projected future mental health needs of the Nation. The Federal Government would participate in the programs by giving financial assistance for the construction and staffing of the community mental health centers and by greatly increasing its support of research to assure long-term advances in the prevention, diagnosis, treatment, and rehabilitation of the mentally ill.

Similar efforts are called for by the President in the field of mental retardation.

HOSPITAL INSURANCE

Another important feature of the President's health program is his proposal for hospital insurance protection for aged persons through the social security system. Considering the facts that aged people require, on the average, three times as much hospitalization as younger poeple and yet have only about half as much income, the addition of hospital insurance to social security is urgently needed to protect the economic freedom and security of older citizens. Every person eligible for hospital benefits would be given a card much like the cards now provided hospitalization insurance subscribers to identify him upon admission to a hospital or nursing home.

Hospitals, skilled nursing facilities, and community health-service organizations would be paid for the reasonable costs of the services they furnished. There would be little difference between the procedures under the proposed program and those already set up and accepted by hospitals in connection with Blue Cross programs.

Every hospital which is accredited by the Joint Commission of Accreditation of Hospitals (a nongovernment, professional organization) would automatically be able to participate, provided the hospital had an arrangement for reviewing the utilization of its services and facilities.

Appropriate State agencies would play an important role in determining which nonaccredited hospitals and which skilled nursing facilities would be eligible to participate. These State agencies would also provide consultative services to those institutions to help them qualify.

The President's proposed insurance program would not be socialized medicine. Nor would it lead to socialized medicine. It is simply a national program to help older people pay hospital and related health-care bills.

Older people who would be entitled to benefits under the program would continue to choose their own doctors, just as now. If an elderly person's doctor decided that his patient needed hospital care, the patient and his doctor—not the Government—would determine what hospital he entered, just as now.

The proposed program would simply be a means of paying for certain services, not a means of providing these services. The services themselves would be provided in the same way they are now. They would be provided by the same institutions and the same professional personnel.

As with Blue Cross, the only difference resulting from the program would be in how the bills got paid. In fact, persons over 65 who were already insured under a private health insurance plan providing the same benefits plus some other protection could continue under that plan and receive their basic social security hospital insurance in that way.

In short, what is proposed is a program of hospital insurance, with specified benefits, for people over 65. It is not a program under which hospitals and nursing homes would be taken over by the Government or run by the Government. It is not a program under which doctors would be working for the Government under Government supervision.

It is not a program of socialized medicine.

The program would have no effect on the relationship between the doctor and his patient. It would not cover the fees for the services of private physicians in home or office.

The only difference would be that a doctor could refer an elderly person to the hospital knowing that the bulk of the bill would be paid through the hospital insurance program—that the patient would not have to exhaust his savings or go into debt.

If the patient required nursing-home care following hospitalization, the doctor could recommend such care knowing that the bill would be paid through the hospital insurance program.

Or, if the doctor considered that the best course for the patient would be visiting-nurse services or other health services in the patient's own home, he could recommend this, knowing that the bills would be paid through the hospital insurance program.

In still another situation, if the doctor considered that the patient needed extensive diagnostic services as an outpatient of a hospital, he could arrange this, knowing that the bulk of the costs would be paid through the hospital insurance program.

Hospital insurance under social security—reinforced by private savings and private health insurance and supplemented where necessary by medical care through public assistance—would become the first line of defense against the high cost of illness in old age.

EDUCATION

Now let me turn to another concern of our Department and of the present administration—education.

Today, we are facing a twofold challenge in education that, unless met, can hamper our national growth. We have today more students than ever before, and their number is increasing. At the same time, the relentless progress of our technology is demanding higher levels of education and training for everyone concerned.

In his special message to the Congress (January 29, 1963) President Kennedy vigorously outlined a bold and realistic program for American education. The President pointed out: "Education is the keystone in the arch of freedom and progress. Nothing has contributed more to the enlargement of this Nation's strength and opportunities than our traditional system of free, universal elementary and secondary education, coupled with widespread availability of college education."

The President believes that the doors to the schoolhouse, to the library, and to the college lead to the richest treasures of our open society: To the power of knowledge—to the training and skills necessary for productive employment—to the wisdom, the ideals, and the culture which enrich life—and to the creative, self-disciplined understanding of society needed for good citizenship in today's changing and challenging world.

The President's program includes Federal aid for elementary, secondary, and higher education. It emphasizes improvements in both the quality and quantity of education. It is the most comprehensive and creative education program advanced by any President of the United States.

The proposals represent a careful reevaluation of national needs and national priorities.

Increasing the quality and availability of education is vital to both our national security and our domestic well-being. A free nation can rise no higher than the standard of excellence set in its schools and colleges. Ignorance and illiteracy, unskilled workers and school dropouts—these and other failures of our educational system breed failures in our social and economic system: Delinquency, unemployment, chronic dependence, a waste of human resources, a loss of productive power and purchasing power, and an increase in tax-supported benefits. The loss of only 1 year's income because of unemployment is more than the total cost of 12 years of education through high school. Failure to improve educational performance is thus not only poor social policy; it is poor economics.

Only 10 percent of our adults had a high school or college education at the turn of the century. Today such an education has become a requirement for an increasing number of jobs. Yet nearly 40 percent of our youths is dropping out before graduating from high school; only 43 percent of our adults has completed high school; only 8 percent of our adults has completed college; and only 16 percent of our young people is currently completing college.

Recent research has shown that one of the most beneficial of all investments is education, accounting for some 40 percent of the Nation's growth and productivity in recent years. It is an investment which yields a substantial return in the higher wages and purchasing power of trained workers, in the new products and techniques which come from skilled minds, and in the constant expansion of this Nation's storehouse of useful knowledge.

Improved education is essential to give new meaning to our national purpose and power in the new age of science and space. In the last 20 years, mankind has acquired more scientific information than in all previous history. Ninety percent of all the scientists that ever lived are alive and working today. Vast stretches of the unknown are being explored every day for military, medical, commercial, and other reasons.

The twisting course of the cold war requires a citizenry that understands our principles and problems. It requires skilled manpower and brainpower to match the power of totalitarian discipline. It requires a scientific effort which demonstrates the superiority of freedom. And it requires an electorate in every State with sufficiently broad horizons and sufficient maturity of judgment to guide this Nation safely through whatever lies ahead.

From every point of view, education is of paramount concern to the national interest as well as to each individual. Our Nation requires a new standard of excellence in education, matched by the fullest possible access to educational opportunities, enabling each and every citizen to develop his talents to the maximum possible extent.

As a nation our concern for the future of our children—and the growing demands of modern education which Federal financing is better able to assist—makes it necessary to expand Federal aid to education beyond the existing limited number of special educational programs which Congress has enacted over the years. We can no longer afford the luxury of endless debate over all the complicated and sensitive questions raised by each new proposal on Federal participation in education. To be sure, these are all difficult problems—but this Nation has not come to its present position of leadership by avoiding hard problems. We are at a point in history when we must face and resolve these problems.

Local and State governments and private institutions, responding to individual and local circumstances, have done much. They have, in recent years, devoted sharply increased resources to education. Total national outlays for education nearly trebled during the 1940's and more than doubled during the 1950's, reaching a level of nearly $25 million in 1960. As a proportion of national income, this represented a rise from little more than 4 percent in 1940 to nearly 6 percent in 1960, an increase of over 40 percent in total effort.

And still more effort is needed. The Federal Government—despite increasing recognition of education as a nationwide challenge and despite the increased financial difficulties encountered by States, communities, and private institutions in carrying this burden—has clearly not met its responsibilities in education. It has not offered sufficient help to our present educational system to meet its inadequacies and overcome its obstacles.

It is our conviction that the Federal Government should not take over responsibility for education. That is neither desirable nor feasible. Instead its participation should be selective, stimulative, and, where possible, transitional.

Experience over a century with Federal aid to land-grant colleges has demonstrated that Federal financial participation can assist educational progress and growth without Federal control. In the last decade, experience with Federal aid under the National Science Foundation, with the National Defense Education Act, and with programs for assisting federally affected school districts has demonstrated that Federal support can benefit education without leading to Federal control.

The proper Federal role is to identify national education goals and to help local, State, and private authorities build the necessary roads to reach those goals. Federal aid will enable our schools, colleges, and universities to be more stable financially and therefore more independent.

What are these goals? In our opinion they include the following:

1. The quality of instruction provided in all our schools and colleges must be improved. We must stimulate interest in learning in order to reduce the alarming number of students who now drop out of school or who do not continue into higher levels of education. This requires more and better teachers—teachers who can be attracted to and retained in schools and colleges only if pay levels reflect more adequately the value of the services they render. It also requires that our teachers and instructors be equipped with the best possible teaching materials and curriculums. They must have at their command methods of instruction proven by thorough scientific research into the learning process and by careful experimentation.

2. The educational system of our Nation faces a major problem of quantity—of coping with the needs of our expanding population and of the rising educational expectations for our children which all of us share as parents. Nearly 50 million people were enrolled in our schools and colleges in 1962—an increase of more than 50 percent since 1950. By 1970, college enrollment will

nearly double, and secondary schools will increase enrollment by 50 percent—categories in which the cost of education, including facilities, is several times higher than in elementary schools.

3. Special attention must be given to increasing the opportunities and incentives for all Americans to develop their talents to the utmost—to complete their education and to continue their self-development throughout life. This means preventing school dropouts, improving and expanding special educational services, and providing better education in slum, distressed, and rural areas where the educational attainment of students is far below par. It means increased opportunities for those students both willing and intellectually able to advance their education at the college and graduate levels. It means increased attention to vocational and technical education, which have long been underdeveloped in both effectiveness and scope, to the detriment of our workers and our technological progress.

In support of these three basic goals, President Kennedy proposes a comprehensive, balanced program to enlarge the Federal Government's investment in the education of its citizens—a program aimed at increasing the educational opportunities of potentially every American citizen, regardless of age, race, religion, income, and educational achievement.

This program has been shaped to meet our goals on the basis of three fundamental guidelines:

1. The careful appraisal of the entire range of educational problems, viewing educational opportunity as a continuous lifelong process, starting with preschool training and extending through elementary and secondary school, college, graduate education, vocational education, job training and retraining adult education, and such general community educational resources as the public library.

2. A selective application of Federal aid—aimed at strengthening, not weakening, the independence of existing school systems and aimed at meeting our most urgent education problems and objectives, including quality improvement; teacher training; special problems of slum, depressed, and rural areas; needy students; manpower shortage areas such as science and engineering; and shortages of educational facilities.

3. More effective implementation of existing laws, as reflected in the President's recent budget recommendations.

To enable the full range of educational needs to be considered as a whole, the President has transmitted to the Congress a single, comprehensive education bill—the National Education Improvement Act of 1963, which has been introduced into the Congress by Senator MORSE and Representative EDITH GREEN. Education cannot easily or wisely be divided into separate parts. Each part is linked to the other. The colleges depend on the work of the schools; the schools depend on the colleges for teachers; vocational and technical education is not separate from general education.

The President's proposal is an attempt to launch a prudent and balanced program drawing upon the efforts of many past Congresses and the proposals of many Members of both Houses. It is solely an educational program, which does not attempt to solve all other difficult domestic problems. It is clearly realistic in terms of its cost—and it is clearly essential to the growth and security of this country.

The American people—in partnership with their governments—have continued to insist that "the means of education shall forever be encouraged," as the Continental Congress affirmed in the Northwest Ordinance. Fundamentally, education is and must always be a local responsibility, for it thrives best when nurtured at the grassroots of our democracy. But in our present era of economic expansion, population growth, and technological advance, State, local, and private efforts are insufficient. These efforts must be reinforced by national support if American education is to yield a maximum of individual development and national well-being.

The urgency of the President's program does not rest on the course of the cold war. Improvement in education is essential to our Nation's development without respect to what others are doing. Nevertheless, it is worthwhile noting that the Soviet Union recognizes that educational effort in the 1960's will have a major effect on a nation's power, progress, and status in the 1970's and 1980's. According to a recent report prepared for the National Science Foundation, Soviet institutions of higher education are graduating three times as many engineers and four times as many physicians as the United States. While trailing behind this country in aggregate annual numbers of higher education graduates, the Soviets are maintaining an annual flow of scientific and technical professional manpower more than twice as large as our own. At the same time, they have virtually eliminated illiteracy, with a 23-fold increase since the turn of the century in the proportion of persons with an education beyond the 7th grade. This Nation's concern for education is surely sufficient to excel the achievements of any other nation or system.

The program for American education proposed by President Kennedy is reasonable and yet far-reaching. It offers Federal assistance without Federal control. It provides for economic growth, manpower development, and progress toward our educational and humanitarian objectives. It encourages the increase of the knowledge, skills, attitudes, and critical intelligence necessary for the preservation of our society. It will help keep America strong and safe and free. The President has strongly recommended it to the Congress for high-priority action. He asks your help in fighting for this vital measure.

The health and education proposals that we have discussed today will be subjects of considerable debate in the weeks to come. They involve a matter of choice on the part of the Nation—a weighting of the importance of health and education and how the optimum in both can be obtained by each individual. I think that choice, dictated by the truth of the fact that we cannot stand still, will be a wise, affirmative one.

PREREQUISITES TO SUCCESSFUL COLLECTIVE BARGAINING

Mr. MORSE. Mr. President, I ask unanimous consent that there be printed in the RECORD an address by A. J. Hayes, international president of the International Association of Machinists, entitled "Prerequisites to Successful Collective Bargaining," given at Texas Christian University on March 14.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PREREQUISITES TO SUCCESSFUL COLLECTIVE BARGAINING

(Remarks by A. J. Hayes, international president International Association of Machinists, at Texas Christian University Conference on Collective Bargaining and Arbitration, Fort Worth, Tex., March 14, 1963)

I appreciate this opportunity to meet with you and to discuss some of the issues and trends which seem to point to a crisis in collective bargaining in America today.

Apparently a great many people have been convinced—by some of the organizations of big business, by some of the pundits of the political podiums, and by many of the keepers of the press—that collective bargaining has failed in America, and that some alternative method of settling labor disputes is inevitable and desirable.

Perhaps a hint of what has gone wrong with collective bargaining—if anything actually has gone wrong—was contained in an article by A. J. Liebling which appeared in the New Yorker recently. With tongue-in-cheek, Mr. Liebling noted that under the rules by which newspapers report strikes, employers always offer and unions always demand. He pointed out that since no newspaper has ever written about an employer who demanded that the workers accept his terms, the public has been conditioned to believe that employers make nothing but benevolent offers—and unions make nothing but greedy demands.

In the somewhat murky atmosphere of this kind of reporting it is not surprising that so many people are convinced that a crisis truly exists in labor relations. The dock strike, the combined lockout and strike in the newspaper industry, and threatened breakdowns in railroad and defense occupations have not only solidified this crisis complex, but generated a new drive toward laws designed to dilute and even destroy collective bargaining in America.

So I want to talk about collective bargaining, and the implications of the efforts to supplant it with other methods of settling labor disputes. Specifically, I want to analyze the "Prerequisites to Successful Collective Bargaining." And let me say at the outset that one of the most important prerequisites of all is a recognition—by employers, politicians, and the press—that in a free society with a free work force there is really no acceptable alternative to collective bargaining.

If collective bargaining is breaking down today part of the reason is that certain influential employer organizations, newspapers, and politicians are determined to replace free collective bargaining with State compulsion. In effect, they are creating a sickness in order that they may prescribe a cure.

Since the 88th Congress convened a flood of antiunion bills have poured into the hoppers. For example, one bill, by Senator DIRKSEN, would establish compulsory arbitration in the maritime trades.

Another, by Senator CURTIS and Senator MUNDT, would bring unions under the antitrust laws, which means breaking them into small isolated locals completely incapable of bargaining effectively with the kind of huge nationwide corporations that dominate so many industries in our economy.

Still another, by Senator MCCLELLAN, would prohibit strikes in defense industries and substitute compulsory arbitration by a board appointed by the Secretary of Defense. The Senator would also bring transportation unions under the antitrust laws and bar them from striking, picketing, or acting in concert with other unions.

Senator GOLDWATER has recognized that some of the other solutions being offered—particularly compulsory arbitration—would inevitably lead to Government control of prices, profits, and the prerogatives of management. Therefore, his solution is more direct and one sided. Without touching the privileges, prerogatives, and powers of management the Goldwater bill would destroy the ability of unions to bargain by hedging the right to strike in a thicket of bureaucratic and time-consuming restrictions.

In the face of bills such as these—proposing such drastic changes in the structure of collective bargaining and trade unionism in the United States—one might assume that collective bargaining has failed completely, and that the need to find some alternative method of regulating relations between labor and management warranted the most extreme and severe countermeasures.

And yet, despite the profusely publicized labor disputes that have hit the headlines recently, the facts clearly show that collective bargaining has not failed, and that no public or private emergency demands that collective bargaining be scrapped in America. True, some recent strikes may have caused inconveniences and, perhaps, even some shortages. But inconveniences and shortages are not, in themselves, a national emergency.

A shortage of bananas, for example, or even the several weeks' absence of your favorite newspaper does not justify a panic-stricken rush to destroy the rights and values that differentiate a free country from a Communist one.

Far from being a failure, collective bargaining has been spectacularly successful in America. Over the years—and at a time when swift technological changes have generated great apprehension and unrest in the workplace—collective bargaining has provided labor and management with a beautifully balanced mechanism for achieving industrial stability.

In fact, despite all the highly sensationalized accounts of recent strikes, the total impact of strikes on the total economy is so infinitesimal as to make the current hysteria about a crisis in labor relations look ludicrous.

Not only are the total man-days lost as a result of strikes in an average year, less than two-tenths of 1 percent of all the time that is worked, but the trend through the years has been steadily down. Last year, for example, fewer workers were involved in strikes than at any time since the end of World War II.

Invariably I've noticed that those who shout the loudest about the man-days and production lost because of strikes are the least concerned about the man-days and production that are lost because of unemployment or job injuries. And yet strikes cause only about one-fourth as much production loss as do job accidents, and only about one sixty-fourth as much wage loss as unemployment. In fact, more time was lost last year due to unemployment than was caused by all the strikes that have taken place in America in the past 35 years—since 1927.

Thus collective bargaining is working, and working better every year. The so-called crisis in labor relations is a phony crisis.

Millions of workers and tens of thousands of employers are producing peacefully under the terms of agreements amicably achieved through collective bargaining.

Thus, I repeat, the crisis is phony. However, the danger that we may recklessly destroy collective bargaining in America is very real indeed. Against a background of public hysteria shortsighted men have tried to set the stage for the destruction of the rights and freedoms of every member of every union in our country.

They are shortsighted because they have not considered the price they will pay to destroy the rights of the working people. That price is, of course, the eventual but inevitable loss of their own rights. It is axiomatic that what Congress can do to organized labor this year another Congress can—and will have precedent to—do to management in another year.

So let me suggest that as a people we must decide what it is we seek in our labor-management relations. If our total goal is simply industrial peace at any price, the way to achieve it has been blueprinted by every totalitarian dictatorship in history. Nazi Germany and Fascist Italy had industrial peace in the days of Hitler and Mussolini. The Soviet Union, Franco's Spain, and Castro's Cuba all have industrial peace right now. So industrial peace as such, is not hard to come by. It can be achieved by any society that is willing to sacrifice the freedom of the work force.

But certainly this is not a legitimate goal for America. For it is obviously not possible to sacrifice the freedoms of the work force without compromising those of business, managerial, and professional classes. And our goal is not to achieve an industrial peace based on submission and subjugation but to provide human beings with an effective voice in their own economic destiny.

And this goal has never been more important than it is today. Due to new developments in technology the scales of economic power are being dangerously tipped in favor of huge concentrations of impersonal corporate wealth. So the question is not whether collective bargaining is perfect, but whether, in a free society, any of the other methods being suggested would result in more industrial peace and greater industrial justice.

These are the tests—the true tests—against which we must measure the proposals that are being made in such profusion today.

Probably the most superficially appealing—at least to those who have never worked in a factory—is the proposal that unions be brought under the antitrust laws. On the surface it sounds so reasonable and fair to say that since corporations are covered by the antitrust laws unions should also be.

But the absurdity—or downright intellectual dishonesty—of those who profess to see no difference between the associations of workingmen and the predatory combinations of big business can be easily demonstrated by a few historic and economic facts.

First, what a worker has to sell is not property but a part of himself. Property can be withheld from the market, without loss of value, when the price is not satisfactory. But labor is highly "perishable." Any attempt to withhold it from the market when the price—that is, the wage—is too low results in an immediate and permanent loss to the worker.

Second, commodities can easily be transferred from an unfavorable to a favorable market. Labor, on the other hand, is relatively immobile, being rooted in a particular locality not only by such ties as family, friendship, church affiliation and familiarity of surroundings, but by lack of knowledge of employment opportunities elsewhere.

Third, buyers of commodities are vastly more varied and numerous than are employers of labor. In fact, in recent years a trend of corporate mergers and absorptions has concentrated greater and greater control of production and jobs into fewer and fewer hands. At the present time, for example, more than 38 percent of America's total productive capacity is accounted for by its 200 largest corporations.

Fourth, owners of commodities, corporate and otherwise, have far greater financial resources in cash, credit, property and inventory than do workers. Not only do they have greater resources, but while employers have piously preached individualism, they have customarily practiced combination. As Adam Smith pointed out in his bible of laissez-faire, "The Wealth Of Nations," about 200 years ago, "Masters are always and everywhere in a tacit but constant and uniform combination not to raise the wages of labor above their actual rate."

Fifth, on a commercial market it is the seller of a property that sets its price. But in the labor market it is not the seller—i.e., the worker—but the buyer—i.e., the employer—who establishes the amount to be paid for labor. This is because even in times of prosperity the need and competition for jobs is greater than the need and competition for workers.

For reasons such as these, workers—even with the strongest unions—have never been able to create a monopoly of labor which is anything like the monopoly of management over goods and markets. And today, with technological unemployment rising rapidly, the critical danger to our economy comes not from the efforts of unions to protect workers but from the cutthroat conditions which are generated when desperate men compete for jobs.

In view of these considerations it is clear that those who prescribe antitrust laws for labor, either have no conception of what they propose, or no conscience for the consequences. Despite the hopes of the kind of reactionaries in the business world who view right-to-work laws as a contribution to industrial relations, legislation of the antitrust stripe cannot be fairly considered a suitable or desirable alternative to collective bargaining.

The second great cure-all being offered to the country today is, of course, compulsory arbitration. It is said that we must adopt compulsory arbitration—at least in transportation and defense industries—because we cannot risk strikes or lockouts in occupations that connect so closely with the national health, safety, and welfare.

But before we get carried away with the idea that compulsory arbitration is a magic remedy, let us at least compare it with collective bargaining to see which is most likely to create conditions leading to true industry stability.

In free collective bargaining, where the ultimate right to strike exists, both parties have a reason to reach agreement. For neither normally wants a strike. A strike means lost—or at least delayed—profits for the employer. And it obviously means lost wages for the worker. This possibility of mutual loss serves as a powerful incentive for discussion, persuasion, facts, reasoning, and compromise. It means that no union will refuse to compromise—and risk a strike—over any but the most important issues which the membership will fully support.

The possibility of a work stoppage provides both parties with a compelling motive to reach an agreement that is not only mutually satisfactory, but which forms the foundation for a harmonious relationship throughout the life of the contract.

That is what collective bargaining will do. And, as I have indicated, that is what it does do in the overwhelming number of negotiations that take place in America each year. In our union we have studied the records and we have found that our objective of bargaining for settlements—not strikes—is achieved in almost 98 percent of our negotiations every year.

By way of contrast, this process of the parties actively seeking a mutually satisfactory agreement is completely negated by compulsory arbitration. When the right to strike disappears, and the parties have no reason to reach agreement, the chances are they will not. They won't because each side will start from an extreme position (to impress the eventual arbitrator) and will refuse to compromise (believing that the more they claim the more the arbitrator may give them).

Certainly compulsory arbitration will never lead to the kind of mutually satisfactory agreements that are normally achieved through collective bargaining. The chances are that neither party will be satisfied, that production will suffer, and that, as time goes on, the settlements will become increasingly political.

If nothing else the experience of other countries should warn those who think compulsory arbitration would be a labor relations cure-all. An arbitration is a quasi-judicial proceeding. As such it replaces negotiators with lawyers, issues with technicalities, and substance with form.

In Australia disputes between employers and employees have been dragged through one proceeding after another for as long as 5 years. By the time an award is handed down the issues often no longer matter. The result is not industrial stability, but a work force that takes its frustration out in slowdowns, sitdowns, wildcats, and other disruptive displays of industrial antagonism.

A study made a few years ago showed that Australia had as many strikes—despite compulsory arbitration—as other countries in the British Commonwealth where disputes were settled by collective bargaining.

In at least one country—the Philippine Republic—a compulsory arbitration law was repealed when experience proved that it provided neither better industrial relations, nor fewer strikes, than did free collective bargaining.

This is not to say that there is no place for arbitration in labor-management relations. As a union we agree to arbitration of disputes arising under the contract in about 95 percent of our negotiations. And every year we are involved in thousands of arbitration hearings at all levels of our organization.

But there is a vast difference between submitting an existing contract to a third party for a ruling on its meaning, and permitting a third party to write the contract itself.

The facts show very plainly that neither compulsory arbitration nor application of the antitrust laws to union will lead to greater industrial stability than collective bargaining carried on in an atmosphere of mutual respect and good will between labor and management.

And this, of course, is what we are missing in the relationships between unions and management in the United States today.

Though the workers of America approve and support the free enterprise system, the organizational spokesmen for management do not in turn accept the fact that unions play a needed and beneficial role in a free enterprise economy. Thus, instead of accepting the union as a partner in production, many employers tend to look at it as "the enemy."

In this atmosphere it is miraculous that collective bargaining has been as successful as the figures on strikes, settlements, and days lost have shown it to be.

Even though collective bargaining has been a long-term success in America, there is undeniably some public sentiment to prohibit strikes which actually jeopardize the national welfare. Of course, there is some question of definition here.

When is a strike really jeopardizing the national welfare? And when is it merely embarrassing whichever administration happens to be in power?

If it is necessary to enact a Federal law to deal with strikes in industries directly affecting the public health, welfare, and safety, I suggest that the principles on which our country is based demand that it be a fair law and not one which places all the penalties on one side regardless of which party is guilty of a breakdown in negotiations.

This, of course, is exactly what the present Taft-Hartley Act does. And the inequities of the injunction procedure under Taft-Hartley were never more dramatically illustrated than they were in the recent negotiations in the aerospace industry.

In the two negotiations that reached an impasse the union in both cases accepted the overall recommendations made by impartial Government panels, even though they fell short of goals previously selected by the membership.

It is interesting to note that this was one of the very few times in which a significant number of daily newspapers throughout the United States editorially condemned management's attitude and blamed the companies instead of the unions for bringing about the threat of a work stoppage.

And yet, when the chips were down, and the Government moved to act to avert a shutdown, the Taft-Hartley Act provided only one remedy, and that was to enjoin the union even though most objective observers believed that it was the company that precipitated the breakdown in defense production.

The lesson, I think, is clear. If we want to minimize the risk of work stoppages in defense industries we ought to set up a procedure under which penalties are levied not against labor alone but against the party which is shown by the evidence to be guilty of a refusal to bargain in good faith or accept the recommendations of impartial panels.

I suggest, for example, that if courts could seize a factory and impound the profits, as well as enjoin strikes, and force workers to accept conditions they would otherwise reject, very few disputes would ever reach a stage calling for public intervention.

But more than laws, and penalties, and continued Government participation in labor-management relations we need to bring the institutional relationships between business organizations and unions into harmony with the personal relationships that exist between businessmen and union representatives.

At the institutional level the organizations of business—the National Association of Manufacturers, the U.S. Chamber of Commerce, the National Right-to-Work Committee and the like—are waging war, class warfare, against the American labor movement.

Make no mistake about it, the existence and purpose of such a center as the National Association of Manufacturers' so-called Center for the Study of Union Monopoly Power is well known to the union members of America. This and other weapons of the class war, spewing out their poison, can only obscure the basic compatibilities of labor and management within the framework of the free enterprise system.

It is ironic that these institutional and organizational hatreds—which, incidentally, are becoming stronger every day—do not reflect the feelings which most employers have for the particular union with which they deal—or the particular union representatives with whom they have contact.

Normally, the personal relationships between labor and management are characterized by mutual respect, trust, and appreciation.

Most business executives are wise enough to know that unions perform an essential and valuable service by handling day-today grievances, by providing workers with a constructive form of protest and expression, and by insuring that human values are not lost in the punchcard jungle of personnel administration.

But they must also recognize that there are no alternatives to collective bargaining consistent with the traditions that have grown out of our basic documents of government—the Constitution and the Bill of Rights. And the organizations that speak for them must stop chasing the will-o'-the-wisp of compulsory arbitration, or the destruction of unions through antitrust laws.

At a time when America seeks to provide the world with a suitable alternative to communism, it is dangerous for labor and management to engage in a class struggle which has no relevance or place in America.

So rather than continue to seek the destruction of unions and collective bargaining, I would seriously urge the leaders of American industry to bring this pointless, and potentially dangerous, class struggle to an end.

Let them recognize the obvious: that there is really no alternative to collective bargaining, and let us replace class warfare with a determination to make collective bargaining work. In the new climate which results—a climate which reflects institutional as well as personal respect, trust and mutual appreciation—America will achieve far more than a successful system of collective bargaining. It will solidify the foundations of the good and just social order which labor and management are both seeking in America.

INGRESS AND EGRESS RELATING TO NATIONAL FOREST LANDS

Mr. MORSE. Mr. President, on February 1, 1962, the Attorney General issued a landmark decision on ingress and egress relating to our national forest lands. I have discussed this excellent decision on several instances on the floor of the Senate.

The Secretary of Agriculture has now proposed a redraft of Forest Service regulations on ingress and egress. Within a short time he will issue final regulations. There may be further changes which should be made before these regulations are finalized. On April 23, Assistant Secretary of Agriculture John Baker plans to hold a meeting which will give various groups an opportunity to express their views. I am certain that Secretary Freeman and Assistant Secretary Baker will, at that time, consider most carefully whether there ought to be revisions in these proposed regulations.

It is my opinion that unless there are some substantial defects which are brought to light and which need correction, the Secretary of Agriculture should place the new regulations into effect promptly after the April 23 meeting.

At this time I wish to place in the Record, so that there will be wide public notice, a letter dated March 18 addressed to me by Assistant Secretary Baker, enclosing a statement and notice concerning proposed national forest regulations, and the draft regulations themselves.

I ask unanimous consent that there be included in the Record, at the close of my remarks, a letter I received from Assistant Secretary of Agriculture Baker, also dated March 18, and a letter that the Chief of the Forest Service sent to Mr. Doyle of the National Lumber Manufacturers Association on the same date.

As I have said from the outset, I desire that there be the widest public knowledge of these proposed regulations, their cause and their effect, and it is for this reason that I place this further information at the disposal of my colleagues and the public.

There being no objection, the material was ordered to be printed in the Record, as follows:

DEPARTMENT OF AGRICULTURE,
Washington, D.C., March 18, 1963.

Hon. WAYNE MORSE,
U.S. Senate.

DEAR SENATOR MORSE: In August 1962 a discussion draft of proposed regulations affecting administration of the forest development transportation system was circulated for review and comment. Many comments and suggestions were received by early November. These were carefully studied to determine which ones could be included in the regulations.

A redraft of the proposed regulations incorporating the acceptable comments and suggestions has been prepared. This together with a statement concerning them is enclosed.

There has been considerable interest in this subject. Expressed opposition to the adoption of these regulations has been largely limited to some portions of the lumber industry. It has been our position that the Department would arrange a meeting if differences were not reasonably resolved in redrafting the regulations. While considerable progress has been made, it is unlikely that the conflicts can be entirely resolved.

The redraft of the proposed regulations together with the statement is being distributed to those reviewers who have indicated an interest in the subject. Included with the new draft is an announcement of an advisory hearing. At this hearing there will be presented a brief summary review of the regulations and their purposes. The hearing will provide an opportunity for comments in addition to those already submitted by interested persons who appear. Comments may be filed with the Chief of the Forest Service in advance of or within 10 days after the meeting. I plan to attend the meeting.

Your further comments on the proposed regulations will be most welcome at any time as will be your participation or attendance at the meeting in April.

Sincerely yours,

John A. Baker.

Notice From Forest Service, Department of Agriculture

Enclosed for your information and further review are:

1. Redraft of the proposed national forest access regulations directed toward management of the forest development road system serving the national forests. This redraft is proposed for publication in the Code of Federal Regulations under title 36, chapter 11, part 212.7 to 212.11 inclusive, when approved by the Secretary of Agriculture.

2. Statement concerning the proposed national forest access regulations.

These regulations were first circulated as a discussion draft for comments in August 1962. This review resulted in over 450 comments. These have been carefully considered in the development of the enclosed redraft and the accompanying statement.

The Secretary of Agriculture has requested me to circulate this draft to those interested reviewers who previously commented. He has also asked that a meeting be arranged to permit those interested to present new arguments or additional comments on this draft for consideration by him prior to his decision. Comments may also be presented to the Forest Service in writing prior to or within 10 days of the scheduled meeting.

An advisory public hearing is called for 10 a.m , April 23, 1963, in room 218, Administration Building, Department of Agriculture, Washington, D.C.

A transcript of the hearing will be made for use by the Secretary in his further consideration of the regulations.

Additional copies of this notice, the enclosed statement and proposed regulations are available in the office of the Chief, Forest Service, room 3008, South Building, Department of Agriculture, Washington, D.C.

M. M. Nelson,
Acting Chief, Forest Service.

Redraft of New Regulations Proposed by Agriculture—Code of Federal Regulations

TITLE 36—PARKS, FORESTS, AND MEMORIALS

Chapter II—Forest Service, Department of Agriculture

Part 212—Administration of the Forest Development Transportation System

Part 212 is amended by adding the following sections:

"Section 212.7 Road System Management:

"(a) Traffic Rules—

"1. General.—Traffic on roads under the jurisdiction of the Forest Service other than 'Special Service Roads' shall be subject to State traffic laws where applicable: *Provided,* That use of such roads shall be subject to rules prescribed by the Chief, notice of which has been given by publication in a newspaper having general circulation in the locality and posting at the entrances to the roads, covering uses of or operations on the road as to which the State laws and rules are not applicable or are not deemed adequate for the safety and protection of users of the roads and the National Forests.

"2. Special service roads.—The Chief shall issue traffic rules governing the use of 'Special Service Roads' or adopt in lieu thereof traffic rules promulgated for comparable roads of the State in which the road or segment of road is located, provided that where local traffic rules are adopted they shall be supplemented by him to the extent necessary to adequately govern special traffic uses and conditions, including but not limited to load weights and widths, size of vehicles, speed limits and provisions for the safety and protection of users and of the National Forests. Notice of such rules shall be given in the manner prescribed in section 212.7 (a) 1.

"(b) Special service roads.—The Chief may designate a forest development road or a segment thereof a 'Special Service Road' and control or regulate the use of the road as necessary in the public interest and safety: *Provided,* That the road is not a part of the highway system of a State, county, or other public road authority: *Provided further,* That the United States controls the right-of-way.

"(c) Cost recovery on special service roads.—Where the Chief determines that a share of the cost of acquisition, construction, reconstruction, improvement, or maintenance of a 'Special Service Road,' or a segment thereof, used or to be used for commercial hauling of non-Federal forest products and other non-Federal products, commodities and materials should be borne by the owners or haulers thereof and where such owners or haulers have not shared in the cost of acquisition, construction, reconstruction or improvement and have not made contributions to pay their proportionate cost shares, the Chief may condition the permission to use the particular 'Special Service Road' or segment thereof upon payment to the United States of the proportionate share of such cost and bearing proportionate maintenance as has been determined by him to be attributable to such owner's or hauler's use in accordance with section 212.11.

"Section 212.8 Ingress and Egress

"(a) Persons Residing Within the Boundaries of National Forests.—Persons residing within the boundaries of National Forests shall be permitted ingress and egress over the National Forests and use of existing roads and trails for access to their homes and property: *Provided,* Such ingress and egress or use shall conform to rules and regulations governing the protection and administration of the National Forests and the roads or trails to be used.

"(b) Others.—Entering upon the National Forests and use of existing roads and trails will be permitted for all proper and lawful purposes, subject to compliance with rules and regulations governing the National Forests and the roads or trails to be used.

"Section 212.9 Access Procurement by the United States

"(a) Policy.—The Chief shall obtain as promptly as is feasible needed road and trail access to National Forest land to assure effective protection, management and utilization of such land and its resources and for the use and development of the resources upon which communities within or adjacent to the National Forests are dependent. Such access shall include procurement of interests in existing non-Federal roads and road systems, as well as rights-of-way for roads and trails over non-Federal land. Consideration shall be given in each case to the needs of the owners to use the existing roads in the protection, management and utilization of their lands and industries.

"(b) Existing or Proposed Forest Development Roads Which Are or Will Be Parts of a System of a State, County, or Other Local Subdivision.—Forest development roads which are or will be parts of a system of a State, county, or other local subdivision road system and are on rights-of-way held in the name of the State, county, or other local subdivision may be constructed, reconstructed, improved or maintained by the Forest Service when there is an appropriate agreement with the State, county, or other local subdivision under authority of 23 U.S.C. 205: *Provided,* Such construction, reconstruction, improvement or maintenance is essential to provide safe and economic access to National Forest land.

"(c) Acquisition of Easements and Rights of Use.—Except as otherwise provided in these regulations, easements for road and trail construction across non-Federal lands and easements or rights of use over non-Federal roads and trails will be acquired in the name of the United States of America and its assigns. The easements or rights of use may be acquired by purchase, condemnation, donation, or as a reciprocal for permits or easements for rights-of-way for roads or trails to be constructed or for easements over or permits to use existing roads or trails.

"(d) Methods of Compensation for Easements and Rights of Use Acquired by the United States.—Compensation in negotiated acquisitions may be: (1) by payment from appropriated funds; (2) pursuant to reservation in the grant of easement to the United States whereby the grantor reserves the right to require haulers of Federal timber or other Federal products over the road conveyed or thereafter constructed by the grantor to make payments to the grantor in accordance with the terms of the reservation; (3) by granting reciprocal rights; or (4) by a combination of these methods. Compensation will be limited to the fair market value of the easement or right of use.

"(e) Cooperative Construction and Use Agreements.—Where areas, partly National Forest and partly private or other ownership, are undeveloped or inadequately developed by roads, the Chief will, to the extent feasible and advantageous to the United States, join in planning, constructing, reconstructing, improving, maintaining, and using an adequate road system on the basis of each party bearing the proportion of the cost attributable to the anticipated benefits.

"(f) Condemnation.—Where access across non-Federal land or over a non-Federal road or trail cannot be obtained on equitable terms through negotiations and with reasonable promptness, condemnation will be undertaken upon a finding that: (1) such action is necessary and advantageous to the

United States, considering the elements of time, need for access to National Forest land, probable cost (award for value and damage), alternative means of access, and other pertinent factors; and (2) that funds are available for payment of the anticipated award.

"(g) Access Over Non-Federal Land and Use of Non-Federal Roads or Trails on a Temporary Basis.—The Chief may negotiate a temporary agreement for access over non-Federal land and for use of an existing non-Federal road or trail where there is immediate need for temporary access for limited purposes that can be economically met by such procedure, or where the foreseeable need does not justify the expenditures necessary to provide a permanent road or trail.

"(h) Use and Control of Interests in Roads, Trails and Easements Acquired by the United States.—Interests in roads, trails and easements acquired by the United States shall be under the control of the United States, subject to approved reservations, limitations and other provisions set forth in the deed, permit and other indenture. This control by the United States may include restricting or conditioning the use of the interest owned by the United States in the road, trail or easement where necessary.

"Section 212.10 Permission To Cross National Forest Land and Assignable Rights-of-Way Owned by the United States

"(a) Permission to Construct and Use Roads Across National Forest Land and Assignable Rights-of-Way Owned by the United States.—If a reciprocal benefit is needed by the United States, permission to construct and use a road across National Forest land and across assignable rights-of-way owned by the United States and administered by the Forest Service will be conditioned, except as provided in this subsection, for any applicant who seeks a permit to construct and use a road across the same, upon the grant to the United States of a reciprocal benefit. Such benefit shall bear: (1) a reasonable relation to the management of the National Forests; and (2) a value substantially similar to the value of the permission to cross National Forest land or right-of-way applied for. In those instances where the values of the interests needed by the United States exceed those applied for by the applicant, the additional interests required by the United States will be acquired as provided in sections 212.9 (c) and (d). Where values needed by the applicant exceed those needed by the United States, the difference in values will be determined under principles set forth below and in sections 212.7(c) and 212.11. If a reciprocal benefit is not needed by the United States, or the applicant shows good cause why the reciprocal benefit needed by the United States cannot or should not be granted by him, or the applicant declines to grant the reciprocal benefit requested by the United States or if a bona fide emergency exists, permission to construct and use a road across lands owned by the United States may be conditioned for any applicant upon reasonable charges and all other terms and conditions required by the Chief to protect the interest of the United States. Permits for road construction and use will be non-exclusive and will retain in the United States all rights in the right-of-way and in the road except the privilege granted the permittee to use the road for the specific purposes stated in the permit. Permits will be conditioned upon compliance with their terms and conditions and to the rules and regulations governing the protection and administration of the National Forests and those applicable to such roads.

"(b) Permits for Commercial Hauling on Special Service Roads.—Except for minor or occasional use, permits will be required for commercial hauling on 'Special Service Roads' of non-Federal forest products, and other non-Federal products, commodities, and materials when the Chief determines that such owners or haulers should provide: (1) proportionate maintenance; (2) an equitable and reasonable needed reciprocal benefit to the United States; (3) a share of the cost of construction, reconstruction, or improvement of such road or segment thereof; or (4) any combination of these. When such owners or haulers have not provided to the United States the needed reciprocal benefit, or borne their share of the cost, permission to use a road will be conditioned for any applicant upon the terms and requirements and subject to the like conditions and charges as prescribed in Section 212.7(c), 212.10(a), and 212.11(d) for permission to construct or use such roads.

"(c) Easements and Stipulations for Roads Crossing National Forest Land Having the Status of Land Reserved From the Public Domain.—Applications for easements over National Forest land having the status of land reserved from the public domain, and over roads thereon, with appropriate stipulations will be approved by the Chief for those applicants who have conveyed or provided permanent multiple-use easements over roads and lands owned or controlled, directly or indirectly, by them to the United States of America and its assigns and who have already constructed, or will, as scheduled by the agreements, construct their proportionate share of the road or road system concerned. Such applications for easements shall be approved by the Chief only when they are for non-exclusive easements which retain in the United States all rights in the road or road system except the rights of the applicant to use and maintain the road or road system in the administration, protection, and utilization of lands and the resources thereof owned or controlled by the applicant, and when the rights applied for are limited to the share of use commensurate with the applicant's contribution to, or performance of, a share of construction or other improvement as set forth in the cooperative agreement or cooperative understanding covering the road or road system. Applications for easements in appropriate form, together with required plats showing the National Forest land having the status of land reserved from the public domain to be crossed, shall be forwarded to the Forest Service. When the Chief has determined that the applicant has satisfactorily constructed his determined share of the related road or road system, or is committed by appropriate agreement to deposit funds or construct his share of the road or road system, and has granted or provided the easements or other interest required by the United States under such agreement, the Chief after approval of the application, will attach thereto the stipulations agreed to by the applicant and the Chief covering the use of the easement applied for, and forward the same to the designated officer of the Department of the Interior for the purpose of obtaining the required easement under the authority of the Secretary of the Interior. When the easement is approved and returned by the officer of the Department of the Interior to the Forest Service for entry in its records, it will be entered and thereafter delivered to the applicant pursuant to agreement.

"Section 212.11 Principles for Sharing Use of Roads

"The use of roads under arrangements for sharing costs or performance shall be in accordance with the following:

"(a) Road Improvement.—Use of a road for commercial hauling, except occasional or minor amounts, will be conditioned upon improvement or supplemental construction of the road to safely and economically serve the contemplated use, unless the Chief determines that the safety and economy of the established and foreseeable use by the United States, its users and cooperators will not be impaired by the use for which application is being made. With the consent of the Chief the applicant may deposit funds in the estimated amount required for the improvements or supplemental construction in lieu of performance. Such funds will be used by the Forest Service to do the planned work. The cost of the improvements or supplemental construction will be taken into account in determining any otherwise required contribution to cover the proportionate share of the cost of road acquisition, construction, reconstruction or improvement attributable to the use.

"(b) Corresponding Benefits.—Corresponding benefits which may be accepted by the Chief for sharing road use will be those which bear a reasonable relation to the management of the National Forests. They may be in the form of: (1) deposit of funds with the Forest Service for use in paying the cost of road construction, reconstruction or improvement to be borne by the user; (2) the grant of a reciprocal right of substantially similar value to the road use sought; (3) construction over applicant's property of a new road needed for access to and use of National Forest land and the conveyance to the United States of America and its assigns of the needed rights in such road; or (4) any combination of these.

"(c) Cost Determinations for Roads Cooperatively Constructed Under Agreements.—When roads are constructed under cooperative agreements to meet mutual needs of the United States and others for access, determinations of the shares of costs to be borne by the United States and the cooperating parties will include consideration of: (1) the standard of road required for the planned hauling; (2) the share of planned use; (3) the location and volume of tributary timber owned by each party and expected to be hauled over the road or roads; (4) the tributary areas owned or controlled by each party; (5) expected use by the public; and (6) other appropriate considerations.

"(d) Cost Recovery by the United States From Others on Special Service Roads.—When roads designated as 'Special Service Roads' are used under permit for commercial hauling instead of under cooperative agreement any cost to be recovered by the United States will be calculated in proportion to the planned use of the road. The road cost used in such calculation will be the amount or estimated amount expended in the acquisition, construction, reconstruction, and improvement of that capacity of the road required to serve the use needs of all parties that are or reasonably can be expected to use the road. Such road share cost payments will be through deposits in advance of use unless the user provides a payment bond satisfactory to the Chief guaranteeing that payments will be made promptly upon billing by the Forest Service.

"(e) Cost Sharing With a Cooperator.—The costs to achieve the agreed upon road or road system may be met by: (1) use of appropriated funds; (2) construction, reconstruction or improvement of roads or segments of roads by timber purchasers or other users; (3) use of deposits made by cooperator with the Forest Service to cover cooperator's agreed share; (4) agreement with cooperator pursuant to which cooperator does more than his agreed share of constructing, reconstructing, or improving a road and recovers costs incurred in excess of his agreed share by charging National Forest timber purchasers and other commercial haulers using the road an equitable amount within the limits and to the total amount specified in the agreement; or (5) a combination of the aforementioned methods.

"(f) Road Maintenance and Resurfacing.—Cooperators, and permittees using 'Special Service Roads' will share the road maintenance and resurfacing costs under suitable agreements to perform, arrange for performance by others, or by making deposits with the Forest Service which will be used to pay the costs of work performed for efficient use and for the preservation and protection of such roads from all elements, and to prevent erosion to adjacent lands: *Provided,* That purchasers of National Forest timber shall perform an agreed upon amount of maintenance work representing their proportionate share of necessary maintenance, or at their election in lieu of actual performance thereof, make payments to a specified maintainer of the agreed amounts for maintenance.

"(g) INTERESTS TO BE ACQUIRED BY THE UNITED STATES IN ROADS OR EASEMENTS THEREFOR.—Where the United States is to bear or share the cost of constructing, improving, or acquiring a road system, a road, or a segment thereof, or acquires an easement therefor, the interest acquired will: (1) be for perpetual use unless the road use falls within the limited classes where temporary roads or roads for limited periods are acceptable; (2) provide adequately for foreseeable National Forest management, protection, and utilization needs; and for the use and development of the resources upon which communities within or adjacent to the National Forests are dependent; and (3) not be subject to conditions, reservations, or covenants unrelated to the road use, or which seek or might tend to direct or limit National Forest management policies and procedures."

STATEMENT CONCERNING PROPOSED NATIONAL FOREST ACCESS REGULATIONS

GENERAL

Proposed regulations 212.7 to 212.11, inclusive, apply to the Forest Development Transportation System and to access over national forest lands. They do not apply to the Forest Highway System.

ACCESS PRINCIPLES

There are several principles which are of primary importance to and basically control the national forest access program. There are presented hereunder the highlights of the principles deemed most important in the current drafting of regulations. The following most strongly influence and direct the language of proposed regulations 212.7 to 212.11, inclusive.

1. Multiple-use access to national forest lands is needed in virtually every case. The United States needs and must obtain multiple-use access to national forests lands for the protection, administration, and utilization of the national forests, or where necessary, for the use and development of the resources upon which communities within or adjacent to the national forests are dependent.

2. Road construction by national forest timber purchasers is presently limited to the prudent operator concept. Consequently, some appropriated funds may be required sooner or later to do supplemental road improvement in every road system. This means that the right-of-way which is essential for multiple-use access is necessary before such improvement. It is usually good business to acquire initially the right-of-way to meet such foreseeable needs.

3. Sustained yield management of the various land resources requires generally permanent or long-lasting improvements, including roads. Permanent or perpetual easements are so uniformly needed that this requirement can be regarded as the normal and usual one.

4. Easements granted to the United States and its assigns to meet the foregoing requirement must be nonrestrictive so as to provide for all foreseeable use including use by recreationists, hunters, and fishermen as well as timber haulers. It follows that if the owner of a private road being acquired by the United States wants to reserve access rights for recreation, timber management, mining, and any other lawful use of his property, the Forest Service is quite willing to consider such reservation of rights. The Forest Service wants to be able to cooperate with those private landowners who also seek to promote the desirable policy of multiple use.

5. Since the purpose of national forest roads is to accommodate mixed traffic or all anticipated kinds of traffic at various times, it is essential that the Government be in a position to regulate the traffic it plans to accommodate. This does not mean the private road owner cannot control and be assured of the use of the rights he reserves. The owner will logically want to reserve the rights of use he foresees the need of and will wish to be assured of as a property right. Rules specified in the conveyance to the United States for the exercise of reserved rights would be part of the private right and not subject to change by the United States except after further acquisition through negotiation or in rare instances by the exercise of eminent domain.

6. Whenever possible and feasible, the Forest Service will avoid duplicating existing roads and road systems as a land and timber growing conservation policy by making a single road system serve all tributary ownerships insofar as practicable. If after reserving the interest desired by the owner for his purposes, it is determined by the Forest Service that the remaining road interests that can be acquired by the United States are less than will be needed, there must and will be a decision as to the best course to take. Usually the alternatives are to acquire subject to the owners' needs and widen and improve the road to meet the Government's needs, to acquire a separate right-of-way and construct a separate road system, or to condemn for access rights needed by the Government. It will be the policy to be quite prompt in reaching a decision to condemn for such needed access rights where negotiations cannot be concluded to the satisfaction of both parties.

HIGHLIGHTS OF PURPOSES AND OBJECTIVES

Section 212.7—Road system management

Subsection (a) prescribes that the traffic on the road system will be controlled under provisions of the State traffic laws to the extent they are applicable. State and local governments are to be encouraged to develop means for applying State traffic laws to traffic on national forest roads.

When the public safety, protection of the national forests or the roads require it, the Forest Service will prescribe and enforce such rules as are needed to assure safe and efficient use.

Subsection (b) provides that special service roads will be designated as needed to assure use for the more important purposes. On these roads the Forest Service may: (1) regulate traffic for safety of the users or of property; (2) regulate the kind and volume of traffic to meet the requirements of land management; (3) obtain required maintenance; (4) regulate commercial hauling; (5) require needed road improvement to accommodate the permitted hauling; (6) recover road costs; (7) establish load size and weight limits and any other special traffic rules needed for safety or the utilization of the road.

Under subsection (c) cost recovery will be limited to commercial hauling of non-Federal products over such designated special service roads when the delegated official determines that such tributary products should bear a share of the cost of the road. Cooperative construction on the road, or contributions thereto, by land or timber owners will be recognized. Since most of the cooperative road agreements originated in 1952 or later, it is contemplated that cost recovery under section 212.7 will be generally limited to costs incurred in constructing or improving roads or segments of roads after June 30, 1952. In special situations involving earlier cooperation with one or more but not all non-Federal users cost recovery may be authorized over a road or road segments where the facts clearly indicate that it will be equitable to charge for non-Federal hauling by the party who has not previously borne an equitable share.

The replacement costs of that portion of the construction of a road which may have been accomplished by and to meet the needs of the user or hauler of National Forest products will be estimated and combined with any costs which may have been incurred from appropriated Federal funds. The total will be regarded as the Government's cost for the purpose of determining the share or shares to be borne by the commercial hauler of non-Federal products on a road designated for cost recovery.

Costs recovered will be deposited in the Treasury of the United States.

Relatively few of the existing roads will be designated for collection of cost recovery charges, because most road systems serving mixed ownership areas were developed with the cooperation of public agencies or the benefiting private owners. Most national forest roads will continue under these regulations to be used free of charge as they have been in the past.

Section 212.8—Ingress and egress

Under (a) it will be the objective to continue and improve our good relationships with persons residing within the national forests. After more than 50 years of development virtually all persons residing in the forests have a way by road or trail to their domiciles. It is intended that they be permitted to continue customary access on such roads or trails in compliance with rules and regulations of the Secretary.

The objective will be to assure that an actual settler shall not be denied the rights he has under the 1897 law. All entry and use by actual settlers and others will be conditioned upon compliance with rules and regulations governing the national forests and the forest development roads and trails to be used. These provisions are not new.

It is intended under (b) that, except on the few special service roads designated for cost recovery, use of national forest roads and trails will continue to be without charge as in the past.

Section 212.9—Access procurement by the United States

Subsection (a) indicates the principal objective of policy is to move more promptly to get multiple-use access to national forest lands. This will be accomplished by obtaining rights-of-way upon which the Government can build roads or trails or by acquiring private roads. Joint construction and sharing of costs is covered under 212.11.

Under (b) it will be the objective of the Forest Service to work cooperatively and closely with the States, counties or other local subdivisions of government in development and maintenance of roads needed for both national forest and local government use.

Under (c), (d), and (e), the objectives of the regulations controlling the acquisition of rights-of-way and establishing the methods of compensation are aimed at flexible means of obtaining access rights fairly and reasonably by negotiations. The rules for negotiating agreements on cooperative construction and use of roads are likewise aimed at serving the needs of the cooperators with each bearing a fair proportion of the costs.

Subsection (f) provides when negotiations fail prompt use of condemnation will be the objective, thus settling the issues judicially.

Under (g) the provisions for temporary access are intended to be used only where the circumstances clearly justify this action. If the temporary right-of-way is obtained to gain access more quickly, it will be the objective to promptly obtain the permanent right-of-way.

Under (h) the principle of the Government controlling that which it owns are well established. It is stated in this section to remove any doubt as to the intent that the Forest Service will follow this principle and that it has no authority to leave control of a road acquired by the United States in the prior owner.

Section 212.10—Permission to cross national forest land and assignable rights-of-way owned by the United States

Subsection (a) provides the guidelines for achieving reciprocity. It is intended they produce fair and reasonable results. Since reciprocity requires agreement of the private party and most Forest Service access needs must be met promptly the applicant who cannot or will not promptly grant the needed reciprocal rights or benefits may be given a permit to build and use a road at his expense. Such a permit, however, will be revocable and retain in the United States the right to improve and use the road. An applicant who delivers the reciprocal rights or benefits needed by the United States may obtain either a permit or a permanent right-of-way under 212.10(c) with an assurance, where appropriate, that other users will share in the costs of the road.

Subsection (b) prescribes the rules for hauling on special service roads by the haulers who have not shared in the construction. Haulers must do their maintenance and may be required to improve the road, provide a reciprocal benefit, or pay a share of the costs, or a combination of these.

Subsection (c) specifies the procedures for obtaining permanent rights-of-way under Department of the Interior authority. The objective is to use the authority to obtain permanent multiple-use access over the related private lands of the applicant. No permanent easement will be approved except for those who have furnished needed reciprocal benefits to the United States.

The Department of the Interior has the statutory authority to issue the permanent rights-of-way or long-term permits in the nature of an easement across national forest lands of public domain status. The appropriate officer of the Department of the Interior has been authorized to issue the rights-of-way for such permanent or long-term use as may be recommended for approval by the Department (Agriculture) and the provisions of 43 C.F.R. 244.16 and 244.9 have been suspended from operation in the cases involving such applications. Such easements are nonexclusive rights. The United States will in all cases retain the right to use or permit the use of the right-of-way for any purpose which does not unreasonably interfere with the grantee's use.

Stipulations for use of the rights-of-way will be prepared by the designated official to protect national forest interests and designed to meet the specific needs of the project or road system and to cover the management responsibilities of the United States.

It is the responsibility of the Forest Service to obtain clearance from other interested Federal agencies when they are involved (e.g., Federal Power Commission and Bureau of Reclamation for areas withdrawn for their use) and to have the application made in approved form for later approval by the Department of the Interior. The Forest Service has the primary management responsibilities over the lands in question. Accordingly, it is responsible for determinations that the interests of the Government are protected, that appropriate reciprocal rights have been obtained, and for terms of the stipulations entered into with applicants.

Section 212.11—Principles for sharing use of roads

Subsection (e) of section 212.9 directs the Forest Service, whenever it is advantageous to the United States, to join with the related owners of intermixed land in planning, constructing, reconstructing, improving, maintaining and using road systems serving the lands and resources of the cooperators. Where it is found mutually advantageous this general policy has been followed by the Forest Service and many neighboring land and timber owners for a number of years.

Section 212.11 is designed to establish methods of carrying out the cooperative policy established in 212.9(c).

Subsection (a) has as its objective the improvement of national forest roads to safely and economically meet the increasing needs of the particular roads and establishes the means of accomplishment.

Subsection (b) defines the authority to accept reciprocal benefits from an applicant desiring to use a forest development road. It should facilitate making mutually advantageous access agreements.

Subsection (c) provides that the determination of the shares of costs requires agreement of the Forest Service and the other cooperators as it has in the past. The objective of 212.11(c) is to establish guidelines which include the factors most often found essential in the past. The most important and usually the only definitive factor is the tributary timber expected to be hauled over the road system. Other factors may be important and require measurements or estimates for consideration. Agreements will include the extent to which overhead costs are to be recognized and included. A cost in an amount equivalent to interest on unamortized investments may be included in agreements under which cooperators recover costs from users. It will be the objective to eliminate any real need for this by having each cooperator construct or contribute his share at the appropriate time. The objective will be to obtain cooperation in the road system by the fairest possible means for determining the cost shares of the participants on the basis of the foreseeable and anticipated benefits.

Subsection (d) states the purpose of cost recovery is to obtain the fair share of the Government's cost for a road having a direct commercial benefit to a non-Federal user. The purpose is also to avoid having a user ride free over a road which is constructed and used by those who contribute their fair share of the cost. The objective will be to recover costs on roads or segments of them incurred since July 1, 1952. Under special circumstances where equity clearly warrants it, costs incurred earlier may be considered. Once costs are recovered only continued maintenance and road improvements, or a share of them if required to safely accommodate the use, would be required.

Subsection (e) establishes the guidelines on the various methods of sharing by agreement in the cost of constructing cooperative roads or road systems.

Subsection (f) establishes maintenance requirements for commercial use of designated special service roads. The principle is established that each will either do the maintenance representing his proportionate share or at his election make payments to a specified maintainer. A major purpose is to avoid having a road damaged or its worth deteriorate as a result of commercial use.

Subsection (g) has as its purpose to make it clear that when the United States is to share in a cooperative road or road system it is to obtain an interest in the right-of-way and road for the purpose of serving foreseeable needs of the national forest lands and resources and, when necessary, for other uses which serve dependent communities consistent with provisions of the forest development road and trail provisions of the Forest Highway Act. It also makes it clear this interest will not be subject to any type of control by grantors or prior owners which could tend to direct or limit national forest management.

(Note.—It is intended that upon final adoption of the new regulations they will replace or supersede any former regulations in conflict herewith.)

Department of Agriculture,
Washington, D.C., March 18, 1963.

Hon. Wayne L. Morse,
U.S. Senate.

Dear Senator Morse: On October 12, Mr. Mortimer Doyle wrote to Mr. Cliff enclosing the National Lumber Manufacturers Association statement of principles directed to private land access within national forests. On November 2, you wrote to me and Interior Assistant Secretary Carver on the same subject enclosing Mr. Doyle's letter to Mr. Cliff.

Mr. Cliff has responded to Mr. Doyle and I am enclosing a copy of his reply. We have given considerable study to the principles and the related comments. We substantially agree on many of them and we believe these are fully reflected in existing and proposed policies and regulations. However, you will note there is not full agreement on a few of the principles which are in conflict with those which we believe must control a national forest access program operated in the public interest. These differences are discussed in some detail in the letter to Mr. Doyle.

We have analyzed the response to the NLMA principles by the Department of the Interior to you and by Agriculture in Mr. Cliff's letter to Mr. Doyle. They are in close accord. Considering the differences in the laws governing the O. & C. and the national forest lands, in the history of the lands, in their uses, and in their geographic patterns, we believe the differences in the policy are reduced to the practical minimum. These differences in the response of the two agencies to the NLMA principles which appear to us to have some significance are limited to the following:

Under principle 5, the Forest Service provides for designation of special service roads while the O. & C. regulations do not. The designation of certain Forest Service roads for special controls or restrictions will be applied where necessary to meet needs of maintenance, user safety, or particular forest uses at certain times and to achieve reciprocal benefits or to recover costs under the proposed regulations.

The Forest Service and O. & C. regulations are in harmony in response to principle No. 8, except that multiple use and sustained yield management of national forest lands as directed by 74 Stat. 215 require easements fully meeting these objectives. As you know, both agencies are on a perpetual basis in land management and road development.

Under principle 9, the BLM regulations do not provide for condemnation while the Forest Service proposes to do so. We understand the BLM uses other authorities for this purpose and has an active program underway in this. We propose to include condemnation in our regulations both because the industry has requested it and we think it is sound to describe when and how it may be applied here. The Forest Service does propose to promptly condemn where it needs access and cannot negotiate successfully for it.

Under principle 10, there first appeared to be a possibility of difference in practice by the two agencies. We have determined there is actually no substantial difference. Both agencies agree that arrangements may be made in advance to protect an investment. This must be done by agreement or arrangement before construction begins. A party who constructs a road under the permit cannot later be compensated for it unless the permit so provides or such an arrangement is made. A road permittee with no such agreement will construct no better road than is required for this purpose. Consequently, the situation should not present a significant problem under most circumstances.

Under 12(a), we would point out that it may be necessary to regulate traffic to a slightly greater extent to meet special multiple-use requirements than does the BLM. Considering the interest the Forest Service acquires in the road and the requirements of public and mixed traffic, this is logical. Consequently, the Forest Service does not agree to have its easements conditioned upon Federal road users carrying general liability insurance to cover operations and activities on other national forest lands.

We believe in other respects the Forest Service and O. & C. basic positions are very close together.

Sincerely yours,

JOHN A. BAKER.

U.S. DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
Washington, D.C., March 18, 1963.

Mr. MORTIMER B. DOYLE,
National Lumber Manufacturers Association,
Washington, D.C.

DEAR MR. DOYLE: This is in response to your letter of October 12 commenting on the discussion draft of the proposed road regulations which were circulated for review in early August.

We have given considerable study to your comments and the statement of principles for regulations governing access to private lands within the national forests. Our concern, of course, is how to obtain access across private lands to reach national forest lands. Since effective and constructive working relationships in areas of mixed ownerships are quite important, if the work of the industry and the Government is to be carried on economically and with minimum interruption, agreement on principles is quite desirable.

Our comments on the principles you presented follow hereafter in this letter. We substantially agree on many of them and we believe these are fully reflected in the existing and proposed policies and regulations. There are several, however, on which there is not full agreement. These are in conflict to a greater or lesser degree with principles which must control a national forest access program operated in the public interest. The national forest lands are dedicated by law to public use. This policy would not support regulation and restriction of use to serve only the needs of the forest products industry. We believe against this background that if these conditions are known to and accepted by the association, a major step forward will have been taken. We state them briefly.

1. Multiple-use access to national forest lands is needed in virtually every case. The United States needs and must obtain multiple-use access to national forest lands for the protection, administration, and utilization of the national forests, or where necessary, for the use and development of the resources upon which communities within or adjacent to the national forests are dependent.

2. Road construction by national forest timber purchasers is presently limited to the prudent operator concept. Consequently, some appropriated funds may be required sooner or later to do supplemental road improvement in every road system. This means that the right-of-way which is essential for multiple-use access is necessary before such improvement. It is usually good business to acquire initially the right-of-way to meet such foreseeable needs.

3. Sustained yield management of the various land resources requires generally permanent or long lasting improvements, including roads. Permanent or perpetual easements are so uniformly needed that this requirement can be regarded as the normal and usual one.

4. Easements granted to the United States and its assigns to meet the foregoing requirement must be nonrestrictive so as to provide for all foreseeable use including use by recreationists, hunters, and fishermen as well as timber haulers. It follows that if the owner of a private road being acquired by the United States wants to reserve access rights for recreation, timber management, mining, and any other lawful use of his property, the Forest Service is quite willing to consider such reservation of rights. The Forest Service wants to be able to cooperate with these private landowners who also seek to promote the desirable policy of multiple use.

5. Since the purpose of national forest roads is to accommodate mixed traffic or all anticipated kinds of traffic at various times, it is essential that the Government be in a position to regulate the traffic it plans to accommodate. This does not mean the private road owner cannot control and be assured of the use of the rights he reserves. The owner will logically want to reserve the rights of use he foresees the need of and will wish to be assured of as a property right. Rules specified in the conveyance to the United States for the exercise of reserved rights would be part of the private property right and not subject to change by the United States except after further acquisition through negotiation or in rare instances by the exercise of eminent domain.

6. Whenever possible and feasible, the Forest Service will avoid duplicating existing roads and road systems as a land and timber growing conservation policy by making a single road system serve all tributary ownerships insofar as practicable. If after reserving the interest desired by the owner for his purposes, it is determined by the Forest Service that the remaining road interests that can be acquired by the United States are less than will be needed, there must and will be a decision as to the best course to take. Usually the alternatives are to acquire subject to the owner's needs and widen and improve the road to meet the Government's needs, to acquire a separate right-of-way and construct a separate road system, or to condemn for access rights needed by the Government. It will be the policy to be quite prompt in reaching a decision to condemn for such needed access rights where negotiations cannot be concluded to the satisfaction of both parties.

With the foregoing in mind, we will turn to the "Statement of Principles" enclosed with your letter of October 12, 1962. Following each numbered principle are the Forest Service comments.

1. "Every landowner or possessor of interests in realty whose property is so located as to require access across national forest lands to reach and manage such property should be given access."

We believe this is provided for under 212.8 on Ingress and Egress, under 212.10 on Permission to Cross National Forest Land, and under 212.11 on Principles for Sharing Use of Roads.

2. "Existing access rights evidenced by such documents as Stipulations Government Exercise of Rights of Ingress and Egress and by Special Use Permits should be protected."

We agree in general to this principle. In cases where a road was constructed or improved in the past by the applicant and used for the purpose applied for, there is no intention to diminish any rights or privileges he has established. However, where a road was constructed by the Forest Service or by someone else for it, the party would be treated as not having a vested right of use in the road. See the provisions of proposed 212.10 concerning "Permission To Cross National Forest Lands and Assignable Rights-of-Way Owned by the United States," and 212.11 concerning principles for "Sharing Use of Roads."

3. "Grants of access across national forest lands should be given promptly for the purpose and duration requested, and should be appurtenant to the lands served."

We agree with the first part of this and intend to act as promptly as the conditions under the provisions of 212.10 and 212.11 can be met by the applicant and the Forest Service. The regulations will propose to continue using permits as in the past but add the substantial improvement of arranging to grant easements.

The procedure agreed upon with the Department of the Interior under the act of March 3, 1899 (30 Stat. 1233, 16 U.S.C. 525) is designed to provide a permanent right-of-way to be used in the administration, protection, and utilization of forest lands and the resources thereof owned or controlled by the applicant. It is thus more comprehensive than a right-of-way appurtenant to certain described lands.

Also, it may be transferred with the consent of the Government, provided the assignee agrees to comply with and be bound by the terms and conditions of said right-of-way. Since its use is limited to situations where there is essential agreement on sharing maintenance and use, we have not believed it should be assignable in whole or in fractions without assurance that essential agreements of those joined in the road system will continue to be carried out.

4. "If the Forest Service has authority to issue rules and regulations governing access, such rules and regulations, including charges, if any, should be certain, definite, and uniformly applicable to all users. Maintenance and road use fees collected should be expended on or credited to the roads for which collected."

Our comments are as follows:

(a) The Secretary's authority to issue regulations pertaining to this program has not been delegated to the Forest Service.

(b) "Charges" under these regulations are only for the purpose of recovering that part of the costs incurred by the United States which equitably should be shared by the particular users.

(c) Cost recovery charges are designed to be applied only to a non-Federal hauler who benefits directly from the road use and who has not participated in constructing the roads or improving them to the extent necessary to bear his use.

(d) Cost recovery charges will not be expended on the roads for which collected. In accordance with law they will be deposited in the Treasury of the United States.

Timber and other products on Federal lands are sold on the basis that the particular Forest Service road is available for hauling them subject to sharing maintenance proportionate to the hauler's use, or upon condition that the hauler construct, improve and maintain the road to the extent required to permit his safe and economic hauling. In either case he has borne his share of the cost by means other than through cost recovery charges.

Cost recovery charges will under the above limitations be as certain, definite, and uniformly made as conditions will permit to those to whom they apply. Maintenance will be required as occasioned by hauler's use and will be as uniform as are the uses. There are situations in which maintenance work is "pooled" for a particular group of roads within a maintenance unit. Where cooperator deposits are made to cover maintenance work performed, separate accounting for individual needs in such units would be difficult to administer and would increase overhead expenses.

5. "In those instances where the Forest Service has authority to place certain access

roads in restricted use categories, it should announce a policy for so doing. National Forest roads, not restricted to special uses, should be available without charge to all users."

We are in agreement with this.

6. "Each road use should bear only its proportionate share of road costs."

We agree generally that road costs should be shared in proportion to the planned use of the road. Whether use by recreationists and others is significant and measurable and should be borne by the Government, a particular landowner, or all landowners proportionate to their other planned use of the road will depend upon the particular facts in each case.

7. "Disagreement over operating problems should be settled by an appeals procedure such as that requested in August 9, 1962, letter to the Secretary of Agriculture on the lumber industry four-point program."

The appeals procedure is under study. At this point, the recourse available is through the regulation A-10 procedure.

8. "Where the Forest Service seeks to condition access to private land on the grant of a reciprocal right from an applicant for access, such right shall be limited to the same road system for which the applicant seeks rights, to substantially similar values, to like property interests, and to a like term."

The objective of this principle is, we believe, to stress that the policy be fairly and reasonably designed and applied. In some cases there are opportunities for exchanging quite different rights over more than one road system needed by the private owner and by the Government. The intent is to be fair and reasonable so that the results will benefit both parties.

We provide under proposed 212.10(a) that if a reciprocal benefit needed by the United States exceeds those applied for by an applicant, the additional interests will be acquired by payment from appropriate funds or by other methods described under 212.9(d). If the values needed by the applicant exceed those needed by the United States, the differences in value will be determined under principles set forth in 212.7(c), and 212.10(a), and 212.11.

9. "In the event of disagreement as to whether value of the right being sought by the Forest Service is reciprocal, the Forest Service should within a reasonable time exercise its right of eminent domain to determine the true value."

Condemnation is not available for determining the values to be used as a basis for reciprocal grants. However, before a recommendation to exercise eminent domain is made to the Secretary where valuation differences are involved, we generally intend to prepare a staff appraisal of value and also in complex or unusual cases to obtain an independent appraisal of the value of the interest to be taken so that our judgment may be guided as to the amount that will likely be just compensation. Application of this principle will, of course, require that appropriated funds be available for payment of the award at that time. Strong efforts will be made to arrange allocation of funds for condemnation within a reasonable time after it is found that agreement cannot be reached.

10. "Where requested, temporary access should be granted during negotiations for a joint road system. Investments made under such temporary rights should be protected, and the road owner should be compensated for temporary use of the road."

We agree with the first sentence of the principle where conditions require early access. The objective of the last part of the second sentence can be agreed to, if the applicant will deliver the right-of-way for the access needed by the United States. It can then be arranged by including cost recovery provisions in a permit issued by the United States for the road to be built on national forest land. The agreement can provide that it may be carried over to an easement to be issued by the United States. To protect an investment made for construction under a temporary permit an agreement should be entered into prior to the construction. Otherwise the roadbuilder has no assurance that the anticipated final agreement will be consummated and that he will receive the needed easement. However, all past experience indicates that those who build roads under permits, including those containing cost recovery provisions, have generally been able to continue use of the road they have constructed and incorporate the terms thereof into subsequent agreements.

The Forest Service is quite willing to enter agreements in advance so that it can meet the requirements of those cases where conditions require early access and there is agreement in principle to cooperate but facts or conditions are not yet available or known with sufficient accuracy to agree in specific detail.

11. "The Forest Service should acquire only temporary or periodic use access rights where adequate to meet national forest management objectives."

We agree with this principle. Our proposed regulation 212.9(g) expresses the principle as we think it should be stated in the context of the responsibility imposed on the administration of the national forests.

12. The principle as stated is rather lengthy and really is a series of principles some of which are actually in the points already covered. Our comments on your views are as follows:

First sentence: "The Forest Service should recognize that there are instances when negotiated road agreements between itself and other parties will better satisfy all parties' access requirements."

Mutually satisfactory agreements providing for exchange of rights-of-way, joint construction and use of road systems in areas of mixed national forest and other ownerships are regarded by the Forest Service as providing the most desirable means of access in such areas. Many agreements have already been made and successfully carried out. Continuation of the cooperative road program will be strongly supported and implemented by the Department. The subject is treated primarily in proposed 212.9(e) and 212.11.

Except for temporary roads, the Forest Service cannot spend appropriated road construction funds on lands which it has permission to use only through revocable "agreements." It must have an easement. Proposed regulation 212.9(e) states the intended policy. A cooperative agreement is subject to mutually agreed modifications and to termination by either party. This background needs to be kept in mind in discussing the principles under consideration.

We agree to the second sentence which states: "The Forest Service should also recognize the need to provide a fair, sound, and mutually beneficial basis for any such agreement."

Our views on the following principles as they have been listed are as follows:

(a) "The Forest Service should recognize the right of the party having the principal investment in a road to control it. Control should include the right to prescribe reasonable operating rules and regulations, including the creation of adequate indemnity by bond or otherwise, and requiring general liability insurance in amount and scope consistent with industry practice."

The cooperating party can in his conveyance to the United States reserve the right to use the road subject to such specific terms, conditions and road use rules as may be mutually agreed upon and set forth in the conveyance. This would retain in the grantor whatever assurance and control were mutually agreed upon over his reserved interest. Control as it pertains to multiple use or any mixed traffic, public safety and control of use by others not provided for by the reservations in the easement will need to be vested in the United States. We agree that operating rules and regulations should be kept on a reasonable basis.

In areas where the practice is well established in the industry, we have agreed in some cases to a provision for requiring commercial haulers to be bonded for indemnity for damage to the roads or structures used and for requiring reasonable liability insurance for such haulers to insure their operations while using the road. We do not agree to requiring national forest users, other than commercial haulers, to be bonded for such indemnity. Nor do we agree that unless it were required by law any national forest user, including commercial haulers, should be required to carry general liability insurance for activities or operations conducted on national forest lands.

(b) "The parties' respective investments in existing roads should be recognized."

We agree if it means roads on lands or interests in lands belonging to the parties. On the other hand, if this means that the private party should be reimbursed for a road he constructed under a permit which did not provide for cost recovery on the roads over national forest land prior to entering into a share-cost agreement, we cannot do this. However, we do not propose to diminish any rights or privileges, without cause, of any given party who has constructed a road crossing national forest lands as long as he uses the road for the purpose covered by the permit and is not in violation of the permit or applicable laws and regulations.

(c) "All road users should be required to obtain a permit from the road owner prior to commencement of use. Such permit should contain terms and conditions of use which should be detailed at the time the joint agreement is negotiated."

This is partly covered in 12a above.

Control of use and how to permit it can best be worked out in the individual agreement at the time it is being negotiated.

(d) "Grants of right-of-way should be mutual with respect to their terms and conditions, including reservations, and with respect to their duration."

This principle is not incorporated in the regulations for the reasons hereafter stated. The Forest Service must normally require that easements be unrestricted as to time and kind of use except in the rare instance where the facts clearly show it is in the interest of the United States to accept something less. The Forest Service needs multiple-use access in virtually every case. Sustained yield management requires generally permanent or longlasting improvements, including roads. Easements which enable the United States to meet these requirements must be permanent and nonrestrictive so as to provide for such users as recreationists, hunters, fishermen, etc., as well as timber haulers. Since the purpose of national forest roads is to accommodate mixed traffic or all anticipated kinds of traffic at various times, it is essential that the Government be in a position to regulate such traffic.

(e) "This agreement should be certain, definite, and specific as to:

(i) "The road or road system of all parties which each will have the right to use."

We agree to this.

(ii) "The lands of all parties from which forest products or other materials may be taken out over the roads subject to the agreement."

This principle cannot be categorically followed in all cases. It is impossible to be definite and specific with respect to the lands that are owned by third parties within the agreement area. When it is impracticable to follow the principle, provisions may be made for adjustments and modifications.

(iii) "The extent to which overhead costs are to be recognized in both construction and maintenance."

We agree to this. Maintenance overhead expense may be quite nominal. Overhead items will be specific in agreements but not in the regulations.

(iv) "The procedure to be followed for reversion upon abandonment."

Generally reversion is not a problem; therefore, no regulation relating to it is proposed. Reversion or termination is not, however, a matter to be covered solely in an agreement. The terms should be stated clearly in the easement deed or other document granting right-of-way.

(f) "Where a change in private road status causes economic loss by limiting the uses of the road, the road owner should be compensated."

We intend to follow a policy of fair compensation recognizing whatever may be compensable under Federal law.

(g) "Existing reserved rights of use should be protected. Moreover, conditions agreed upon at the time a right-of-way agreement is entered into should not be subject to change by future regulations."

Existing rights of use, if retained by the owner in a conveyance, are property rights and are not subject to change by future regulations.

(h) "In appropriate instances, a road owner should be entitled to an amount equivalent to interest on any unamortized investment remaining in a road system."

This objective can be accomplished by agreement if conditions justify it. However, the objective is to eliminate any real need for it. This can frequently be done by having construction performed on behalf of each cooperator in time to avoid carrying any substantial unamortized investment.

(i) "Traffic rules shall be determined by mutual agreement subject to the party having the greater investment making the final decision."

See discussion of this point under "a" above.

(j) "Maintenance and road use fees collected from purchasers of national forest timber should be applied to the roads for which collected."

See discussion under 4 above.

(k) "Easements and other road use rights should be appurtenant to the lands served."

See our comments under 3 above.

(l) "Road replacement cost for each user should be determined at the time such user first removes logs."

We aren't certain of the purpose of this statement here. Perhaps you intend it to be applied to users who are not participants in the agreement.

Our proposed regulation 212.11(d) covers costs to be recovered by the United States from parties other than those who participate in road construction or improvement. Such costs would have to be determined at the time the user makes application for commercial hauling.

(m) "The amortization share allocated to timber volume should be based upon the total merchantable timber tributary to a particular road, including the volume merchantable at the time the road was constructed and the volume which will become merchantable during the payout period."

We agree quite fully to this in principle. However, there may be instances where this could produce inequity. When that is demonstrable, additional criteria may be required. Proposed 212.11(c) sets out the criteria we think should be given consideration. The "volume which will become merchantable during the pay-out period" may be indeterminate or the pay-out period be such that its inclusion could produce inequity or uncertainty. Therefore, we cannot agree to invariably include it.

(n) "A party should be required to share in the cost of a joint road only to the extent it is constructed to a standard adequate to serve his particular needs."

We would presume that the road must meet the sum of the needs of the parties and may require a standard more than adequate to meet the needs of any single one of the parties and yet result in having the share cost less than a road built by the party alone. Thus each party's share would be related to his situation. Our proposed 212.9(e) expresses what we believe is the sound guiding principle.

The foregoing together with the comments of all reviewers have been considered in redrafting the regulations. The redraft will shortly be referred to the Secretary. You have his letter of December 4, 1962, concerning them. You may be certain that your statement of principles has been given thorough consideration already both in this agency and in appropriate departmental offices.

Sincerely yours,

EDWARD P. CLIFF,
Chief.

AMENDING THE TRADE ACT—ARTICLE BY SENATOR JACOB K. JAVITS

Mr. KUCHEL. Mr. President, one of the great students in the U.S. Senate on matters affecting American trade and trade policy is our able and distinguished colleague from New York [Mr. JAVITS].

In the March 25 edition of Brandon's Shipper & Forwarder, the Senator from New York discussed with great clarity the amendment of the present Trade Act and his own feeling as to how trade among the free nations of the world should be strengthened and should grow.

Mr. President, I ask unanimous consent that the entire text of this excellent article may be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMENDING THE TRADE ACT

(By Senator JACOB K. JAVITS)

President de Gaulle is threatening to make France and Germany the core of a so-called third force in world politics. I believe that we must be clear on the deplorable consequences of such a course of action.

We must also make sure that there is an alternative to the free world bearing these consequences. The alternative would at least prevent a complete scattering of free world power, as is now threatened by Great Britain's exclusion from membership in the European Economic Community (EEC). The alternative is an economic association of the English-speaking peoples, joined by other free world nations which are threatened by exclusion from the EEC.

Such an association would be viable and soundly based on economic power and historic fact. It must be nondiscriminatory and look to the day when the EEC can be fully reintegrated into free world trade patterns.

The United States and the United Kingdom both have a total trade with each other and with the Commonwealth, the European Free Trade Association (EFTA), Japan and Latin America, nearly four times greater than with the EEC countries. The $23 billion of U.S. trade and the $14 billion of United Kingdom trade with these areas and with each other, added together, form a $37 billion trading relationship which overshadows the $24 billion of trade among the EEC countries. In terms of sheer economic weight, the total world trade of the United States and the United Kingdom alone almost equal the total world trade of the EEC countries. The combined annual production of an economic association of the areas I am discussing is four times greater than the annual production of the EEC countries; the combined population is six times greater. To a large extent such an association would have common traditions of law and language. The United States and the United Kingdom also have in common the fact that both are vitally engaged in economic development ventures—the Alliance for Progress and the Colombo plan—conforming closest to the aspirations for dignity and responsibility among the newly developing nations of the free world.

Let us be cognizant of our own strength. We continue to adhere to our policy that the economic integration of an outward looking Europe is a major asset in the struggle for freedom. We must not, however, leave any impression that the free world has no alternative to accepting the consequences of a small, isolationist Europe.

The setting up of unsurmountable barriers to British membership in the EEC, the short-tempered EEC retaliation against the United States increase of the tariffs on glass and carpets under the "escape clause," and the fact that the United States feels it necessary to deny to France information on nuclear weapons technology are bringing to a head a grave crisis of unity among the Atlantic nations. The bonds of purpose, mutual trust and interdependence which have enabled the free world to resist Communist aggression for 15 years are being strained severely.

We cannot let the situation get away from us, because the consequences are too grave for the United States and for the free world.

This danger was foreseen by many, like myself, who strongly favored and supported the movement for European economic and political integration which has resulted in the creation of the EEC—we were and are right, for the strength to the free world brought by the EEC was worth the risk, but this does not erase the need to fight the danger now. U.S. economic power, exercised through the instrument of trade, must be applied to counter the political forces which threaten to split the Atlantic Community.

But a decision must be made to so apply our strength, rather than to stand transfixed by the quixotic spectacle being enacted in Paris. Whatever may be General de Gaulle's motivations, his actions are made possible only by the economic power of the EEC. But economic power also can be used to bring these countries back into the mainstream of free world policies.

The principal element of the amendment (S. 602) which I have offered to the Trade Expansion Act of 1962 was conceived in the belief that the value of the EEC resides in its ability to strengthen the free world. If the EEC should tend to divide and weaken the free world, its value could turn into a temporary liability. Therefore, I have proposed authority for the President to negotiate for the mutual elimination of all tariffs with all fully developed free world nations. Thus, if Great Britain, the industrialized members of the British Commonwealth and the industrialized members of the European Free Trade Association are shut out of the Common Market, we can take them into an economic partnership with us.

With the authority now given to the President by the Trade Act, we could stand by, relatively helpless, while the EEC eliminated its internal tariffs and became a family club, and trade barriers continued to divide us from the rest of the free world. This is the effect of the provision that tariffs can be eliminated only on categories of items in which the EEC and the United States account for 80 percent or more of the world's export trade. There are only a very few such categories, unless Great Britain is a member of the EEC.

But the United States and Great Britain can and should form an effective economic and trading partnership with the developing nations and with Japan. Together, we take more than $4 billion of Latin American exports—twice as much as does the EEC. Together we import $9.1 billion from the British Commonwealth. Britain alone takes nearly as much in Japanese exports as the EEC, and, of course, the United States is Japan's best customer.

We are leading customers for British machinery and transport equipment, leather, wool textile manufactures, and, of course, Scotch whisky. Great Britain, in turn, is among the top European purchasers of our machinery, chemicals, grain products, fats and oils, nonferrous metals, textiles, pulp and paper, and fruits and vegetables.

Consideration of the U.S. export markets alone shows that we sell to Great Britain, the Commonwealth, the European Free Trade Association, Japan, and Latin America $11.3 billion of our products, more than three times as much as to the EEC countries. There is no logical reason why the action of General de Gaulle should deprive us of such a great trading partnership merely because of a quirk in our own law. I felt so last year when I originally introduced my amendment, and I continue to be convinced of this.

The markets and productive capacities of this free world complex are so vast that they could generate the kind of magnetic pull which would draw the EEC into solidarity with us. The debates now going on in Western Europe, as well as the clearly stated positions of high ranking statesmen on the continent of Europe give a basis for believing that the separatist tendencies will not prevail. But the fact that the alternative of an association of the English speaking peoples does exist could give substance to this hope.

INFORMATION ON THE CURRENT FINANCIAL STATUS OF THE UNITED NATIONS

Mr. HICKENLOOPER. Mr. President, the Republican policy committee of the Senate, at my request, has recently completed a comprehensive and I believe most informative study on the current financial status of the United Nations. This study was approached from a totally nonpolitical and impartial standpoint, and we believe it is an accurate objective presentation of the financial situation of the United Nations at the present time. I think it should be of great help to Senators and to the public generally in evaluating the program and from an information standpoint in connection with United Nations activities.

Mr. President, I ask unanimous consent that in connection with my remarks, this study may be printed in the Record; including the preliminary statement; to be followed by a table giving the status of advances to the working capital fund and contributions due to the United Nations regular budget; a statistical statement of the status of contributions due to the United Nations Emergency Force special account; a statistical financial statement of the status of contributions due to the Congo ad hoc account; a compilation of the financial situation as to the totals of current and arrear contributions outstanding as at February 28, 1963; a table on contributions to the Food and Agricultural Organization for the Organization's calendar years 1958–61, as of the date October 31, 1962; a statement as to the contributions to the International Civil Aviation Organization, as those statistics were available October 31, 1962, for that Organization's calendar years 1957–61; a statement of the contributions to the International Labor Organization as compiled September 30, 1962, and showing the contributions to that Organization for the calendar years 1957–61; a statement of the contributions to the Intergovernmental Maritime Consultative Organization, compiled as of October 31, 1962, for that Organization's calendar years 1959–62; a statement of the contributions to the World Meteorological Organization, as of December 31, 1962, for that Organization's calendar years 1958–61; a statement of the contributions to the International Telecommunication Union, compiled as of December 31, 1962, for that organization's ordinary budgets for the years 1957–61; a statement of the contributions to the United Nations Educational, Scientific, and Cultural Organization, compiled as of October 31, 1962, for the Organization's calendar years 1958–61; and, finally, a statement of the contributions to the World Health Organization, compiled as of October 31, 1962, for the Organization's calendar years 1958–61.

There being no objection, the statement and tables were ordered to be printed in the Record, as follows:

Information on the Current Financial Status of the United Nations

(Note.—Prepared by the staff of the Senate Republican policy committee, Bourke B. Hickenlooper, chairman; David S. Teeple, staff director.)

The United Nations regular budget was $82 million in 1962. Of this the United States is obligated to pay 32.02 percent; the Soviet Union, 14.97 percent; the United Kingdom, 7.58 percent; France, 5.94 percent; and the rest lesser percentages down to a minimum, fixed by the General Assembly, of 0.04 percent.

The regular budget of the United Nations is prepared by the U.N. Secretariat. When the General Assembly of the United Nations meets, it has before it both the budgetary estimates of the Secretary General and the report of the Advisory Committee on Administrative and Budgetary Questions. Decisions on the budget are made by a two-thirds vote of all General Assembly members present and voting.

No serious difficulties have been encountered on payments to the regular budget but difficulties have arisen on the special assessments levied for the U.N.'s Emergency Force in the Middle East (hereinafter designated as UNEF) and the U.N. operation in the Congo (hereinafter designated as UNOC).

The charter of the United Nations lays a specific obligation upon all countries to pay their assessments or, after 2 years in arrears, face the loss of their votes. But the charter provides, in article 19, "The General Assembly may, nevertheless, permit such a member to vote if it is satisfied that the failure to pay is due to conditions beyond the control of the member." As a result member countries great and small are refusing to fulfill their financial responsibilities to the United Nations.

No one has seriously suggested that any of them be deprived of their votes.

Prior to 1956, the expenses of peace and security operations had been carried within the regular budget. In 1956 UNEF was financed under a special budget, called a special account, and in 1960 in the case of UNOC, the budget was called an ad hoc account.

Another account, titled the "Working Capital Fund," is assessed on the same basis of percentage as the regular budget. It currently has a ceiling of $40 million. It is used partly as a revolving fund to carry the U.N. through the period when the regular budget assessments are due and when regular budget assessments are collected, and partly to finance emergency operations.

While willing to vote these peace and security operations into existence, most countries in the United Nations refused to share the cost of UNEF and UNOC in the usual manner; that is, on the basis of the regular scale of assessmenets. Because of default on these special levies, the organization will approach a debt of $200 million by the end of 1963. Reasons offered by defaulters for their refusal to share the cost of UNEF and UNOC in the usual manner were many and varied.

First, they contended the charter contemplated peace and security actions should be carried out primarily by the five permanent members of the Security Council who would furnish their troops without cost to other U.N. members. They said the five permanent members of the Security Council should therefore pay considerably more than their ordinary assessment percentage for UNEF and UNOC.

Second, they said the "aggressors" who made U.N. peace and security actions a necessity, plus "parties in interest" should pay all or most of the expenses.

Third, some member countries claimed they could not afford to contribute to the UNEF budget and UNOC budget.

Finally, some countries felt these operations to be unwarranted and in violation of the charter. As a result the United States has felt it necessary to make voluntary contributions, over and above our normal assessment contributions, in 1957, 1958, 1959, 1960, 1961, and 1962.

The Soviet Union argued these emergency items did not fall within the assessments procedure provided by the charter and therefore any disapproving member is free to refuse to help pay for them.

The United States contended the charter's provision applied to all expenses of the U.N. The International Court of Justice at The Hague in July 1962 issued an advisory opinion supporting the U.S. position. The Soviet Union says it will ignore the Court's opinion and continue to refuse to pay its share of the special assessments. The Communist bloc countries have followed the Soviet lead and approximately 40 other nations have also refused to contribute to either or both of the peace-enforcing operations.

In the face of this financial crisis the Assembly in December 1961 voted to authorize the Secretary General to sell $200 million worth of bonds. At President Kennedy's request Congress last year passed a bill authorizing the United States to purchase up to $100 million worth of the U.N. bonds if the amounts are matched by other members.

Further financial criticism was directed at the United Nations when it was revealed, late in 1962, that the U.N. had undertaken to provide a grant of $1,157,600, over a 5-year period, to assist in the development of an agricultural research program in Cuba. To the extent the United States provides approximately 40 percent of the money contributed to the U.N. Special Fund for Economic Development, it was said that 40 percent of the cost of this assistance to Cuba was defrayed by the United States, contrary to our national interests.

Not all operations of the United Nations are financed through assessments. Several specialized agencies receive voluntary contributions from member countries. These specialized agencies include:

1. International Atomic Energy Agency.
2. International Labor Organization.
3. Food and Agriculture Organization.
4. United Nations Educational, Scientific and Cultural Organization.
5. World Health Organization.
6. International Bank for Reconstruction and Development.
7. International Development Association.
8. International Finance Corporation.
9. International Monetary Fund.
10. International Civil Aviation Organization.
11. Universal Postal Union.
12. International Telecommunications Union.
13. World Meteorological Organization.
14. Intergovernmental Maritime Consultative Organization.

The following tables list, as of February 28, 1963, amounts due to the current Working Capital Fund, as well as amounts due to the regular budget, the U.N. emergency force, and the U.N. operation in the Congo, for each year in which funds are due.

An appendix to this report contains those available records of uncollected contributions to the voluntarily financed agencies as furnished by the U.S. Dpartment of State, Office of International Administration.

[3] Under financial regulation 5.2(e), this amount is applied as an adjustment to the amount of the appropriations for 1963.

[4] Includes credits of $3,475,000 offset by voluntary contributions.

[5] Includes credits of $1,685,481.50 offset by voluntary contributions.

[6] Includes credits of $1,389,474 offset by voluntary contributions.

[7] Includes credits of $3,900,000 offset by voluntary contributions.

[8] Includes credits of $15,305,596 offset by voluntary contributions.

[9] Includes credits of $11,400,800 offset by voluntary contributions.

FOOD AND AGRICULTURE ORGANIZATION

Contributions statement as of Oct. 31, 1962, for the Organization's calendar years 1958–61 [1]

SUMMARY

Calendar year	Total due	Amount received	Percent received	Balance due
1958	$8,322,500	$8,313,352	99.89	$9,148
1959	8,322,500	8,261,932	99.27	60,568
1960	$9,225,500	$9,067,835	98.29	$157,665
1961	9,225,500	9,145,894	99.14	79,606

UNCOLLECTED CONTRIBUTIONS [2]

Country	Calendar year 1958	Calendar year 1959	Calendar year 1960	Calendar year 1961	Total
Argentina		$49,970	$134,692		$184,662
Bolivia	$5,826	5,826	3,690	$3,690	19,032
Costa Rica				544	544
Dominican Republic				6,458	6,458
Ecuador		1,443	7,381	1,880	10,704
Greece				3,446	3,446
Guinea			832	3,690	4,522
Haiti			3,690	3,690	7,380
Panama				$3,690	$3,690
Paraguay	$3,322	$3,329	$3,690	3,690	14,031
United Arab Republic				31,219	31,219
Uruguay				13,919	13,919
Yemen			3,690	3,690	7,380
Total	9,148	60,568	157,665	79,606	306,987

[1] Totals due for years prior to 1958 are: China, $1,077,198 (1948–52); Czechoslovakia, $141,292 (1949–50); Hungary, $88,235; Bolivia, $6,550 (1956–57).

[2] Czechoslovakia (on Dec. 27, 1949); Hungary (on Jan. 26, 1951); and China (on July 21, 1951) gave notice of withdrawal from the Food and Agriculture Organization. However, because of the revisions of the Food and Agriculture Organization Constitution (art. XVIII) that "notice shall take effect 1 year after the date of its communication to the Director General," and that "financial obligation to the organization of a member nation which has given notice of withdrawal shall include the entire financial year which the notice takes effect," these countries are under obligation to pay their assessments.

INTERNATIONAL CIVIL AVIATION ORGANIZATION

Contributions statement as of Oct. 31, 1962, for the organization's calendar years 1957–61 [1]

SUMMARY

Calendar year	Total due [2]	Amount received	Percent received	Balance due
1957	$3,074,437	$3,020,013	98.23	$54,424
1958	2,987,901	2,983,973	99.87	3,896
1959	3,672,000	3,667,104	99.87	4,896
1960	$3,865,000	$3,852,632	99.68	$12,368
1961	4,083,000	4,038,505	98.91	44,495

UNCOLLECTED CONTRIBUTIONS

Country	Calendar year 1957	Calendar year 1958	Calendar year 1959	Calendar year 1960	Calendar year 1961	Total
Bolivia				$3,745	$4,618	$8,363
Cuba					10,098	10,098

DANGER IN THE ARCTIC AS RADIOACTIVITY MOUNTS

Mr. BARTLETT. Mr. President, a grave and potentially dangerous situation exists in the Arctic regions of our Nation. American citizens of Eskimo and Indian stock who live in inland Alaska rely upon caribou meat as their principal food stock. There is reason to believe that the caribou are becoming increasingly contaminated with strontium 90 and cesium 137. This contamination cannot be of good effect and may well be of harm to these people and to their descendants.

The time is approaching, Mr. President, when the Senate and the Nation must give real attention to the perils caused by the radioactive refuse of atomic testing. Practical action is needed and the Federal Government dare not duck its responsibility.

Let me make it very clear, Mr. President, that I realize I am speaking of a highly technical scientific subject of which I have no expert knowledge. This is a subject on which there has been inadequate investigation and study. Scientists themselves cannot agree upon the implication and import of this contamination and certainly no layman can speak with any assurance.

Although I am not a scientist, as a Senator it is my responsibility to speak out when the health and safety of the people of my State are threatened. I am not an expert, but I will become one if it is necessary in order to get action and attention on this subject.

The contamination of foodstuffs by radioactive matter is subject to a good deal of misinformation and fear. It is not my intention to stir panic, to make wild charges, or to confuse further what is already a dreadfully confused situation.

It is my intention to obtain from those Federal officials responsible a clear statement of the facts as we now know them. I intend to press for active, continuing, and adequate on-the-spot investigations and a sensible and intelligent plan for securing and insuring the health and safety of Eskimo and Indian Americans.

TRICK FIGURES

The facts on radioactivity in the Arctic are not now adequate. I will present to the Senate such figures as are available to me. Before doing so let me make two points.

The figures that are available are scanty indeed. Averages and conclusions are often based upon findings taken from but two or three caribou or from three or four human beings. Figures are often "one shot" taken at one time in one place, even though there is reason to believe—especially with cesium 137 which has a biological half-life of approximately 120 days—that contamination levels may vary greatly with season, with atomic activity, with variations in plant life and general ecology.

The terms used in measuring the biological effects of radiation are many and confusing. Measurements may be given in nanocuries, picocuries, micromicrocuries, disintegrations per minute, rads, strontium units—SU, roentgen equivalent man—REM. Contamination levels may be given in the same report in DPM's per kilogram, wet weight per kilogram, ash per gram calcium and so forth and so forth and so forth. It has been suggested, Mr. President, and I pass this suggestion on without comment, that such a variety of units could be used to discourage and confuse the layman attempting to arrive at the facts of the situation. Certainly they have that effect.

The figures are sparse and insufficient. We should not place, therefore, too much reliance upon them. They should be taken as indications rather than fact.

In evaluating these statistics, we must remember that the radiation protection standards recommended by the Federal Radiation Council are not to be taken as standards but merely as guidelines. Let me quote from a Federal Radiation Council public announcement of September 10, 1962:

> Radiation protection guides are not a dividing line between safety and danger in actual radiation situations, nor are they alone intended to set a limit at which protective action should be taken or to indicate what kind of action should be taken. As applied to fallout, guides can be used as an indication of when there is a need for detailed evaluation of possible exposure risks and when there is a need to consider whether any protection action should be taken under all the relevant circumstances.

To a layman, it appears in practice that when these guidelines are approached, as they are being approached in Alaska, everything becomes very spongy. On some occasions when these limits are approached, the evaluation and protective action called for by the Federal Radiation Council are not undertaken. Instead, the limits themselves are reexamined.

Prior to 1960, the maximum permissible concentrations—MPC—as accepted by the U.S. Public Health Service for strontium 90 were 80 micromicrocuries per liter. In 1960 this limit was lowered to 33, thus conforming to the recommendation of the International Commission on Radiological Protection. In 1962 the maximum permissible concentrations were raised from 33 to 200 strontium units—strontium unit is defined as one micromicrocurie of strontium 90 per gram of calcium.

I ask unanimous consent that the table indicating the current radiation protection guide given for strontium 90 be printed in the RECORD at this point. This table is taken from the second summary report of the Atomic Energy Commission on Project Chariot.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

	Strontium 90[1] *in picocuries per day*
Range I	0–20
Range II	20–200
Range III	200–2000

[1] Assumes intake of 1 gram of calcium per day.

Mr. BARTLETT. I quote from the Public Health Service, 1962:

> The grades are as follows: Range I, intakes in this range would result in only a few individuals, if any, reaching a large fraction of the radiation protection guide; range II, intakes in this range would result in average exposures to population groups not exceeding the radiation protection guide; and range III, intakes within this range would result in exposures exceeding the radiation protection guide if continued for a sufficient period of time. The Federal Radiation Council has recommended that measures limiting intake of radioactive materials should be considered when indications are that levels averaged over a year will be within range III.

I am informed that the recommendations of the National Committee on Radiation Protection indicate that the maximum permissible burden of cesium 137 for nonoccupational populations is in the area of 1,000 nanocuries. For individuals the maximum range permissible lies at 3,000 nanocuries. The average rate is set lower than the individual rate to allow for individual mini-max variations of the contamination level within the group being averaged.

Strontium 90 taken into the body finds its way to the bones, where it lodges for many years. Concentrations of this nuclide can cause leukemia or bone cancer. Because children are growing and adding to their bone structure they tend, on the average, to absorb eight times the amounts of strontium 90 absorbed by adults under the same conditions. This is why strontium 90 is so very dangerous to the young.

Cesium 137 does not concentrate in any particular organ in the body but tends to spread throughout the system. The body eliminates roughly half of the cesium 137 within 100 days of ingestion. This short biological half-life of cesium 137 contrasts with the biological half-life of strontium 90 which is 11 years. Cesium 137 has as its main effect the mutation of gene structure leading to deformities in children yet unborn.

In the light of the above, my statement today must be read with the understanding that the figures are sketchy and the guidelines elastic.

CONTAMINATED FOOD CHAIN

The source of the contamination of Alaska native peoples is found in the unique arctic food chain. One of the major forms of indigenous plant life in the northern regions of Alaska is lichen. This type of plant, unlike most others, depends for its water and nutrients upon the atmosphere and not the soil. It sifts the air and thus absorbs directly and without dilution fallout material from atomic testing. Arctic lichen has been found to be very, very heavily contaminated with cesium 137 and strontium 90.

In the long, hard arctic winter the caribou depend upon this lichen as their principal food source. And thus they, too, become contaminated.

The Eskimos and Indians in these inland areas depend for their food upon caribou. There is ample reason to believe that these people in turn have absorbed into their system unusual amounts of radioactive materials.

The size of these amounts is a subject for debate. Adequate figures do not exist. The extent of the health hazard created is also a subject for dispute due to the lack of information.

This, however, seems clear and irrefutable: The Eskimos and Indians are receiving several times more strontium 90 and cesium 137 into their system than are American citizens of more temperate climates.

This contamination is not limited to Alaska alone. The lichen-caribou-man food chain exists throughout the arctic regions of the world. It is repeated in Canada; in Sweden, the Laplanders depend upon reindeer, which in turn depend upon lichen. Native peoples of the arctic regions, whether in Siberia, Canada, Europe, or Alaska, live by this food chain.

Mr. President, I ask unanimous consent that three tables be printed at the conclusion of my remarks: Exhibit I indicating known measurements of radionuclides in lichen, exhibit II indicating amounts found in caribou and reindeer, and exhibit III indicating amounts found in arctic man. These tables were prepared by Dr. L. A. Viereck of the Alaska Department of Fish and Game.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibits I, II, and III.)

Mr. BARTLETT. Mr. President, exhibit I indicates what few details we have on the contamination levels in arctic lichen. It appears that lichens have concentrations of strontium 90 and cesium 137 up to 100 times that of other plants in the Arctic as in temperate zones.

CARIBOU AND REINDEER

The figures on caribou contamination are difficult to evaluate. The levels of strontium 90 in caribou meat appear to be 25 to 30 times that of beef in the United States. The levels of cesium 137 appear to be from 3 to 300 times that found in beef.

It is perhaps significant that the level of strontium 90 found in reindeer bones in Scandinavia has doubled in the 4 years from 1956 to 1960. The level found in caribou antlers tripled in the years from 1955 to 1959. Since that time, with the stepup in atomic testing since 1960, these levels cannot have fallen.

The AEC has pointed out, in a letter to me dated February 12, 1963, that figures obtained during the 1962 Project Chariot investigations produced somewhat lower figures than those obtained elsewhere. This, however, is readily explained by the fact that there is little lichen available in the region in which the AEC tests were conducted—page 145, Project Chariot Report, 1962, "Floristic surveys and analyses of caribou rumen content both indicate a sparsity of forage lichens in the Cape Thompson region."

On the basis of the figures in exhibit II, it appears that radiation levels in caribou are approaching—or have surpassed since the figures were taken—the top of the second range as set forth by the Federal Radiation Council. The Council in publishing its guidelines said that such levels call for appropriate positive control measures. Yet, so far as I know, nothing whatever is known as to the effect such exposure is having on the caribou; so far as I know, nothing whatever is being done to find out.

HUMAN BEINGS

Exhibit II outlines what is known about contamination in arctic man It is apparently a fact that both in Finland and in Alaska human beings for whom caribou and reindeer are staple foods are receiving susbtantially more strontium 90 and cesium 137 than are those who depend upon other foods. This is not to say necessarily that these levels have reached dangerous proportions. But any strontium 90 is bad; more is worse; and it is foolish to deny it. It is both foolish and inhumane not to investigate with very great care situations involving continued substantial intake of the isotope.

Studies made so far on caribou-eating Eskimos have been insufficient in both time and extent. Individual adults sampled had values as high as 1.9 picocuries strontium 90 per gram calcium. Since young growing children retain in their bones eight times the strontium concentration of adults, this could mean that some individuals have a value as high as 15 picocuries per gram of strontium in their systems. It has been estimated this means that some are receiving about 50 picocuries per gram in their diet on a regular sustained basis. This is well above the maximum permissible concentration recommended by the International Commission on Radiological Protection and is midway within range II of the radiation protection guide.

Cesium 137 levels, because of the short biological half-life of this element, tend to vary excessively. Levels in Alaska have been found as high as 800 nanocuries; levels in Lapland have been found as high as 1,000 nanocuries. These figures are one-third the maximum permissible amounts. Whether these are exceptions on the high side or whether individual counts may rise, perhaps even double this level in other seasons under other circumstances we cannot know. I repeat: The figures we have are "one shot" figures.

WORLDWIDE CONCERN

Although we in the United States have taken little action in this area and have demonstrated little concern, the subject has been given attention by agencies and governments in other countries. The International Atomic Energy Agency, I am told, has sponsored radiology investigations in Scandinavia—RIS—and two international symposia have taken place. The United States was not represented at the first symposium but did, I believe, send a representative to the second; a third meeting was scheduled for March in Sweden. I shall request a full report on this meeting from the Atomic Energy Commission. I shall inform the Senate of its contents.

Many articles in scientific journals have touched upon the problem, and I ask unanimous consent to place in the RECORD at the conclusion of my remarks exhibit IV, two articles on the subject.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit IV.)

Mr. BARTLETT. I requested the Atomic Energy Commission to comment upon the contents of one of these articles, "A New Caribou Problem," by Dr. William O. Pruitt, Jr. Dr. Pruitt is associate professor at the University of Alaska. In his article he pointed out the high strontium 90 level in caribou bone as an indication of the seriousness of the contamination threat to the Eskimo. The AEC dismissed this point by saying, "Eskimos do not eat caribou bone." Of course no one said they do. They eat caribou meat and marrow and if the bone is contaminated, will not this be contaminated too?

CONTAMINATION: A NATIONAL PROBLEM

Fallout and radionuclide contamination are a national problem. They are not a State problem. Failure to assume full Federal leadership and direction could lead to tragedy far larger than statewide proportions.

The time is long past due for the appropriate Federal agency to educate and inform the people as to the extent and nature of the subject. I am confident there is no widespread danger. The hazards that exist are of a spotty and variable nature and can be handled with adequate and fairly simple safeguards.

Certainly, in the case of the lichen-caribou-man life chain, remedy and precautions are not complex. Unlike problems caused by fallout, the contamination in the Arctic is concentrated in the single source: The life chain. Although Eskimos have always lived on caribou, they need not do so. Because it is certain that only a few areas would be heavily contaminated, it should be possible to find and demarcate these areas and to see that human beings living within them are given adequate protection.

The time is long past due to begin a program of informing and educating the people on the extent of fallout and contamination. That there is now a large measure of confusion and apprehension in this field is due in part to the lack of public information and understanding. It often appears that the responsible government agencies in this field look upon the public not as compatriots but as combatants.

Hazards from fallout or from contamination—if they exist and when they exist—are found only in small areas where wind or ecology will bring about an undue concentration. In these areas as they become identified positive steps should be taken to insure the health of the people.

IMMEDIATE NEEDS

It is imperative right now, to institute adequate, continuous, extensive, painstaking testing in Arctic Alaska. These tests should be on a month-in, month-out basis. There is little use and little point to one-shot tests. These have shown in the past only that the problem exists. What we need to know now is exactly where it exists and exactly how severe it is.

What is equally necessary is to work out a sensible program of steps to be taken should human radiation levels among the Eskimos reach grave heights.

In this regard, the radiation protection guide set the level 200 to 2,000 strontium units as that which would require "appropriate positive control measures." It is my understanding that the U.S. Public Health Service has not as yet determined just what measures will constitute "appropriate positive control." It is time that it does so.

There is no question that the vast majority of caribou-eating Eskimos are healthy. There is, however, the possibility that a few—a very few—individuals may be risking serious injury to themselves and their progeny through unusual intake of contaminated meat. Where such a possibiilty exists, it is our responsibility and our Government's responsibility to see that these individuals are found, that they are warned and helped.

Mr. President, as an example of lack of interest evinced by Government agencies in this question, I should like to have inserted at the conclusion of my remarks as exhibit V, the comments of the Atomic Energy Commission upon Dr. Pruitt's article and my own letter in reply to the Commission's remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit V.)

Exhibit IV—A New Caribou Problem

(By William O. Pruitt, Jr.)

The caribou problem in Canada has engaged the attention of biologists for several years. The massive decline in the caribou population has resulted in tragedy for segments of the northern ecosystem, including man. While the decline has been attributed to a variety of causes, the best explanation concerns the progressive loss, over many years, of mature spruce-lichen forest. This situation of loss of the winter range through forest fires has now been superseded by another caribou problem of even greater seriousness.

The new problem is that caribou (and reindeer) are "hot spots" in terms of contamination with radioactive material. This is true of not only Canadian caribou but also those in Alaska, northern Scandinavia, and northern U.S.S.R. Strontium 90 and cesium 137 appear to be the primary contaminants. The source of these radionuclides is undoubtedly atmospheric nuclear explosions.

In order to understand the magnitude of the contamination one must delve into the jargon of the radiation biologist. Here one meets a welter of terms for various levels of exposure and concentration of radionuclides—rems, millirems, microcuries, micromicrocuries, and a newly introduced one, nanocuries. In the United States the Federal Radiation Council has set a safe limit for humans for whole-body exposure of 0.17 rem per year. Such an exposure would occur with a concentration of about 17 strontium units of strontium 90 in the skeleton. The levels of contamination in caribou bones tested so far are now on the order of 100 to 200 strontium units, far above the level set as safe for another mammal, man. In Swedish reindeer contamination with cesium 137 has reached the order of 25 nanocuries per kilogram, while beef from the same region showed less than 0.1 nanocurie per kilogram.

Radioactive contamination of other northern mammals appears relatively low. Why are caribou and reindeer so high? Here is a neat demonstration of the interdependence of all living things. The answer can be deduced logically and, indeed, was ecologically obvious as far back as 1959. In that year E. Gorham reported in the Canadian Journal of Botany that lichens showed abnormally high radiation counts. Later work by a number of investigators has confirmed Gorham's findings. Moreover, the northern plants that rank next to lichens in intensity of radioactive contamination are sedges. What are the two most important caribou foods? Lichens and sedges.

Lichens are subject to radioactive contamination, particularly by fallout from noncontaminated nuclear explosions, because of their peculiar physiology. A lichen is actually a combination of two types of plants—a fungus and an alga. The two live together and together they form a completely different kind of plant—a lichen. This form of life receives its nutrients directly from the air, from dust and other windblown material. Thus a lichen feeds on a kind of natural fallout. In all the eons of time before 1945 it was a harmless kind of fallout. Now, however, lichens absorb manmade radioactive fallout along with the natural nutrients. Lichens have evolved such efficient mechanisms for retaining natural fallout that they also retain virtually 100 percent of the radioactive particles which fall onto them. Moreover, lichens grow exceedingly slowly. While a blade of grass may contain fallout particles deposited on it during a 2- or 3-month growing season, a fragment of lichen of similar size may contain fallout particles deposited during many years. Because of their slow growth, lichens now contaminated will probably remain hot for many years.

The mechanisms whereby sedges are contaminated are not so well understood. It is known, however, that plants from tundra-wet meadows generally contain more radioactive material than do plants from other tundra habitats.

Since the caribou is the base of the food chain in the North, turning vegetation into a form that other animals, including man, can utilize, one would expect the entire food chain to be contaminated. Here we run into a paucity of data. What data have been gathered, however, indicate that the entire food chain (lichen/sedge—caribou—carnivore/man) is indeed contaminated. For example, what few data have been gathered on man indicate that all people who eat much caribou or reindeer meat have higher whole-body radiation counts than people who do not eat caribou or reindeer. Tests for strontium 90 in a few Alaskans showed that new bone was being formed which had about four times the average U.S. concentration. Measurements of a few Swedish Lapps showed that they had cesium 137 concentrations 30 to 40 times as high as the average of the control group from southern Sweden. What the levels of contamination are in relation to details of diet and food habits and how these levels affect the genetic and somatic attributes of the plants, animals and men concerned, is not known. The few published reports from North America have shown a strikingly nonecological approach to the problem.

Behind all the reassuring announcements and news releases about nuclear explosions since the beginning of the atomic age there has lurked the spectre of the time when the so-called safe limits would be exceeded. It is clear that for a great area of the earth's surface that time has now come. The tundra and taiga which now contain such ecologically important hot spots comprise about one-fifth of the land area of the northern hemisphere. The human population of the region is relatively sparse and, unfortunately, casts few votes in the world's halls of government. If a hot spot of similar magnitude were to develop in relation to peaches, or beef, or milk, or tobacco it seems probable that no reason would be thought serious enough to allow the contamination to continue.

[From Science magazine, April 1962]

Strontium 90 in Alaska—Alaskan Eskimos for Whom the Caribou Is a Dietary Staple Have a High Strontium 90 Concentration

(By Arthur R. Schulert, assistant professor of biochemistry at Vanderbilt University, Nashville, Tenn., and attached to the U.S. Navy Medical Research Unit No. 3, Cairo, Egypt)

(Abstract: Strontium 90 concentrations have been determined in a variety of foods used by the native population. Caribou from the tundra carry 10 to 20 times the level of domestic cattle. Eskimos for whom caribou is a staple in the diet are found to have four times the strontium 90 content of the average for the world population of the North Temperate Zone.)

The strontium 90 distribution in the ecology of the Arctic tundra has been given relatively little attention. The closeness to the U.S.S.R. test site, the permafrost surface, and the initial high concentrations in caribou bone from Alaska suggested that a survey of critical samples from this area should be performed.[1] It was decided to examine caribou which live on the mosses and low vegetation overlying the permafrost zone, foodstuffs grown on farms along the coastal belt, native fish, and human bone and particularly urine from isolated Eskimo groups.[2] The localities of interest are shown in figure 1.

Most of the samples were obtained in cooperation with the Arctic Health Research Center of the Public Health Service. The farm crops were obtained through the University of Alaska. Some caribou samples were obtained by personnel at the Ladd Air Force Base in Fairbanks. About 75 percent of the human bone samples were analyzed by commercial laboratories. The remainder of the human bones, and all other samples, were analyzed at the Lamont Laboratory by use of previously reported methods.[3]

Table 1 gives the results of pooled samples of deer antlers obtained in California in 1945, 1952, 1955, and 1958, and shows the gradual increase in concentration. In contrast, the pooled sample of caribou antlers from Alaska showed over 10 times the concentrations of the California deer. Since the fallout appears roughly proportional to precipitation, which is very low in the tundra region, this great difference would appear to point toward an ecological mechanism. For example, in late 1959 the strontium 90 cumulative deposition in Columbus, Ohio, and New York, N.Y., was about 67 megacycles per square mile in the 40-inches-per-year rainfall belt, while at Point Barrow, Alaska, deposition was 11 megacycles per square mile for 10 to 20 inches of rainfall.[4] The tundra region averages less than 10 inches per year of rainfall.

The strontium 90 content of a variety of Alaskan foods is given in table 2. The farm crops are compared with the average values from three eastern U.S. locations previously reported, namely, Atlanta, Ga.; Baltimore, Md.; and Cincinnati, Ohio.[5] The cabbage and potatoes show much lower concentrations of strontium 90 in Fairbanks than in the eastern United States, but the wheat carries similar concentration. The milk produced in the vicinity of Anchorage, Alaska, has a similar strontium 90 concentration to that in the Midwest.[4] Thus it might be expected that the level of strontium 90 in human bone for the non-Eskimo population in the cities and towns along the southern coast of Alaska would be similar to that in the continental United States.

Among the native foodstuffs sampled. marine fish as well as polar bears, who feed largely upon them, show generally low concentrations with the exception of one sample of Beluga meat. The fresh-water fish and one sample of plant roots are in the range of vegetables and grain grown in the United States. One walrus sample showed a high concentration of strontium 90 in the meat. Overall it would be expected that Alaskan natives who live predominantly on fresh-water fish would have body burdens of strontium 90 similar to the rest of the United States, whereas those who live predominantly on marine life would have values somewhat lower, particularly those that eat the bony parts of small fish.

---

[1] Most of the sample procurement was accomplished by Dr. Christine Heller of the Arctic Health Research Institute of the Public Health Service at Anchorage, Alaska. This followed arrangements made in cooperation with Dr. A. B. Colyar and Dr. E. M. Scott in October 1959. Some caribou samples were obtained by Col. J. D. Fulton of the Ladd Air Force Base in Fairbanks. The wheat, cabbage, and potatoes were obtained by Dr. Arvo Kallio of the Department of Horticulture, University of Alaska. The California antlers were submitted by Dr. Harry Foreman of the Los Alamos Scientific Laboratory, Los Alamos, N. Mex. Prof. J. L. Kulp critically read the manuscript and offered helpful suggestions. The Lamont analyses were conducted by Rieta Slakter Hirshman and Karin Bartelsen. This research was supported by the U.S. Atomic Energy Commission on contract AT (30–1)– 1656. This report is Lamont Geological Observatory contribution No. 537.

In contrast to the above, samples associated with caribou of the Arctic tundra show much higher concentrations (table 3). The stomach contents of the caribou show extremely high concentrations, indicating that the strontium 90 from fallout must be concentrated on the surface and soaked up by the lichens, mosses and other plant life which exists on top of the permafrost and constitutes the caribou diet. Since there was no significant reduction in the concentration between 1959 and 1961, the concentration of strontium 90 in the atmosphere and rainfall must not be an important factor for this ecological situation.

The lower strontium 90 concentration in bone and meat compared to stomach contents is in the direction of the discrimination against strontium relative to calcium which exists in almost all biological processes. The discrimination from diet to bone in the caribou, however, as indicated by these data, is 10 to 20, as compared to 4 for man. The strontium 90 concentrations in soft tissue and newly depositing bone are similar but are 10 to 20 times higher than animals' bones in Germany or Nevada at about the same time.[6] The antlers which are replaced yearly show values similar to those of the bone.

In view of the high strontium 90 concentration in caribou, an attempt was made to obtain bone samples from outlying districts, since it is understood that a few of the inland Eskimos live largely on caribou. This, of course, is very difficult in the sparsely settled areas where autopsies are almost nonexistent, but some samples were obtained from natives in these areas, who were treated at the Public Health hospitals. Most samples were obtained during thoracic resection; some were obtained at autopsy.

Bone samples, shown in table 4, were obtained from native people, but most of them lived near towns or villages or along the seacoast. A few probably lived inland. No precise dietary information was obtained on these subjects.

The average of these adult samples (0.5 μμc Sr^{90}/g Ca) lies somewhat above that for the rest of North America (0.3 μμc Sr^{90}/g Ca for adults).[7] The individual adult samples which gave 1.9, 1.4, and 1.0 μμc Sr^{90}/g Ca are unusually high. Since young children have eight times the concentration of adults, children on the diet which gave an adult level of 1.9 μμc Sr^{90}/g Ca would reach 15 μμc Sr^{90}/g Ca, and newly formed bone would have a concentration slightly greater than this, corresponding to an average diet of about 50 μμc Sr^{90}/g Ca, which is about four times the U.S. average for the same period. Thus, while the average in this series in which high values were sought is about 25 percent greater than the U.S. average, a few samples are quite high, which may reflect an appreciable quantity of caribou in the diet.

A few tribes that consume caribou almost exclusively are known in Alaska, but bone samples did not become available from this small group. Therefore, in order to get an adequate index of their exposure to strontium 90 and thus what the level would be in newly deposited bone, urine samples were obtained on six such individuals in February 1961 with the results shown in table 5. Their tribe is located near Shungnak in northwest Alaska about 50 miles north of the Arctic Circle and 150 miles from the coast along the Kobuk River. Thus, in addition to caribou, they had access to fresh-water fish, but probably not marine life. It is noted that the strontium 90 concentration averaged 25 μμc (range 20 to 32) in the individuals of this predominately caribou-eating tribe.

In earlier work comparing the diet and urine concentrations of strontium 90 in three diverse population groups, it was shown that the diet level is about twice that found in the urine.[8] Therefore, these individuals had diet levels of about 50 μμc Sr^{90}/g Ca. The diet/bone discrimination against strontium 90 is four, and thus these individuals are forming bone at concentrations of 12 μμc Sr^{90}/g Ca. This is more than four times the U.S. average in 1961 and corresponds with the highest value obtained in bone among the 36 samples received and individually analyzed from native residents of Alaska.

The following conclusions are reached:

1. The foodstuffs consumed by the bulk of the population in Alaska probably have strontium 90 concentrations similar to those in the North Temperate Zone.
2. The concentration of strontium 90 in Alaskan caribou exceeds that of other foods by a factor of 10 or more.
3. Urine concentration of strontium 90 in a caribou-eating tribe indicates that new bone is being laid down with about 12 μμc Sr^{90}/g Ca, which is more than four times the average U.S. concentration.
4. Three human bones of 35 that were analyzed also indicated new bone deposition of about this concentration.

EXHIBIT V

U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C., February 12, 1963.

Hon. E. L. BARTLETT,
U.S. Senate.

DEAR SENATOR BARTLETT: This is in reply to your letter of January 18, 1963, which forwarded for our comment an article concerning caribou in Canada and Alaska.

The article by Dr. William O. Pruitt, Jr., on "A New Caribou Problem" in the Hudson's Bay Co. publication entitled "The Beaver" is somewhat misleading.

The guides provided in "Handbook 69," National Bureau of Standards, and in the Reports of the Federal Radiation Council, which are in agreement, are intended for use under assumptions of a 50-year exposure period and a constant exposure level. Thus, exposure to such things as fallout or nuclear accidents presents a much different problem from the constant level 50-year exposure. Even if the guides could be used, Dr. Pruitt's reports of 100 to 200 strontium units are not applicable because they represent ratios of calcium to strontium; moreover Eskimos do not eat caribou bone, at least during their usual patterns of living.

The cesium levels that were obtained for Eskimos during the 1962 Chariot investigations provide a basis for a somewhat different view than that of Dr. Pruitt. The FRC guide is 0.5 rem per year for an individual, and one-third of that (0.17 rem per year) for the average of a population.

These exposure levels are considered by the FRC to fall well within levels of exposure acceptable for a lifetime. The 1-year cumulative totals are simply fractions of this total, arbitrarily recommended to provide a regular interval within which to check exposure levels as radiation exposure occurs. For cesium 137 these levels are 3,000 nanocuries (per individual) averaged over 1 year, and 1,000 nanocuries (per population) averaged over 1 year.

Inland Eskimo communities had higher levels in 1962 than coastal villages because, Dr. Pruitt explains, the people are more dependent on caribou meat for food. Caribou eat lichens and these have higher levels of almost all isotopes than any other plants and, frequently, are the chief food plant during the winter months. At Anaktuvuk, the cesium 137 level in one individual was 790 nanocuries, less than a third of the radiation guide level specified by FRC. The average for the village was 421 nanocuries, less than half of the guide level specified by FRC.

At the coastal village of Point Hope, near the Chariot site, levels were much lower, the average being 17 nanocuries, and the maximum for an individual was 119 nanocuries. These are one fifty-ninth and one twenty-fifth of the radiation protection guide, respectively.

But, as was pointed out at the beginning, these guides were designed to apply only to a reasonably constant source of radiation, a dubious assumption in the tundra, but used in attaining the above values.

Pruitt's language is also misleading in that he cites levels in terms of multiples of some lower level without citing the actual value of the lower level.

Cesium 137 has a biological half-life of about 100 days, a factor not mentioned by Dr. Pruitt. It is difficult to conclude that "safe limits" are being exceeded and that the tundra and the evergreen forests to the south contain "ecologically important 'hot spots,'" either on the basis of data obtained during the Chariot investigations or on the basis of those data cited by Dr. Pruitt.

Your attention is called to the graph on page 148 of the recent Chariot report which you have received showing relative levels of cesium 137 in caribou. Seasonality is emphasized in one location, but much less prominent in another. This is traceable to presence or absence of lichens in the caribou diet during winter months.

Additional findings are contained in the section of the Chariot report entitled "Radiation and Biotic Populations," beginning on page 113.

If we can be of further assistance in this matter, please let us know. We are returning the article forwarded to you by Mr. Lucien.

Sincerely yours,

S. G. ENGLISH,
Assistant General Manager.

MARCH 21, 1963.

Dr. SPOFFORD G. ENGLISH,
Assistant General Manager for Research and Development, Atomic Energy Commission, Washington, D.C.

DEAR DR. ENGLISH: I write to you relative to the question of the radiocontamination of caribou in the Arctic and in response to your letter of February 12.

---

[7] J. L. Kulp and A. R. Schulert, Science, in press.

[8] A. R. Schulert, "Nature," 189, 933 (1961).

In paragraph 3 of your letter it appears that you have misinterpreted Dr. Pruitt's reference to strontium units found in caribou. In his article, Dr. Pruitt reports that the FRC guide for humans for whole-body exposure is set at 0.17 rem per year. He says, "Such an exposure would occur with the concentration of about 17 'strontium units' of strontium 90 in the skeleton. The levels of contamination in caribou bones tested so far are now on the order of 100 to 200 strontium units." Dr. Pruitt is not saying here that Eskimos eat caribou bone as you imply. He is saying that the caribou has been found, in certain areas, to be heavily contaminated. It is an uncontested fact that in the inland areas of the Arctic, caribou meat is a major and staple food for Eskimos. If caribou bones are highly contaminated, is it not logical to assume that caribou meat will also be contaminated; and is it not likely that the Eskimo eating this meat will also receive a high level of radioactivity? This is what Dr. Pruitt is saying.

As you point out, cesium 137 has a biological half-life of about 100 days. I am informed that at the time Project Chariot scientists were measuring whole-body contamination levels at Point Hope, Alaska, it had been more than 100 days since caribou had been taken by the people. As a result whole-body levels were low. I am told that while the AEC investigator was on the scene, 11 boatloads of caribou arrived in the village from hunters on the Kukpuk River. If the investigator had tested the people a week or so after they had eaten the fresh meat, would not the results have been significantly different?

It would appear to me noncontrovertible that caribou meat is a consequential and perhaps dangerous source of contamination for human beings. People who eat caribou and reindeer have been found to be in the 400–700 small nanocurie gamma range while those who do not eat caribou and reindeer have been found to be in the 5–10 nanocurie range.

While apparently such contamination is not a source of great concern to the AEC, it is of concern to the International Atomic Energy Agency. This Agency has sponsored the radiation investigations in Scandinavia (RIS) and two international symposia on the subject.

Is it true, as I am told, that no American or Canadian representative was present at the first symposium and that the second was attended by an AEC official who had not himself investigated the caribou-Eskimo problem?

You say, "It is difficult to conclude that * * * the tundra and the evergreen forest to the south contain ecologically important 'hot spots' either on the basis of data obtained during the Chariot investigations or on the basis of those data cited by Dr. Pruitt." While the AEC does not feel that "hot spot" is the appropriate term, apparently RIS does. This term, I am told, is taken directly from RIS literature.

May I please have, at your convenience, comments on the above and a direct answer in layman's language to the following:

1. Is caribou contamination a peril to the health and future of the Eskimo?

2. If it is AEC's position that this could be a peril to health, what is being done to protect American citizens living in the Arctic?

3. If it is AEC's position that this is not a peril to health, how do you reconcile your stand with that of the International Atomic Energy Agency?

Sincerely yours,

E. L. Bartlett.

THE CALENDAR

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of bills on the calendar beginning with Calendar No. 71, Senate bill 74, and continuing through Calendar No. 86, Senate bill 752, and that they be considered in sequence.

The PRESIDING OFFICER. Is there objection? The Chair hears none and it is so ordered.

Under the agreement, the following bills were considered and passed, as follows:

DR. OLGA MARIE FERRER

The bill (S. 74) for the relief of Dr. Olga Marie Ferrer was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of title III of the Immigration and Nationality Act, Doctor Olga Marie Ferrer (A12539965) shall be held and considered to have been admitted to the United States for permanent residence on May 17, 1947, and to have complied with the residential and physical presence requirements of section 316 of the said Act.

FLORA ROMANO TORRE

The bill (S. 93) for the relief of Flora Romano Torre was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Flora Torre shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

CARNETTA GERMAINE THOMAS HUNTE

The bill (S. 196) for the relief of Carnetta Germaine Thomas Hunte was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Carnetta Germaine Thomas Hunte shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

CARMELO SCHILLACI

The bill (S. 213) for the relief of Carmelo Schillaci was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Mr. Carmelo Schillaci shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent resident to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

YOO CHUL SOO

The bill (S. 292) for the relief of Yoo Chul Soo was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Yoo Chul Soo may be classified as an eligible orphan within the meaning of section 101(b)(1)(F) of the said Act and a petition may be filed by the Reverend and Mrs. Gordon J. Milldrum, citizens of the United States, in behalf of the said Yoo Chul Soo pursuant to section 205(b) of the Immigration and Nationality Act subject to all the conditions in that section relating to eligible orphans.

KAINO HELY AUZIS

The bill (S. 310) for the relief of Kaino Hely Auzis was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purpose of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Kaino Hely Auzis shall be held and considered to be the natural-born alien minor child of Aileen Ellen Auzis and Anthony Adolph Auzis, citizens of the United States: *Provided,* That the natural parents of the beneficiary shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

DOMENICO MARTINO

The bill (S. 504) for the relief of Domenico Martino was considered, ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of paragraph (9) of section 212(a) of the Immigration and Nationality Act, Domenico Martino may be issued an immigrant visa and admitted to the United States for permanent residence if he is found to be otherwise admissible under the provisions of such Act: *Provided,* This this Act shall apply only to grounds for exclusion under such paragraph known to the Secretary of State or the Attorney General prior to the date of the enactment of this Act.

MILLIE GAIL MESA

The bill (S. 686) for the relief of Millie Gail Mesa was considered, ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of paragraph (7) of section 301(a) of the Immigration and Nationality Act, Mrs. Janis Lavern Mesa, a citizen of the United States, shall be held and considered to have resided in and to have been physically present in the United States, prior to the birth of her natural child, Millie Gail Mesa, for a period of five years after the said Mrs. Janis Lavern Mesa had attained the age of fourteen years.

LASZLO JANOS BUCHWALD

The bill (S. 715) for the relief of Laszlo Janos Buchwald was considered, ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of sections 212(a) (9) and (19) of the Immigration and Nationality Act, Laszlo Janos Buchwald may be issued a visa and be admitted to the United States for permanent residence if he is otherwise admissible under the provisions of that Act: *Provided,* That the exemptions provided for in this Act shall apply only to grounds for exclusion of which the Department of State or the Department of Justice had knowledge prior to the enactment of this Act.

ELVIRA CICCOTELLI

The bill (S. 322) for the relief of Elvira Ciccotelli was considered, ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provision of section 212(a) (1) of the Immigration and Nationality Act, Elvira Ciccotelli may be issued a visa and be admitted to the United States for permanent residence if she is found to be otherwise admissible under the provisions of that Act: *Provided,* That a suitable and proper bond or undertaking, approved by the Attorney General, be deposited as prescribed by section 213 of the said Act: *And provided further,* That this exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice has knowledge prior to the enactment of this Act.

ENRICO PETRUCCI

The bill (S. 866) for the relief of Enrico Petrucci was considered, ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Enrico Petrucci may be classified as an eligible orphan within the meaning of section 101(b) (1) (F) of the said Act and a petition may be filed by Mr. and Mrs. Matthew J. Hannon, citizens of the United States, in behalf of the said Enrico Petrucci pursuant to section 205(b) of the Immigration and Nationality Act subject to all the conditions in that section relating to eligible orphans.

JOZSEF POZSONYI

The Senate proceeded to consider the bill (S. 72) for the relief of Jozsef Pozsonyi and his wife, Agnes Pozsonyi, and their minor child, Ildiko Pozsonyi, which had been reported from the Committee on the Judiciary with an amendment on page 1, line 8, after the word "visa", to strike out "fee" and insert "fees", and in the same line, after the amendment just stated, to strike out "Upon the granting of permanent residence to such aliens as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct the required numbers from the appropriate quota or quotas for the first year that such quota or quotas are available." and insert "Upon the enactment of this Act, the Attorney General shall reduce by three numbers the number of refugees who may be paroled into the United States pursuant to sections 1 and 2(a) of the Act of July 14, 1960, as amended (74 Stat. 504; 75 Stat. 460)."; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Jozsef Pozsonyi and his wife, Agnes Pozsonyi, and their minor child, Ildiko Pozsonyi, shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fees. Upon the enactment of this Act, the Attorney General shall reduce by three numbers the number of refugees who may be paroled into the United States pursuant to sections 1 and 2(a) of the Act of July 14, 1960, as amended (74 Stat. 504; 75 Stat. 460).

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

CHANG AH LUNG

The Senate proceeded to consider the bill (S. 206) for the relief of Chang Ah Lung, which had been reported from the Committee on the Judiciary with an amendment in line 8, after the word "to", to strike out "this alien" and insert "such alien as provided for in this act"; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Chang Ah Lung shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

MANNOR LEE

The Senate proceeded to consider the bill (S. 215) for the relief of Mannor Lee, which had been reported from the Committee on the Judiciary with an amendment in line 4, after the word "Act", to strike out "Miss"; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Mannor Lee shall be held and considered to have been lawfully admitted for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper qouta-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

MIRHAN GAZARIAN

The Senate proceeded to consider the bill (S. 671) for the relief of Mirhan Gazarian, which had been reported from the Committee on the Judiciary with an amendment to strike out all after the enacting clause and insert:

That, for the purposes of the Act of October 24, 1962 (Public Law 87–885), Mirhan Gazarian shall be deemed to be within the purview of section 1 of that Act.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

JANOS KARDOS

The Senate proceeded to consider the bill (S. 752) for the relief of Janos Kardos, which had been reported from the Committee on the Judiciary with amendments on page 1, at the beginning of line 5, to insert "be issued a visa and", and in line 10, after the word "Act", to insert a colon and "*And provided further,* That this act shall apply only to grounds for exclusion of which the Department of State or the Department of Justice has knowledge prior to the enactment of this act."; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of section 212 (a)(4) of the Immigration and Nationality Act, Janos Kardos may be issued a visa and be admitted to the United States for permanent residence if he is found to be otherwise admissible under the provisions of that Act: *Provided,* That a suitable and proper bond or undertaking approved by the Attorney General be deposited as prescribed by section 213 of the said Act: *And provided further,* That this Act shall apply only to grounds for exclusion of which the Department of State or the Department of Justice has knowledge prior to the enactment of this Act.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

NATIONAL WILDERNESS PRESERVATION SYSTEM

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 88, Senate bill 4.

The PRESIDING OFFICER. The bill will be stated by title.

The Legislative Clerk. A bill (S. 4) to establish a National Wilderness Preservation System for the permanent good of the whole people, and for other purposes.

Mr. MANSFIELD. Mr. President, there will be no action taken on this measure today, but it is being laid down as the pending business.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana to proceed to the consideration of the bill.

The motion was agreed to; and the Senate proceeded to consider the bill, which had been reported from the Committee on Interior and Insular Affairs with amendments.

EXECUTIVE SESSION

Mr. HUMPHREY. Mr. President, I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

EXECUTIVE REPORTS OF COMMITTEE ON ARMED SERVICES

Mr. INOUYE. Mr. President, from the Committee on Armed Services, I report favorably 65 appointments and promotions of general and flag officers in the Army, Navy, and Marine Corps, and the nomination of one admiral for retirement. I ask that these nominations be printed on the Executive Calendar.

The PRESIDING OFFICER. The nominations will be placed on the Executive Calendar.

The nominations are as follows:

Vice Adm. David L. McDonald, U.S. Navy, for appointment to commands and other duties determined by the President, in the grade of admiral while so serving;

Rear Adm. William E. Gentner, Jr., U.S. Navy, for appointment to commands and other duties determined by the President, in the grade of vice admiral while so serving;

Adm. Robert L. Dennison, U.S. Navy, for appointment to the grade of admiral on the retired list;

Rear Adm. William A. Brockett, U.S. Navy, to be Chief of the Bureau of Ships in the Department of the Navy;

Maj. Gen. Charles H. Hayes, U.S. Marine Corps, for appointment to commands and other duties determined by the President, in the grade of lieutenant general while so serving;

Maj. Gen. James Karrick Woolnough, U.S. Army, for appointment to a position of importance and responsibility designated by the President, in the grade of lieutenant general while so serving; and

Brig. Gen. John Edward Kelly, Army of the United States (colonel, U.S. Army), and sundry other officers for temporary appointment in the Army of the United States.

Mr. INOUYE. Mr. President, in addition, I report favorably 1,472 promotions and appointments in the Army in the grade of colonel and below, and 5,404 appointments and promotions in the Navy in the grade of commander and below. Since these names have already been printed in the Congressional Record, I ask unanimous consent that they be ordered to lie on the Secretary's desk, for the information of any Senator.

The PRESIDING OFFICER. Without objection, the nominations will lie on the desk, as requested by the Senator from Hawaii.

The nominations are as follows:

Edkwood H. Solomon, Jr., for appointment in the Regular Army of the United States;

Ned E. Ackner, and sundry other officers, for promotion in the Regular Army of the United States;

Adolphus R. Allison, Jr., and sundry other officers of the U.S. Navy, for temporary promotion;

Raymond G. Andrews, and sundry other officers, for promotion in the Regular Army of the United States; and

Jackie E. Bradford, and sundry other distinguished military students, for appointment in the Regular Army of the United States.

The PRESIDING OFFICER. If there be no further reports of committees, the nominations on the Executive Calendar, beginning with new reports, will be stated.

Mr. HUMPHREY. Mr. President, I move that the Senate proceed to the consideration of nominations under New Reports.

The PRESIDING OFFICER. Without objection, the clerk will state the first nomination under New Reports.

DEPARTMENT OF STATE

The legislative clerk read the nomination of W. Averell Harriman to be Under Secretary of State for Political Affairs.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

Mr. HUMPHREY. Mr. President, I know the distinguished Senator from New York would not want the confirmation of the able Under Secretary of State for Political Affairs, W. Averell Harriman, of New York, to take place without there appearing in the Record at least a brief statement on the exemplary and unselfish service to the Nation performed by Mr. Harriman during many years, ranging through prewar years, the war years, and the postwar years. Mr. Harriman has not only served as ambassador, Secretary of Commerce, and as Director of Mutual Security, but also as Assistant Secretary of State and as special representative of the President of the United States; all this as well as having been governor of the great Empire State.

Mr. President, I ask unanimous consent that a brief biographical sketch, showing particularly the services to this country performed by Mr. Harriman, be printed in the Record at this point.

There being no objection, the statement was ordered to be printed in the Record, as follows:

W. Averell Harriman

Present position: Assistant Secretary of State for Far Eastern Affairs.

Considered for: Under Secretary of State for Political Affairs.

Born: November 15, 1891. Education: B.A., Yale, 1913. Marital status: Married.

Experience: Nongovernment: 1915–17, vice president, supplies and purchases, Union Pacific R.R.; 1932–46, chairman of the board, Union Pacific; 1917–25, chairman of the board, Merchant Shipbuilding Corp.; 1920–31, W. A. Harriman & Co., Inc.; 1931–46, partner, Brown Brothers Harriman & Co. (merger); 1946–63, limited partner, Brown Brothers Harriman & Co.; 1931–42, chairman, executive committee, Illinois Central R.R. Co.; 1915–46, director, Illinois Central R.R. Co.; 1955–58, Governor of the State of New York.

Government: 1933, member, Business Advisory Council for Department of Commerce; 1937–39, Chairman, Business Advisory Council for Department of Commerce; 1934, Administrator, Division II, National Recovery Administration, special assistant, Administrator, NRA; 1934–35, administrative officer, NRA; January 3, 1941, Chief, Materials Branch, Production Division, Office of Production Management; 1941, special representative of the President in Great Britain, rank of Minister; 1941, special representative of the President to U.S.S.R. (chairman mission) rank of Ambassador; 1942, representative in London of Combined Shipping Adjustment Board; 1942, member, London Combined Production and Resources Board; 1943–46, U.S. Ambassador to Russia; April 10, 1946, U.S. Ambassador to Great Britain; 1946–48, Secretary of Commerce; 1948–50, U.S. Representative in Europe under Economic Cooperative Act of 1948, rank of Ambassador; 1950–51, Special Assistant to the President; 1951, American representative on North Atlantic Treaty Organization Commission To Study Western Defense Plans; 1951–53, Director, Mutual Security Agency; 1961, Ambassador at Large, Assistant Secretary of State for Far Eastern Affairs.

Office: Department of State, Washington, D.C.

Home: 3128 P Street NW., Washington. D.C.

Legal residence: New York.

Mr. HUMPHREY. Mr. Harriman has given most of his life to the service of his Nation. I am very proud to be able to share in his friendship, and I am proud to be living at a time when the Nation has been served by such outstanding statesmanship and leadership.

I wish to compliment the distinguished Under Secretary of State on his service to the Nation. He brings to that service a wealth of experience and a breadth of knowledge that very few men possess.

His vitality and vigor are a source of amazement to his contemporaries. He is a unique man in American history. He is one of the truly great men of our time and a great American citizen.

I congratulate the Senate upon its confirmation of the nomination of this great American, and I congratulate the President on sending to us this nomination.

Mr. KEATING. The Senator is perhaps unaware that I appeared and, quite unnecessarily, introduced this distinguished figure to the Committee on Foreign Relations at the time his nomination was considered. I said then that he was beginning to make a perennial appearance and commented on the great service which he has rendered to our country. I express the hope that he will continue to advance in appointive office and will not be diverted in any way to the seeking of elective office.

Mr. HUMPHREY. The Senator from New York makes such wise observations. I knew that the Senator came before the committee to present Mr. Harriman. This was only another expression of the qualities of courtesy and hospitality—and, I might add, good commonsense—on the part of the Senator from New York. For this, I commend him.

Mr. KEATING. I thank the Senator from Minnesota.

BOARD OF PAROLE

The legislative clerk read the nomination of James A. Carr, Jr., to be a member of the Board of Parole.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

The legislative clerk read the nomination of Homer Lester Benson to be a member of the Board of Parole.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

Mr. HUMPHREY. Mr. President, I ask unanimous consent that the President be notified immediately of the nominations confirmed today.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. HUMPHREY. I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

A COMPREHENSIVE STUDY OF ENVIRONMENTAL HEALTH

Mr. HUMPHREY. Mr. President, I should like to announce that the Subcommittee on Reorganization and International Organizations of the Committee on Government Operations will be conducting a major study on "Inter-Agency Coordination in Environmental Hazards."

A multitude of evidence confirms that such a study could prove tremendously useful to the Nation.

A formal examination of this nature was first proposed to me by my distinguished associate, the junior Senator from Connecticut [Mr. RIBICOFF].

I have asked Senator RIBICOFF to take the lead in conducting this review.

OUTSTANDING QUALIFICATIONS OF SENATOR RIBICOFF

Senator RIBICOFF brings to this heavy assignment outstanding qualifications as a former Member of the House, former Governor, former Cabinet officer, and now a Member of this body. As Secretary of Health, Education, and Welfare, Senator RIBICOFF had firsthand knowledge of the need for coordinated activity in the field of environmental hazards. In joint action with the Secretaries of Agriculture, Interior, and Defense, he established on June 22, 1961, the Federal Pest Control Review Board. Significantly, the earliest recognition of the need for establishing an administrative procedure like this was expressed by Dr. Neely Turner, entomologist for the State of Connecticut, during the controversy resulting from gypsy moth control operations in the Northeastern United States a number of years ago. Actually, the Review Board was established after President Kennedy's special message on natural resources in 1961 spelled out the need to resolve the conflict that had arisen between several agencies of Government over the use of chemical pesticides that might harm public health and our fish and wildlife resources.

Senator RIBICOFF also served as Chairman of the Federal Radiation Council, composed of the major Federal agencies having an interest in nuclear energy and its safe use. Congress had authorized the establishment of this Council in recognition of the challenge facing the Nation in the field of radiological health, requiring coordinated activity on the part of the various Federal agencies involved in nuclear matters.

The Nation can count on him and on the subcommittee as a whole for a thorough-going and rational review.

THE SUPREME INTEREST—HEALTH

Earlier, I mentioned various economic and other interests involved. The fact is that there is one supreme interest—the health of us all. We are all, in the final analysis, consumers.

As consumers, we both benefit from chemicals and face possible hazards.

Last night's CBS program indicated the great good that has come to mankind as a result of the development of pesticides, insecticides, herbicides, and fungicides. As the distinguished Senator from Oregon [Mrs. NEUBERGER] pointed out on the floor 2 days ago:

> Today through the use of chemical insecticides, typhus, yellow fever, and malaria, man's ancient and dismal scourges, are rapidly disappearing throughout the world. Were it not for modern pesticides * * * our agricultural resources would be fearfully inadequate to the task of sustaining an expanding world population at acceptable standards of living and health.

And I agree with her that this good must be weighed against possible adverse affects from uncontrolled and mismanaged use of these products. A reasonable balance must be struck. This is the underlying concept of all control measures in the field of environmental hazards.

No one in a position of responsibility, including, of course, Miss Carson, has suggested that "all" chemical poisons be taken off the market. No one suggests we close down our industry, because water is being polluted. No one proposes to take automobiles off the road because they contribute to air pollution. But what must be done is to establish reasonable and intelligent controls over possible hazards so that they do not become unmanageable threats to our health, our economy and our very way of life.

MEMORANDUM FROM SENATOR RIBICOFF AND WALL STREET JOURNAL ARTICLE

I believe that, as a matter of completeness of the record, the Senate may be interested in reading the excellent memorandum from Senator RIBICOFF, which prompted the review.

I ask unanimous consent that his comments be printed at this point in the RECORD, to be followed by a helpful article in the April 3, 1963, issue of the Wall Street Journal, entitled "Pesticides and Health."

There being no objection, the comments were ordered to be printed in the RECORD, as follows:

To: Senator HUBERT H. HUMPHREY, chairman, Subcommittee on Reorganization and International Organizations.
From: Senator ABRAHAM RIBICOFF.
Subject: Agency coordination in environmental hazard research and regulation.

Rachel Carson's book "Silent Spring" has stirred wide public interest in the problem of environmental hazards. As she pointed out: "The most alarming of all man's assaults upon the environment is the contamination of air, earth, rivers, and sea with dangerous and even lethal materials."

During my tenure as Secretary of Health, Education, and Welfare I became acutely aware of the problems of interagency coordination in the field of environmental hazards.

As Secretary I served as Chairman of the Federal Radiation Council which was established some years ago to work out the interagency problems of radiation control. Without the Council there would have been chaos in this vitally important field. At least now the interagency conflicts in the field of radiation control can be resolved in an orderly manner. But serious problems remain in the development of Government policy with respect to many environmental hazards.

For example, the pesticide situation discussed in Miss Carson's book had deteriorated to such an extent, with each agency going its own way without regard to the programs or policies of other agencies, that it became necessary, through the joint action of the Secretaries of Agriculture, Interior, Defense, and Health, Education, and Welfare to issue an order establishing the Federal Pest Control Review Board (June 22, 1961). This action grew out of a recommendation by the President in his 1961 natural resources message. One of the examples cited by the President in that message was the need to resolve the conflict that had arisen between several agencies of Government over the use of chemical pesticides that might harm public health and our fish and wildlife resources.

Air pollution activities are carried on in the Public Health Service, the Bureau of Mines, and other agencies.

Water pollution control problems are considered in various agencies and in different units of the same agency.

The contamination of milk and food is under study and control of various agencies.

In short, there is real need to examine the agency coordination aspects of environmental hazard regulations with a view to determining the efficiency and economy of programs designed to protect the health and safety of 180 million American men, women, and children.

We have the various agencies studying themselves and the White House Office of Science and Technology studying the various agencies. While these studies are helpful there is a need for a full public airing of the problem which only can be accomplished by a congressional subcommittee having a wide-scope jurisdiction and directive to look into interagency relations. Only your subcommittee has such authority.

I have studied your hearings on drug research and regulation and feel that a study of environmental hazards could follow that same pattern. The issues and problems are quite similar and the good work already done could serve as a guide to the staff. Perhaps an initial subject to be looked at in this field is pesticides. The White House Office of Science and Technology has circulated among interested Federal agencies the first draft of its report reviewing the use of pesticides in the United States and what is being done by the Government to control their effects. The report could serve as background for an agency coordination study by your subcommittee on the subject of pesticides as one example in the field of environmental hazards.

With regard to staff, I would endeavor to have assigned to me an intern under the American Political Science Association program who could be assigned full-time to working with other members of my staff and Mr. Cahn in developing these hearings.

[From The Wall Street Journal, Apr. 3, 1963]

PESTICIDES AND HEALTH: CHARGE THAT CHEMICALS HARM HUMANS, NATURE FAILS TO HAMPER SALES—FARMERS, GARDENERS STEP UP SPRING BUYING AMID FUROR STIRRED BY AUTHOR'S ATTACK—TIGHTER U.S. CURBS FORESEEN

(By Roger B. May)

Makers of chemicals that attack insect pests, rodents and weeds say sales are soaring this spring even though they are under heavy attack themselves. But they are concerned about the future.

Although no stranger to controversy, the industry has been under increased fire since last June when Rachel Carson, a respected author and biologist, charged that careless users of pesticides were not only poisoning pests but also beneficial wildlife and man himself. Contending that the present massive chemical attack on nature could have dire results, she urged use of other controls. For instance, she argued that crabgrass killers widely used on lawns wouldn't be necessary if proper methods of lawn care were followed.

Miss Carson's views first appeared in a series of articles in the New Yorker magazine. In September, a longer version, documented with 54 pages of references, was published as a book titled "Silent Spring."

The book, a best seller for a time, aroused conservationists and other groups. Since the beginning of the year, 40 bills have been introduced in State legislatures calling for stricter controls on the use of pesticides. In Connecticut a hearing last month on new pesticide legislation drew such a large crowd it had to be moved to larger quarters.

PRESIDENT'S COMMITTEE TO REPORT

One of the chemical companies' biggest worries is over a study of pesticides being conducted by President Kennedy's Advisory Committee on Science and Technology. Insiders say the committee's report, to be issued soon, will stress the value of pesticides but will take a critical line and recommend Federal steps to assure better control. Two bills already have been introduced in Congress to tighten Federal controls on pesticide use.

No one can predict what further restrictions, if any at all, these efforts will bring on the use of pesticides.

But so far there is no evidence that sales have been affected at all. Industry sales of pesticides rose to $345 million last year, 16 percent over the 1961 level. This accelerated a climb that has lifted volume 72 percent since 1955. As the planting season gets underway in many parts of the Nation, producers say farmers and gardeners are buying more of these chemicals than a year ago at this time.

An outpouring of new products has been partly responsible for the industry's rapid growth. Nearly 5,300 new pesticide compounds were registered with the Department of Agriculture last year, the most since 1948, the first year registration was required. For the first 2 months of this year, registrations were slightly ahead of the 1962 pace. There are over 57,000 pesticides on the market for use against some 25,000 species of insects and untold varieties of weeds and rodents. Most of the compounds are based on chemicals known as chlorinated hydrocarbons.

RESEARCH SPENDING HIGH

Spending for pesticide research this year is expected to be close to $40 million, more than 10 percent of industry sales. Research expenditures for industrial chemicals generally average only about 4.4 percent of sales. Stauffer Chemical Co. of New York raised its pesticide research budget by 17 percent in 1962 over the year before and boosted it a further 20 percent this year. Of the 757 patent applications filed by Dow Chemical Co. of Midland, Mich., in 1962, about 10 percent were for pesticides although only about 7 percent of Dow's sales are in this field.

American Cyanamid Co. has pumped $11 million into new greenhouses and related facilities near Princeton, N.J. for testing farm chemicals. California Chemical Co., a Standard Oil Co. of California subsidiary, is increasing the research staff of its Ortho Division by 12 percent this year as it mans new research facilities in California and Florida. Union Carbide Corp. has more than doubled the size of its research farm near Raleigh, N.C., since it opened in 1956.

Among the new fruits of this research is a Rohm & Haas Co. product which the company claims will kill barnyard grass in rice fields but not the rice itself. It may save farmers the bother of flooding fields to hold down grass and weeds. FMC Corp.'s Niagara Division is marketing a new herbicide which it claims kills weeds in tomato fields without affecting the tomatoes, a difficult problem in the past. Monsanto Chemical Co. has a new chemical it says will destroy hard-to-kill weeds such as thistle and lambsquarter. Du Pont Co. is beginning large-scale promotion of a chemical designed to kill cornfield grasses, which are hard to control, as well as weeds.

ENTHUSIASTIC FARMER

Farmers often greet chemical developments with enthusiasm. Joseph A. Wagner in Prince George County, Va., claims his yield from a 50-acre peanut field last season was 2,200 pounds to the acre after he used a new soil insecticide. The previous season, using no insecticide, his yield was only 1,400 pounds an acre, largely because of an attack by army worms. Such dramatic increases in yields through use of pesticides are not unusual.

"Farmers have been convinced of the value of these chemicals—the objections are coming from nonagricultural people," one company official says. Public health officials also frequently support the chemical companies. Massive chemical attacks on mosquitoes and flies have been credited with widespread control of malaria and other diseases.

But critics also cite evidence of damage. Dr. James D. DeWitt of the U.S. Fish and Wildlife Service told the annual convention of the National Audubon Society last fall that findings of chemicals in dead birds indicate pesticides may be contributing to the extinction of certain species, including the bald eagle. The society is urging States to set up control boards to regulate pesticide use. Massachusetts has set up such a board and Ohio and Connecticut have bills pending.

Douglas Campbell, a San Francisco psychiatrist and a professor at the University of California, contends that many of what are believed to be virus infections and nervous disorders in humans may actually be toxic conditions resulting from repeated small doses of insecticides. Such doses, he claims, only cause vague aches and pains, low-grade fevers and chronic stomach aches, but also the symptoms of some mental disorders, such as double vision.

In Miami, a Dade County medical examiner recently ruled that a fumigation of a household with insecticides "instigated a chain of events that led to the death" of a housewife. Six homeowners in Norfolk, Va., recently filed an unsuccessful suit to stop the State from using a chemical called dieldrin to wipe out the white-fringed beetle, which damages plants. Miss Carson's "Silent Spring" cited deaths of birds and cats near Sheldon, Ill., when dieldrin was used to kill beetles.

POSITIVE SIDE STRESSED

To try to counter such adverse publicity, the Manufacturing Chemists Association (MCA) and National Agricultural Chemicals Association (NACA), both in Washington, last November began sending monthly feature stories to news media stressing the positive side of pesticide use. Similar material is being mailed directly to 100,000 individuals. The NACA doubled its public relations budget for the fiscal year that begins October 1 and is promoting a safety program, underway so far in five States, aimed at convincing applicators of chemicals they should follow manufacturers' directions. Chemical makers complain most accidents stem from improper usage of pesticides.

"But I don't see how it (the industry) can be regulated any more than it is," says Pincus Rothberg, president of Montrose Chemical Corp. of California, a Stauffer affiliate and a major producer of DDT, one of the earliest of modern insect killers. Chemical companies contend they spend several years testing new pesticides and then must register them with the Department of Agriculture, which can require further tests.

In addition, the Food and Drug Administration sets maximum levels of residues of pesticides that may remain on food crops after harvesting. The FDA cannot check all foodstuffs that go to the consumer, of course, and its police powers are limited. But an FDA charge of unsafe practices can have spectacular results. Cranberry sales plummeted in November 1959 after the Agency warned that the crop had been sprayed with a weedkiller that had caused cancer in rats.

Miss Carson argues that the results of chemical attacks often are only temporary, since pests have a habit of adapting quickly to new poisons. She urges greater use of other types of controls, such as encouraging the natural predators of pests.

Some chemical companies admit insects do develop immunities; some varieties of house flies have become immune to DDT, for example. Much current research and some new products are necessitated by this, they say. Some companies are working on products that are not direct poisons. For instance, Olin Mathieson Chemical Corp. is working on a compound that it hopes will eradicate boll weevils and potato bugs by sterilizing the male of the species. Federal tests of this method on the boll weevil have shown promise. Sterilization has been used successfully by the USDA in the Southeast to destroy the screw worm fly, which attacks animals.

The chemical companies say, however, that Miss Carson's attack was one-sided and overdrawn, failing to weigh the large benefits of pesticide use against its risks. Miss Carson's warning about the dangers involved when man attempts to manipulate his environment are challenged by George C. Decker, an entomologist at the Illinois Agricultural Experiment Station. He argues that man has been successfully manipulating his environment for centuries.

"With populations increasing and the area of farmland decreasing, it will be only a matter of a few years until (the world) will have to make ever-increasing use of agricultural technology, including more efficient pest control, to meet the world's food and fiber requirements," Mr. Decker says.

THE GREAT DEBATE

Mr. HUMPHREY. Mr. President, a great debate has been raging in our country over various aspects of environmental health, notably over issues posed by pesticides.

It is, however, indisputable that there are environmental hazards, and that they are increasing, not diminishing. There definitely is a rising contamination of the air, earth, rivers, and seas with dangerous, and sometimes even lethal, materials. Man is gaining increasing benefits from the chemical-industrial revolution, but he is also paying a price.

Last night, the Nation saw an outstanding television program, prepared by CBS Reports, "The Silent Spring of Rachel Carson." It dramatically pointed up one of the great challenges of our time—man's assault upon his environment.

It depicted the strong, sincere views of leading public and private protagonists on this subject.

The unassailable fact, as I see it, is that, as man changes his environment, his environment may change him. Man is a part of his environment. He is a part of Nature: He must be prudent as he makes changes in the balance of nature. But changes will come.

We cannot turn the "hands of the clock" back. As I told the Animal Health Institute yesterday, whether anyone likes it or not, we are living in a chemical age of incredible scientific achievement.

We must set our goal consciously to maximize the benefits of science and minimize avoidable hazards.

A FEW GENERAL GUIDELINES

I should like to set forth what I regard as a few additional guidelines of the study.

First. Its aim will be to get the significant facts and present them to the Senate and the Nation.

We will want to know where our country is heading and why, and how, and where we should be heading.

Our traditional procedure on the subcommitte has been, to learn and set forth which agency is doing what, why, how, where, at what cost, and with what relationship to what other agencies are doing.

Our procedure, moreover, has been to draw to the fullest extent upon the facts and judgment of prior and contemporaneous studies.

Very considerable review of this subject has already been conducted within the executive branch, by the National Academy of Sciences-National Research Council, and other sources. Our aim would be to capitalize upon the other work, avoiding any duplication, and picking up from where others have left off.

COOPERATION WITH PRESIDENT'S OFFICE OF SCIENCE AND TECHNOLOGY

Second. We would work very closely, I am sure, with the President's able science adviser, Dr. Jerome Wiesner. I am informed that the pesticide problem has been receiving Dr. Wiesner's closest attention. I am further informed that within about 4 weeks, a report by the Life Sciences Panel of the President's Science Advisory Committee on this issue will be ready for release. I have not seen the report, but it is my understanding that it is a frank, historic statement of the policy and technical issues confronting the U.S. Government agencies, industry, agriculture and the public on this much-debated issue.

I do not have the slightest doubt that it will be a landmark report.

INTERAGENCY MECHANISMS

Third. We will be interested, as indicated earlier, in how well interagency mechanisms are actually working. I refer, of course, to the Pesticide Control Review Board, the Interdepartmental Committee on Pesticides, the Armed Forces Pesticide Control Review Board, and so forth.

It is clear that interagency coordination is the key to success in these efforts. Numerous Federal agencies have important and enlarging responsibilities in this field. These agencies include the Department of Health, Education, and Welfare, Department of Agriculture, Department of the Interior, Department of Defense, and others. Considerable sums of taxpayers' money are involved, both for regulatory and research purposes.

Our subcommittee's continuing study of drug issues has repeatedly shown that, even with the best of intentions, Federal agencies face serious difficulties in coordination and collaboration, because of often different orientations, approaches, and backgrounds.

PERSPECTIVE ON AGREEMENT AND DISAGREEMENT

Fourth. We will want to learn the areas of interagency agreement, and the areas of interagency disagreement, as well as the comparable points of agreement and dispute in the vast private sector of our society.

Having outlined these areas, we will be in a position to find a sound, judicious road ahead.

A sense of overall perspective is essential.

MINNESOTA'S BROAD INTERESTS

The people of Minnesota know that I approach this problem with a full awareness of its many implications to all segments of life in my State and in all the other 49 States of the Union. Our conservationists are aware of my deep concern over the misfortune of man's permitting the despoiling of the great outdoors.

Industry knows, however, that it is my desire to advance the state of the art in science and technology as rapidly as possible. And agriculture is aware that in order to continue to have high-quality foods and fibers at reasonable cost, it is essential that man deal effectively with insect pests, weeds, and disease.

These respective interests are hardly irreconcilable; but they do involve sharply different emphases and can and do lead to misunderstanding.

The problem of environmental hazards has, of course, long been of interest to me. In 1956 and 1961, I joined with Congressman JOHN BLATNIK, of Minnesota, in sponsoring legislation to strengthen the Nation's water pollution control programs. This year I am pleased to be a cosponsor of S. 432, the clean air bill introduced by Senator RIBICOFF and S. 649, a bill to further strengthen the Federal Water Pollution Control Act introduced by Senator MUSKIE.

CONTINUED STUDY OF DRUGS

Our subcommittee's present study of interagency coordination in drug research and regulation will, of course, continue. It has given us valuable experience for this larger study.

Chemical agents used to treat man's diseases are but one part of man's changing environment. There are both similarities, as well as differences between the study of drugs and other environmental factors.

Preliminary evidence suggests these similarities, among others, between our drug study and the wider study which are now launching.

First. In the field of environmental health, there is as critical a problem of breakdown in scientific communication, as exists in almost any other aspect of modern life. All of the mounting problems which this subcommittee has mentioned over a period of years—relating to the collection, abstracting, indexing, storage, retrieval, evaluation, and dissemination of scientific information—are multiplied manyfold in the area of environmental health.

We are dealing with incredible numbers of chemical ingredients and of published and unpublished information about them.

There are today well over 200 basic chemicals used in somewhat over 54,000 formulations—registered with the U.S. Department of Agriculture.

How even one chemical on a given crop at a given time under given circumstances interacts with another chemical—much less still others—is a scientific problem in itself, and a problem to try to search in the literature to the extent that the literature exists.

Second. We do not begin to know enough about how drugs actually work on a cellular or system or organism basis, particularly over a long term; and we do not know the genetic effects of many drugs and chemicals. In the same manner, science does not possess a fraction of the counterpart knowledge which it feels it must have as regards agricultural and other chemicals.

The question often is: How far and how fast dare we go or dare we not go—while the basic knowledge is being discovered?

If, at one extreme, we wait "until all the answers are in," we will not use a single new drug or other chemical agent. If, at the other extreme, we hardly wait at all, we run a needlessly high degree of risk.

Third. Everyone should be aware that the Food and Drug Administration has important statutory obligations with respect to both drugs and environmental health. I may add that this latter area seems to illustrate as strikingly as almost any other—the critical shortage of manpower, materiel, and equipment which has for so long confronted this vital agency. Its scientists, inspectors, and other personnel have had to spread themselves so thinly with respect to the pesticide problem alone, that it seems almost a miracle that we have achieved as much protection as we have.

The proposed 1964 fiscal year budget for the agency will allow it, for example, to increase its tiny present sampling of one-third of 1 percent of interstate shipments of food crops to but 1 percent of the total.

The proposed budget, moreover, will only make a small dent in overcoming the shortage of scientific personnel for the setting of safety levels—tolerances—for residues of agriculture chemicals permitted on crops.

PAST SUBCOMMITTEE WORK

Both from an FDA and other standpoint, environmental health is far from new to this subcommittee. The very title of our subcommittee, "Reorganization and International Organizations," indicates our area of jurisdiction over fiscal and other phases of U.S. activities in the U.N. Food and Agricultural Organization and the World Health Organization.

Our extensive past series of health publications has made numerous references to the type of problems we will now meet head-on. For example, of our 11 committee prints on international health, print No. 5—"Cancer—A Worldwide Menace"—noted carcinogenic effects of chemical agents; print No. 10—Radiation Research in the Life Sciences—referred to health problems posed by nuclear progress and our report, Senate Report 142, 87th Congress—"Coordination of Research in Bio-Medicine and Other Scientific Areas"—noted overall outlay for all health purposes, including environmental health.

Mr. RIBICOFF. Mr. President, may I say to the distinguished Senator from Minnesota that I am honored he has given me this assignment. Under the chairmanship of Senator HUMPHREY, the subcommittee on reorganizations has performed invaluable service to the American people.

His hearings on drug safety have alerted us to the continued need for careful administration of our drug laws and more frequent interchange of information and ideas between Federal agencies.

The adoption of a strong drug law last year was an important step forward. Its proper administration is now the essential element of consumer protection against dangerous and useless drug products.

The drug hearings have served and will continue to serve a most useful purpose. I am very hopeful that our study of environmental hazards, which the chairman has just now authorized, will be just as useful.

As last night's CBS telecast clearly showed, there is an appalling lack of information in the entire field of environmental hazards. We face serious questions, but we are woefully short of answers.

We will take a full and careful look at this entire field. We will seek neither to condemn any useful product nor to condone any needless hazard. It is clear these chemicals have a great potential for good. They also have a potential for harm. We want to know how the appropriate balance is being struck, and how our Federal agencies are going about this vitally important job.

Mr. HUMPHREY. Mr. President, I thank the Senator very much for his remarks.

ADDRESS BY RIGHT HON. HAROLD WILSON, O.B.E., M.P.

Mr. McCARTHY. Mr. President, recently the leader of one of the major political parties in Great Britain addressed the National Press Club in Washington. In the course of his address, he spoke on a number of subjects, including the United States, England, and the whole Western Alliance. I ask unanimous consent that the remarks of the Right Honorable Harold Wilson be printed at this point in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY THE RIGHT HONORABLE HAROLD WILSON, O.B.E., M.P., AT THE NATIONAL PRESS CLUB AT WASHINGTON, D.C., ON MONDAY, APRIL 1, 1963.

I should like to begin by saying what I am here for. First, what I am not here for. I am not here to negotiate. An opposition cannot negotiate with governments. I am here as leader of one of the great parties in our democracy to learn more about current thinking in the United States on the great issues confronting the Atlantic partnership. I was last here in January 1962, at that time as the Labor Party's spokesman on foreign affairs. I would have come in January of this year, but had to return from New York to London on the day that Hugh Gaitskell died, without coming on to Washington.

So having said what I am here for I do not need, I hope, to repudiate the story which was featured in some papers last week under the title "Wilson's Fourteen Points." I haven't got 14. I haven't got any. A statement in one of Friday's papers that I "announced" before leaving London that I was bringing a 14-point program is quite wrong. The London story came as the responsibility of the pressman who wrote it and who at that time had not been to see me or had any discussion with me. It was a nice and amusing piece of imaginative writing but I cannot take any responsibility for it. I'm sorry.

I have not come to press any lines of policy on the U.S. administration. To do so would be highly improper and unconstitutional. My purpose in coming is to learn and to listen—and to explain, when I am asked, the general trend of Labor Party thinking and policy on the main issues of world affairs.

But I have read a great deal of what has been written, and I should like to thank you for all the kind things you have said about me—I have in the process learned a lot of things about myself I didn't know before—and I have been asked by many pressmen a lot of questions about our approach. I should, therefore, like to try today in my talk to answer some of these questions.

I should like to begin with the economic problems the free world is facing.

All of us want to see a great expansion of trade, and a removal of trade barriers, between member countries of the Atlantic community. Equally we urgently need to see a steady and dynamic expansion of production within our respective countries. My fear is that anything we are able to do in freeing trade and expanding national production will run in a measurable period of time into a crisis of world liquidity. World trade has increased fourfold in monetary terms since prewar; the monetary resources available to lubricate this trade have barely doubled. We have the position that the two greatest trading nations in the world both urgently need to expand production, in their own inerests and that of the free world, and that both are inhibited by fear of balance-of-payments difficulties. We are moving more and more into the position that if sterling is strong, the dollar is weak, if the dollar is strong, sterling is weak; there are times when we face the danger that both are weak. And if Western nations show the degree of statesmanship which we hope for in reducing trade barriers, there is a real danger that trade expansion will grind to a standstill through a famine of liquidity. And we shall be reduced again to beggar-my-neighbor measures designed to export unemployment and deflation from one country to another. We are within a reasonable distance of a major sizeup in free world trade, beginning with a crisis in dollar and sterling trade, which at best will inhibit our hopes of economic expansion at a time when other nations are pressing remorselessly ahead, and which at worst could create another 1931. I am also deeply concerned at the growth of indebtedness in underdeveloped countries such as those of Latin America. Already the burden of servicing loans is preempting a high proportion of their oversea earnings; in 4 or 5 years many of them will reach the breaking point.

In passing may I say with all the emphasis I can command that the answer does not lie in devaluation whether of the dollar, or sterling, or both. That would be a lunatic and self-destroying operation, neither justified by the problem nor relevant to its solution. The same applies to loose talk about floating rates. As an ex-trade minister I have a built-in prejudice in favor of enabling exporters to quote fixed prices with reasonable assurance of monetary stability. Equally the answer cannot be found in a revaluation of gold, which would simply provide an uncovenanted benefit to two countries, South Africa and the Soviet Union, whose benefit should be low in our scale of priorities.

What is needed is a medium for the creation of international credit through the established machinery of the International Monetary Fund. The unparalleled American and British expansion in the 19th century was made possible by a new discovery, the power of commercial banks to create credit, free from the thralldom of gold. In the 20th century we have so far shown ourselves unworthy of the ingenuity and inventiveness of our grandfathers. We should now move toward a system in which the IMF could create international credit peri passu with the development of world trade. If this could be combined with the Australian proposal for discriminatory credit facilities to be issued to underdeveloped countries to spend in debtor countries such as, in present circumstances, United States and Britain, we could evoke increased production in our two countries, related to the needs of world development. This could be the answer to unused capacity in our countries.

The dangers, and the opportunities, we now face would justify the summoning of a World Monetary Conference, an economic summit for the free world.

Now I turn to the situation which arises from the breakdown of the Brussels negotiations. I do not want to go back over the past. What matters now is our response to a challenging and even exciting situation. It is above all a new, though not an unforeseeable situation. For 18 months Western policies were directed to a consummation in Brussels. Now we have to start again.

The Labor Party was prepared to accept a solution which would have been genuinely outward looking and be a stepping stone to a wider free trade area embracing the Atlantic community, and the Commonwealth.

There was nothing in the Treaty of Rome, as such, that would have precluded such an advance. What we were not prepared to join was an inward looking, autarchic Europe which would sever Britain from our traditional channels of trade with the Commonwealth and the wide-trading world. The adoption by the EEC of an agricultural policy based on restrictionism, of high prices policed by a penal import levy on imports from the outside world was a sign that perhaps Schacht, rather than Adam Smith, provided the inspiration for the agricultural planners of the new Europe. This policy involved a degree of interference with established market channels, a degree of rigging of prices and production, of internal self-sufficiency, far transcending the wildest dreams of any British or American Secretary of Agriculture, of any party, who ever existed, and in saying this I am speaking the language of superlatives.

At every stage of the debates in Parliament, Hugh Gaitskell and I and others of us stressed the need for the preparation of an alternative policy in case the talks broke down and Britain was presented with entry terms which proved intolerable. This was designed not only to strengthen our bargaining position, for negotiations based on the thesis that there was no alternative to entry were bound to produce stiff, possibly unacceptable, terms; it was designed to avoid a vacuum, a paralysis of policy in the event of breakdown.

At all stages we spelled out a policy based on the concept of an Atlantic—and wider than Atlantic—community based on the United States, Britain and EFTA, EEC, the Commonwealth and probably Japan and possibly Latin America. As long ago as November 1961, when the Clayton-Herter report was presented to the joint committee of Congress, I said that this, rather than a narrow European conception, provided the key to the future.

President de Gaulle's brusque intervention faced us with the need for a constructive alternative. Paying every tribute to the breadth and vision of Mr. Macmillan's reappraisal after Brussels, I could not feel that a policy whose constructive measures were limited to the cancellation of a royal visit to Paris could be said to be measuring up fully to the challenge with which we were faced. We, therefore, put forward the following:

1. Urgent action to make the Kennedy round effective, on the basis I have mentioned including the United States, United Kingdom, the Commonwealth, EFTA, and those trading areas such as Japan and Latin America which are essential to U.S. trade.

2. Urgent action to conclude international commodity agreements to provide stability in the prices and production of those commodities which enter into international trade, including products of temperate zones such as cereals and dairy produce, and those of primary producing countries such as cocoa, tin, rubber, sisal and tea. We are too apt to forget that all that has been done in the past 10 years in the development of economic aid from advanced countries to the underdeveloped areas, amounting now to $3½ billion, has been more than offset by the collapse in the export income of underdeveloped countries through the fall in primary commodity prices.

3. Associated with this, action to channel food surpluses from advanced countries to meet the needs of hungry nations, for example on the lines proposed by Lord Boyd-Orr in 1946 for a world food board, an imaginative concept 15 years ahead of its time, which was rejected because most of us hadn't the dollars in a dollar-hungry world. We must face the fact in our modern democracies, that built-in subsidies and support to our farmers will mean a permanent surplus of food, and this will be enormously augmented if the Common Market agricultural policy is not vetoed by GATT.

4. Planned international action to provide not merely monetary help for developing countries, but governmental and intergovernmental orders for steel, machine tools, and transportation equipment, linking their needs with our industries at present working below capacity.

5. Measures to expand international liquidity.

6. Urgent action on the lines so imaginatively proposed by Mr. George Ball to provide planned quota outlets in all advanced countries for textiles and other manufactured goods from Asia and Africa.

7. On a Commonwealth basis closer integration of Commonwealth development plans enabling Britain to recapture markets we have lost through neglected opportunities in the past decade.

These are measures required on a marked scale. For our part we are prepared in Europe to work to find a solution to the problem of an economic division between EEC and EFTA. Perhaps OECD will provide the right forum, perhaps, as we have suggested, regular meetings of European heads of government to seek close political unity and a solution of Europe's economic problems. We are prepared at the right time, and given the right conditions to enter into fresh negotiations with the Six, provided this does not mean another 18 months with Britain setting the anti-chamber while the Six meet and wrangle about our fate, provided that no one regards the concessions made by Mr. Heath as an acceptable starting point. We have stated the five broad conditions which should govern Britain's entry and we are prepared to negotiate on the basis of these conditions. But no one sees any immediate prospect of a new breakthrough, and that is why I stress the urgency of the other measures which are open to us.

Now I turn to some of the wider issues of world affairs; three in particular, Berlin, disarmament, and the defense of the West.

On Berlin, I recognize that reports of a speech I made in Cardiff 5 weeks ago have caused some anxieties. This is because the full text was never available. I do not blame the press. I overloaded them. It was the night I made my first major speech as leader of the opposition. I had a full handout on our policy for housing and rents, and the position of slum landlords. In addition, I had a few animadversions on Mr. Macmillan and his colleagues which news editors thought of some interest. So there was little space to report a speech I made earlier in the day at the university in which Berlin was mentioned. Our view, which I repeatedly stated in Berlin when last year I led 42 Labor Members of Parliament on a mission to Berlin, designed to show our solidarity and support for Willy Brandt and the citizens of West Berlin is clear. Any settlement of the Berlin issue must provide two nonnegotiable, inalienable conditions: (1) the right of the people of West Berlin to live in a system of society and under a system of government of their own free choosing; (2) guarantees of access to West Berlin from the West going beyond mere paper promises, together with all other measures necessary to insure the viability of West Berlin; (3) we regard it as essential that for the foreseeable future Western forces remain in Berlin, as of right, and as custodians of the new agreement; (4) to secure such an agreement we should be prepared to show some degree of flexibility in relation to recognizing the existence of the authorities in East Germany and working out practical measures with them; and (5) we should show a willingness to recognize on a factual basis Germany's Eastern frontiers. Unfortunately some reports from Cardiff only repeated the fourth and fifth points of this package.

On disarmament I will say little because of the delicate stage of the negotiations, because we could be on the verge of a great breakthrough. My party accepts and insists on the need for effective international verification and supervision. On the test ban there is not only the problem of the number of inspections, but also the means and effectiveness of the system of inspection. On this Russia still has to come through.

On the wider question of a comprehensive disarmament agreement, nuclear and conventional, we feel that time has come when the Secretary General of the United Nations might be asked to take the two drafts and examine the possibility of bridging the formidable gap which still exists between them.

We believe that a further step forward could be made, here I know that what I am saying will find little acceptance here today, by the creation in areas of high tension of nuclear free zones and areas of effectively controlled conventional disarmament. Such areas as the continent of Africa, the Middle East, Latin America, and central Europe, might be taken, perhaps in that order.

This would mean effective inspection. The Soviet acceptance of the Rapacki plan involves acceptance of inspection. But inspection must be effective. And, as the Swedish Government insisted in their December 1961 resolution at U.N., we must have realism and no disturbance of the present balance of forces in Europe.

Now, on defense. Our position is clear. We stand firmly by NATO and the Western Alliance. We are not a neutralist party and neutralism has no part or place in our policies. We want to see Britain and other European countries make a more effective contribution to NATO.

I know there is nothing more boring in nature than a politician who continually refers to his past speeches, but I find that if I repeat, ipsissimis verbis, the speeches I made 2 or 3 years ago on this issue, there is a rush to say, "How he's changed since he became leader of his party." In every speech I made as foreign affairs spokesman I stressed the central role of NATO in our defense policy and in that wide section of our foreign policy which relates to defense; and, secondly, the paramount need to increase our contribution to the conventional strength of NATO forces. We do not believe this is possible if we pour out our substance on the vain effort to maintain the so-called independent, so-called British, so-called deterrent. Because it isn't independent, it isn't going to be British and its deterrent value in our view adds nothing to the effectiveness of Western deterrent power.

But it does mean such a deployment of our financial and real resources as to limit our ability to make an effective contribution to NATO's ground forces. It does mean a block to our hope of preventing the proliferation of nuclear weapons and it does mean increasing the danger that a conventional outbreak in Europe can quickly escalate into nuclear war.

I believe that our view on this represents the consensus of military opinion in Britain, including many Conservative M.P.'s, and that in this respect Mr. Macmillan is inhibited from pursuing the right military policy by the clamant pressure of a small but vociferous band of atavistic back-benders whose intervention was decisive at the time of Nassau.

It is argued that to be realistic and recognize the plain fact that the United States is the custodian of the strategic deterrent on behalf of the Western Alliance, that this places us in a position of humiliating dependence on another nation. I do not agree. It is dependence on the United States for the so-called British deterrent which creates the wrong relationship and which means that meetings of Western leaders, instead of being directed to the urgent problems of strengthening the alliance, are dominated by unrewarding, and I would feel humiliating wrangles about the supply of particular weapons.

Every American pressman I met asks whether a labor government would repudiate the Nassau agreement. I don't like the word "repudiate" which implies breaking faith with a partner, and I have my doubts about the enthusiasm with which the U.S. administration approached the Nassau agreement. My answer is that a Labor government's first task would be to survey the defense position we inherit, to survey the shambles, some say, then to enter into discussions with our American partners about Nassau and about our broader approach to NATO. In view of our policy on deterrents, we should then renegotiate, I have heard the word "denegotiate," the agreement.

Before I leave defense I should like to say one word about Britain's overseas bases East of Suez. The future of some of them is obscure: one thing we should have learned at heavy cost is that you cannot hold a military base in hostile territory. But in general, though some rundown is possible and desirable to release troops for Germany and for the strategic reserve, I believe it to be a mistake to evacuate key bases where we have the chance to remain. It is a hundred times easier for Britain to remain there, even with a token force, than for us, still less the United States, to seek to enter if trouble breaks out. I believe, therefore, that our maintenance of these bases should be regarded as a specific and invaluable contribution to the alliance.

I have talked today mainly about the relationship of Britain and the United States within the Alliance. Frequently I am asked, "What about the special relationship?" I am never quite sure what this means. I am more interested in a close relationship based on a common purpose, common objectives and as far as can be achieved community of policy, a relationship based not on condescension or on a backward-looking nostalgia for the past, but on the ability of both parties to put forward their strength and their own unique contribution to our common purpose. Charles Lamb said in one of his essays, "There is nothing so irrelevant in nature as a poor relation," and if ever our relationship with you were based on that status the sooner it were ended the better: that is why the first priority in British internal policy is to build up our economic strength so that as partners, in the Alliance, in Europe, and the Commonwealth, we are relevant and necessary. It is on that, not on any conception of past greatness that our standing in the world will depend. Our ability to restore the lost dynamic to Britain's economic society, to restore a sense of economic and social and moral purpose, will have far more bearing on our value as an ally and a partner than any vain nuclear posturings. It may not be long before the same truth dawns on President de Gaulle.

Because we reject the notion that Britain is fated by history or some vicious twist of fate or by internal debility to be treated as the sick man of Europe, we are not. We have a reservoir of unused and underused talent, of skill and craftsmanship, of inventiveness and ingenuity, of administrative ability and scientific creativeness which if mobilized will, within a measurable period of time enable us to become, not the workshop of the world; that is no longer our role, but the pilot plant, the toolroom of the world. Our scientists are among the finest in the world. The tragedy is we don't produce enough of them, and those we do produce we do not use intelligently. Some we fail even to hold, and the reason for this is not as one noble lord has said the deficiencies in your educational system, it is deficiencies in our industrial and governmental system that we do not provide the status and opportunities, above all the key role in our society that the needs of the 1960's demand.

That is why the central thread of labor policy, the key to our plan to redynamize Britain's economy, is our plan to mobilize the talents of our scientists and technicians, redeployed from missile and warheads, on research and development contracts, civil research and development to produce the new instruments and tools of economic advance both for Britain and for the war on poverty in underdeveloped areas of the Commonwealth and elsewhere. If we are able to do this, and I have no doubt that we can, we shall be able in a very few years to transform our society and, in the alliance, in our economic relations with the Atlantic community, and in the wider context of the north-south challenge, to put forward our full and so far unrealized strength, dependent on no one, but ready to play our full role in the interdependent community of free nations.

FIRST INSTALLMENT OF REPORT OF SECURITIES AND EXCHANGE COMMISSION ON RULES OF NATIONAL SECURITIES EXCHANGES AND NATIONAL SECURITIES ASSOCIATIONS

Mr. WILLIAMS of New Jersey. Mr. President, yesterday the Securities and Exchange Commission submitted to Congress the first installment of its report on the adequacy, for the protection of investors, of the rules of national securities exchanges and national securities associations.

On March 28 I urged the industry, the press, investors, and the general public to consider the report in a mature and sober manner, with careful reflection and thorough analysis. From what I have read, it appears that such an approach has been adopted by those in authority.

Conflicting reports on the Commission's findings may arise, however, and it is, therefore, proper that the general public have an opportunity to review the highlights of this report as set forth in Chairman William L. Cary's letter of transmittal to the President of the Senate and the Speaker of the House of Representatives.

Mr. Cary sets the tone of the SEC's report in the following paragraph:

> At the outset we emphasize that, although many specific recommendations for improvements in rules and practices are made in the report of the special study, the report demonstrates that neither the fundamental structure of the securities markets nor of the regulatory pattern of the securities acts requires dramatic reconstruction. The report should not impair public confidence in the securities markets, but should strengthen it as suggestions for raising standards are put into practice. Serious shortcomings are apparent and the report, of course, has concentrated on their examination and analysis. Yet it is not a picture of pervasive fraudulent activity and in this respect contrasts markedly with the hearings and findings of the early thirties preceding the enactment of the Federal securities laws. The study confirms the strength of those laws and the heightened sense of obligation of the financial community.

I ask unanimous consent that Mr. Cary's letter of transmittal be printed at this point in the Record:

There being no objection, the letter was ordered to be printed in the Record, as follows:

Securities and Exchange Commission,
Washington, D.C., April 3, 1963.
The President of the Senate.

Sir: I have the honor to transmit the first segment of the Report of the Special Study of Securities Markets. The report is submitted pursuant to section 19(d) of the Securities Exchange Act of 1934 (P.L. 87-196), which directs the Commission to make a broad study of the adequacy of investor protection in the securities markets.

I

At the outset we emphasize that, although many specific recommendations for improvements in rules and practices are made in the Report of the Special Study, the report demonstrates that neither the fundamental structure of the securities markets nor of the regulatory pattern of the securities acts requires dramatic reconstruction. The report should not impair public confidence in the securities markets, but should strengthen it as suggestions for raising standards are put into practice. Serious shortcomings are apparent and the report, of course, has concentrated on their examination and analysis. Yet it is not a picture of pervasive fraudulent activity and in this respect contrasts markedly with the hearings and findings of the early thirties preceding the enactment of the Federal securities laws. The study confirms the strength of those laws and the heightened sense of obligation of the financial community.

At the same time the report makes very clear that important problems do exist, grave abuses do occur, and additional controls and improvements are much needed. The tremendous growth in the securities markets over the past 25 years, and most particularly the increased public participation, imposed strains on the regulatory system and revealed structural weaknesses. Neither the securities acts, the Commission, nor the industry itself anticipated the problems arising from the entry of unqualified persons, the spectacular development of the over-the-counter market, the vast number of companies going public for the first time, or a variety of other striking changes. Some of these problems resulted from inadequacies in established enforcement machinery, both Government and industry. Others reflect patterns of conduct now tolerated, but which, upon exposure and analysis, appear incompatible with the public interest. Testimony to this effect has been given by many responsible members of the financial community, in their comments and most vividly in their adoption of higher standards of conduct without compulsion of law. It is these voluntary standards which regulation should reflect and make generally applicable.

The functions of this report and of any changes proposed are to strengthen the mechanisms facilitating the free flow of capital into the markets and to raise the standards of investor protection, thus preserving and enhancing the level of investor confidence. Raising capital from the general public is a marked feature of the American economic system. In this country there are now approximately 17 million shareholders. As the study attests, this phenomenon has been advanced and protected by the securities acts, a proven legislative achievement. Yet no regulation can be static in a dynamic society; unanticipated changes in the markets and the broader public participation should be accompanied by corresponding investor protection. The importance of the capital markets to our national economic progress does not permit anything less than the most fair and efficient operations. Government and industry regulation and the efforts of the financial community must continue to be directed against practices which undermine the integrity of the securities markets and which can only be harmful to the economic growth of this country and to the investors who furnish the funds for that growth.

While the report focuses upon shortcomings in the industry and in the self-regulatory authorities, in certain respects it is an express or implied criticism of the Commission as an institution. The Commission has not fully exercised its powers, nor coped effectively with all of the problems confronting it. There are undoubtedly several reasons for this. Important among these is the expansion of the securities markets, which renders exceedingly difficult the task of identifying and responding to a myriad of new problems while preoccupied with a heavy flow of administrative tasks. Furthermore, at times the Commission has been hampered by a lack of personnel or has concentrated its efforts on particular areas. Finally, in certain instances, statutory power has been lacking. But our job, like industry's, is not to rationalize inactivity but to initiate improvements. The report of the special study will be a catalyst in this process.

As a final prefatory comment, we should like to emphasize that this report is not a commentary on the level of securities prices, nor upon the investment merits of any particular company mentioned. These types of economic analyses have traditionally been outside the scope of the Commission's responsibilities.

II

The complete report of the "Special Study of Securities Markets" will be the most comprehensive of its kind in over 25 years. The examination of the securities markets and the writing of the report have been done by a separate group established in the Commission and designated the "Special Study of Securities Markets," under the supervision of Milton H. Cohen, Director. The special study was given freedom to analyze and point out problems as they appeared to it; in this respect, the judgments, analyses, and recommendations in the report are those of the special study and not the Commission. However, the Commission has worked very closely with the study throughout and has gone over every section of the report. We believe that the report is a thoroughly responsible document. We do not embrace every recommendation as our own, but we do accept them as a sound point of departure for proposals to the Congress, for rulemaking by the Commission and by the self-regulatory agencies, and for discussions with the industry. Like the study, we at the same time recognize the complexities and subtleties of the problems presented.

III

Transmitted here are chapters I through IV, and chapter IX. The remainder of the report, while nearing completion, is not available at this time essentially because of the scope of the undertaking. The Congress repeatedly made clear that the report should be broad and thorough. The study, with the support of the Commission and its operating divisions, has made every effort to carry out this mandate. However, the breadth of the obligation was not evident at the outset and a proper fulfillment necessitates some delay.

The chapters submitted deal with important and basic areas and practices in the securities markets. In many respects they disclose problems calling for vigorous and prompt responses by the Commission and the industry. The Commission will very shortly recommend to the Congress certain legislative proposals (to be discussed below) where the present statutory scheme appears inadequate. An important part of these reflects our continuing belief in self-regulation as an ingredient in protection of the investor. Certain deficiencies can be treated through rulemaking by either the Commission or the self-regulatory agencies. Still others can be resolved only by a more uniform and voluntary adoption of improved procedures by the members of the industry.

A

The report begins where regulation must begin—the point of entry into the business. It is self-evident that the standards of conduct of the securities industry are vitally dependent on the integrity and competency of its personnel. Obviously no system can be devised which eliminates all potential wrongdoers. But the report of the special study concludes that the minimal controls furnished by existing regulation are inadequate. Notable ease of entry is apparent under both Federal law and the rules of the National Association of Securities Dealers, Inc., the self-regulatory agency for the over-the-counter market. With the exception of the major exchanges, significant standards of character, competence, and minimum capital have not been generally imposed. Nor has attention been sufficiently directed to the unique problems of supervisors, such as branch managers, and research analysts. Furthermore, certain sectors of the industry, including most importantly certain distributors of mutual fund and real estate securities and also investment advisers, are not subject to the discipline of self-regulation. In addition, the present legislative scheme, in revolving around the firm as the regulated unit, provides an artificial and unsatisfactory means of focusing on the individual in the many instances where he is the appropriate object of disciplinary action. Finally, useful and needed intermediate sanctions, short of revoking the registration of a broker-dealer, are not available to the Commission.

We shall, therefore, recommend to the Congress legislative proposals in the following direction:

1. Authorizing standards of character, competence and financial responsibility as conditions for entry into the business, to be established and administered by the national securities associations, notably the NASD which will complement similar regulation by the exchanges of their members;

2. Requiring all firms and individuals to be subject to the authority of one of the self-regulatory agencies;

3. Granting the Commission direct disciplinary controls over individuals and perfecting NASD controls in this area; and

4. Providing the Commission with intermediate sanctions over firms and individuals.

B

A basic factor underlying the enactment of the Federal securities acts was recognition of the intricate nature and high liquidity of securities and of the corresponding duties necessarily assumed by those who deal in them. The heightened public participation in the securities markets severely tested the adequacy of controls, external and self-imposed, particularly in the area of selling practices and investment advice. The examples of sales techniques cited by the study show a striking spectrum: from the illegal operations of boilerrooms to the disciplined patterns of the responsible, reflecting elaborate supervisory procedures and voluntary codes of conduct. Even in the latter, which represent high standards of achievement, serious lapses have occurred. Yet it is their best formula which, if universally followed, would result in increased investor protection. Certain excesses also appear to have developed in the investment advisory materials of both broker-dealers and investment advisers, as evidenced by fanciful recommendations based on little more than mere rumor. Here again uniform application of the best industry practices would seem to be in order. In this area, legislation is not presently recommended. Powers exist in the self-regulatory institutions and the Commission to advance selling and investment advisory practices.

C

The mechanism, practices and rules for distributions in the securities markets are examined in the report with particular emphasis on the so-called "hot issue" phenomenon that accompanied the active and rising markets of the late 1950's and the early 1960's and involved primarily companies going to the public for the first time. A record flow of these new issues was another critical trial for both the regulatory pattern and industry practices; the findings of the report do not invalidate the general thrust of this pattern or whose practices. At the same time particular weaknesses have developed; their elimination should strengthen the distribution mechanism without impairing access to the capital markets. Most of these can be remedied by rules of the Commission and the NASD, with one important exception.

At present a prospectus containing business and financial information about a company must be delivered to the purchasers of the company's stock during a period of 40 days after a registered public offering of that stock. The findings of the report of the special study demonstrate that, particularly in the case of new issues, dramatic price movements may result from uninformed investor action and that maximum exposure of financial and public information is crucial to securing knowledgeable evaluation of these securities. The Commission will, therefore, recommend to the Congress that, in the case of new issues, the 40-day period be extended to 90 days or such shorter period as the Commission may prescribe by rule or order.

D

Much of the material submitted evidences the fundamental importance of adequate disclosure by issuers as a most vital means of investor protection. The report points out the broad range of problems and abuses in the securities markets, including improper selling practices, misleading public relations, irresponsible investment advice, and erratic "after markets" for new issues, which can be greatly mitigated by the more complete availability and dissemination of financial information. The report further demonstrates, as have prior studies, that the longstanding contrast in the disclosure-oriented protections afforded investors owning securities listed on national exchanges and investors owning securities traded in the over-the-counter market is not warranted. Issuers of over-the-counter securities, unlike their listed counterparts, are under no obligation to comply with the Commission's proxy rules or, except in certain cases, to furnish annual and periodic financial reports.

Another void in investor protection in the over-the-counter market relates to insider trading. An insider of a listed company must report his transactions in the company's stock; his short-swing trading profits in the stock are recoverable by the company; and he is prohibited from selling the stock short. The policies expressed in these sections should also be applicable in the over-the-counter market. The so-called sponsorship problem, where an underwriter makes an after-market in a stock he has underwritten and at the same time is represented on the board of directors of the issuing company, has been carefully analyzed by the study. Its findings indicate that the application of the insider trading provisions will not disrupt trading markets in over-the-counter securities, except perhaps in very limited instances which could be handled through exemptions on a case-by-case basis.

Accordingly, the Commission will recommend extension of those sections of the Securities Exchange Act of 1934 which provide for the filing of annual and periodic reports, compliance with the proxy rules, and protections against insider trading to certain companies whose securities are traded in the over-the-counter market. A phased program of coverage would gradually include all those companies with 300 or more stockholders. In the case of bank stocks, which appear to account for about 20 percent of the issues of the over-the-counter market, if Congress so desires, disclosure requirements could be administered by the appropriate Federal bank regulatory authorities in order to integrate these controls with the existing patterns of bank regulation.

E

An analysis of the over-the-counter market will be submitted in our complete report. At this time, however, we wish to inform the Congress that we shall propose a legislative recommendation essentially directed to the wholesale quotations systems of that market.

At present the National Quotations Bureau dominates the business of over-the-counter wholesale quotations. The bureau, a private corporation, is not regulated by any agency, Federal, State or self-regulatory. Despite the efforts of the bureau, which has operated with a conscientious regard for the responsibility which its function and dominant position entail, this crucial segment of the over-the-counter market has had inadequate controls; numerous abuses involving quotations have been perpetrated by broker-dealers. Moreover, developments in electronic data processing have foreshadowed the emergence of new and perhaps revolutionary quotation systems. In view of the vital significance which these systems can have to the functioning of the over-the-counter market, they should not be allowed to emerge without due regard to the welfare of the market and to the public interest.

Accordingly, the Commission will recommend to the Congress that operators of quotations systems, like the National Quotations Bureau, be required to register with the Commission and adopt and enforce rules of fair practice in the use of their systems, just as is presently the case with the self-regulatory agencies.

F

We have described a substantial part of the legislative measures which we shall recommend to the Congress this year. A few others will subsequently be proposed; a very important one of these might concern certain aspects of security credit regulation—which would be submitted only after full coordination with the Federal Reserve Board. Not all of the study's legislative recommendations in the chapters transmitted have been adopted by the Commission; these are the subject of our continuing study and may be proposed to the Congress at a subsequent date.

To secure the benefit of industry views on our legislative proposals, we shall immediately request leaders of the financial community to form liaison committees.

IV

The report of the special study is a major contribution to the understanding of the operations and problems of the securities markets. In its collection and analyses of data, it provides a thorough and responsible foundation for action. Furthermore, the enactment of Public Law 87-196 and the very existence of a special study have assisted in the creation of a more salutary environment and have resulted in numerous important developments. The American Stock Exchange has undergone an intensive reorganization. The New York Stock Exchange has commenced a program for improved controls over selling practices and initiated new qualification standards. The NASD has undertaken a comprehensive revision of its bylaws and rules of fair practice. Broker-dealers have reviewed and altered their systems of supervision. It would go too far to assert that all of these, and other numerous changes, are the direct products of the special study and of the initiating legislation. Yet it would be difficult to deny that their existence has at least produced a reevaluation of existing practices and procedures by the industry, as well as the Commission, which can only be beneficial. In other words, the financial community has taken the opportunity to make its own special study, with valuable consequences.

As has been pointed out throughout this letter, the report of the special study is only a prelude; it discloses many problems whose resolution will require the efforts of the Commission, the exchanges, the NASD, and the industry itself. To these we will now turn our attention. Our legislative recommendations to the Congress will be an important first element, indeed a prerequisite for needed improvements. However, much of the action may be taken through the self-regulatory agencies, through exercise by the Commission of existing powers and through the influence of leaders in the securities industry to raise standards.

In concluding, the Commission wishes to express its appreciation to the members of the financial community, the self-regulatory institutions and the numerous companies that fully cooperated with the special study. Many gave generously of their time and manpower in assisting the study to gather information and viewpoints.

The superlative efforts of the staff of the special study and its supervisors must be especially singled out. All worked tirelessly and with a fine understanding of the heavy responsibility they were obligated to discharge. The Commission was uniquely and most strongly served in having Milton H. Cohen as Director, Ralph S. Saul as Associate Director, Richard H. Paul as Chief Counsel, Sidney M. Robbins as Chief Economist, and Herbert C. Schick as Assistant Director. Not to be overlooked are the contributions to the study in counsel and data collection of many persons in the operating divisions and offices of the Commission.

By direction of the Commission.

WILLIAM L. CARY,
Chairman.

CUBA

Mr. KEATING. Mr. President, for many months the attention of this Nation has been fixed on the Caribbean area and in particular on the island of Cuba, where the Soviet Union has established a powerful military base. Last fall the Soviets installed medium and intermediate range missile bases, imported medium range missiles into Cuba and stationed bombers there, precipitating the most serious cold war threat since the days of the Berlin blockade. Under a quarantine procedure, supported by the Organization of American States, the United States was successful in forcing the withdrawal, so far as we know, of these weapons systems.

But, Mr. President, the overall Soviet threat to this hemisphere has not been withdrawn. A substantial Communist military base continues to exist only 90 miles from U.S. shores. Soviet troops and weapons are still there and so far as we know, are still being kept fully supplied. In my judgment, the people of the United States have no choice but to face this situation realistically and work out a course of action to meet it effectively.

I am convinced the American people and most of our Government officials share the same basic premises which I do in considering the Cuban situation:

First, the maintenance of a Soviet military base in Cuba is a persistent threat to world peace. Its removal by any means short of war would enhance prospects for world peace.

Secondly, Communist activities in Cuba and emanating from Cuba pose a special danger to the stability of the Western Hemisphere. Not only the security of the U.S. facilities, such as the Guantanamo Base and the Panama Canal, and the reliability of launching and communication facilities at Cape Canaveral, but also the internal stability of Latin American States are jeopardized by the continuing Soviet military presence in Cuba.

Thirdly, the Soviets, we can be sure, will not remove their forces and weapons from Cuba merely because we have asked that they do so. Only if the burden of their maintenance on this island, thousands of miles from the Soviet mainland, is made intolerable to them, will they consider the possibility of withdrawal.

Fourthly, the United States and the Organization of American States have the right and obligation to require the removal of a foreign controlled military base from the Western Hemisphere and to use all necessary measures to bring about such a removal.

These premises, I believe, form the basis for a common consensus on the part of the American people regarding Cuba. But, individuals may and do differ and offer contradictory views on the very difficult question on how to act to bring about the desired results. Many people in public life have spoken out on the subject. A number of Members of Congress have made specific recommendations. These range for instance, from the blockade or quarantine proposed by the distinguished Senator from Kentucky [Mr. COOPER], to the recognition of a Cuban government in exile, suggested by the distinguished Senator from Florida [Mr. SMATHERS].

There have, in fact, been many other proposals. I certainly do not claim for my own recommendations any particular infallibility; nor, of course, can I guarantee that my recommendations, if put into effect, would cause the Soviets to fade like mists from the Western Hemisphere. What I do offer, however, is my own analysis of the dangers that face us in Cuba, and, stemming out of that analysis, my own, personal views as to what course we can take in cooperation with other free world allies to bring maximum pressure to bear on the Soviets in Cuba.

Mr. President, these recommendations, which I shall be discussing today, are derived from a position paper on Cuba which I submitted on February 8 to Mr. John McCone, the Director of the Central

Intelligence Agency. This series of recommendations for U.S. action on Cuba was submitted to the President on the same day. It was agreed at that time that these proposals would not be made public until the President, the State Department, and others had an opportunity to review them.

A week and a half later—on February 19—I inquired whether it was at that time considered advisable to discuss publicly these recommendations. The next day I was advised by Mr. McCone that the President, of course, would not attempt to inhibit any Senator from discussing any matter, but that he felt that disclosure of these suggestions at that time might be harmful and might adversely affect the promised Soviet troop withdrawal, anticipated before mid-March. It was emphasized that the decision as to public disclosure of my proposals was entirely up to my own judgment.

Under the circumstances, however, I felt I should not go counter to the views of the Commander in Chief, regardless of whether I agreed with the rationale of his decision. Now that the middle of March has passed—indeed, the entire month of March—and a limited number of Soviet personnel have apparently been withdrawn, I see no further reason to maintain silence.

It has always been my view that constructive discussion of the Cuban situation is in the national interest and can contribute to the achievement of national unity and support for any effective program our Government ultimately adopts to eliminate Russian weapons and soldiers from this hemisphere.

Mr. President, this is not a time for lamenting and wringing of hands over Cuba. It is a time for a realistic review of the problems and a serious analysis of what can be done both in the short run and in the long run to meet the threat posed by a Soviet base in this hemisphere.

For that reason, I have decided to outline and discuss my policy recommendations at this time. I recognize that there are no pat solutions to the problem of Soviet Cuba; and offer my proposals only in the hope that they have sufficient merit to be worthy of study. Certainly, they will not be easy to implement and their effect may not be evident for many months. Nevertheless, I believe that they do offer an important alternative which should be seriously weighted and attempted before any more drastic and potentially more dangerous measures are considered.

First and foremost, let no one deceive himself into thinking that the danger is Cuba. Even Castro's Cuba, a country of 6 million people is not a military threat to the United States. And Castro as the head of such a state is no more able seriously to menace the United States than any other Latin American dictators, past or present, who have put their own personal ambitions and megalomania ahead of the welfare of their impoverished citizens.

No, Mr. President, the threat is not Cuba or Castro. The threat is the Soviet Union and Khrushchev. Those who try to conceal this unpleasant fact are not doing any service to the United States or the free world. They are only hiding their own heads in the sands of hope while the rough winds of reality continue to wreak havoc.

Mr. CLARK. Mr. President, will the Senator from New York yield; or does he prefer to finish his speech, first?

Mr. KEATING. I prefer to finish my speech; and then I shall be happy to yield.

Mr. President, surely this unpleasant truth should be clear by now. In fact, in his latest public utterance Castro appears to have emphasized the point himself. He revealed that the Soviets had taken the initiative and had requested the Cuban Government to permit the construction of MRBM and IRBM sites last fall. If this is true, the Soviets were not yielding to Cuban pressures in bringing their strategic missiles, as some Kremlinologists and Cubanologists have suggested. They were bringing the pressure to bear themselves, in order to menace to Western Hemisphere more directly. Of course, we cannot be positive that Castro is speaking the truth about anything; but those revealing words have not yet been disproved. They should be a warning to all who still choose to pretend that 180 million Americans do not need to pay any heed at all to 6 million Cubans. At this time the 6 million Cubans have, and deserve, the deep sympathy of virtually the entire hemisphere, but it is the 215 million Soviets and the power of Soviet Russia behind them that should be of concern to all of us.

Our ultimate objective, then, in dealing with Cuba, must be, as outlined in my position paper delivered on February 8:

First. The prevention of the spread of Communist influence and Soviet control from Cuba to other parts of the hemisphere.

Second. The removal from Cuba of Soviet-bloc forces, weapons, and other military equipment.

Third. The establishment of self-determination for the people of Cuba, through a freely elected constitutional government.

To block the spread of Soviet influence from Cuba, we must work closely with the Organization of American States. Meetings such as the recent Costa Rican gathering can be useful in devising methods to track Soviet agents throughout the hemisphere and in devising procedures for preventing the export from Cuba of propaganda, weapons, funds, and other equipment to promote subversive activities. This objective must not be subordinated to the enunciation of eloquent, long-range economic ideas, important indeed as that is. The United States must not measure the success of an international gathering by the amount of U.S. aid that is promised.

There are still too many ways for Communist influence and techniques to enter this hemisphere right now for us to be able to ignore the immediate threat. Tighter security is required in many areas.

Mexico, which still permits weekly Cubana Airline flights between Havana and Mexico City—parenthetically it should be said there used to be two a week; so it is an improvement to have them now only weekly—and is the principal gateway between Cuba and Latin America, was not even a party to the recent Costa Rican Conference. Other nations have under consideration the continuation of routes—which were discontinued at the time of the October crisis—between Cuba and the continent. Somehow, even U.S. citizens have found ways of reaching Cuba, so that they can return and can deliver glowing accounts of the supposed successes of communism.

Five nations—Mexico, Brazil, Chile, Uruguay, and Bolivia—still have Cuban diplomatic missions that are hives of Communist activity. Cuban diplomats transport anything from guns to propaganda broadsides and hard cash. These routes, by which communism is exported throughout the Western Hemisphere, can be, and must be, better controlled than is the case today.

The recent upheaval in Guatemala and the disturbances in Argentina illustrate the continuing instability in Latin America which increases the danger of the export of subversion and violence from Cuba. This is a particularly acute problem among the smaller nations of Central America. Admittedly, economic, social, and even political conditions in some of these countries are not what they might be, and add fuel to leftist propaganda. Admittedly, United States aid through the Alliance for Progress and economic coordination through a Central American Common Market will be useful in the long run in defeating Communist propaganda. But the immediate threat is subversion, violence, and revolution. When a hoodlum grabs you by the throat, you do not react by shouting, "Federal aid for urban renewal."

In my view, the isolation of Cuba should be the most important of the O.A.S. objectives at this time. I believe it can be accomplished by—

First. Setting up O.A.S. inspection teams to monitor and inspect all ships and planes on arrival in Latin American countries from Cuba.

Second. A progressive, gradual policy of curtailing flights and passenger steamship routings between Cuba and other Latin American countries.

Third. Establishment of a complete trade boycott between Cuba and other Latin American countries.

Fourth. Denying Latin American cargoes or refueling facilities to any ships or planes trading with Cuba.

Fifth. Withholding of U.S. assistance to Latin American countries which persist in supplying or strengthening the links between Soviet Cuba and the rest of the hemisphere.

These recommendations were, as I have said, first presented to the President on February 8—nearly 2 months ago. Since that time, some of the steps I suggested in whole or in part, as well as some others, have been taken by the U.S. Government. Both at the request of Latin American nations and under U.S. guidance, we have tightened up on procedures for keeping track of subversive agents throughout the hemisphere. Surveillance over Castorist supporters has been greatly stepped up. In my judgment, all these moves are in the right direction.

Others of these proposals, such as a trade boycott, are in actual fact being very gradually realized by the increasing inability of the Cubans to offer goods for export or payments for imports. Some, such as the withholding of U.S. AID funds, seem to be more honored in the breach. But it is my convinced judgment that measures of this sort, seriously proposed and emphasized by the U.S. Government, can be forged into an effective OAS program against Cuba. I applaud the steps taken to date; and I hope they will be followed by some of the other measures proposed, as well.

Certainly there will be some opposition from Communist groups in Latin American countries. Some Latin American countries will be reluctant, as Mexico and Brazil have already been, but the point is that the United States must offer genuine and effective leadership. As President Garcio Fascio of Costa Rica, President of the OAS Council, pointed out recently on "Meet the Press":

> The OAS cannot have a definite policy without knowing what the policy of the United States is * * * We cannot take any step that the U.S. Government is not prepared to take because it is the one who has the responsibility of the cold war and the only one who can confront the military consequences of a clash with the Russians.

When the United States took the lead, as we did in October, the Latin American countries offered 100-percent cooperation. When we, on the other hand, deliberately downgrade the Soviet menace and talk only about economic development for the next decade, important as that is in the long run, then we do not get cooperation. That is one of the big lessons of the Cuban crisis. It must be taken to heart as part of an integrated and determined policy to rid this hemisphere of the Soviet military base that Cuba today represents.

OAS action, however, is only a part of the program which I propose and in many ways it is the lesser part. The real menace is not Castro or Cuba, but the Soviet Union. We must bear in mind at all times the fact that our principal objective is not merely to contain Castro but to effect the removal of Soviet troops and weapons. To dislodge Khrushchev from Cuba will require the cooperation of NATO and the entire free world. This, too, is possible, once our Government impresses upon the world what the real dangers are; once we make clear to the world that we are not afraid of a Cuban invasion of the United States any more than we feared a North Korean invasion of the United States in 1950 or a North Vietnamese invasion of the United States in 1962.

What we do fear and what we and the whole free world most oppose is a progressive takeover, as we saw in Eastern Europe, as we have seen in Laos, and as we may see elsewhere, under the supposed guise of legality, by a Communist power and dictatorship that will stifle the voice of freedom entirely.

Cuba today is isolated in geography from the rest of the Communist empire. But it is not isolated in the history of Communist expansion. It must be seen and handled in the whole, regrettable, unfortunate, but necessarily present context of the cold war.

The strongest weapon that NATO and the free word nations possess in this struggle is economic. The basic strength of the free enterprise system and the basic weakness of the totalitarian system are pitted against one another. Our strongest weapons in peacetime as in war are the muscle and sinew of our economy. Yet in the so-called peaceful competition between East and West, the Soviets are using every economic trick they know, while we, in effect, have too often ignored what we can accomplish by our genuine economic impact.

Particularly, where Cuba is concerned, the economic resources of the United States, of NATO, and of the free world could be mobilized with devastating effect. We could make the economic burden on the Kremlin for the support of their Cuban base well-nigh intolerable. Specifically, I propose a step by step program of economic pressure, on the Soviet Union and the Soviet bloc, which I am convinced would do more to halt Communist expansion than any other nonmilitary method. Until the Cuban people are restored to freedom, we should, first, forbid U.S. cargoes of any sort, Government or private, to be carried on ships or shipping lines that have been used since January 1963 to supply Cuba.

Second, we should insure that no U.S. shipping facilities or cargoes anywhere in the world are available for any ships or shipping lines that have supplied Cuba.

Third, we should initiate NATO regulations to provide that no NATO ships carry cargoes to Cuba.

Fourth, we should initiate NATO action to insure that no NATO cargoes will be available to ships supplying Cuba.

Fifth, we should deny U.S. nonmilitary aid to any nation providing shipping, trading, or refueling facilities or goods for Cuba.

Sixth, we should cut off NATO sales to the entire Soviet bloc of any goods or equipment of a type which the Soviet bloc is supplying Cuba, except possibly food and medicine.

Seventh, we should initiate further restrictions on NATO trade and, where possible, institute a complete free world boycott on trade, with the Soviet bloc, so long as any Soviet soldiers or weapons remain in Cuba.

Mr. President, let me again say that I know it will not be easy to secure agreement for such measures. It will require powerful influence and serious persuasion on the part of the U.S. Government. I also recognize that even so these measures may not be sufficient to force an immediate Soviet withdrawal. Even the most severe economic pressure and trade restrictions can be withstood by the Soviet Union for some time. Nevertheless, I believe they must be the first step in a concentrated policy to make the continued Soviet occupation of Cuba intolerable.

Only after measures of this kind have been attempted strongly and severely over a reasonably long interval, barring some unforeseen exacerbation of the situation, should the United States seek to move further. Only then, in my judgment, should the United States consider reconstitution of an international quarantine around the island to prevent additional Soviet economic or military entrenchment in Cuba. Only then, should the United States seek OAS and NATO cooperation to; first, institute a quarantine on shipments by the Soviet bloc or other countries of any additional military equipment to Cuba; and, second, if even this fails to accomplish our objective, institute a quarantine on shipments by the Soviet bloc or other countries of any petroleum products to Cuba.

To some extent we are moving in this direction right now. The United States has put into effect limited shipping restrictions. We have persuaded some of our allies to do the same.

Yet in the months of January, February, and up to about the middle of March, 39 ships from non-Communist nations landed in Cuba. These included 14 British—counting 2 visits by 1 ship—14 Greek—counting 2 visits by 1 ship—4 Norwegian, 3 Italian, 1 Japanese, 1 Lebanese, 1 Spanish, and 1 Danish. On March 16, the Greek Government forbade Greek ships, excluding those on long-term charter, to trade with Cuba, an act which I heartily commend.

Although I have been asked not to reveal the exact dates, more of these ships arrived in February than in January, and indications are that March figures also will not reflect any decline from the 2 previous months; in fact, more probably another slight increase. None of these ships carried any U.S. cargo in the month of January because of the east coast dock strike. Only three that I am aware of carried U.S. cargo in February or March either—but this was less the result of official Government action than of the patriotic determination of the International Longshoremen's Association.

There has also been a sharp drop in overall free world purchases from Cuba, from $789 million in 1958 to $81 million for the first 6 months of 1962; and in Cuban purchases from the free world, from $771 to $41 million for the same periods. This is primarily due to the limited ability of the Cubans to export or to finance imports in view of their deals with the Soviet Union and their decline in agricultural production.

As far as trade between the Soviet bloc and NATO and other free world countries is involved, this is an area of increasing importance, which in my judgment the United States has consistently underrated. It is a subject I have spoken on at some length in the past, several times, on the Senate floor.

It is a well-known fact that the Soviets gain a great deal more than the Western nations from the current trends of East-West trade. Immediately after Stalin's death in 1953, Soviet economic experts determined that there were many areas in which they might profit significantly from increased trade with the West. Particularly in order to meet the Soviet requirements for rapid industrial growth, the Communists turned to Western Europe.

Communist-bloc imports between 1953 and 1960 from the industrialized countries of the West increased from $1.4 to $4.4 billion. Sixty to ninety percent of Soviet imports from European countries consisted of metals, metal shapes, transportation equipment, machinery, complete plants, and other goods representative of an advanced Western technology. Inevitably such items as electronic equipment for communications and control, precision machine tools, industrial handling equipment, railroad and sea transportation equipment, mills for sheet and strip steel, electric power equipment, and large diameter pipeline contributed greatly to Soviet industrial development. They enabled the Soviets in many cases to skip lengthy and expensive research and development programs. And these items help the Soviets in their efforts to "leap-frog" Western technological progress.

What does the West get in return? First of all, it must be admitted that European countries see the Soviet Union primarily as a market for their manufactured goods and, therefore, ultimately a source of jobs. What the European nations actually buy in return is to a large extent Soviet oil and petroleum products. These products could, of course, easily be purchased from Middle Eastern countries or from Latin America but at a somewhat higher price.

So, in effect, what is happening right now is that present East-West trade patterns provide the Soviets with what they want most in the way of Western industrial equipment and know-how. At the same time, it provides them with an important level where jobs are concerned in key west European countries. The French experience has indeed been instructive, for when the French coal miners went on strike, the Soviet Union canceled coal deliveries to France, already scheduled and contracted for, to demonstrate what they called "socialist solidarity" with the striking miners. Thus the Soviets used their trade position deliberately to influence the domestic economy and politics of France. In short, it should be completely clear that it is the Soviets and not the Western nations which gain by existing trade arrangements. Instead of using our powerful trade economic weapons to our own advantage, we are using them to help the Soviets. To cope with the present Cuba crisis we must use every means in our power to reverse this trend, to bring pressure to bear through trade and economic measures. The Soviets know how dependent they are on the industrial nations of the West. We are foolish to ignore this important source of economic power.

Specifically, I am concerned about the lack of coordination within NATO on trade controls with the Communist bloc.

I am concerned about the increasing sales of Soviet oil at cutrate prices, to create a market on which the industrial countries of Western Europe may come to depend.

I am concerned over the continued export to the Soviet Union of oil pipeline and other equipment that helps the Soviets to undermine Western oil companies, free world oil producing nations, and industrial security and aids them in their program of economic and political penetration.

I am concerned over the continued sale and transfer to the Soviet bloc of Western technology which the Soviets do not now possess.

In all these areas where the free world is strong we are literally selling our strength at a discount for Russian rubles.

Last year after considerable debate, an amendment to the Export Control Act was adopted of which I was the author. It provided:

> The Congress further declares that it is the policy of the United States to use its economic resources and advantages in trade with Communist-dominated nations to further national security and foreign policy objectives of the United States.
>
> Such rules and regulations shall provide for denial of any request or application for authority to export articles, materials, or supplies, including technical data, from the United States, its territories and possessions, to any nation or combination of nations threatening the national security of the United States, if the President shall determine that such export makes a significant contribution to the military or economic potential of such nation or nations which would prove detrimental to the national security and welfare of the United States.

This is now the law of the land and United States officials are obligated to abide by this language and this intent in carrying out the provisions of the Export Control Act.

In our dealings with other free world countries through the foreign aid program, we are equally lax in consideration of the cold war economic competition which we are facing. We provide aid to countries that sell strategic goods to the Communist bloc and in some instances our aid has even helped other countries build up powerful military forces with Soviet training and equipment.

Last year the Congress adopted an amendment to the foreign aid bill which I offered, providing as follows:

> It is further the sense of Congress that in the administration of these funds great attention and consideration should be given to those countries which share the view of the United States on the world crisis and which concentrate their own resources on economic development rather than on Communist-supported military or propaganda efforts directed against the United States or against other countries receiving assistance under this act.

This, also, is now the law of the land and should be the basis for consideration and decisions made to implement the foreign aid program.

In short, it is my deepest conviction, over years of study and attention to this issue of trade with the Soviet bloc that the greatest power of the free world is economic and that we are both neglecting and abusing that power. While the Communists thrust their aid like a weapon into the heart of the free world, some of our allies tend too often to barter freedom for a few pounds and shillings of profit.

In the particular case of Cuba, I believe that only a firm and determined policy will lead to Soviet withdrawal. The steps I have recommended are severe—admittedly so—but they are infinitely preferable to military force. We must use our economic might. We cannot hope to oust the Soviets with our right hand, as it were, tied behind our back. My recommendations at no point call for military action against Cuba.

The longer we delay effective action, the more difficult it will be to blunt the Communist drive in this hemisphere. Certainly risks are involved in an effort to engineer a Soviet retreat. Certainly the Kremlin would prefer to move forward than backward. But there are even greater risks if we do nothing.

The most difficult aspect of the programs I have outlined, I am well aware, will be to obtain the necessary understanding and cooperation of other free world countries. It will be possible only when we ourselves determine to face the dangers squarely and to discuss them in their full extent. Continued efforts to minimize the threat, even consciously to distract attention from it with plans, however meritorious, for the next decade, instead of now, will make it impossible to generate the united action and determination necessary for success.

We have in our power the methods and the means to conduct an effective policy toward Cuba.

If we use our economic strength, today, against the Communists, to promote a Soviet withdrawal from Cuba, we will be in a far stronger position tomorrow to make our economic strength work for Latin America through the Alliance for Progress and similar measures. If we do not use our strength efficiently against the Soviets today, we may find, as we are even now finding in South Vietnam, for instance, that it will be infinitely more costly and more difficult to achieve our objectives in the long run.

ADJOURNMENT TO 9 A.M. MONDAY, APRIL 8, 1963

Mr. KEATING. Mr. President, pursuant to the order heretofore entered, I move that the Senate now stand in adjournment until 9 o'clock next Monday morning.

The motion was agreed to; and (at 4 o'clock and 34 minutes p.m.), under the previous order, the Senate adjourned until Monday, April 8, 1963, at 9 a.m.

NOMINATIONS

Executive nominations received by the Senate April 4, 1963:

U.S. DISTRICT JUDGE

John M. Cannella, of New York, to be U.S. district judge for the southern district of New York, vice Irving R. Kaufman, elevated.

Charles B. Fulton, of Florida, to be U.S. district judge for the southern district of Florida. (A new position.)

UNITED NATIONS

Edwin M. Martin, of Ohio, Assistant Secretary of State for Inter-American Affairs, to be the Representative of the United

States of America to the 10th session of the Economic Commission for Latin America of the Economic and Social Council of the United Nations.

Walter M. Kotschnig, of Maryland, to be the Representative of the United States of America to the 18th plenary session of the Economic Commission for Europe of the Economic and Social Council of the United Nations.

Diplomatic and Foreign Service

Bryan R. Frisbie, of California, for reappointment in the Foreign Service as a Foreign Service officer of class 3, a consul, and a secretary in the diplomatic service of the United States of America, in accordance with the provisions of section 520(a) of the Foreign Service Act of 1946, as amended.

Guy Chandler Mallett, Jr., of Florida, for appointment as a Foreign Service officer of class 3, a consul, and a secretary in the diplomatic service of the United States of America.

William F. Miller, of Massachusetts, for appointment as a Foreign Service officer of class 4, a consul, and a secretary in the diplomatic service of the United States of America.

The following-named Foreign Service officers for promotion from class 8 to class 7:

Andrew F. Antippas, of Massachusetts.
David E. Biltchik, of New York.
Kenneth E. Block, of Maryland.
Paul H. Boeker, of Ohio.
Stephen W. Bosworth, of Michigan.
Kenneth L. Brown, of California.
Richard Irving Burnham, of New York.
Francis R. Campbell, of Minnesota.
James R. Cobbledick, of Connecticut.
Gerald de Santillana, of California.
Jerrold Mark Dion, of Washington.
Richard A. Dugstad, of Virginia.
William F. Eaton, of Maryland.
Frederick D. Elfers, of New York.
David A. Engel, of New Jersey.
David J. Fischer, of Minnesota.
Donald Keith Guthrie, of New Mexico.
Benjamin Hill Hardy III, of Virginia.
Jean J. Hediger, of New Jersey.
Miss Audelia V. High, of Illinois.
Robert W. Holliday, of Texas.
Kenneth C. Keller, of Idaho.
Edmund H. Kelly, of Ohio.
Richard F. King, of Louisiana.
C. William Lafe, of Pennsylvania.
William L. Lee, of California.
Hugh C. Lobit, of Texas.
Mark McCormack, of Pennsylvania.
Harry M. Montgomery, Jr., of New Jersey.
Bert C. Moore, of Ohio.
Glenn A. Munro, of Maryland.
Benjamin R. Parks, of Pennsylvania.
Charlton M. Pettus, of Missouri.
Allen Van Potts, of Utah.
Jerrold C. Rodesch, of Wisconsin.
Walter F. Schepp, Jr., of New York.
Merle W. Shoemaker, of Pennsylvania.
N. Shaw Smith, of Virginia.
Charles T. Sylvester, of Rhode Island.
Daniel Taher, of New Jersey.
Raymond J. Wach, of Ohio.
Haven N. Webb, of Tennessee.
John D. Whiting, of Wisconsin.
Thomas Edward Williams, of Kansas.
Richard L. Wilson, of Iowa.
Miss Hanna W. H. Woods, of Arkansas.
Ronald E. Woods, of Michigan.

The following-named persons for appointment as Foreign Service officers of class 7, vice consuls of career, and secretaries in the diplomatic service of the United States of America:

Norman L. Achilles, of Pennsylvania.
Evan R. Berlack, of New York.
Stephen M. Block, of Connecticut.
Miss Ann P. Campbell, of Connecticut.
Richard C. Devine, of New York.
Robert Duncan Emmons, of California.
Robert P. Goold, of the District of Columbia.
John P. Jurecky, of Illinois.
Richard L. McCormack, of Florida.
Cameron H. Sanders, Jr., of New York.
Miss Mary J. Sommer, of Connecticut.
Miss Lenore E. Westfahl, of Wisconsin.

The following-named persons for appointment as Foreign Service officers of class 8, vice consuls of career, and secretaries in the diplomatic service of the United States of America:

Richard C. Brown, of New Mexico.
James R. Bullington, of Tennessee.
Francis S. Hall, of New York.
James M. Hawley, III, of West Virginia.
Robert E. Lamb, of Georgia.
David F. Lambertson, of Kansas.
Melvyn Levitsky, of Iowa.
Edward W. Lollis, II, of Indiana.
Stephen Harwood Miller, of Pennsylvania.
Donald E. Mudd, of the District of Columbia.
Nicholas M. Murphy, of New York.
Louis V. Riggio, of New York.
Philip McPherson Rudisill, of Georgia.
Thomas A. Schlenker, of California.
John F. Simmons, Jr., of the District of Columbia.
Rufus Grant Smith, of New Jersey.
Dennis L. Thompson, of Idaho.
Thomas J. Wajda, of Ohio.

The following-named Foreign Service Reserve officers to be consuls of the United States of America:

Warren H. Brown, of New York.
Archie Davies, of Florida.
William B. Davis, of Michigan.
Francis T. Donovan, of Pennsylvania.
George Gurow, of Illinois.
H. Henry Heintzelman, of Maryland.
John F. Hogan, Jr., of Maine.
Rene Andrew Lutz, of Maryland.
James A. McGinley, III, of Florida.
John A. Mason, Jr., of Pennsylvania.
E. Bruce Miller, of Pennsylvania.
George W. Porter, of Louisiana.
Albert F. Reynolds, of Virginia.
Robert B. Sandin, of Virginia.
James A. Scott, of Maryland.
John W. Shirley, of Maryland.
Calvin M. Smyth, of Virginia.
Ernst A. Van Es, of South Carolina.
Francis E. Ward, of Rhode Island.
David E. West, of Virginia.

The following-named Foreign Service Reserve officers to be consuls and secretaries in the diplomatic service of the United States of America:

Ned P. Holman, of Oklahoma.
Robert L. Smith, of Virginia.
Alexander J. Zeffer, of California.

The following-named Foreign Service Reserve officers to be vice consuls of the United States of America:

Dino J. Caterini, of Ohio.
Ernest J. Chiocca, of Virginia.
Jeff Corydon, III, of Maryland.
James R. Fees, of Washington.
Robert E. Knopes, of Maryland.
Theodore Kobrin, of Connecticut.
Bruce R. Koch, of Pennsylvania.
Jacques A. Prindiville, of Massachusetts.
Ismael Rivera, of the District of Columbia.
Wendell J. Roye, of New York.

The following-named Foreign Service Reserve officers to be secretaries in the diplomatic service of the United States of America:

Francis L. Albert, Jr., of the District of Columbia.
John C. Bonnet, of Virginia.
Charles G. Cogan, of Massachusetts.
James V. Joyce, of Virginia.
William B. King, of the District of Columbia.
Robert H. Lupton, of New York.
Charles A. Mann, of North Carolina.
Clare E. Petty, of Maryland.
Peter Ringland, of Maryland.
Harold Shapiro, of California.
Charles D. Stewart, of Michigan.
Serge Taube, of Virginia.
Joseph Stanley Toner, of Virginia.
Thomas A. Twetten, of Iowa.
Raymond Villemarette, of Louisiana.

CONFIRMATIONS

Executive nominations confirmed by the Senate April 4, 1963:

Department of State

W. Averell Harriman, of New York, to be Under Secretary of State for Political Affairs.

Board of Parole

James A. Carr, Jr., of Massachusetts, to be a member of the Board of Parole for the term expiring September 30, 1968.

Homer Lester Benson, of Indiana, to be a member of the Board of Parole for the term expiring September 30, 1968.

HOUSE OF REPRESENTATIVES

Thursday, April 4, 1963

The House met at 12 o'clock noon, and was called to order by the Speaker pro tempore, Mr. Albert.

The SPEAKER pro tempore laid before the House the following communication from the Speaker:

April 4, 1963.

I hereby designate the Honorable Carl Albert to act as Speaker pro tempore today.

John W. McCormack,
Speaker of the House of Representatives.

PRAYER

Dr. Arthur M. Romig, D.D., Presbytery executive, Presbytery of Washington City, Washington, D.C., offered the following prayer:

God of grace, God of glory, whom we know as Father, Thy name we adore; Thy purposes we would fulfill. Look down in mercy upon this company assembled. With knowledge of our weakness we seek Thy strength; in knowledge of our limitations we beseech Thine infinite power.

Lead us from mere prudence into venturesome faith; stretch our vision from the narrow horizons of human prejudice to the larger view of divine righteousness; and grant us the ability and courage to translate our sensitivity to human need into laws and acts that would make real in the lives of the people of this great Nation the divine purpose of Thy great goodness.

Hear our prayer and grant us Thy peace, dear Father. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGES FROM THE PRESIDENT

Sundry messages in writing from the President of the United States were communicated to the House by Mr. Miller, one of his secretaries, who also informed the House that on the following dates the President approved and signed bills of the House of the following titles:

On March 28, 1963:

H.R. 2438. An act to extend the induction provisions of the Universal Military Training and Service Act, and for other purposes.

On April 2, 1963:

H.R. 212. An act to amend section 904, title 38, United States Code, so that burial allowances might be paid in cases where discharges were changed by competent authority after death of the veteran from dishonorable to conditions other than dishonorable; and

H.R. 2085. An act to amend the Internal Revenue Code of 1954 to provide that the deduction for child care expenses shall be available to a wife who has been deserted by and cannot locate her husband on the same basis as a single woman.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. McGown, one of its clerks, announced that the Senate had passed, with amendments in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 4715. An act to incorporate the Eleanor Roosevelt Memorial Foundation, Inc.

DUAL RATE CONTRACTS

The **SPEAKER** pro tempore. The Chair desires to announce that pursuant to the authority granted the Speaker on Wednesday, April 3, 1963, the Speaker did on that day sign the following enrolled bill of the Senate:

S. 1035. An act to extend the provisions of section 3 of Public Law 87-346, relating to dual rate contracts.

COMMITTEE ON RULES

Mr. **BOLLING**. Mr. Speaker, I ask unanimous consent that the Committee on Rules may have until midnight tonight to file certain privileged reports.

The **SPEAKER** pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

COMMITTEE ON BANKING AND CURRENCY

Mr. **BOGGS**. Mr. Speaker, I ask unanimous consent that the Committee on Banking and Currency may be permitted to sit during general debate on today, April 4, Friday, April 5, Monday, April 8, and Tuesday, April 9.

The **SPEAKER** pro tempore. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

SECRETARY OF DEFENSE McNAMARA

Mr. **STAGGERS**. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The **SPEAKER** pro tempore. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

Mr. **STAGGERS**. Mr. Speaker, I want to associate myself with the many men and women who are rising in approval and commendation of our Secretary of Defense. Secretary McNamara has brought honor and distinction to a department that is easily the most important section of the executive branch of our Government today. It is vital to the adequate defense of our Nation and, indeed, to our survival in a hostile world, that this Department be headed by a man capable of directing and controlling the most powerful military machine in all history. Mr. McNamara has demonstrated a variety of qualities too seldom found in an executive carrying so much responsibility: a detailed understanding of the many elements which make up his job; unquestioned integrity; a willingness and ability to make quick decisions based on exhaustive study; a clarity in explaining the reasons for his decisions; a resolute courage in defending his decisions. The Nation is fortunate that it can enlist the services of such a stanch and able American in this hour of need. His conduct of his office leaves no opening for any proper political or industrial criticism. Informed sources both at home and abroad agree as to the brilliance of his performance, as well in the matter of conserving national resources of money and energy as in the more important matter of perfecting our military capabilities. I call upon all good Americans to offer fitting tribute to an official who is wise and farsighted, alert and active, faithful to his trust, and a patriot in every sense of the word. Such a tribute can be best expressed in strong approval of the course Mr. McNamara has been following in these difficult days.

FEDERAL TAX ON GAMBLERS IS A FAILURE—LET US HAVE A NATIONAL LOTTERY

Mr. **FINO**. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The **SPEAKER** pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. **FINO**. Mr. Speaker, after 10 long years, we should be convinced that the 1951 Federal tax on gamblers is a real and complete flop. The recent report from the Treasury Department proves that this tax has failed not only as a revenue raiser but as a gambling stopper as well.

When Congress imposed this 10 percent tax, which the Supreme Court has interpreted as governmental recognition of gambling in the United States, it was then believed that it would pump into the Treasury $400 million a year based on estimates that the gamblers' annual take was $4 billion.

However, Mr. Speaker, in 10 full years, gamblers have paid into the coffers of our Treasury a little over $8 million for their stamps and about $73 million out of their earnings. This total collection of $81 million is a far cry from what should have been collected by Uncle Sam.

Although gambling in this country has grown into a $50-billion-a-year industry, only about 16,000 persons have confessed being gamblers by paying their Federal wagering tax.

It is difficult, Mr. Speaker, for our American taxpayers to understand the double role played by our Government in assuming a sanctimonious attitude about gambling while taxing gamblers, gambling winnings and admissions to race tracks.

Is it not time that we stopped all of this hypocricy and really faced sound reality?

It is difficult to understand our stubborn refusal to recognize and capitalize on the normal gambling spirit of the American people when we know that gambling moneys are being siphoned off by organized crime syndicates.

Mr. Speaker, there is only one way to strike a real blow at the underworld and that is through a national lottery which will not only solve the problem of gambling and crime but would add over $10 billion a year to our own tax revenues.

I assure you, Mr. Speaker, that a national lottery will never be a flop as a revenue raiser.

INVESTIGATION OF U.S. STATE DEPARTMENT

Mr. **ADAIR**. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The **SPEAKER** pro tempore. Is there objection to the request of the gentleman from Indiana?

There was no objection.

Mr. **ADAIR**. Mr. Speaker, I recently presented to the House of Representatives a number of petitions bearing upward of 20,000 signatures urging the Congress of the United States to conduct a complete and impartial investigation of the U.S. State Department. These petitions and almost all of the signatures thereon came from Fort Wayne, Ind., and indicate a deep and growing concern with respect to the Department of State.

At the same time microfilm copies of these petitions were sent to the President of the United States and the matter was brought to the attention of the chairman of the Committee on Foreign Affairs.

There are many things which contributed to the large number of signatures upon these petitions and the fact that a considerable portion of those who signed have emphasized their views in letters or personal conversations with me. These people are loyal, patriotic Americans, who desire above all that our Nation maintain itself free from the influences of communism. As they look about the world and see conditions in country after country they become understandably concerned. Particularly, are they distressed over the fact that there is in Cuba a Communist base which threatens not only our own Nation militarily and from the standpoint of propaganda, but is a menace also to virtually every republic in the American hemisphere. We have seen how Cuba has become a base for propaganda activities, and there is now a well-grounded fear that it may become an arsenal from which pro-Communist elements throughout Latin America are to be supplied.

This is only one of many illustrations which could be used, and I am sure that the intent of the signers of these petitions is to strengthen and preserve our

American Republic. I commend them to the attention of the Members of this House and urge that appropriate action be taken.

U.S. ACCOMPLISHMENTS IN THE NUCLEAR POWER FIELD

Mr. HOSMER. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD and to include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. HOSMER. Mr. Speaker, outstanding progress has been achieved by the Nation's nuclear power program in the brief decade following the passage of the Atomic Energy Act in 1954. No nation in the world has matched U.S. leadership in the development of this new source of energy. It is to the fullest credit of the Atomic Energy Commission, the Joint Committee on Atomic Energy, and American industry, that technical progress and practical achievement have brought nuclear power to the threshold of economic reality.

Following upon the very substantial research and development efforts of the AEC toward the realization of economic nuclear power, 125 investor-owned electric utility companies are today participating in 1 or more of 25 nuclear power projects in the United States. These projects include—

Eight stations in operation with capacities ranging from 4,000 to 275,000 kilowatts, and totaling some 750,000 kilowatts.

Six stations under design or construction with capacities ranging from 17,000 to 325,000 kilowatts, and totaling some 550,000 kilowatts.

Four stations under preliminary planning or contract negotiation with capacities ranging from 395,000 to 1,000,000 kilowatts, and totaling some 2,300,000 kilowatts.

Seven utility group projects involve studies and research and development.

These projects are summarized in table I and participating utilities listed are discussed in table II. Details respecting the projects are as follows:

First. Santa Susana plant consists of the AEC's sodium reactor experiment, and the Southern California Edison Co.'s experimental station. The reactor plant was designed, constructed, and is being operated for the AEC by Atomics International, a division of North American Aviation. The conventional portion is being operated by the Southern California Edison Co., at its own expense.

Reactor plant design started July 1, 1954, and the entire station went on the line July 12, 1957. The facilities were installed to serve experimental needs and were an important preliminary to the construction of the Hallam nuclear power facility. Experimental data continue to be developed, and Atomics International has a program which may last several years.

During the past year the bulk of the effort was directed toward experimental work. In connection with this, the installation generated steam for a total of 2,617 hours and produced 2,264,000 kilowatt-hours of electricity over a period of 1,439 hours.

Second. The Vallecitos atomic powerplant celebrated its fifth anniversary of start of power operations last October. During these 5 years of developmental work this joint project of Pacific Gas & Electric and General Electric produced some 292 million thermal killowatt-hours of power and supplied over 40 million kilowatt-hours of electricity. In addition the plant has been used to train many reactor operators and has attracted over 31,000 visitors.

The plant's boiling water reactor was used in 1962 and will continue to be used in 1963 for AEC and General Electric sponsored development programs on high power density nuclear fuels, longer nuclear fuel life, and maritime reactor fuel studies. System stability studies were completed in 1962. In addition, a superheat loop in the reactor was expanded in 1962 to boost superheat fuel irradiation capability from one element to nine elements. The superheat loop is a part of the AEC's nuclear superheat development program.

The reactor was shut down in September due to a steam leak caused by a small crack in the recirculation piping. High thermal and mechanical stresses were identified as the forces responsible for the cracking. New piping was installed and corrective action taken to prevent reoccurrence.

Third. Shippingport atomic power station, the country's first large-scale nuclear power station, was constructed as part of the AEC's reactor development program. Duquesne Light Co. owns the conventional portion of the plant, contributed to the nuclear portion of the plant and operates the entire plant for the AEC. Shippingport was designed to function both as a test facility and as a power producer. Construction was initiated in September 1954—and completed the latter part of 1957. Criticality was achieved on December 2, 1957. Since then numerous tests have been made while the unit has also been operated as part of the Duquesne system.

In April 1962 a supplemental agreement was concluded between Duquesne and the AEC, which provides for continued operation of Shippingport by Duquesne Light beyond the expiration date of the present contract. The revised agreement will provide for operation during the burnup of core I, seed 4, the removal of core I and installation of core II, and for a period of 5 years beyond completion of the installation of the second core. Installation of this second core is scheduled for early 1964 and will increase the net capability of the plant from 60,000 to 90,000 kilowatts net. In addition, this new agreement provides for an adjustment in costs so that Duquesne Light's future expenses associated with Shippingport will be equal to those which Duquesne would incur in generating the equivalent electrical output of Shippingport by conventional means.

Initial construction of the heat dissipation system was completed in October. Operational testing was performed but terminated due to major control problems. The heat dissipation system, a part of the core II modification program, will operate in parallel with the turbine generator plant. This system was installed to dissipate the excess energy because core II is designed to produce 150,000 kilowatts and the generator has only a 100,000-kilowatt capacity.

Fourth. Dresden nuclear power station was designed and built by the General Electric Co. for a firm price of $45 million. Of the contract price, $15 million was paid as a research and development expenditure by Commonwealth Edison Co. and the other members of the Nuclear Power Group, Inc. The remaining $30 million plus the cost of the site and company overheads was capitalized by Commonwealth Edison Co. First criticality was achieved on October 15, 1959; first electricity was produced on April 15, 1960. The plant went into commercial operation on August 1, 1960.

From January 1, 1962, until it was shut down for the first refueling on November 7, 1962, Dresden operated 93.3 percent of the time with an overall capacity factor of 86 percent. The unit was shut down to remove and replace 192 fuel elements out of the 464 in the reactor and to make certain alterations and inspections.

Inspection showed the cause of sticking of one rod was galling between a chromium-plated sleeve and the index tube. Inspections of five other control drives showed only minor wear. Inspection of the lower case boron carbide control blades showed them to be in perfect condition. The grid support plate showed no new or enlarged cracks in areas previously inspected and only one in the area not previously inspected. Inspection of fuel assemblies showed a few failures among experimental elements. These will not be returned to the core.

Permission was received from the AEC to increase reactor power from 630,000 kilowatts—thermal—to 700,000 kilowatts—thermal—in September. A net station capability of 202,000 kilowatts was demonstrated at a reactor output of 675,000 kilowatts—thermal—prior to shutdown.

Negotiating a fuel reprocessing contract with Nuclear Fuel Services and the related agreements with the AEC have been pushed vigorously throughout the past year. It appears now that these matters would be settled in the near future. Without the incentive of the $30 plutonium price, Dresden probably will be operated as incremental operating costs dictate, the same as the conventional plants. This should result in an annual capacity factor of about 65 percent for the next few years.

Fifth. Yankee Atomic Electric Co.'s nuclear powerplant at Rowe, Mass., uses a pressurized water reactor. Construction was completed in July 1960; initial criticality was attained in August; and power operation began in November of that year. The plant was placed in commercial operation July 1, 1961, at an authorized power level of 150,000 kilowatts gross electrical output. The reactor was shut down for refueling on May 18, 1962, core I having produced 1.33 billion kilowatt-hours by that date. Operation was resumed with core II on September 21, 1962. On October 11, 1962, Yankee's facility license was amended to permit operation at 540,000 kilowatts—thermal—which corresponds to approximately 170,000 kilowatts gross electrical output. The new power level was reached on October 17 and operation at or near this level continued for the remainder of the year. Gross generation during this period amounted to 370,951,000 kilowatt-hours.

The project was undertaken as part of the power reactor demonstration program and was estimated to cost $50 million. Arrangements had been made to finance up to $57 million including cost of the initial core, working capital, and preliminary operation. As of July 1, 1961, when the plant was placed in commercial operation, the total cost of the project was $43.7 million, of which $39 million represented the cost of the plant and the balance, working capital, core fabrication costs, and organization expense. In addition, the AEC contributed $5 million in the form of research and development work pertaining to the nuclear design of the plant.

Sixth. The Saxton nuclear powerplant attained initial criticality on April 13, 1962. This 5,000-kilowatt plant is owned and operated by Saxton Nuclear Experimental Corp., a company formed by the domestic operating subsidiaries of the General Public Utilities Corp. The unit will be operated in a 7½-year research and development program. The program will include 5 years of operation with primary emphasis on exploring the possibilities of increasing nuclear fuel-use efficiencies and economies and lowering future capital costs.

Following attainment of criticality, zero power experiments were conducted in order to provide a reference for accurate interpretation and evaluation of future research and development experiments.

Power was generated for the first time on November 16 for a period of approximately 3 hours. The reactor was then shut down for a period of approximately 3 weeks to make a number of previously scheduled minor modifications and repairs. Electric power was generated again on December 16 and the reactor was operated for several days at 75 percent of full power starting December 26.

The AEC issued an amendment to the Saxton operating license providing for phase 1 of the Saxton research and development program. This will cover a period of approximately 1 year and include operating the reactor with chemical shim control up to 23,500 kilowatts—thermal—and operation with special test subassemblies in the core at power densities up to 16 kilowatt-feet of fuel rod.

Seventh. The Indian Point nuclear powerplant was built and financed by the Consolidated Edison Co. of New York, Inc. This 275,000-kilowatt pressurized waterplant attained criticality in August 1962 and began commercial operation in the following month. Since the early part of this year the plant has operated at rated capacity. The nuclear reactor provides 163,000 kilowatts of the capacity and an oil-fired superheater 112,000 kilowatts.

Eighth. The Big Rock Point nuclear plant achieved criticality on September 27, 1962, 28 months after Consumers Power Co. was issued a construction permit for this facility. The first generation of electric power was achieved on December 8, 1962. Since December 8 the plant has been engaged in a stepwise approach to full power. Full rated power of 50,000 kilowatts electrical gross output for the first core and a sustained full power run are scheduled for the month of March. This program is necessary to verify plant capability and to establish normal operating conditions as a reference base for research and development activities. With the completion of these performance tests the plant built and owned solely by Consumers Power Co., will be dedicated to the conduct of a 4½-year research and development program under the auspices of the AEC. The program will include irradiation of developmental fuels; stability, transient and physics testing; and operation of a process computer system. The program also includes increasing plant capability to 75,000 kilowatts and providing data useful to the design and operation of large, economic boiling water reactors.

Construction cost of the completed plant was well within the original estimate for the project. The success of the operation training program is evidenced by the fact that the plant staff took full responsibility for and provided the manpower necessary for all plant operations to date with consulting assistance available from General Electric Co. The success of plant operations and favorable response to Consumers Power Co.'s public information program resulted in the Big Rock Point nuclear plant being recognized by the press as among the top 10 news items in Michigan during 1962. The public information center at the plant has handled over 150,000 visitors.

Ninth. Pacific Gas & Electric Co. commenced construction of Unit No. 3 at Humboldt Bay powerplant on November 11, 1960. This project is being financed entirely with investor funds, including research and development. Bechtel Corp. designed and constructed the unit on a rgular commercial basis. General Electric Co. supplied the nuclear and electrical equipment. The total cost of the unit is estimated to be $21.4 million. The design incorporates pressure suppression containment, which is believed to be a significant advance in the art. With it, in the event of an operating accident, escaping steam from the primary system would be quenched in a water pool, thereby reducing pressure rise after the accident.

The construction permit incorporating this feature was granted by the AEC on November 9, 1960. The public hearing for the provisional operating license was held July 19, 1962, and the license was issued on August 28. As of January 1, 1963, construction was essentially complete. The first load of fuel was delivered on September 25 and fuel delivery was completed December 29. Initial fuel loading began February 15, 1963.

Tenth. The Carolinas Virginia Nuclear Power Associates, formed in 1956, have built a heavy-water moderated and cooled, pressurize-tube reactor nuclear steam generator under the third round of the AEC power demonstration program.

During 1962 the Carolinas Virginia Nuclear Power Associates completed installation of all major equipment in its plant at Parr, S.C. An AEC provisional operating license was issued on November 27, 1962. During hot fitup tests conducted in late November, minor mechanical difficulties were experienced which have delayed criticality. It is now anticipated that initial criticality will occur in midspring 1963.

Under the contract the Carolinas Virginia Nuclear Power Associates has with the Commission, the AEC supports the cost of the research and development program. The Carolinas Virginia Nuclear Power Associates bears the cost of administering the program and furnishes the reactor.

Eleventh. The Enrico Fermi atomic powerplant is sponsored by the Power Reactor Development Co., a nonprofit organization, and the Detroit Edison Co. Atomic Power Development Associates, Inc., is performing research and development and furnished the reactor design. In addition, Atomic Power Development Associates, Inc., is assisting in the nuclear testing of the reactor.

Construction essentially is completed, but nonnuclear testing in 1961 revealed two areas where extensive repairs and modification were necessary. The work required was nearly completed before the yearend, and in early 1963 various components were being reassembled and checked out for actual operation. It was estimated that from 2 to 4 months would be required before the reactor would be ready for fueling.

In December 12, 1962, during preoperational testing, a leak developed in the tubing of No. 1 steam generator and a sodium-water reaction occurred. All safety devices worked as intended and the resultant gases were discharged through a rupture disc to vent pipes above the steam generator building roof.

Inspection with the tube bundle in place revealed what seems to be comparatively small leaks in six tubes. An appropriate program to determine the cause of the failure and proper corrective measures is underway. This failure is not expected to cause a delay in the fueling program.

Twelfth. Construction essentially is completed on the Pathfinder atomic powerplant, rated 66,000 kilowatts with a boiling water reactor and an internal nuclear superheater. The plant, located about 5 miles from Sioux Falls, S. Dak., was designed and built for Northern States Power Co. by the Allis-Chalmers Manufacturing Co. with architect-engineering services by Pioneer Service & Engineering Co. The Central Utilities Atomic Power Associates, a group of 10 midwestern utilities, has furnished $3.65 million toward research and development costs and AEC assistance for research and development totals $10.3

million including a $1.8 million waiver of fuel-use charges. Northern States Power, as owner and operator, will be investing about $19 million in the plant.

Due to delays in fabrication of the fuel, plant startup is now scheduled for third quarter 1963. The startup program involves about 1 year in a step-by-step approach to full power so that commercial operation cannot be realized before late 1964. Preoperational testing of the plant is well underway and training for operating personnel is continuing. Northern States Power, as license applicant, and Allis-Chalmers, as plant designer, are actively engaged with the AEC in plant licensing matters.

Thirteenth. The Peach Bottom nuclear powerplant is being built by Philadelphia Electric Co. in cooperation with the nonprofit High Temperature Reactor Development Associates, Inc. (a 53-company association). These companies are building a prototype high-temperature, helium-cooled, graphite-moderated nuclear powerplant in response to an AEC invitation.

The plant is being constructed on a fixed-price contract for $24.5 million. In addition, AEC will contribute toward research and development performed by General Dynamics an amount not to exceed $14.5 million, including $2 million in postconstruction research and development. AEC also will waive up to $2.5 million in fuel-use charges during research and the first 5 years of operation.

A construction license for Peach Bottom was issued by the AEC in February 1962 and site clearance was begun immediately. All major plant components have been ordered and physical construction of the plant was approximately 28 percent complete by the end of 1962. The plant is scheduled for completion in the middle of 1964. Preconstruction research and development essentially is complete. The program for postconstruction research and development is in preparation.

Fourteenth. Pacific Gas & Electric Co. on November 28, 1962, received from the California Public Utilities Commission a certificate of public convenience and necessity for unit No. 1 at Bodega Bay Atomic Park. The petition for a rehearing before the Commission was denied on January 2, 1963. On December 28, 1962, the company filed an application with the AEC for a license to construct and operate a nuclear reactor as a part of unit No. 1.

The unit will consist of a nuclear-fueled boiling water reactor and a tandem compound turbine generator, with a nominal rating of 325,000 kilowatts. It will be located on Bodega Head on the Pacific coast, approximately 50 miles northwest of San Francisco, on a 225-acre site. The reactor will be of the single-cycle, forced-circulation type with internal steam separation. Fuel will be slightly enriched uranium dioxide in stainless steel tubing. Pressure suppression containment, first developed for the company's Humboldt Bay nuclear unit, will also be employed at Bodega Bay.

Fifteenth. Southern California Edison Co. and San Diego Gas & Electric Co. project: Southern California Edison Co. has executed a contract with Westinghouse Electric Corp. and Bechtel Corp. for the engineering and construction of its proposed 395,000-kilowatt—gross—nuclear powerplant, to be located in the northwest corner of Camp Pendleton, Calif. San Diego Gas & Electric Co. will acquire a 20-percent interest in the plant.

Site grading and excavation is scheduled to commence on October 1, 1963, and construction of the plant proper is scheduled to commence on April 1, 1964. This schedule is dependent upon acquisition of the plant site and the issuance of all necessary regulatory approvals in advance of these dates. An application for a construction permit and for an operating license for the plant has been filed with the AEC.

Good progress has been made with respect to the significant features of a contract between Edison, San Diego, and the AEC, under which the two companies will undertake to procure and operate the plant in accordance with, and as a part of, the AEC's power demonstration program.

The Secretary of the Navy has stated that the Department of the Navy has no objection to the location of the plant in the northwest corner of Camp Pendleton. Legislation has been introduced in Congress which would authorize the Secretary of the Navy to grant easements to Edison and San Diego for the construction, operation, and maintenance of the plant, and for offsite transmission and communication lines, access road, spur track, and other appurtenances to the plant.

Sixteenth. The Connecticut Yankee Atomic Co., formed by the 12 major New England investor-owned electric utility companies, plans to construct a 500,000-kilowatt atomic powerplant at Haddam Neck, Conn. The plant will use a pressurized water reactor. Its cost is estimated to be between $70 and $80 million. Completion date is tentatively set for 1967. Research and development assistance will be sought from the AEC.

The decision to go forward with plans for a large nuclear plant of this type is based on the results of a study which showed that atomic power cost is competitive now with fossil fuel costs in New England and gives every promise of producing lower costs in the future.

Seventeenth. A large-scale nuclear powerplant is expected to be built by the New England Electric System. While the original plan was for a plant of the order of 300,000 to 350,000 kilowatts, present thinking is directed toward a plant of 500,000 kilowatts or larger. The recent organization of Connecticut Yankee Atomic Power Co., in which New England Electric System is a substantial participant, and its plans for construction of a nuclear plant of approximately 500,000 kilowatts for completion in 1967 has influenced the time schedule for the proposed New England Electric System plant so that a completion date in 1968 or in 1969 is now envisioned.

This plant must, of course, take its place in the orderly development of the future power-supply program for the system. It is conceived as a production plant, not an experiment or prototype. In view of the proposed completion date, the system has as yet no necessity to freeze on the reactor's precise type or design, and can continue to analyze and take into account continuing developments in reactor operations and design.

Eighteenth. Consolidated Edison Co. of New York, Inc., has applied to the AEC for a construction permit to build a 1,000,000-kilowatt nuclear powerplant at Ravenswood, Queens, N.Y. The proposed plant will have a pressurized reactor and oil-fired superheater. The combination design is expected to produce electricity at a cost competitive with a plant using conventional fuel entirely. Preliminary estimates indicate construction costs of $175 million. The plant will be built entirely with funds raised by Con Edison. No Government moneys would be involved. Plans call for completion of the plant by 1970.

These projects aggregate some 3,600,000 kilowatts of capacity and will involve estimated utility company expenditures of almost $1 billion. Expenditures through 1964 are tabulated in table III. Furthermore, it is to be expected that additional stations and further substantial expenditures by utility companies will follow in time involving units not only in the 500,000-kilowatt category and larger but also in the smaller ranges of say, 150,000 to 200,000 kilowatts, as well. In line with this is the recent announcement of Pacific Gas & Electric Co. that it will depend on the atom more and more as time passes. If its Humboldt Bay atomic plant and its proposed Bodega Bay atomic park plan are as economically successful as Pacific Gas & Electric Co. confidently expects, many of its new big generating units will be nuclear. This could involve about 10 million kilowatts in the period 1970 through 1980.

While the majority of the reactor projects in which electric utility companies are participating make use of the presently most competitive types, there are a significant number which are designed to push existing technology to the utmost limits. Thus, there are found advanced projects involving not only converter and breeder reactors but also sodium technology, high temperature and gas-cooled systems, uranium-thorium complexes, and pressure-tube designs. In addition, the utility group study projects include advanced development concepts.

It was recognized from the outset that most of the stations being built would not produce economic power. However, these systems had favorable promise for the future, and justified the construction and operation of plants to identify the problems involved and so to accelerate the development of applicable technology. It is reasonable to expect that they will contribute markedly to our national reactor development program.

Another significant contribution by the electric utility industry has been the evaluation and clarification of nuclear power economics. The operation of power stations by power companies on power networks had made it possible to study directly and practically the cost of nuclear power. As a result, it is becoming increasingly possible to judge nuclear reactor designs in terms of true economic values. In this connection, the investment and participation of the equipment manufacturers has played a notable role and has contributed to the competitive environment which exists today for proven reactor systems.

It is significant to note that the growing competition of nuclear power is having an impact on the conventional power industry as well. As Congressman Holifield, Dr. Pittman of the Atomic Energy Commission, and Federal Power Commission Chairman Swidler have pointed out, the competition of nuclear power has been a factor in the downward cost trends of fossil fuels in certain areas of the country. In short, nuclear power has already become a competitive element in the electric power producing market and, in this sense, electric power consumers already are enjoying fruits of nuclear power developments.

A further substantial contribution by electric utility companies to our Nation's effort is being made through the training of personnel. Electric utility companies have recognized the need for technical competence in this new field and have pressed the training of their engineers, scientists and operators in nuclear technology and related disciplines. In this manner, they have added substantially to the pool of human resources needed to support the Nation's growing program in the use of nuclear energy.

The electric utility companies' accomplishments, contributions and active participation in the nuclear power field have done much to complement and justify the efforts of the AEC. A strong feeling of confidence is emerging in the industry concerning the reliability and economic viability of nuclear power systems. This feeling of confidence undoubtedly will continue to grow as new stations are added to the power systems. There is little question but that the past decade's effort has brought nuclear power to a level of economic competitiveness in the high fuel cost areas of the country. It is safe to say that, by 1970, few electric utility companies anywhere in the United States will add substantial new capacity to their systems without considering the possibilities of nuclear power.

TABLE I.—*Electric utility company participation in nuclear power development*

PLANTS IN OPERATION

Name of participating utility and plant [1]	Location of plant	Reactor type	Capacity of plant (kilowatts electric)	Construction cost [2]	Research and development cost [3]	Critical	Commercial operation	Generation in 1962 (kilowatt-hours)	Total generation (kilowatt-hours)
(1) Southern California Edison Co.[4] (Santa Susana).	Santa Susana, Calif.	Sodium graphite.	[5] 7,500	[4] $1,340,000	----------	April 1957	July 1957	2,310,000	18,438,000

---

[1] Utility member companies of groups are shown in appendix II.

[2] Plant costs exclusive of switchyard and step-up transformers, but including interest during construction. Any exceptions for specific plants are noted.

[3] Made by sponsoring utility or other participating utilities; does not include contributions made by the AEC.

[4] Nuclear portion of plant designed, constructed, and operated for the AEC by Atomics International. Southern California Edison Co. built and operates conventional portion of plant.

[5] Gross.

[6] Pacific Gas & Electric Co. built and operates conventional portion of plant. General Electric Co. built and operates nuclear portion.

[7] AEC owns nuclear portion of plant. Duquesne Light Co. contributed to nuclear portion, owns conventional portion of plant and operates entire plant.

[8] Turbine rated 100,000 kilowatts. Plant to be modified to have increased capacity with new core.

[9] Net.

[10] In addition to expenditures for conventional portion of plant and the site, Duquesne Light Co. contributed $5,000,000 toward cost of reactor.

[11] Fixed price for reactor and auxiliary equipment, fuel and associated costs for 5-year research and development program, plus expenditures for training, licensing, insurance and other miscellaneous costs during construction.

[12] Administrative, operation maintenance cost of research and development program till end of 1962. Does not include manufacturer's research and development costs.

[13] Research and development project.

[14] Nuclear 163,000 kilowatts: oil-fired superheater 112,000 kilowatts.

[15] Ultimate capacity of plant 75,000 kilowatts (gross).

[16] The construction of the Big Rock Point nuclear plant required capital expenditures of approximately $12,000,000 more than would have been required for the same amount of conventional plant capacity. This amount is considered to be a research and development expenditure and as such is to be amortized off over a 10-year period. The cost of ownership of the remaining plant investment made available for research and development activities is also a logical research and development expense. For the coming 4½-year period this will amount to an additional $8,000,000.

[17] Plant now engaged in initial phase of a 4½-year AEC sponsored research and development program aimed at increased power densities, longer fuel life, and lower fuel fabrication costs.

[18] Does not include $1,650,000 administrative, employee training, and startup costs.

[19] Not available.

[20] Fuel loading scheduled early spring 1963, criticality midspring 1963.

[21] 100,000 kilowatts after fuel development program.

[22] Low power testing, April 1963. Commercial operation indefinite, probably early 1964.

[23] Internal nuclear superheater.

[24] In addition to this expenditure and its portion of the HTRDA research and development program, the Philadelphia Electric Co. will expend an estimated $4,240,000 for land, interest during construction, etc.

[25] Or more.

TABLE II

NAMES OF ELECTRIC UTILITY COMPANIES PARTICIPATING IN NUCLEAR POWER STUDY, RESEARCH, DEVELOPMENT, OPERATING AND CONSTRUCTION PROJECTS

Projects in operation

1. Southern California Edison Co. (Santa Susana).

2. Pacific Gas & Electric Co. (Vallecitos).

3. Duquesne Light Co. (Shippingport).

4. Commonwealth Edison Co. (Dresden). Nuclear power group; American Electric Power Service Corp., Central Illinois Light Co., Commonwealth Edison Co., Illinois Power Co., Kansas City Power & Light Co., Pacific Gas & Electric Co., Union Electric Co.

5. Yankee Atomic Electric Co. (Yankee): Boston Edison Co., Central Maine Power Co., Central Vermont Public Service Corp., Connecticut Light & Power Co., Eastern Utilities Associates, Hartford Electric Light Co., New England Electric System, New England Gas & Electric Associates, Public Service Co. of New Hampshire, Western Massachusetts Electric Co.

6. Saxton Nuclear Experimental Corp. (Saxton): Pennsylvania Electric Co., Metropolitan Edison Co., Jersey Central Power & Light Co., New Jersey Power & Light Co.

7. Consolidated Edison Co. of New York, Inc. (Indian Point).

8. Consumers Power Co. (Big Rock Point).

Projects under construction or design

9. Pacific Gas & Electric (Humboldt Bay).

10. Carolinas Virginia Nuclear Power Associates, Inc. (Parr): Carolina Power & Light Co., Duke Power Co., South Carolina Electric & Gas Co., Virginia Electric & Power Co.

11. The Detroit Edison Co. (Enrico Ferm). Power Reactor Development Co.: Alabama Power Co., Central Hudson Gas & Electric Corp., Cincinnati Gas & Electric Co., Columbus & Southern Ohio Electric Co., Consumers Power Co., Delaware Power & Light Co., Detroit Edison Co., Georgia Power Co., Gulf Power Co., Iowa-Illinois Gas & Electric Co., Long Island Lighting Co., Mississippi Power Co., Philadelphia Electric Co., Potomac Electric Power Co., Rochester Gas & Electric Corp., Toledo Edison Co., Wisconsin Electric Power Co.

12. Northern States Power Co. (Pathfinder). Central Utilities Atomic Power Associates: Interstate Power Co., Iowa Power & Light Co., Iowa Southern Utilities Co., Madison Gas & Electric Co., Northern States Power Co., Northwestern Public Service Co., Otter Tail Power Co., St. Joseph Light & Power Co., Western Power & Gas Co., Wisconsin Public Service Corp.

13. Philadelphia Electric Co. (Peach Bottom). High Temperature Reactor Development Associates, Inc.: Alabama Power Co., Arizona Public Service Co., Arkansas Power & Light Co., Atlantic City Electric Co., Baltimore Gas & Electric Co., California Electric Power Co., Central Illinois Electric & Gas Co., Central Illinois Light Co., Central Illinois Public Service Co., Central Louisiana Electric Co., Inc., Central Power & Light Co., Cincinnati Gas & Electric Co., Cleveland Electric Illuminating Co., Delaware Power & Light Co., Detroit Edison Co., Gulf Power Co., Gulf States Utilities Co., Hawaiian Electric Co., Ltd., Idaho Power Co., Illinois Power Co., Iowa Public Service Co., Kansas City Power & Light Co., Kansas Power & Light Co., Kentucky Utilities Co., Louisiana Power & Light Co., Mississippi Power Co., Mississippi Power & Light Co., Missouri Public Service Co., Montana Power Co., New Orleans Public Service, Inc., New York State Electric & Gas Corp., Niagara Mohawk Power Corp., Pacific Gas & Electric Co., Pacific Power & Light Co., Pennsylvania Power & Light Co., Philadelphia Electric Co., Portland General Electric Co., Potomac Electric Power Co., Public Service Co. of Colorado, Public Service Co. of New Mexico, Public Service Co. of Oklahoma, Public Service Electric & Gas Co., Puget Sound Power & Light Co., Rochester Gas & Electric Corp., St. Joseph Light & Power Co., San Diego Gas & Electric Co., Sierra Pacific Power Co., Southern California Edison Co., Southwestern Electric Power Co., United Illuminating Co., Utah Power & Light Co., Washington Water Power Co., West Texas Utilities Co.

14. Pacific Gas & Electric Co. (Bodega Bay).

Projects in planning or contract negotiations

15. Southern California Edison Co.-San Diego Gas & Electric Co.

16. Connecticut Yankee Atomic Co.: Boston Edison Co., Cambridge Electric Light Co., Central Maine Power Co., Central Vermont Public Service, the Connecticut Light & Power Co., the Hartford Electric Light Co., Montaup Electric Co., New Bedford Gas & Edison Light Co., New England Electric System, Public Service Co. of New Hampshire, the United Illuminating Co., Western Massachusetts Electric Co.

17. New England Electric System.

18. Consolidated Edison Co. of New York, Inc. (Ravenswood).

Study, research, and development groups

19. Empire State Atomic Development Associates, Inc.: Central Hudson Gas & Electric Corp., Consolidated Edison Co. of New York, Inc., Long Island Lighting Co., New York State Electric & Gas Corp., Niagara Mohawk Power Corp., Orange & Rockland Utilities, Inc., Rochester Gas & Electric Corp.

20. Texas Atomic Energy Research Foundation: Central Power & Light Co., Community Public Service Co., Dallas Power & Light Co., El Paso Electric Co., Gulf States Utilities Co., Houston Lighting & Power Co., Southwestern Electric Power Co., Southwestern Public Service Co., Texas Electric Service Co., Texas Power & Light Co., West Texas Utilities Co.

21. Southwest Atomic Energy Associates: Arkansas Power & Light Co., Arkansas-Missouri Power Co., Central Louisiana Electric Co., Inc., Empire District Electric Co., Gulf States Utilities Co., Kansas Gas & Electric Co., Kansas Power & Light Co., Louisiana Power & Light Co., Mississippi Power & Light Co., Missouri Public Service Co., New Orleans Public Service, Inc., Oklahoma Gas & Electric Co., Public Service Co. of Oklahoma, Southwestern Electric Power Co., Western Light & Telephone Co., Inc.

22. TABLE III.—*Estimate of expenditures by electric utility companies for nuclear power projects* [1]

	1958 and earlier	1959	1960	1961	1962	1963	1964
Expenditures for plants [2]	$123,324,000	$98,451,000	$103,058,000	$84,054,000	$45,452,000	$39,211,000	$31,999,000
Other expenditures [3]	11,485,000	3,307,000	3,048,000	6,004,000	6,133,000	6,806,000	6,738,300
Total by years	134,809,000	101,758,000	106,106,000	90,058,000	51,585,000	46,017,000	38,737,000
Cumulative	134,809,000	236,567,000	342,673,000	432,731,000	484,316,000	530,333,000	569,070,000

[1] Based on information obtained from the major nuclear power groups and previous surveys made by Edison Electric Institute.

[2] Estimate of expenditures by electric utility organizations for the following plants in operation, under construction or in contract negotiations including accompanying research and development work, but exclusive of operating cost: Dresden, Yankee, Shippingport, Santa Susana, Vallecitos, Saxton, Indian Point, Big Rock Point, Humboldt Bay, Parr, Enrico Fermi, Pathfinder, Peach Bottom, Bodega Bay, Southern California Edison-San Diego Gas & Electric Co. project, and, Connecticut Yankee.

[3] Includes expenditures by individual companies and groups of companies for nuclear power study, research, and development. These figures do not include expenditures associated with any of the projects listed in footnote 2 above. Included in this category are the following groups: Empire State Atomic Development Associates, Texas Atomic Energy Research Associates, Southwest Atomic Energy Associates, Nuclear Power Group, Rocky Mountain-Pacific Nuclear Research Group, Atomic Power Engineering Group (up to 1959), Pacific Northwest Power Co. Group, Pennsylvania Power & Light Co. project (up to time of cancellation), Pioneer Service & Engineering Group (up to 1957). ECNG–FWCNG project (up to time of cancellation), East Central Nuclear Group, and Florida West Coast Nuclear Group.

TREASURY, POST OFFICE, AND EXECUTIVE OFFICE APPROPRIATION BILL, 1964

Mr. GARY. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 5366) making appropriations for the Treasury and Post Office Departments, the Executive Office of the President, and certain independent agencies for the fiscal year ending June 30, 1964, and for other purposes; and pending that motion, Mr. Speaker, I ask unanimous consent that general debate continue not to exceed 3 hours, one-half of the time to be controlled by the gentleman from New York [Mr. PILLION] and one-half by myself.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Virginia?

There was no objection.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Virginia.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 5366, with Mr. THORNBERRY in the chair.

The Clerk read the title of the bill.

By unanimous consent the first reading of the bill was dispensed with.

The CHAIRMAN. Under the consent agreement, the gentleman from Virginia [Mr. GARY] will be recognized for 1½ hours, and the gentleman from New York [Mr. PILLION] for 1½ hours.

The Chair recognizes the gentleman from Virginia.

Mr. PASSMAN. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. [After counting.] Seventy Members are present, not a quorum. The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 15]

Avery
Bass
Battin
Buckley
Burton
Cameron
Cederberg
Celler
Corman
Cramer
Dawson
Diggs
Dulski
Grabowski
Gray
Green, Pa.
Harvey, Mich.
Healey
Hébert
Jennings
Jones, Ala.

Kee
Kluczynski
Lloyd
McDade
McIntire
Macdonald
O'Brien, Ill.
Pike
Pilcher
St Germain
Shelley
Staebler
Teague, Tex.
Tollefson
Walter
Widnall

Accordingly, the Committee rose; and the Speaker pro tempore having resumed the chair, Mr. THORNBERRY, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill H.R. 5366, and finding itself without a quorum, he had directed the roll to be called, when 395 Members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

The CHAIRMAN. The Chair recognizes the gentleman from Virginia [Mr. GARY].

Mr. GARY. Mr. Chairman, I yield myself such time as I may require.

Mr. Chairman, we are considering today one of the most important bills that this House will be called upon to consider during the entire session. It is the second largest appropriation bill that will be presented. This bill carries in total $16,100 million. Of that amount, I hasten to say, that $10,100 million is for permanent appropriations over which our committee has no control. The greater part of that amount is for the interest on the public debt.

We are faced today, in my judgment, with a very serious fiscal situation. To begin with, we have a public debt as of March 27, 1963, of $304,638,386,616.44 and in the slang of today, "That ain't hay." It is a tremendous debt that we, today, are passing on to future generations because we are doing nothing whatever to reduce it. The Federal budget has been balanced only six times during the last 32 years.

The estimated deficit for this present fiscal year which ends on June 30, 1963, is $8,800 million. The estimated deficit for the next fiscal year, 1964, is $11,900 million. That anticipates a deficit of $2,700 million by reason of the proposed tax cut. So we are going into debt every day.

The estimated interest for the fiscal year 1964 is $10 billion. That is an increase of $320 million over last year. The interest on our Federal debt alone is greater than the entire Federal budget in 1940.

Let me call your attention to this fact. Every time the second hand of your watch makes a complete circle, it costs the taxpayers of this Nation $19,000 in interest alone.

That is for every minute throughout the entire 24 hours for the 365 days in the year. That in my judgment is something to cause us to stop and consider.

I have heard a lot of criticism of the work of our committee on this bill. Let me say to you that I think we have one of the best committees in the entire Congress. I want to pay my respects to my colleagues on this committee: The gentleman from Louisiana, Mr. OTTO PASSMAN; the gentleman from Oklahoma, Mr. TOM STEED; the gentleman from New York, Mr. JOHN PILLION, the ranking minority member; and the gentleman from Massachusetts, Mr. SILVIO CONTE. I want to tell you they have worked on this bill. I am rapidly acquiring the title around here of slave driver, and I am afraid that it is not without some cause, because I do urge the members to work hard and, at times, for long hours. My only defense is that I work along with them, however hard or long the task.

This committee held hearings for 1 solid month, during which we heard various representatives of the departments. If you really want to know something about our Government I suggest that you scan, at least, the printed hearings of our committee.

It has been the policy for the last several years for the full committee to call before them the Secretary of the Treasury and the Director of the Budget for the purpose of inquiring into the entire budget and the fiscal affairs of the Government. The full committee did not do that this year; therefore, our subcommittee requested the Secretary of the Treasury and the Budget Director to appear together before us to discuss these matters, and you will find them carefully reported in the hearings of our committee. You can get some very valuable information there concerning the fiscal condition of the Government.

In addition to that we have a very able assistant, the clerk of our committee, who has done a magnificent job on this bill.

The bill, therefore, is not one man's labor, it is the labor of the committee; and I am happy to say that our committee comes before you today with a unanimous report.

To begin with we have followed the lead of our very able and beloved colleague, the gentleman from Ohio, Mr. MIKE KIRWAN. When he presented his bill to you last Tuesday, he called attention to the fact that his committee had started what I hope is going to be the policy throughout this session of requiring each agency to absorb as a minimum the second step of the pay increase which was authorized by Public Law 87-793 to become effective January 1, 1964. You will recall when we adopted the pay increase bill last year we provided that additional amounts should become effective in various steps.

The gentleman from Ohio started the practice in his committee and our committee has followed it in this bill.

The total amount of regular appropriations in this bill after taking out the permanent appropriations is approximately $6 billion, to be exact, $5,997,026,000. That is an increase of $331 million over 1963.

It is a cut in the budget request of $149,816,000. In percentages that cut is only 2.45 percent of the amount requested. But I do think I should say, in an effort to justify a cut of that magnitude, and I do not make any apologies for the cut, you have in this bill two of the oldest and most sensitive departments of the Government. There are no new activities in these departments. They are all essential activities that the Government has been carrying on for years. You cannot cut them 10 to 15 percent as you can with some of the agencies by stopping new programs. There are virtually no new programs in the bill.

So far as personnel is concerned, the total personnel requested was 14,088. Our committee recommended 11,273, which is a cut of 2,815.

Taking the estimates according to departments, we will start first with the Treasury Department.

The request of the Treasury Department was for $1,153,230,000. Our committee recommends $1,095,910,000, which is an increase of $102,946,000 over 1963, and a cut of $57,320,000. This is a cut of 4.1 percent.

I have not heard one single murmur out of the Treasury Department. If they have insisted that any of that be restored, I have not heard it. To the contrary, we have cut the Post Office Department only 1.8 percent on their request—as I will point out when I get to the Post Office Department—as opposed to the 4.1 percent for the Treasury Department. I simply mention it now in passing. Most of the increases in personnel requested were by the Post Office Department and by the Internal Revenue Service.

Mr. Chairman, I do not believe it is necessary to go into every single item in this bill. For example, there is the Office of the Secretary of the Treasury. We cut that $80,000. They asked for 10 additional employees and we allowed 5. We think some additional employees are needed because of the tax studies that are going on at the present time. But I want to emphasize that this is an economy budget. I am perfectly willing to admit that. The Departments, in order to live within it, are going to have to economize. I think this is a fair budget and one under which they can live. In view of the fiscal situation today, I think we have got to move to the establishment of economy budgets.

Something very unusual happened in the Division of Disbursement. That is one of the divisions of the Treasury Department that has been making excellent use of the automatic data processing machinery. They asked this year for a personnel decrease of 71. Instead of asking for a larger force they asked for a decrease of 71 employees.

We come now to the Bureau of Customs, which is one of the larger bureaus, and I think we should discuss it briefly. They asked for $76,100,000. We allowed them $72 million, an increase of $4,490,000 over 1963, and a cut of $4,100,000.

They do have new programs. One of them the Congress put upon them last year. The Congress during the last session passed a law requiring the Bureau of Customs to enforce the law against the admission of Communist material into this country. What have they done? The Bureau of Customs and the Post Office Department have combined their activities. They are working in close harmony, not only in stopping Communist propaganda coming into the country, but also in stopping pornographic material.

Frankly, I must say to you that I had not paid much attention to this pornographic situation until this year, but our committee visited New York and saw some of the material that the Customs Bureau has confiscated there, and I want to tell you it is a most shocking situation. Not only is that material subversive, but a great part of it is perversive, and they are sending this pornographic material out to the youth of our land, striking at the fundamental morals of our entire Nation. The Bureau asked for 37 additional employees to work on that program. We have allowed all of them. In addition to that, they have been providing the Census Bureau with statistics for years. They were taking these statistics off of the unaudited invoices that came in. They began to make some checks, and they found out that a great many of those invoices were incorrect, as the result of which their statistics at times were from 10 to 25 percent in error. In view of this new trade bill it is very essential that we have correct statistics touching our trade. These statistics are used by the Commerce Department and the other departments of the Government. So, now they have a verification program on those statistics. They audit the invoices before they compile the statistics. They have asked for 89 additional personnel for that purpose. Representatives of the Commerce Department and other departments said the statistics were badly needed, and while it is bad enough not to have statistics, it is certainly worse to give incorrect ones. If they are furnished they should be accurate. In addition to this, they requested 251 personnel over and above those two activities. We felt that was too much. But, they do have a backlog in their appraisals and in their evaluation of the imports, and whenever that backlog piles up sufficiently, they cannot assess the duties in sufficient time to enable the importers to work their costs into their goods. Unless they know what the tariff is going to be, they cannot properly fix the price of their goods. So, we have allowed them 74 additional personnel, and we have suggested that they be used where they can best serve to cut down these backlogs which exist in the Department.

We put the Bureau of Printing and Engraving under a business budget some years ago, and it is operating very successfully. We do not appropriate any money for them, but they determine what their unit cost is, and they charge each department for the work that they do for it. However, they need an air-conditioning system in their building, and it is probably needed worse in that building than any other building in the city, because the engraving work that they do, requires not only uniform temperature, but it also requires uniform humidity. Last year we allowed them $300,000 for drawings and specifications for an air-conditioning system. This year they asked for $5,380,000 for construction. We did not allow that amount because we do not think, from the information we have, that the drawings and specifications will be ready in time for them to spend that money this year. So, we have postponed that until next year. Very frankly, it is not a saving, but we have taken it out of this budget. It will have to be appropriated next year because it is a very essential project.

The Bureau of the Mint tells us that we have a very substantial shortage of coins in this country. There has been a run on the mint in the last few years, and they do not know why. But at the present time the inventory of coins at the mint is at a very low ebb. As a matter of fact, if we do not pass the pending supplemental bill which will provide the additional money they need for the current fiscal year, they will be very severely handicapped. They are rapidly running out of coins. Therefore we have allowed most of the appropriation they asked for. We have recommended $7.3 million, reducing their request by some $420,000, which represents mostly the absorption of a part of the pay increase.

We have added—and I will say for the benefit of my friend, the gentleman from Colorado, Mr. ROGERS, who is standing now, and I assume is going to question me, because one of the mints is located in his district—we have allowed $125,000 for the installation of an annealing furnace at the Denver Mint, and also suggested a study at that mint.

Mr. Chairman, the sum of $125,000 will provide for 400 million additional coins. We are operating the mints today at a maximum. We are running three shifts a day and are operating at a maximum and still we cannot turn out enough coins.

Mr. Chairman, the Congress has before it a request to authorize a new mint for Philadelphia. We have made some improvements in Philadelphia. As a matter of fact the last improvements we made at the mint in Philadelphia we had to run some of the machinery outside the building through one window and bring it back into the building through another because of a lack of space within the building. We felt that through the installation of this furnace we can increase the capacity of the Denver Mint.

Mr. Chairman, we also recommended a study to see if something could not be done to increase the output of the Denver Mint further, which we think can be done.

Mr. ROGERS of Colorado. Mr. Chairman, will the gentleman yield?

Mr. GARY. I am glad to yield to the gentleman from Colorado.

Mr. ROGERS of Colorado. I appreciate the gentleman giving me the opportunity to discuss the question of the $125,000 for the purpose of installing an additional annealing furnace and related equipment and facilities at the mint in Denver.

As I understand it, this is only what one would call a temporary stopgap in supplying the necessary coinage that is now thought to be temporary?

Mr. GARY. This will be an additional annealing furnace. The $125,000 will put in a permanent installation which will increase the coinage output by 400 million coins. We have asked for a study to determine whether or not we can go further.

Mr. ROGERS of Colorado. It would not be a temporary thing, but it would not in any manner interfere with the so-called report as to the possibility of expansion of the Denver Mint?

Mr. GARY. No, it would not. We have asked for a study in order to determine how it can best be expanded.

Mr. ROGERS of Colorado. And they have asked for this because the operation of the Denver Mint shows that the cost of production is less per unit?

Mr. GARY. That is right, and because it is a more modern plant and has more modern machinery. We modernized the machinery at the Philadelphia Mint several years ago, as much as it could be modernized at the present time. Before we can make any further changes at the Philadelphia Mint to reduce the cost or to increase the output, it will be necessary to build a new addition or plant.

Mr. ROGERS of Colorado. If the gentleman will yield further, the gentleman's request for further study involves an expansion perhaps of the Denver Mint, if it proves to be profitable?

Mr. GARY. We have asked for a report on that. This $125,000 is temporary in that we may add to it later on, but it will be a new and a modern annealing furnace which will enable them to increase the output, not as much as we want to increase it, but 400 million coins, which will help meet the shortage.

Mr. ROGERS of Colorado. Mr. Chairman, if the gentleman will yield further, it is my understanding that it is not the intention of this subcommittee to predetermine the so-called request for an additional mint as provided in S. 872?

Mr. GARY. Absolutely not; and, to the contrary, I will say that our committee intends to visit the Denver Mint next month and personally inspect the situation to see what can be done to enlarge it.

Mr. ROGERS of Colorado. Mr. Chairman, I may say that I should like to welcome the gentleman's committee next week, because I am going to be home and would like to show them a good mint and an efficient operation. I wanted to establish a clear legislative intent here.

Mr. GARY. I thank the gentleman; but some of our committee would also like to be home next week, so we are going to make our trip in May.

Mr. ROGERS of Colorado. I thank the gentleman from Virginia.

Mr. GARY. Mr. Chairman, the next item is the Bureau of Narcotics. In my judgment, that is one of the most efficient bureaus in the entire Government of the United States. I earnestly suggest to every one of the Members that they read the portion of our hearings relating to narcotics. It will open your eyes to the things that are going on in this country. There are charts that will tell you the number of addicts, where they are, and you can see where the seat of the trouble is in this country in the matter of the narcotics problem. It will also show some of the very interesting cases that they have solved during the past year, in which they seized millions of dollars worth of narcotics coming into this country.

The Bureau of Narcotics is doing a magnificent job. We have allowed them a few extra men for work overseas because the agents we have had working overseas have been very effective.

The next item is the Bureau of the Public Debt. They surprised the committee with a request for a reduction of 104 employees. They are doing a magnificent job with their data processing machinery and have greatly reduced their workload in the last few years.

Mr. Chairman, the next is the Coast Guard, which asked for $251 million for operating expenses. We recommended $248 million. That is an increase of $27,600,000 over what they have for the current year, but it is a cut of $3,100,000 in their estimate for 1964.

Mr. Chairman, let me say that, of the increase that the Coast Guard is requesting, $28,500,000 represents items over which it has no control. For example, one of them is not really an increase in expenditure but a transfer of the ocean station program from the Navy to the Coast Guard.

Up to the present time, the Coast Guard has been operating this ocean station program. They have been manning the ships, operating the program; but the Navy has been paying them for it. Whatever the cost was, they sent the Navy the bill and the Navy paid it. We saw no reason for that situation. We thought that if the Coast Guard is going to operate the program, we should appropriate the money to the Coast Guard and let them operate it completely, so $17 million of that amount is merely a transfer item that heretofore was paid to the Coast Guard by the Navy. Now we are appropriating the money directly and I hope that when the Defense Department appropriations bill comes out that committee will see that that $17 million is cut out of the Navy program. We have apprized them of the situation and I am sure that they will do that.

The next item is the Coast Guard "Acquisition, construction and improvements activity." They requested $60 million which would be an increase of $26,670,000 over the 1963 appropriation of $33,330,000. We recommend $51 million which is an increase of $17,670,000 over 1963 and a cut of $9 million from their estimate for the next fiscal year. This is substantially higher than last year's appropriation simply because we have insisted on well-worked-out programs. We recognize that they must have safe and adequate airplanes, ships, and shore installations in order properly to perform their functions, but we have insisted for the last few years that they work out a program of replacement in each of those areas. They worked out the program for airplanes about 5 years ago and we have been going along with them on that.

What we wanted was a program of replacement that would give them a more uniform amount for replacements each year, rather than coming in and asking for large replacements one year and small replacements the next year.

Last year they said they had worked out their ship program, but they were not ready to present it, so we did not allow them anything for ships. Something was put in on the other side but we held it down. They have now worked out a program for their ship replacement. We felt we ought to go along with that program. At the same time, the program is on a 10-year basis. In view of the fiscal situation we thought it might be stretched out a little bit, so we have cut them $9 million.

The next is the retired pay. Congress fixes the amount of that and we can make no changes in the amount.

The next is the Reserve program. There has been a very careful study of the Reserve program of the Coast Guard, along with all of the other services, and we are allowing the amount they request, which is in keeping with the recommendations of that study committee. The budget contemplates the provision of additional Reserve facilities and equipment that is necessary to carry out the program that all of the services have agreed on.

Next is the Internal Revenue Service, and here is one of the most difficult problems we have had through the years. There is not a Member of this House, Mr. Chairman, that does not want to see every man pay his just taxes, because if he does not, then his burden is passed on to the man who is paying just taxes and it increases his burden beyond the point that it should be increased.

The Service has a most ambitious scheme. They have a scheme whereby they are going to have a central data processing center in Martinsburg, W. Va. Then they planned to have nine regional centers in various parts of the United States. Every taxpayer in the United States will be given a number. He places that number on his return. These returns are sent to the regional offices. There they are put on punchcards, and from the punchcards they are transferred to magnetic tapes. The magnetic tapes will then be sent to Martinsburg, W. Va., and there, at Martinsburg, W. Va., will be a complete file of the tax status of every taxpayer in the entire United States. It is going to take until 1969 to complete the program.

Our committee before they started on it said, "Listen, do you need all of these nine centers?" They said they thought they did. We said, "Go back and make a further study and see if you cannot cut the number." They came in this year and said they had made a further study and they could cut them to seven, and that alone would save $5 million a year.

Only one of those regional offices is in complete operation at the present time and that is the one in Atlanta, Ga. There they are processing both the individual and corporate returns. One has been opened in Philadelphia. They this year are processing the corporate returns but will not begin to process the individual returns until next year. Then gradually they will open up these centers all over the United States.

Our committee in January visited the one regional center that is in full operation, in Atlanta, Ga. We also visited the national center at Martinsburg, W. Va. There we saw the first refund checks processed on the new machines. They told us, "Now you can watch us compute 800 refunds." I stood there before the automatic machinery and I expected to see the wheels begin to turn, and there was just half a turn in the machinery and they said, "It is all over."

With a half turn, in a split second, they were able to compute on that machine 800 refunds. That tape was sent to the Bureau of Disbursement and from that tape the Bureau of Disbursement will print the refund checks. It is a system that should save the Government tremendous sums of money.

In addition to that, they have asked for substantial increases in personnel this year. We felt they did not need all of the increase they had asked for so we have cut them down rather considerably in their personnel requests. I know they think it is too much, but nevertheless we have allowed them some additional personnel because this is a growing country and you have additional returns coming in each year that have to be processed. So we have allowed them 500 additional permanent employees. They also asked for 777 temporary employees and we allowed them that entire number of temporary employees because we thought it is much cheaper to employ temporary employees during the rush season than to employ permanent employees. So we gave them the allowance on the temporary employees but held down on the permanent employees.

The next item is the Office of the Treasurer of the United States. As you know our former colleague, the delightful Mrs. Kathryn O'Hay Granahan is now Treasurer of the United States. As you all know, she is a very gracious lady and she came before our committee and captivated the hearts of the members of the committee as she does with everyone with whom she comes in contact. We allowed most of the money that she requested although we did cut her request by $100,000. I think she can absorb that cut without any difficulty.

The next item is the Secret Service. The Secret Service requested $7,260,000. We recommend $6,760,000 which is an increase of $1,065,000 over 1963 and a decrease of $500,000 in the estimate. Included in this request of the Secret Service is a request for 76 additional employees, 35 of whom were for the protection of the Vice President of the United States. There has been some discussion of this situation on the floor of the House, and I want to explain just exactly what the situation is. Just after the Blair House attack on President Truman in 1950, the Congress passed a bill authorizing the protection of the Vice President at his request. Of course, any Vice President hesitates to ask for protection. Thereafter, after the Caracas incident in Latin America when Vice President Nixon, as you know, was in grave danger there, the Eisenhower administration asked for the passage of a law that would authorize the protection of the Vice President without his request and placing that responsibility upon the Secret Service. That legislation was introduced by Senator Dirksen in the other body. It passed the other body and came to the House of Representatives late and was not passed during that session. At the beginning of the next session, it was introduced again and it passed the House on July 19, 1961, under a suspension of the rules without a rollcall vote. It was held up in the other body by Vice President Lyndon Johnson, because he did not want the protection. The Vice President left the city briefly in October 1962 and it was at that time that the other body took the bill up and passed it and it became law. That bill places upon the Secret Service the obligation to protect the Vice President as well as the President of the United States.

The situation is that the Vice President has never asked for protection; he does not want protection now; he would like to see the law repealed. I have that from his own lips. It is not secondhand information. But the Secret Service says "Congress has placed the duty upon us and we have got to protect him." Frankly, I think there should be the same protection for the Vice President of the United States as there is for the President; for, after all, he is the next person in line. However, at the time the matter came before the House the then Chief of the Secret Service, who has since retired, said it could be done for $100,000 and the House passed the bill with that information before it. The present Chief said he thought he would need 35 men and some $330,000 to discharge this duty. Our committee did not agree. Consequently we have placed the following language in our report:

> In connection with the request for additional personnel to provide protection for the Vice President, the committee feels that adequate protection should be provided for the Vice President and that his wishes in connection with such protection should be respected. When Public Law 87–829 was enacted, the former Chief of the Secret Service estimated that the annual cost of this protection would be approximately $100,000. The amount recommended by the committee would allow such protection as may be necessary, and in the event additional agents are needed to provide adequate protection for the Vice President during his travels, either within the United States or overseas, certainly the Secret Service should draw on its entire resources in order to provide whatever protection is considered to be advisable under the circumstances. The use of Secret Service agents stationed in localities which are visited by the Vice President, of course, should be used in protecting the Vice President when he visits such locations.

In other words if he goes to San Francisco they should use the agents they have in San Francisco rather than send a large group of agents from here.

Two were assigned to be with him at all times. That means that to have 2 regular agents on the job at all times it requires 10 personnel, because we have 5 for each agent on account of the changes in shifts, holidays and the time that these agents are off.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield?

Mr. GARY. I shall be pleased to yield to the distinguished Speaker.

Mr. McCORMACK. The gentleman from Virginia has stated chronologically the historical facts. The Vice President opposed the passage of the bill making it compulsory that he be given protection by the Secret Service. If the Vice President had his own way now he would not want them. There has been a great deal of unfortunate publicity attached to the situation. Every emphasis should be made to show the position of Vice President JOHNSON which has been clear and distinct all the time. I can remember some years ago when I was talking with a President of the United States, chatting with him on some matter, something about the Secret Service came up. That particular President said to me: "John, the only one in connection with my safety who can tell me what I shall do and what I shall not do, will not do, is the Secret Service. They can tell me what I should do and what I should not do. It is the law and I have got to obey it." The Vice President is in the same situation. The law is on the statute books; it is identically the same as the law in relation to the President of the United States.

If anything happens in the future—and may God forbid—the record is clear if any error has been made as to whether adequate protection has been provided, and the report of the committee takes issue with the Chief of the Secret Service, then the responsibility will rest upon the Congress of the United States.

Mr. GARY. I thank the gentleman for his contribution.

There is a popular song, I believe, that "The Secret Service Makes Me Nervous." I can understand that this would be true of both the President and the Vice President. I think it would make me nervous to have them around me all the time.

The next item is the White House Police. There we have a substantial increase, but that is due to the fact that we have transferred to the White House Police jurisdiction over the entire Executive Office Building where important strategic agencies have their offices and highly classified documents are kept. It has been guarded by the General Services Administration, but we thought the White House Police were better qualified to guard that building than the General Services Administration.

The next is the Guard Force. There is very little change in that—practically none. Most of the addition is for increase in salary.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from North Carolina.

Mr. JONAS. Has the gentleman finished his discussion of title I?

Mr. GARY. Yes.

Mr. JONAS. May I say it has been a very clear, forthright statement, and I congratulate the gentleman for presenting it so well to the House.

Mr. GARY. I thank the gentleman.

Mr. JONAS. I wonder if the facts are available or if the gentleman can pinpoint the amount of money in title I for traveling?

Mr. GARY. I shall be glad to give the gentleman that information. I do have it available right here.

Mr. JONAS. Would the gentleman rather wait and put a table in at the end of his discussion?

Mr. GARY. I think it would be better, because the figures I have here cover the entire bill.

Mr. JONAS. Will the gentleman do that before he concludes his remarks?

Mr. GARY. I shall be glad to do so.

We come now to the Post Office Department. They requested $4,976,964,000. That is a lot of money. Our committee is recommending $4,885 million.

Let me say, like the rest of you I have received telegrams stating that we have wrecked the Post Office Department. That cut in the Post Office Department, as I pointed out a few moments ago, is only 1.8 percent, as compared with 2.45 percent for the entire bill, and 4.1 percent for the Treasury Department.

They tell you it will result in cutting off a lot of employees, that they are going to have to reduce employees; and, in addition to that, none of them will be able to get their pay increase. I say to you unqualifiedly that is not true.

I am perfectly willing to admit, as I said in the beginning, that this is an economy budget. We have cut it as much as we thought it could stand. We have cut it $91,964,000, but they do not tell you that we increased it $227,539,000 over last year.

In addition to that, they asked for 9,650 additional employees. Now, they are going to have to cut off some of those employees to meet this budget; they are new employees. It is not going to affect the old employees. We could not stop the increase in pay if we wanted to, and we certainly do not want to. That has been voted by the Congress of the United States. It has got to be paid. So, this budget today would not affect that in any manner, shape, or form.

Now, I will say this. Year before last the Post Office Department came in with an estimated volume increase. During World War II, we thought the postal volume was at a peak, and we expected after the war to see it go down. Instead of going down, it has gone up every single year since World War II. They estimate this increase and, of course, the more volume they have, the more employees they have to have and the more it costs to handle the mail. They came before our committee 2 years ago with an estimated increase in volume of 4.9 percent. Our committee said "We think that is too high," so we recommended 2.9 percent. It went over to the other body, and they made it 3.9 percent, and that was the amount finally agreed upon. Last year they came in again with an estimate of 4.9 percent. We cut it to 2.9 percent. The Senate raised it to 3.9 percent. Then, while we were having all of that discussion last year as to where the committees were going to meet and who was going to preside, the Postmaster General came in and said, "We overestimated our volume for last year. We think now the estimated volume instead of 4.9 is going to be between 2.9 and 3.3 percent; in fact, it looks like it is going to be 2.9 percent." And, that is what it was, and they turned back $30 million to the Treasury. Then he said, "We do not need the money for this year also, because we think the volume is overestimated," so we settled on the 2.9 percent. This year, although they are not turning anything back into the Treasury, they have absorbed $58 million of the pay increase for 1963. Now, that is a remarkable showing and I congratulate them for it. Frankly, they have finally come to our figures, and their figure this year is based on a 3.5-percent increase in volume, which is our 2.9 percent plus 0.6 percent that they estimated for the 2 additional days in 1964.

Mr. PASSMAN. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the distinguished gentleman from Louisiana.

Mr. PASSMAN. In effect, the gentleman is saying that if we had not increased the salaries, they could have turned back $58 million out of last year's appropriation?

Mr. GARY. Yes.

Mr. PASSMAN. That is a matter of record.

Mr. GARY. Yes.

Mr. PASSMAN. And we were subjected to just about as much criticism last year for making adjustments as we are this year; is that not a statement of fact?

Mr. GARY. The gentleman is absolutely correct.

Mr. PASSMAN. I thank the gentleman.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from North Carolina.

Mr. JONAS. The telegrams I have been receiving talk about a cut of $100 million. Of course, that is greater than the total cut for the department. The total is only about $91 million, I understand.

Mr. GARY. That is correct.

Mr. JONAS. Is it not true that the cut in operations is considerably less than that? The cut in the Bureau of Operations is only $69 million?

Mr. GARY. The cut in the Bureau of Operations is $69,814,000.

Mr. JONAS. And, if the gentleman will yield further, this cut would actually amount to less than 1 percent if it is related to the entire bill?

Mr. GARY. Yes; or related to their estimate which was $3.9 billion—$3,959,814,000.

Mr. JONAS. In other words, it would be five-eighths of 1 percent, someone tells me at the table here.

Mr. GARY. I am not that good a mathematician.

Mr. JONAS. I am not either.

Mr. GARY. I am not a mathematician, and never have been.

Mr. JONAS. If the gentleman will yield further, I think the record ought to show that in the field of operations the cut was only $69 million.

Mr. GARY. I will say to the gentleman the one thing I have tried to conceal all my life is my marks in school in mathematics.

Mr. OLSEN of Montana. Mr. Chairman, will the gentleman yield?

Mr. GARY. I shall be glad to yield to the gentleman from Montana.

Mr. OLSEN of Montana. Because some of us have been very discontented and really gravely concerned with this cut, those of us on the Committee on Post Office and Civil Service are proposing to present at the proper time an amendment to restore these cuts. The amendment will be presented at the appropriate time by the ranking majority member, the gentleman from Louisiana [Mr. Morrison].

I thought it would be well to give notice of that at this time.

Mr. GARY. Well, sir, I hope the House will not adopt it. But of course, we have to abide by the decision of the House in this matter.

Mr. HALEY. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from Florida.

Mr. HALEY. I know this is reiterating just what the gentleman has said, but the actual decrease in the Post Office Department is $91 million from the total amount of the request?

Mr. GARY. That is right.

Mr. HALEY. If the gentleman will yield further, there is, however, an increase of $227 million above last year's appropriations?

Mr. GARY. The gentleman is absolutely correct.

Mr. HALEY. And the appropriation for last year covered some unusual things which happened or they would have had money to turn back; is that correct?

Mr. GARY. The gentleman is absolutely correct.

Mr. HALEY. This decrease will not affect any present permanent employee of the Post Office Department?

Mr. GARY. Absolutely it will not.

Mr. HALEY. And, further, in 1962 the Post Office Department had an increase of something over 6,000 employees? Now they are already in here, and this will not affect them in any way whatsoever?

Mr. GARY. Absolutely it will not.

Mr. HALEY. So the people who are screaming about this thing and putting out misinformation to the effect that this is going to cause a decrease in employment in the Post Office Department are absolutely wrong. There is not one present employee of the Post Office Department who will lose his or her job if this present proposal is enacted?

Mr. GARY. The gentleman is absolutely correct, and I thank the gentleman for his contribution.

Mr. PASSMAN. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from Louisiana, a member of the subcommittee.

Mr. PASSMAN. I do not think that the postal clerks knew anything about this reduction until about 65 hours ago. It is somewhat surprising to me that they have acquired so much knowledge as to what the effect would be in such a short period of time. I am not being sarcastic. However, the telegrams which I have received certainly indicate that they believe they have far more knowledge about this matter than the committee.

I want to know if the gentleman from Virginia has received any of those telegrams?

Mr. GARY. I certainly have.

Mr. PASSMAN. If the gentleman will yield further, I wonder what prompted the telegrams to come in during this short period of 65 hours after the committee worked its will.

Mr. GARY. I have been receiving them and I have answered them by telling them just exactly what I have told the members of the committee on the floor of the House here today.

Mr. OLIVER P. BOLTON. Mr. Chairman, will the gentleman yield?

Mr. GARY. I shall be glad to yield to the gentleman from Ohio.

Mr. OLIVER P. BOLTON. With reference to the Bureau of Operations, I come from a very rapidly expanding area. Is it the opinion of the gentleman that the reduction which the committee has made in the request will not affect the Department to such an extent that it would be impossible for the Department to extend service where it is called for?

Mr. GARY. It certainly will not, in my judgment, keep them from extending services. Of course, to what extent it might interfere with it, I have stated in the very beginning that this is an economy budget and it may curtail their extensions to some extent.

I could not say to the gentleman, and I want to be perfectly honest about it, that it would not curtail extensions to some extent. We refrained from telling them where they would have to cut in any place. In addition to that they have the authority to transfer from one appropriation to the other. Therefore, if they run short in one appropriation they can transfer from another appropriation. They have greater latitude in the use of their funds than any agency in the entire Government, with the possible exception of the armed services. I think they can live adequately with this budget.

Mr. OLIVER P. BOLTON. If the gentleman will yield further, where there is a real need for extensions it is the gentleman's feeling that the service can be extended?

Mr. GARY. Yes, it is my opinion that where there is a real need for it it can be extended.

Mr. PASSMAN. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from Louisiana.

Mr. PASSMAN. And, of course, we have a record in this committee of being extremely fair. When this bill goes to the other body, in all probability, if those who are presently complaining could make a case that we have cut it a few million too much it can, and always has been, reinstated. That is the record, is it not?

Mr. GARY. Absolutely.

Mr. PASSMAN. And this committee has a record of being extremely fair. In a few instances, in the 17 years that the gentleman has been on this committee, the committee has made cuts, perhaps a little bit too deep, but then we readily made available a supplemental appropriation so that the service would not be disrupted.

Mr. GARY. Mr. Chairman, I am not bragging at all——

Mr. PASSMAN. Am I not making a statement of fact?

Mr. GARY. I do not believe there is a Member of this House that has the interest of the Post Office at heart more than I do.

Mr. PASSMAN. I certainly agree with the gentleman and that is why I asked that question. There are two other stages—the other side and then the conference. And then if it is found that we have cut a little bit too deeply, which I do not believe, adjustments can be made at a later time. Always there is a supplemental appropriation that can be approved if it is found that we have made a mistake. But may I say that the record is abundantly clear that the estimates of the gentleman from Virginia have always been more accurate than those of the Post Office Department.

Mr. GARY. The estimates of the subcommittee, not of the gentleman from Virginia.

Mr. PASSMAN. I shall accept that—the subcommittee. But is not that a statement of fact?

Mr. GARY. It is a statement of fact.

Mr. PASSMAN. I thank the gentleman.

Mr. JOHANSEN. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield.

Mr. JOHANSEN. Mr. Chairman, I wonder if the gentleman can assure the House that if this cut stands it will in no way affect adversely within-grade step pay increases that are required by law.

Mr. GARY. We cannot affect those. Those are fixed by law. There is no way we can change that.

Mr. JOHANSEN. Precisely.

Mr. GARY. We could not change them if we wanted to, and we do not want to change them. Congress has acted on that. We have no disposition to change that and we could not do so if we wanted to.

Mr. JOHANSEN. At the risk of repetition, this does not involve any layoff or discharge of present employees?

Mr. GARY. Absolutely not.

Mr. JOHANSEN. May I ask one other question and that is whether since this report became public, the gentleman has had any communication from the Post Office Department protesting this?

Mr. GARY. No, sir.

Mr. JOHANSEN. Then is it not passing strange, I will ask the gentleman, that we have this barrage of propaganda from representatives of the employee organizations? The gentleman does not need to answer this question if he does not want to, or if he does not know the answer, but I wonder whether the employee unions are now acting as spokesmen for the Department?

Mr. GARY. I have no information concerning the telegrams that were sent except those that were received in my office and I have answered those. Members have told me that they have had telegrams and I have tried to give them the information so that they could answer them.

Mr. JOHANSEN. It seems to me that if there is a valid protest from the Department, that is a management function.

Mr. DULSKI. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield.

Mr. DULSKI. When the subcommittee was considering this appropriation, did they consider the $163 million deficiency appropriation which is pending at the present time?

Mr. GARY. Yes, sir; we did.

Mr. BARRY. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield.

Mr. BARRY. Mr. Chairman, I think the gentleman has made an excellent presentation, but I think he is also sensitive to the fact that the public has been recently taxed 1 cent on first-class mail and are expecting better service from the Post Office Department. The question is whether they are paying more for the service than they are getting. I wonder if the gentleman can tell us whether there will be any curtailment in present plans for same-day delivery that were inaugurated in this city and in other cities by virtue of the cut that is now being proposed? That is question No. 1. No. 2, I would like to ask the gentleman whether or not there would be any curtailment in the proposed building plans of the Post Office Department with regard to new post offices or the machinery within the post offices?

Mr. GARY. I do not believe there will be any curtailment in the service. It was not the intention of our committee to cut to a point that would result in curtailment of service. Insofar as the building program is concerned, I cannot answer that. We asked for various increases in rent, and what the effect of those programs would be and of their commitments on present programs.

The statement has been made that this bill does not cover present commitments. If that is true, it is the fault of the Post Office Department because we did not have that information before us.

Mr. BARRY. There is a $7 million reduction in plans.

Mr. GARY. Yes. We reduced all along the line. We felt that time has come to economize.

Mr. PASSMAN. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from Louisiana.

Mr. PASSMAN. Is it not true, notwithstanding the fact that we had a substantial increase in postal rates effective as of this January, it is now estimated that in fiscal 1964 we will have a gross operating deficit of $554 million?

Mr. GARY. Yes, that is correct.

Mr. PASSMAN. That gives an idea of the cost of expanded service.

Mr. GARY. Yes.

Mr. BARRY. My understanding is that $450 million of that $500 million of which the gentleman is speaking would be allowed for public service, but it would be only a real operating deficit of something over $100 million for the Post Office Department.

Mr. GARY. I think it is allowed for public service that is not public service.

Mr. PASSMAN. It is, of course, a deficit. You are following the new formula to offset a deficit. You can offset a trillion-dollar deficit if you follow this formula.

Mr. GARY. That is right. The gentleman is absolutely right.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from North Carolina.

Mr. JONAS. In the discussion today, frequently the comment has been made that the committee has cut so much. I think it ought to be made clear that the committee has not cut back anything; you have merely slightly reduced the requests for increased funds over last year. For example, in connection with the inquiry of the gentleman from Ohio [Mr. BOLTON], the report shows that while there was a reduction of $69 million for operations, there is an increase of $188 million for operations over the amount provided last year. So there is not a cut at all—no reduction for operations but an increase of $188 million over the current year. It is merely a reduction in the increase requested over last year.

Mr. GARY. The gentleman is absolutely correct.

I have been on the Appropriations Committee for 17 years, and I have never yet made a cut in an appropriation bill that I can remember that I was not accused of wrecking the operations.

I have wrecked more programs, probably, than any Member of Congress, but they are all still running. They are the healthiest wrecked programs that I ever saw. I think if we wrecked a few more of them in that way we would be better off.

Let me say in addition to this we have made some appropriations here for the Executive Office of the President, but we made very little cut in those because we have three separate and equal branches of the Government and it has been our policy to let the President run his own office as he sees fit. We think that as the head of an independent and equal branch of the Government he is privileged to do that.

Mr. CONTE. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from Massachusetts.

Mr. CONTE. I want to compliment the chairman and the members of the committee for the outstanding job they have performed on this budget and the many budgets in the past. I must say in all fairness that about 4 years ago when the committee made a cut in the Post Office budget I was convinced that the committee had gone too far, Mr. Chairman, and I took the floor against some of the cuts. I did not prevail however. The Post Office operated very well with those cuts.

I would like to get some legislative intent here on the Secret Service so that the record will be clear. Is it the intent of the committee now to provide the Vice President with 2 Secret Service men around the clock, in all, 10 Secret Service men?

Mr. GARY. The budget request for the Secret Service was for 76 additional personnel including 35 agents and 1 clerk for the protection of the Vice President.

We allowed 30 additional employees, 10 for the Vice President and specifically stated that the other 20 were allowed for the tremendous increase we are having in counterfeit cases. They enforce the counterfeiting laws and they needed some additional personnel to enforce the laws against counterfeiting and forging of Government checks and we specifically stated in our report that 20 additional employees are allowed for that purpose.

Mr. CONTE. In other words, these 10 will be assigned to the Vice President, and if I understand it correctly, if he takes a trip someplace in the United States and he needs more to protect him, they will be taken from the field; and if he takes a trip overseas, they will be taken from the field to protect him in those places.

Mr. GARY. The gentleman is absolutely correct.

Of course, the two who are assigned to him will travel with him anywhere he goes. They will be with him all the time, but for additional protection in out of the district areas, they will rely on other personnel in that district. Overseas we felt we should give him unlimited power because we do not want to assume the responsibility for the Vice President when he is traveling overseas.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. GARY. I would like to leave some time for other members of my committee. I would be delighted to yield to my colleague.

Mr. JONAS. I just wanted to remind the gentleman that he was planning to put in the RECORD, at the conclusion of his remarks, the figures on travel.

Mr. GARY. I have these figures. I am glad the gentleman suggested it.

For the Treasury Department, the figure for travel for the Secretary's Office is $61,000 for 1962, $60,000 in 1963 and $62,000 in 1964.

The total for the Treasury Department is $24,655,000 for 1962, $29,323,000 for 1963 and $33,023,000 for 1964.

The complete figures are as follows:

TREASURY—POST OFFICE AND EXECUTIVE OFFICE BILL

Travel

	1962 actual	1963 estimate	1964 estimate
Treasury Department:			
Secretary's Office	$61,000	$60,000	$62,000
Bureau of Accounts	6,000	8,000	8,000
Disbursement	69,000	55,000	51,000
Customs	791,000	780,000	987,000
Mint	41,000	40,000	40,000
Narcotics	262,000	312,000	347,000
Public Debt	490,000	488,000	537,000
Coast Guard operations	6,393,000	7,141,000	7,455,000
Acquisition, construction and improvements	86,000	152,000	175,000
Reserve training	847,000	924,000	1,018,000
Internal Revenue Service	15,074,000	18,894,000	21,677,000
Treasurer of United States	10,000	13,000	13,000
Secret Service:			
Salaries and expenses	523,000	454,000	644,000
White House Police	2,000	2,000	9,000
Guard force			
Total, Treasury Department	24,655,000	29,323,000	33,023,000
1963 over 1962		+4,668,000	
1964 over 1963			+3,700,000
Post Office Department:			
Administration	3,966,000	4,593,000	4,727,000
Research and development	129,000	209,000	284,000
Operations	17,263,000	17,880,000	18,629,000
Transportation			
Facilities	28,000	35,000	45,000
Plant and equipment			
Total, Post Office	21,386,000	22,717,000	23,685,000
1963 over 1962		+1,331,000	
1964 over 1963			+968,000
Executive Office of the President:			
White House Office	21,000	25,000	25,000
Special projects	206,000	347,000	347,000
Bureau of the Budget	106,000	125,000	135,000
Council of Economic Advisers	10,000	10,000	10,000
Security Council	8,000	8,000	12,000
Total, Executive Office of the President	351,000	515,000	529,000
1963 over 1962		+164,000	
1964 over 1963			+14,000
Independent agencies:			
Tax Court	57,000	52,000	52,000
Intergovernmental Relations Commission	20,000	29,000	23,000
Labor-Management Committee	12,000	38,000	40,000
Total, independent agencies	89,000	119,000	115,000
1963 over 1962		+30,000	
1964 over 1963			−4,000
Grand total	46,481,000	52,674,000	57,352,000
1963 over 1962		+6,193,000	
1964 over 1963			+4,678,000

Mr. GARY. I might call the gentleman's attention to this, that the 1963 amount was $4,660,000 over 1962. We have been looking into this item and urging them to keep it down and try to hold it down. As a result, in 1964 there was only a $3,700,000 increase. There is an increase, but the increase was less than the year before.

Mr. JONAS. It does show that traveling is increasing from year to year in the executive department.

Mr. GARY. Yes, travel is increasing from year to year, but the same situation exists in substance in the Post Office Department.

Mr. SMITH of Virginia. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to my distinguished colleague from Virginia.

Mr. SMITH of Virginia. Mr. Chairman, I desire to compliment my colleague from Virginia on the bill he has brought to the floor today. I happen to know that he has devoted a great deal of time, energy, and work on the details of this bill; and I am sure he has not brought in here any cuts that the Department cannot well stand and absorb. I do hope that, with the work he and his committee have done on this bill, the House will sustain the reasonable cuts that have been made in this appropriation.

Everybody talks about cutting appropriations. This is going to be one opportunity where you will have the chance to resist some pressure that is being brought on you, as we all know, by different minority groups. I do hope that my friend from Virginia, if any amendment increasing the bill is adopted, will demand a rollcall vote and put the Members on record.

Mr. GARY. I certainly will ask for a rollcall vote on any amendments increasing the amount.

Mr. GATHINGS. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from Arkansas.

Mr. GATHINGS. I know the gentleman is tired, for he has been on his feet more than an hour explaining this bill. I commend the gentleman and his subcommittee for the splendid job they have done. I especially want to say they have done a fine job in providing the machinery to curb the distribution of salacious material, and I am wondering whether or not the gentleman would care to make a little statement in that regard.

Mr. GARY. We allowed the budget request. We went into that very fully. It is a terrible situation. We allowed the full request both for the Post Office Department and the Customs Bureau. They are working together on it and together we hope they will succeed in eliminating or at least curtailing it. It is a very difficult situation now because the offenders are using first-class mail to send out their advertising matter. They get lists of the youth attending camps in this country or schools. They will send a letter by first-class mail and enclose some salacious material, and say: "We have much worse than this. Just send us $5 and we will send it to you." Of course no one can open first-class mail except upon authorization of the addressee, and the use of first-class mail complicates the problem. But all concerned are doing everything possible to curtail it. We are working assiduously at it.

Mr. Chairman, I trust that it will be the pleasure of the House to pass our bill without amendments.

The CHAIRMAN. The gentleman from Virginia has consumed 1 hour and 17 minutes.

Mr. PILLION. Mr. Chairman, I yield myself such time as I may consume.

The CHAIRMAN. The gentleman from New York is recognized.

Mr. PILLION. Mr. Chairman, I concur with the gentleman from Virginia in his accurate analysis of this bill.

I am in full agreement with the present reductions proposed in this bill.

This bill is a reasonably good bill. The reduction of $150 million is a substantial cut. It is not irresponsible. It is fully supported by the testimony presented to the subcommittee.

In the markup of this bill, the subcommittee had to keep in mind the fact that these two departments, the Post Office and the Treasury are the major revenue-producing agencies of our Government. Reducing their operating costs requires delicate and skillful surgery.

I would like to express my respects to the chairman of the subcommittee, the gentleman from Virginia. He presided over the hearings with impartiality, patience, dignity and great wisdom.

I consider it my duty to publicly acknowledge the substantial contributions made by my associates, the gentleman from Louisiana [Mr. PASSMAN], the gentleman from Oklahoma [Mr. STEED], and the gentleman from Massachusetts [Mr. CONTE], in improving this bill. Their searching questions and valuable suggestions not only helped to reduce the budget recommendations, but will also result in better, more efficient management by these departments.

Mr. Gunnels, of the staff, deserves special mention. His cooperation has been most helpful to the committee.

U.S. SILVER AND MINT CAPACITY SHORTAGES

Mr. Chairman, I do not propose to restate the reductions recommended in the Treasury Department appropriations.

But there is one item in the Treasury appropriation that warrants our most serious attention and deliberation. I refer to the appropriation for the operation of our mints in Denver and Philadelphia. Those items involve basic fiscal and monetary policies.

Our Government is faced with an imminent, highly explosive monetary crisis. This crisis arises from a double squeeze upon our coinage operations.

First. We are faced with a critical lack of manufacturing capacity to produce sufficient coins to meet the public demand.

Second. Our Government lacks sufficient silver stock to meet the legal silver requirements for the redemption of our dollar certificates, and at the same time meet the requirements for silver coinage.

COINAGE SUPPLY CAUSES

There is a noticeable shortage of coins throughout the Nation. The Federal Reserve banks have been rationing coins to different sections of the country. The mints' inventories of coins are exhausted. Some firms in various cities have had to resort to paper script to relieve the shortages.

This is a most unhealthy and dangerous psychological condition.

The causes for this abnormal demand for coins are as follows:

First. An increased industrial demand for silver.

Second. The increasing number of vending machines.

Third. An expanding economy.

Fourth. There is a definite process of speculative hoarding of silver coins, and hedging against the devaluation of the dollar.

Fifth. A fear of inflation and growing lack of public confidence in the fiscal and monetary policies of this Nation.

COIN PRODUCTION AND MINT CAPACITY

The alarming increased demand for coins is illustrated by these mint production figures:

Our coin production for the years 1955–59 averaged 1.56 billion pieces.

In fiscal 1962, our production jumped to—more than doubled—3.46 billion pieces.

For fiscal 1964, our budget called for a prospective production of 3.3 billion pieces.

The Little report, of February 11, 1963, on mint capacity and expected coin requirements, projected a 1964 requirement of 3.3 billion pieces.

The demand for coins has increased so fast that, within the last month and one-half, since February 11, 1963, the coin requirement has been increased to 4.1 billion pieces for 1964. The Little report is already obsolete. That is how fast our coinage system has deteriorated.

THE 1964 DENVER AND PHILADELPHIA MINT CAPACITY

If the Denver mint operates three shifts a day, 6 days a week, and the Philadelphia mint operates three shifts a day, 5 days a week, it will be nip-and-tuck as to whether or not they can produce the 4.1 billion coins that will be needed for fiscal 1964.

These are maximum capacities. The ideal operation for efficiency is two shifts a day, 5 days a week. We lack a reserve capacity if there is a further acceleration in the demand for coins.

LEGISLATION FOR NEW MINT

There is now pending in this Congress a Treasury-sponsored bill to authorize the construction of a new mint. This mint will probably replace the antiquated high-cost minting facilities at Philadelphia. This new mint is needed and should be built. But, a critical time element is involved.

From the testimony before our committee, there will be protracted negotiations for a site. There are development and engineering design problems involved. The target date for construction completion and manufacturing readiness for a new mint is 4 to 6 years away.

This new mint will not solve the crisis that exists today.

The subcommittee took two steps to alleviate the lack of coin manufacturing capacity.

First. This bill provides an astonishing small appropriation of $125,000, and directs the mint officials to put into operation an annealing furnace at the Denver mint. This furnace is on hand, a leftover from the San Francisco mint.

This simple operation will increase our coin production capacity by 400 million coins a year at practically no cost at all. A 10-percent increase of capacity will be produced over the present combined capacities of both the Denver and Philadelphia mints. The new maximum capacity will be increased to 4.5 billion a year.

Mr. ROGERS of Colorado. Mr. Chairman, will the gentleman yield?

Mr. PILLION. I yield to the gentleman from Colorado.

Mr. ROGERS of Colorado. As I understand, the $125,000 is to step up production at the Denver mint at the present time.

Mr. PILLION. That is correct.

Mr. ROGERS of Colorado. And it has nothing whatsoever to do with the plan that the Treasury Department may have as to any buildings that may be constructed under S. 872 that the gentleman referred to.

Mr. PILLION. This is to meet an immediate critical situation to increase the production of coins in the next 6 months or year. The Philadelphia mint or proposed new mint, whether it is going to be at Philadelphia or not, or any other place, is a long-range increase of capacity.

Mr. ROGERS of Colorado. That was evidenced by the statement made on page 528 of the hearings when we were cross-examining the director of the mint, Miss Adams, when she said:

> That is very practical if you can guarantee to us they will not decide upon a single mint and close the existing Denver mint after we put that extra money into it.

Now, that is the unanimous position of the committee.

Mr. PILLION. That is correct. I do not think there is any prospect or intent to close the Denver mint at all.

Mr. ROGERS of Colorado. I thank the gentleman. I appreciate that.

Mr. PILLION. Second, the committee report further directs the mint officials to study the feasibility and the time element involved in the installation of a third roller line at the Denver mint. This would add another 1 billion annual coin plant capacity.

These steps are intended to increase production capacity within the near future—6 months to 1 year—sufficient to meet and forestall any prospective panicky shortage of coins. We want to assure the public that there will be an adequate supply of coins for our needs.

These actions were not initiated or recommended by the mint or the Treasury officials. The chairman of the subcommittee, the gentleman from Virginia [Mr. GARY], deserves full credit for this solution to a most urgent problem.

Mr. Chairman, the acute shortage of our silver supply is closely related to our fiscal and monetary policies. Our free supply of silver available for coinage is about 50 million ounces, or roughly $80 million. At the present rate of demand this supply is less than a year's supply. Our silver dollars are fast disappearing. In 1935 we had a supply of 500 million silver dollars. We thought that inventory would last forever. In the last 14 months the Treasury Department lost 60 million silver dollars. Today we have left only about 84 million silver dollars. At the present rate of demand these will be exhausted in less than 1 year. We do have 1.6 billion ounces of silver in the Treasury. That is worth about $2.11 billion. But this is not free silver. Against this silver we have outstanding about $2.14 billion of U.S. currency redeemable in silver. Therefore, this silver is not available for coinage under our present law.

Mr. Chairman, there has been a spectacular rise in the price of silver. In 1961 the price was 71 cents an ounce. In 1962 it rose to $1.05 an ounce, and today the price is roughly $1.26 to $1.27 per ounce. We carry this silver on our books at $1.29 per ounce.

The silver dollar has a content of seventy-seven one-hundredths ounce of silver at an evaluation of $1.29 per ounce. If the price of silver goes above $1.29 then it becomes profitable to hoard or melt the silver dollars.

In our subsidiary coins, the 10-cent piece, the 25-cent piece, and the 50-cent piece, they have seventy-two one-hundredths of an ounce of silver per $1 of face value. The ratio there is $1.38 per ounce. If silver goes above $1.38 then it becomes profitable to hoard these, or to melt down the silver subsidiary coin.

We must remember that silver is our secondary monetary reserve for our dollars. If the price of silver depreciates the value of our dollar correspondingly depreciates. We are being forced by our fiscal policies into a process of devaluing our dollar.

On December 28 last year President Kennedy under authority of law took the following steps to relieve our silver prices. First, he terminated the sale of silver by the Treasury at 91 cents per ounce. This action was taken rather late, and a large portion of our silver stocks were depleted. Next, the President called for the retirement of all U.S. silver certificates in denominations of $5 or more to be replaced by Federal Reserve notes that are not redeemable in silver. This retirement of silver certificates did not free enough silver to satisfy our needs for coinage.

Now, I note that the Committee on Banking and Currency of the House has favorably reported a bill to demonetize silver. Under this bill—and I expect the bill will be before the House very shortly—the Federal Reserve banks will be authorized to issue $1 and $2 currency notes not redeemable in silver in substitution for the U.S. silver certificates, the $1 and $2 bills that are now in being. This action will replace about $2 billion worth of certificates and place them in the same category as the $30 billion of outstanding Federal Reserve notes.

This action will place about $2 billion of certificates in the same category as the $30 billion of outstanding Reserve notes.

The present 25-percent gold reserve requirement will be increased by $500 million. Our free gold to meet our foreign short-term liabilities will then be reduced to less than $3 billion. The total short-term liabilities held by foreigners payable in gold on demand or the equivalent of demand today totals $25.5 billion. Thus we have $3 billion of free gold promptly available to meet $25.5 billion of current liabilities in gold held by foreign institutions and foreign nationals.

We are at the mercy of foreign governments who hold our dollars and other short-term obligations. We are dependent upon the forbearance of foreign governments for our solvency.

The next step this country must take is to repeal the law requiring a 25-percent gold reserve for our currency and the Federal Reserve Bank deposit requirements. After we have done that we are headed down the road and the fiscally fatal step we will have to take is to internationally devalue the dollar in terms of gold and this of course means international fiscal bankruptcy; and we are pretty close to it. The political, economic and military consequences of such a step would be catastrophic.

Mr. Chairman, this is the second appropriation bill to come before this House. The day before yesterday the House acted upon the Interior Appropriation bill. I was personally proud of the action of this House on that bill. This House is charged with the prime responsibility for fiscal policy and currency regulations. This House I thought acted prudently to discharge its responsibilities faithfully and I have the highest esteem for the gentleman from Ohio [Mr. KIRWAN] who managed that bill on the floor of this House. It was a job well done. I know that this House will give the bill that is now before us the same careful and prudent consideration.

Mr. Chairman, I now address myself to the Post Office Department appropriations in this bill. This appropriation cannot be isolated from the total fiscal picture of this Nation. The administrative budget projects an $11.9 billion deficit for fiscal 1964. The President's budget made a number of assumptions that have not materialized. Unless substantial reductions are made in the budget recommendations the 1964 budget will not have $11.9 billion in deficit but it will exceed $15 billion and probably run somewhere between $15 and $20 billion. That size deficit would seriously jeopardize possible tax cuts. It would further destroy public confidence, discourage job-producing capital investments and weaken our economy generally.

This bill would reduce the Post Office appropriations by $91,964,000. This amounts to a percentage reduction of only 1.85 percent.

The Interior Department reduction was 10 percent. The Treasury Department reductions amount to 5 percent of the budget recommendations.

Based on a percentage comparison, the Post Office reduction is a modest one.

I would like to assure this House that every reduction made by your committee is justified by the testimony before the committee. Earlier, I said that this was a reasonably good bill. A reasonably good bill is not good enough. This House can legislate a better bill.

My criticism of this bill is that the reductions are not big enough. The budget figures and the testimony indicate areas where at least $75 million additional, could be cut without impairing services.

I would like to respond to the flood of telegrams with which the Postal Union officials are attempting to pressure and stampede the Members of this House.

I have talked to a number of national officers of these unions. These officials had no specific criticism or objection to the reductions. They expressed a vague fear that, in some unspecified way, these reductions might possibly affect postal employees.

Every member of the subcommittee has, year after year, been most solicitous for the welfare of postal employees.

It was this subcommittee that insisted that the day-by-day guides work measurement system be reduced to a minimum.

It was this subcommittee that slowed down the costly automation of the post offices.

It is this subcommittee that has pressured the Post Office Department to take into consideration our unemployment figures, so that automation does not take away jobs in periods of unemployment.

There are no present jobs in jeopardy as a result of these reductions.

There are no automatic within-grade salary increases jeopardized.

No present mail services are to be eliminated or curtailed.

There are no present postal routes to be eliminated or reduced.

Mr. Chairman, I am satisfied that this blitzkrieg upon the Members of Congress emanates from the Post Office Department. They have misrepresented the facts to the union officials. These officials are fearful of reprisals from the Post Office officials if they do not put pressure upon the Members of Congress to restore these cuts.

The union officials are acting upon misrepresentations made by Post Office officials as to the effect of these reductions upon their union members. The Post Office Department is not acting in good faith. They are responsible for this campaign of political intimidation against the membership of this House.

The question here is this, Shall this Congress allow itself to be stampeded and coerced into providing funds for the Post Office over and above their established and justified needs?

Mr. Chairman, I anticipate that an attempt will be made to restore the $69,814,000 by which the operations appropriation has been reduced in this budget.

This is less than a 2-percent reduction. The committee has asked the Post Office to absorb $43 million of the 2½-percent pay increase that will become effective on January 1, 1964.

So the absorption of $43 million is less than the absorption in 1963. I want to point out, it is very important to note that the $58 million absorption in 1963 is not carried over into 1964. So the absorption in 1964 is a great deal less than the absorption they were able to make in the year 1963.

Let me say a word or two about the automatic-step increases. It is claimed this budget would affect that. It does not affect the automatic-step increases one iota. There is not any employee who can or will be denied a step increase under this bill. The committee has carefully examined into this item. The budget item stated in the budget for this program was given to us as costing $46.6 million. In 1963 it only amounted to $13.3 million. Mr. Nicholson, Assistant Postmaster General, testified that only $18 million is required for automatic-step increases. So this item alone is overstated by $28.6 million and can be and should be reduced by that amount.

Let us consider the item of temporary personnel cuts. The budget requested an increase of $51 million for temporary personnel. The pay increases and the two extra days for temporary personnel totals only $56 million. This is an item that can and should be cut by an additional $15 million.

Next, we have the item of lapses. The lapses are the differences in the annual rate of pay and the sums left over from the annual salaries that are budgeted due to the termination of jobs in any year. In 1963, the savings to the Department from lapses for 3,216 terminations of jobs amounted to $32,147,000. In 1964, there will be more lapses, more terminations of jobs than in 1963, a total of 3,358. Yet, they budgeted a saving in this area of only $18.3 million. The budget has understated its savings from this account by $14 million. This bill should be reduced by an additional $14 million over and above the amount in this bill.

Next, let us take the item of facilities. The Post Office Department has embarked upon a grandiose 5-year program for the leasing of newly constructed post office buildings. They plan to have constructed and lease back 7,000 new buildings over the next 5 years. The total construction costs will be $800 million or more. Let us just see what that does to the annual budget. This is the way these annual lease costs have risen. Just let me give you a few figures. They are startling. The lease cost rental for leases in 1960 were $44 million. In 1964, that is this year, the annual lease costs have jumped by 100 percent. Today, they stand at $87 million a year.

In 1967 the lease cost will amount to $153 million. That is another jump of $67 million. This item for facilities, in my estimation should be reduced to the 1963 level of $160 million. This bill allows an increase of $18 million. You could well do without that increase.

So far I have itemized a number of areas where reductions can and should be made in this bill in addition to what the committee has recommended, and now these additional reductions would not cut back one job or in any way impair a necessary service, and they are conservative reductions.

Additional reducible items in my estimation are as follows: First, the automatic step increase, $28,600,000; temporary personnel cuts by $15 million; lapses which are understated by $14 million; and facilities, a reduction of $18 million. The total of these reductions that could be made without hurting the service in any way amounts to $75.6 million.

Mr. Chairman, the bill before us is not a tough bill. If anything it is overly generous. The Post Office budget figures in many areas are adequate, and I would recommend that we fully sustain the cuts contained in this bill if we cannot reduce the amounts that I have mentioned here that ought to be reduced, that should be reduced.

Mr. FOREMAN. Mr. Chairman, will the gentleman yield?

Mr. PILLION. I yield.

Mr. FOREMAN. Is the gentleman going to propose an amendment to effectuate these additional cuts?

Mr. PILLION. No; I proposed it in the committee, but I do not intend to propose amendments on the floor.

Mr. FOREMAN. Mr. Chairman, I would like to associate myself with the gentleman's remarks.

Mr. PILLION. I thank the gentleman for his generous remarks.

Mr. REIFEL. Mr. Chairman, will the gentleman yield?

Mr. PILLION. I yield.

Mr. REIFEL. Recently the Commissioner of the Internal Revenue Service announced that there would be some consolidations of regional offices. It just happens that the district office in my State is involved to the extent of the possibility of the transfer of some 17 families the heads of which have been employed there for a number of years, and own their homes. Naturally, they are concerned. We had a meeting with the regional director at which time he explained that the proposal was held up, and under review by Secretary Dillon. However, if the plans are carried out it would take place probably by next January. I read in the committee report on page 9 just below the center of the page the following paragraph:

> As stated in its report last year, the committee approves in principle the long-range plan of the Internal Revenue Service. However, after visiting some of the installations in the field early this year, the committee continues to be of the opinion that the Service is attempting to progress too rapidly in the implementation of its long-range plan and that valuable experience to be gained from the automatic data processing installations in Atlanta, Ga., and Martinsburg, W. Va., will not be fully realized unless the plan is extended and the other planned service centers are phased in on a more reasonable schedule.

Was the fact that this consolidation was being held up for review taken into consideration by the committee as evidence of moving a little more rapidly than might be desirable?

Mr. PILLION. Yes, the committee felt that these automatic data processing stations in the country were moving too fast to profit from the experience of the automatic data processing systems in Atlanta and Martinsburg.

We felt to put in this mechanism and get the greatest benefit from it we should not attempt to build it on a crash-type program.

Mr. REIFEL. Does the gentleman have information other than that given to him by the Commission in the hearings as reported that this review is going to slow this up beyond January 1?

Mr. PILLION. I have no definite information, but under the original order for the consolidation the effective date was January 1 of next year, as the gentleman knows. So I assume that the reconsideration or review would probably put off and delay this consolidation.

Mr. REIFEL. I thank the gentleman.

Mr. FOREMAN. Mr. Chairman, will the gentleman yield?

Mr. PILLION. I yield to the gentleman from Texas.

Mr. FOREMAN. Along this line, the gentleman talked about the automatic data processing installations and additional automation in the handling of IRS returns.

If we are expanding our agency installations, this automatic handling of returns, why is it that we continue each year to add additional personnel to the IRS in 1964, numbering 1,277 personnel?

Mr. PILLION. Of course these are always sold on the idea that the electronic processing equipment will do the work that was formerly done manually; but in the Income Tax Division, the Internal Revenue Service, we find that the automatic data processing system is able to make all these recordings and send them to Virginia or elsewhere. We find some have missed out. These returns must be audited and investigated. If we find a thousand people have failed to account for their bank interest, for instance, you have to have someone to audit them and investigate them and make the collections. That is where these additional employees come in.

Mr. FOREMAN. The more automation you get the more time and personnel is required, and the more we try to save the more we have to check up on them.

Mr. PILLION. That is exactly it.

Mr. CAHILL. Mr. Chairman, will the gentleman yield?

Mr. PILLION. I yield to the gentleman from New Jersey.

Mr. CAHILL. I am also interested, as our friend was, in these proposed mergers throughout the country, the Internal Revenue Service and its representation that it is going to be able to save some $5 million. As far as my personal investigation is concerned, I find no logical basis for that statement that there will be any appreciable savings in these proposed mergers. I am wondering whether or not the gentleman's subcommittee at any time was given concrete figures by the IRS which would reflect that this is in fact a savings that will be effective.

Mr. PILLION. No, we do not have any concrete figures that I recollect. They thought they could make savings not only in the consolidation of the regional offices but also in the consolidation of district offices. How much they can save or what areas they will consolidate or what offices they will consolidate we thought was an administrative matter rather than one within the jurisdiction of the committee.

Mr. CAHILL. What I am seeking to find out is if there is any way a Member can find out the basis for this projected figure of $5 million.

Mr. PILLION. Oh, yes, surely. All you have to do is to request it, and I am sure they will give you the details.

Mr. CAHILL. I have not been able to determine it.

Mr. PILLION. Has the gentleman asked?

Mr. CAHILL. Yes.

Mr. PILLION. We will be pleased to ask them and get the information for the gentleman.

Mr. CAHILL. I thank the gentleman.

Mr. FOREMAN. Mr. Chairman, will the gentleman yield?

Mr. PILLION. I yield to the gentleman from Texas.

Mr. FOREMAN. In the appropriation for the Bureau of the Budget you have allowed them an additional $416,000 here in this proposed budget for 12 new employees. Will the addition of these 12 new employees work to lower the budget or up the budget?

What is this going to do to the budget?

Mr. PILLION. Well, I do not know. Supposedly they are working to reduce the budget, and they do quite a job. The departments come in with estimates a great deal larger than the final recommendations in the budget, so there is probably some justification for it.

Mr. FOREMAN. Did they specifically state in appearing before the committee what the jobs of these additional employees would be; what they would be used for?

Mr. PILLION. No. We cannot go quite that far into detail, because then we get into management, we get into administrative areas. We do not go into what each man will be doing.

Mr. FOREMAN. One other point. I notice the Council of Economic Advisers, which I believe Mr. Heller is the chairman of.

Mr. PILLION. That is the think factory. They do economic thinking and speculation.

Mr. FOREMAN. Getting $13,000 more worth of thinking or perhaps antithinking. I mean, is this for additional employees for the Council of Economic Advisers, or is this for salary increases for those that are there?

Mr. PILLION. I do not know; I cannot say. But, I assume it is for pay raises under the pay scale. I do not know; I do not recollect the testimony.

Mr. FOREMAN. I thank the gentleman.

Mr. PILLION. Mr. Chairman, I now yield 20 minutes to the gentleman from Massachusetts [Mr. CONTE].

Mr. OLIVER P. BOLTON. Mr. Chairman, before the gentleman begins, would he yield?

Mr. CONTE. I yield to the gentleman from Ohio.

Mr. OLIVER P. BOLTON. As the gentleman knows, like many of us, I am exceedingly interested in trying to be as economical with our expenditures as we can. At the same time I am interested that where we cut the budget, we are fair and do it judiciously. Therefore, I wonder if the gentleman would answer three specific questions very briefly for me.

First, will the reduction which the committee has suggested in this bill cause the elimination of any personnel presently on the rolls of the department?

Mr. CONTE. Definitely not.

Mr. OLIVER P. BOLTON. Secondly, will it affect anyone within the department insofar as the scheduled pay raises are concerned under the pay raise bill that we passed last year?

Mr. CONTE. Certainly not. As the chairman pointed out, this is by statute that the Congress passed, and if the committee wanted to cut the pay increase, it could not do it. And, I want to make it specifically clear that the committee had no intent of cutting any pay increase. They are all in favor of the pay increase. However, regardless of that, this is by statute. It is completely out of our jurisdiction, and nothing can be done about it.

Mr. OLIVER P. BOLTON. I appreciate that fact. Now, just one more, which has to do with the extension of service. It is my understanding that the Department requested some 9,000 additional personnel for next year in addition to the 16,000 which have been added to the rolls in the past 2 years; that they also requested additional funds for the extension of service, in addition to the extra personnel. Is it your claim that the reductions which have been suggested by the committee will drastically curtail the Department's plans for extension of service?

Mr. CONTE. To the best of my knowledge, I do not think that there will be any curtailment of extension of service. You must understand this, that there is an increase in operation over 1963 in the amount of $188,137,000; in other words, the committee has recommended in this bill $3,890 million for operations. Now with the $69,814,000 cut from operations, there is still an increase over last year of $188,137,000. Now, it will be up to the Department to decide how this money is going to be spent; how much will be used to cut down on the requested 9,555 additional employees, or what they are going to do for extension of service. To the best of my knowledge, I do not think there will be any curtailment of service, and that they will have enough money in here to continue on with their program.

Mr. OLIVER P. BOLTON. I appreciate that.

Mr. CONTE. I think I should point out also, prefacing my remarks, that I am most sympathetic with the Post Office Department and the postal employees.

I never recall when I have ever voted against them and I do not intend to start voting against them now. I think, perhaps, they are misinformed in respect to this budget. I am sure that if these cuts are sustained, that no one—not one at all—will be hurt as a result of this particular budget.

I must say also in all fairness that I have the greatest respect and admiration for our present Postmaster General. I believe he knows this. I think that J. Edward Day has done a magnificent job as Postmaster General.

In answer to the gentleman's question I want to point out that on March 20, downtown, he spoke to a group and there he stated, and I quote:

> In contrast to the last fiscal year we asked for no supplemental appropriation but instead turned back to the Treasury nearly $40 million in unused funds.

Of course, one must realize that this particular department, the Bureau of Operations, last year received only $3,701,863,000 as compared to $3,890 million which is provided for in this bill. Yet the Postmaster General returned $40 million of unused funds to the Treasury. I want to commend them for that, and I think that they can live with plenty of elbowroom within this budget.

Mr. CORBETT. Mr. Chairman, will the gentleman yield for a statement of fact?

Mr. CONTE. Yes, sir.

Mr. CORBETT. With reference to the $40 million that was returned from the budget 2 years ago, in the current situation they have had to ask for a supplemental of about $168 million.

Mr. CONTE. I do not have the exact figure. I am reading from his statement here where he returned $40 million.

Mr. CORBETT. That statement is a year out of date. There is a supplementary appropriation bill lying in the wings right now which proposes to appropriate to the Post Office Department for the current fiscal year I think something in the neighborhood of $165 million.

Mr. CONTE. Well, that could be so, which will take care of the pay raise.

Mr. CORBETT. I think there are two things involved.

Mr. CONTE. You must remember this, that the amount provided by the committee of $3,890 million takes in the pay raise.

Mr. CORBETT. Granted that, here is where these figures become so misleading in the report. The Department asked for 9,650 additional employees. Your committee report estimates that this would cost $64 million. In other words, the assumption was made by someone who wrote this report that all of these people were going to be hired the first day of the fiscal year.

Mr. CONTE. No; that is not so.

Mr. CORBETT. If the gentleman will yield further, the actual figure, according to the Department, for the increase of this number of employees is $25 million. Consequently, they indicate—I cannot quote them directly—that they will have to get rid of 6,000 of their present employees in order to live under this budget.

Mr. CONTE. That is not so. I do not know where the gentleman picked up this evidence. To the best of my knowledge there will not be a loss of one employee, one present employee.

Mr. GARY. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I shall be glad to yield to the gentleman from Virginia.

Mr. GARY. The gentleman is absolutely correct. The increase in the postal salaries for 1964 over 1963 is $127 million, and we have allowed a total increase of $227 million.

Mr. CORBETT. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Pennsylvania.

Mr. CORBETT. Did the gentleman from Virginia read the report of his own committee? On page 16 there is stated that the 9,555 additional personnel is at an estimated cost of $64,593,000. The Department figure, because they expected to stagger these people onto the payroll, is an estimated cost of $25 million. So when you are charging $69 million to these increased employees when you are actually only going to have to pay them $25 million this money has to come out of somebody's hide.

Mr. GARY. We can only use the figures that the Department gives us when they come before us. That is all we can use.

Mr. CORBETT. These are not the Department's figures.

Mr. GARY. These are the figures the Department gave our committee. I do not know where they got them and I do not know whose figures they are, but they are the figures the Department gave to us.

Mr. CONTE. And furthermore, Mr. Chairman, there is nothing in this report that says that we advocate the reduction of the total amount of these improvements.

Mr. PILLION. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the gentleman.

Mr. PILLION. All this does is to point out areas in which we recommend that the Post Office might look to find $69 million that we are recommending be taken out of the operations budget. As I said a little bit earlier, they absorbed $58 million last year and here we are asking them to absorb only $43 million. The $58 million is not carried over into the 1964 appropriation.

It is no great hardship.

Mr. CORBETT. Mr. Chairman, will the gentleman yield further?

Mr. CONTE. I yield.

Mr. CORBETT. I want to say to the gentleman that when I went to high school we learned in geometry that things equal to the same thing are equal to each other. We say that we do not tell the Post Office Department, "Do not have any Saturday service;" we do not tell the Post Office Department to cut the payroll; we do not tell the Post Office Department not to build offices. We simply take the money away from them. Who is telling whom?

Mr. CONTE. Let us not leave that on the record that way. The record should show that we are providing for this branch of the Post Office $188 million more than they received last year. We are not cutting down. We are giving them a lot more than they received last year.

Mr. JOHANSEN. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield.

Mr. JOHANSEN. I am trying to reconcile my understanding of the statement that the Chairman made a few moments ago when he said there would be no adverse effect, no reduction of automatic within-grade salary increases as a result of this—is that correct?

Mr. CONTE. That is correct.

Mr. JOHANSEN. I cannot reconcile that, although I do not question the gentleman's statement, with the statement in the report on page 16 which lists as one of the areas in which reductions can be accomplished in this period of deficit financing the automatic within-grade salary increases for personnel.

Mr. GARY. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the Chairman of the Committee.

Mr. GARY. The situation is simply this. We felt that there was a possibility that the Department had overestimated the need to carry out the law passed by Congress increasing within-grade promotions. We said a part of the money may come from an overestimate of the funds needed. We do not change any of the within-grade promotions; we cannot change them.

Mr. JOHANSEN. Mr. Chairman, that responds directly to my question and I thank the gentleman.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the gentleman.

Mr. JONAS. Something has been said during the debate about the construction of facilities and the improvement of post offices. Can the gentleman tell the committee how much money the Post Office Department is receiving from area redevelopment funds under the accelerated public works program for repairs and renovation of postal facilities?

Mr. CONTE. I believe the figure is around $2,950,000.

Mr. JONAS. It is a fact, then, it is true, that the Department is receiving additional funds from that source?

Mr. CONTE. Under the accelerated public works program, yes. Also I would like to point out something that has been completely overlooked by anyone who has spoken on this matter. No one has taken into consideration the tremendous modernization program that has been going on in the Post Office Department in the past 6 or 8 years.

There has not been a year I have sat on the committee we have not allowed millions and millions of dollars for automation, research, and development, in places like the Providence Turnkey Post Office. We have a big automation program going on on the west coast. We have visited post offices all over the United States. We have them all over the United States now, where we have automation in parcel post, and we are putting automation in the regular post offices. Of course this will absorb jobs, yet we have added thousands and thousands of employees every year the budget has come up.

Mr. HOLLAND. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Pennsylvania.

Mr. HOLLAND. I think the Post Office is practicing what industry is doing. Industry today is displacing workers. They are not hiring anyone. I think if the Post Office will look over the hiring, it is not so much the people who are being put out of work, as the gentleman says, by automation, they are not taking into consideration how many people they are displacing and putting back on a labor market which is now overmanned.

Mr. CONTE. That is right. This should be taken into consideration when we are discussing this problem; however, in this case there is an addition of personnel rather than a decrease.

Mr. PILLION. There are a number of times when we slow down automation.

Mr. HOLLAND. Then you ought to put a little more money in this bill to hire some people and take them off relief.

Mr. CONTE. I think we ought to point out to the House that here we have two departments of the Government. We recommended for the Treasury Department $1,095,910,000. This agency was cut by over $57 million. But here we have the Post Office with $4,885 million, and it was cut $91,964,000. So draw a ratio between the two. Everybody is excited here on the floor about the Post Office Department. It has not even been scratched compared with what has happened to the Treasury Department. I think both these cuts are very modest cuts. Certainly these Departments can well live within their appropriations.

I should like at this time to ask the gentleman from New York a question so that I may have some further legislative history with regard to the Secret Service men. Is it the gentleman's understanding that when the Secret Service came before our committee they requested 35 Secret Service men and 1 clerk for the Vice President?

Mr. PILLION. That is correct.

Mr. CONTE. When the committee reported out the bill they gave 2 Secret

Service men for the Vice President around the clock, which would be 10, at a cost of about $112,000.

Mr. PILLION. The figure of the subcommittee was a partial reduction, with approximately $112,000 for that service, not to exceed that amount, because representation was made on the floor of the House it would cost not more than $100,000. With the additional pay increases that would amount to about $112,000.

Mr. CONTE. When the Vice President travels to some other part of the United States away from Washington, D.C., where he has to make a speech, then the Secret Service could draw from the agents in the field?

Mr. PILLION. From the agents in those cities.

Mr. CONTE. If he were abroad to some foreign country, they could also draw from the field?

Mr. PILLION. We excluded that. We thought that going to the unknown conditions that may exist on a trip abroad the Secret Service could then assign Secret Service agents as they may find necessary.

Mr. CONTE. But these would be drawn from the field?

Mr. PILLION. That is right.

Mr. JENSEN. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Iowa.

Mr. JENSEN. The most difficult thing for me as well as a lot of other people is to reconcile the fact that here we are mechanizing almost every agency of the Government with this automation machinery that costs millions upon millions of dollars, and they tell us in our hearings that it will relieve a lot of labor, that they will not need as many employees. Then we learn that after we have bought all this machinery they constantly ask for more employees. That is the case in this instance. When can we expect this machinery to start showing up the savings which they have told us it is going to bring about? Has the gentleman any idea of just what goes on here and how much longer we are going to spend these millions upon millions of dollars for this machinery, and then keep on piling on more employees?

Mr. CONTE. I think this is an excellent question that the minority leader of the Appropriations Committee has brought forth. I think that is exactly what the committee took into consideration in arriving at this budget.

Mr. MORRISON. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I have about 2 minutes remaining and I have not started on the prepared text of the talk I wanted to make.

Mr. MORRISON. Perhaps the gentleman can get additional time, but I do have a question on automation that I would like to ask.

Mr. CONTE. I yield to the gentleman.

Mr. MORRISON. I thank the gentleman for yielding. The Magazine Publishers Association recommended that the Post Office Department ought to have a $2 billion crash automation program. That is $2 billion. The Post Office Department is only asking for $13 million and not $2 billion. The Post Office Department is just asking for $13 million and this committee is cutting $2,200,000 out of that.

Mr. CONTE. I am glad that the gentleman from Louisiana asked that question. I read that. It is in the same wire release attributed to the Postmaster General, saying that $40 million went back to the Treasury. That is a lot of hogwash.

Mr. MORRISON. What the Magazine Publishers Association are saying?

Mr. CONTE. Yes.

Mr. MORRISON. I do not think that is hogwash. I think they give a great deal of valuable news and information throughout this country.

Mr. CONTE. They certainly do.

Mr. MORRISON. And they certainly pay a tremendous postal bill.

Mr. CONTE. Mr. Chairman, I do not care to yield further.

Mr. GARY. Mr. Chairman, if the gentleman will yield to me, I would point out that they do not pay the cost of handling their magazines; is that not true? And they are being heavily subsidized by the Government of the United States to a very striking extent.

Mr. CONTE. And in further answer, Mr. Chairman, to the question of the gentleman from Louisiana, let me say this, that the Post Office Department knows what they are doing when they are only asking for $13 million for this item. Why they would have the worst case of indigestion if you ever tried to thrust $2 billion worth of automation down their throat.

Mr. MORRISON. The Post Office Department is only asking for $13 million. That is all they are asking for the whole Department.

Mr. CONTE. Mr. Chairman, I do not yield to the gentleman.

The **CHAIRMAN.** The time of the gentleman has expired.

Mr. PILLION. Mr. Chairman, I yield 5 additional minutes to the gentleman from Massachusetts.

Mr. CONTE. Mr. Chairman, we have seen and this committee has seen, under the able chairmanship of our chairman, some automation down at Providence Turnkey, which we call the Providence Turnkey post office. It is one of the worst messes of automation that I have ever seen. As a result of that big mistake, we told the Post Office Department, and they agreed with us, that you had better go slow in regards to modernization and automation of your post offices.

Mr. PILLION. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I am glad to yield to the gentleman.

Mr. PILLION. Is it not true that the Post Office in the past 2 weeks issued an order stopping the mechanization in many of the new constructions because they are all balled up on mechanizations?

Mr. CONTE. That is true.

Mr. Chairman, I would like this House to know I certainly consider it a deep privilege and honor to sit on this distinguished subcommittee which has done such an excellent job. Certainly, there are some soft spots that remain. I think that with more time and with more help, we might have been able to cut off even more than we did in some of the other departments and agencies. There are areas here, Mr. Chairman, which I believe certainly demand the attention of the Congress. One of the agencies that came up before us was an advisory group to the President known as the Advisory Committee on Labor and Management Policy. That committee since its inception, Mr. Chairman and Members of the House, has spent $580,000. Now I would like to read from the record in regard to the questioning of this particular agency. The witness at the time was Mr. Donovan. That record reads as follows:

> ### FUNCTIONS OF THE COMMITTEE
>
> Mr. CONTE. Since its inception, this committee has appropriated $580,000. Is that right? That is what you received from Congress.
>
> Mr. HUDSON. No, sir. $305,000.
>
> Mr. DONOVAN. In the 2 years.
>
> Mr. HUDSON. $580,000.
>
> Mr. CONTE. You have issued four reports.
>
> Mr. DONOVAN. Yes, sir.
>
> Mr. CONTE. Divided by four, that would total $145,000 for each report. This is quite an expensive project. I picked up one of the reports on collective bargaining, and I see that you recommend that we have free collective bargaining. You did not need to spend $145,000 to tell me that. I am a former union man myself. It is a high cost to receive that opinion.
>
> Why do you need $37,000 extra for personnel compensation this year?

Then he went on to say why they needed more employees.

I quote further:

> Mr. CONTE. Getting back to the $580,000, I should have added that the report on collective bargaining is 9 pages long—not quite that, 8¼ pages long. That comes to about $16,000 a page.
>
> Mr. DONOVAN. In addition to the four reports that you have before you, in the last fiscal year there were also two national conferences, one on national economic issues and one on fiscal and economic policy, which were attended and participated in by leading people from the American industrial world, from the various economic groups, and from the trade union movement. I do not know how one could put a monetary value on that.
>
> Mr. CONTE. I put monetary value on results.

This report starts defining collective bargaining and winds up by saying we should have free collective bargaining and the cost of this report to the taxpayers is $16,500 per page.

Mr. Chairman, it does not take $145,000 to tell me that; I learned the definition of collective bargaining my first year of law school.

Mr. Chairman, I also wish to speak at this time as I did 2 weeks ago and that is in regard to the budget appropriation asked to give protection to the Vice President, 35 Secret Service agents and 1 clerk. Before I review the facts I would like to stress again as I did in my original speech.

That my remarks are in no way directed to the Vice President himself, nor are they to be construed as in anyway reflecting upon him. I fully understand that the Vice President never made such a request and I am not saying that he did.

However, I could not understand that whereas previously 2 agents have been traditionally assigned to the Vice President, the Secret Service is now asking for 35. In reviewing the RECORD of July 17, 1961, Mr. CELLER, my distinguished colleague from New York, asked the following question to Mr. FORRESTER:

> Is it not a fact also that at best the cost would not be over $100,000 for protection of the Vice President-elect and our past Presidents who are now alive?

Mr. FORRESTER, in reply, said:

> I do not think it would be any more than that. I say they are entitled to protection.

And—

> I do not think the RECORD will indicate that I am extravagant, but the people elected the Vice President of the United States, and he is entitled to that protection.

I remember this discussion very clearly, and this is why I was shocked at the huge request of the Secret Service. As a member of the Appropriations Committee I must give every thought to needless expenditures and at a time when 6.1 percent of the people in this country are unemployed.

There was not any sensible justification for the Vice President to have 35 Secret Service agents assigned to him. I am fully in agreement that the mission of the Vice President is an exceptionally important one, and that Mr. JOHNSON is an important man. However, as has been made clear, Mr. JOHNSON does not feel that he needs such a large contingent of agents. Nor could I imagine anyone in this Congress justifying 35 Secret Service men especially when it has been made clear that no other Vice President has ever had more than 2. The vagueness of the law which stated that the Secret Service will provide protection should not be construed as meaning that the Vice President should be swamped with agents.

If, as I stated, the request of $100,000 was made 2 years ago and the cost of the increased protection during the fiscal year starting next July would be $322,000 not including travel expenses, what will be the cost 2 years from now? Will it continue to rise at such an astounding rate? I found the entire issue, as I said in my original speech, preposterous and presumptuous. I am greatly pleased that this Congress will not add funds for this expanded force, at a time when expenses are so high. I repeat that there was nothing personal involved here against the Vice President. I did not think that this request could be justified to this Congress or to the American people, and now we have saved over $200,000. For this reason, I am gratified that my committee has agreed. It must always be the individual function of the Congressman to be a "watchdog" in regard to Federal funds, and to save whenever we can. This is a great responsibility and one we must never overlook.

In answer to the remark made by the majority leader and by the Speaker of the House, I certainly hope and pray that no harm will ever come to our President or Vice President. But I do not feel that it is the responsibility of the House and that the blame should be placed on the House should any injury or harm ever be inflicted upon our President or Vice President. If you had a platoon of Marines, if you had a whole army surrounding each one of these men, and if you had a crackpot with a tripod and a highpowered rifle, he could cause harm to either one of them.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Massachusetts.

Mr. McCORMACK. The Chief of the Secret Service has stated that he considers it mandatory to give protection to the same degree as provided in the law relating to the President. Whether 35 is the correct number or not, I do not know, but in his opinion that is what is necessary. If the Congress should vote less than what in his judgment is necessary, and in the future if a situation should arise which, as the gentleman has said and I have said, God forbid, we hope will never arise, who would be responsible? The Chief has stated his position. Now I want to ask the gentleman whose responsibility will it be then?

Mr. CONTE. Mr. Chairman, as a legislator I am bound by any intent of the Congress. When the bill went through there was colloquy between the gentleman from Iowa [Mr. GROSS], the gentleman from Georgia [Mr. FORRESTER], and the gentleman from New York [Mr. CELLER], chairman of the Committee on the Judiciary, and it was stated at that time that the amount for these Secret Service men, not only for the Vice President but for past Presidents, would be $100,000. Taking into consideration the pay raise, that comes to 10 Secret Service agents. That is two Secret Service agents around the clock. That was the intent of the Congress, and the Chief of the Secret Service is bound by that intent and that is what we have provided for here in this budget.

Mr. McCORMACK. What the gentleman says as to what was stated is correct, but circumstances might change. I think my friend will emphasize the fact that any construction made anywhere on remarks that the gentleman previously made with reference to the Vice President certainly was never intended by the gentleman from Massachusetts. I do not know whether 35 is sufficient or 20. All I know is that the one charged with the responsibility, the head of the Secret Service, has stated his opinion. My main purpose was to express my concern at the impression that went throughout the country about the Vice President. If Mr. Nixon was Vice President, under the same circumstances I would feel just as concerned. A man individually may not want them around, but the Vice President is not only LYNDON JOHNSON individually but LYNDON JOHNSON as Vice President. My concern is to have emphasized as strongly as possible that no matter what is done the Vice President never wanted, himself, any mandatory law passed.

Mr. CONTE. I started out my remarks belaboring the fact that the Vice President had not requested these additional Secret Service men. Again I go back to the CONGRESSIONAL RECORD of March 21, when I originally spoke on this. At that time, the gentleman from Tennessee [Mr. BASS] asked me if the Vice President had requested these additional men.

> Mr. CONTE. Now, I think I made it clear here that I am not directing my remarks to the Vice President.
>
> The Secretary of the Treasury, Mr. Dillon, when he presented his budget to the Congress or to the President, and the administration in turn presented it to the Congress, requested 35 men on behalf of the Chief of the Secret Service.

I made it explicity clear here today that the Vice President did not request these men.

Mr. McCORMACK. The gentleman will agree if anything should happen that the Chief of the Secret Service is not responsible?

Mr. KYL. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Iowa.

Mr. KYL. Is there any idea where these additional people will be used?

Mr. CONTE. This is intriguing. Of the 35 it was explained to us that 1 would be sent down to his ranch in Texas and he would remain there 365 days a year, so that no one could plant electronic equipment in the home or plant a bomb or anything else there while the Vice President was gone.

I believe 16 would be planted at his home here in Washington around the clock, and then he would have 2 with him all around the clock, which would be the 10 that we are giving him now.

Mr. GARY. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Virginia.

Mr. GARY. There would be two around the clock?

Mr. CONTE. With him.

Mr. GARY. There would be two at his home here, one inside and one outside, and one on the farm down in Texas. But, to maintain those 3 would require 15 men, because you have to have 5 for every 1 agent to take care of the shifts, holidays, and otherwise. But, there would be 15 just for the guarding of the two residences.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield further?

Mr. CONTE. I yield.

Mr. McCORMACK. My remarks were not for the purpose of controversy, but I would like to place responsibility. Might I say, I know the Vice President's views. He fought anything other than a voluntary bill, and we all know that. Now, he has a motorboat on some lake down near his ranch in Texas—and I guess it is a fast one—and the Secret Servicemen have to follow him, and they have not got a boat as fast. So, he found out at one time that there was a boathouse built there and he inquired who built the boathouse for the Secret Service to house their boat. It was a little under $2,000. And, LYNDON JOHNSON insisted that he pay that money himself, and he did. So, from the angle of the Vice President, personally he does not want it. He is a man of courage. He has gone through crowds of hundreds of thousands abroad, and the Secret Service say that if there is any one man who has guts, it is LYNDON JOHNSON. But, it is to clarify the picture in the minds of the people of America. And, again, the Chief of the Secret Service has made his recommendations. So, certainly, he has assumed his responsibility. And, my remarks, as I say, were not for the purpose of controversy, because I do not know whether 35 or 20 or anything else is sufficient. But, I do know how LYNDON JOHNSON feels.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Iowa.

Mr. GROSS. How big is this ranch down in Texas?

Mr. CONTE. I do not know. I have never been down there.

Mr. GROSS. Could it be 1,500 or 2,000 acres? How is one man going to handle that situation?

Mr. CONTE. I do not know.

Mr. GROSS. Is he going to live in the boathouse, or where is he going to live? How did the boathouse get into it?

Mr. McCORMACK. Certainly, these questions do not clarify the situation. I understand he has a home and he has a ranch. Now we are talking about two different propositions. The fact remains that the impression that the Vice President sought protection is as far removed from the truth as possible. The Chief of the Secret Service has performed what he considered to be his duty. Whether it should be 25 or 30 I do not know, but I do know if it is cut down, the responsibility does not rest upon the Chief of the Secret Service.

Mr. CONTE. I want to make one thing specifically clear, and it is unfortunate that we are getting into personalities. I was originally opposed to the issue of giving 35 agents and 1 deskman at a cost of approximately $328,000 per year. I could not see where this could be justified, plus the fact that I am a legislator and I think I must abide by the intent of the Congress.

When I went back and I searched the CONGRESSIONAL RECORD on July 17, 1961, it said that they predicted the top dollar—not the medium dollar or approximately the top dollar but the top dollar—for the protection of this person and any past Presidents would be $100,000 a year. So, I gained the impression that it was the intent of Congress to give this person 2 agents around-the-clock which would amount to the equivalent of 10 agents, which the committee gave him and which would come to about $112,000 a year, and I want to commend the committee.

Mr. Chairman, I have never brought up in any of my remarks or insinuated that the Vice President asked for these. I think the Chief of the Secret Service was bound by the intent of Congress and he had no right in coming in here and asking for 35 men and 1 clerk.

Mr. Chairman, going back to my original statement I also feel that, perhaps, the Speaker of the House of Representatives deserves protection. After all, the Speaker is the third man in line of command; if anything happens to the President or the Vice President, my dear friend, the gentleman from Massachusetts [Mr. McCORMACK], would be the President of the United States, and certainly we should be giving some consideration here today to give him protection.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Iowa.

Mr. GROSS. Perhaps our distinguished Speaker does not live as dangerously as the Vice President.

Mr. CONTE. Mr. Chairman, another matter that I would like to discuss is the establishment of the Customs Training Center. There is a request in the budget for four positions which will be filled by instructors with high travel expense costs. This contingent will purport to make matters more pleasant for travelers who arrive in the United States and it is expected that it will cost $152,000 a year on a recurring basis. I was told in committee that this money will be used just to train four instructors. Now, Mr. Speaker, there are about 2,500 or 2,600 inspectors all told, and it seems to be quite a large number.

The reasoning of the customs officials on this whole issue is amazing. For one thing, they want to bring their people from California to New York and plane fare will cost roughly $300 round trip for a single class flight. It would be much easier to bring the instructors to California. It appears that customs will be sending 433 people from the west coast to New York instead of sending the small number of instructors to California. To multiply 433 people by roughly $300, customs is spending a considerable amount of money unwisely. One of the reasons that they give is space problem when all that is needed is a blackboard, some pencils, and paper in any given room. This is just one incident of waste and one which I cannot accept.

Mr. GARY. Mr. Chairman, I yield 5 minutes to the gentleman from Montana [Mr. OLSEN].

Mr. OLSEN of Montana. Mr. Chairman, this is the centennial year of city delivery of mail in the United States. In 1863 when this country was in much worse shape than it is today, when indeed we were experiencing the War Between the States, the administration had the courage to establish city delivery of mail. Facing deficit spending in 1863 they had that kind of foresight to be the first Nation in the world to establish city delivery of mail. Now in 1963 we see a move to cripple the Post Office Department. I know that this charge is scoffed at and has been for several hours now. But it is a fact that the committee has not allowed for any new positions by their own admission, not any new positions for the delivery of mail, either rural or city delivery.

Mr. Chairman, what is the record of the Post Office Department? It is a record of increased efficiency over the years and particularly since 1946 the Post Office Department has increased efficiency 62 percent. At the same time the mail volume has increased 83 percent.

Some challenge is being offered that automation should eliminate some expense. It does in the Post Office Department just as it has done in the telephone business. If it were not for innovations in the telephone business there would not be enough women in America to man the switchboards. Likewise in the Post Office Department, the post office buildings would not be large enough to hold the mail, the volume of mail they have today, if it were not for mechanization to move it out. But they know that even with the mechanization they have to have more people. And where do they have to have them more than any other place? They absolutely have to have them as letter carriers, both rural and city, because there is no automation there. There has to be a man to deliver the mail to the door. That is one place you cannot have a machine perform the duty. And so the Post Office Department has advised us that at the end of this fiscal year, under the proposal of the committee, there will be 7,500 fewer positions in the Post Office Department. They advise us that on the contrary the Post Office Department should have been increased approximately 10,000 positions, or a total of 17,000 positions should have been in this budget.

However, another significant point is that this would not begin to satisfy the $92 million reduction required in this bill, of which $69.8 million is in the operational end—the delivery of mail through nearly 35,000 post offices. The cut of the new positions would only save $25½ million.

It is obvious cuts must be made in other major areas.

One of the areas that is most vulnerable, because it is not a "moneymaker," is in our rural deliveries.

I have made some queries on this point. I understand rural deliveries may have to be reduced to three a week if these cuts stand. This is not a threat. It is a fact.

This would affect about 30,000 rural routes, serving more than 9 million rural families, or well over 30 million individuals.

Such service has been extended to about 150,000 rural families a year in recent years. It seems clear that additional extensions would have to be curtailed under this measure in addition to reductions in existing services.

I do not believe we can afford such serious curtailments of public service so vital to so many of our people at this time.

Mr. Chairman, it should be made crystal clear here that this bill, in effect, cuts the heart out of the operations of our postal service for 1964, even below the 1963 fiscal level, for all practical purposes, at a time when our delicate national economy sorely needs the support of improved mail service.

True, in the postal operational area, where a 3.5 percent increase in mail volume must be handled for a growing population and a mushrooming suburban development, it would grant an increase—on paper—of $188,137,000 over 1963.

However, all but $35 million of that is for the pending Pay Act Supplemental, and automatic within-grade salary increases alone will require nearly $46 million, more than offsetting the $35 million paper increase—leaving an actual cut in available money to run the post offices and deliver the mail. In operations this is a cut in 1964 of about $11 million.

Incidentally, I fail to see how the within-grade increases can be curtailed, as the committee's report implies. These increases are mandatory under law—beyond the control of the postal service.

Mr. Chairman, I urge approval of the amendment.

Mr. MORRISON. Mr. Chairman, will the gentleman yield?

Mr. OLSEN of Montana. I yield to the gentleman from Louisiana.

Mr. MORRISON. Mr. Chairman, I am sure that despite the Department's real progress in the past year in reducing costs and increasing productivity, there is no doubt that if this $92 million cut is approved the Department will be forced to halt its current program for modernizing post offices, for extending new post offices to new households and new businesses by providing needed facilities and equipment for speeding up mail delivery and providing any Saturday delivery at all to the citizens of America.

In other words, we are not necessarily here debating money only. We are also debating services. If you take $92 million out of the Post Office budget you are going to take out $92 million worth of services and a lot of people are going to have their jobs taken away from them. They are not going to hire any new personnel to take care of the increase in the mail which is over a billion pieces per year; is that right?

Mr. OLSEN of Montana. That is exactly correct; all of those statements are correct.

Mr. MORRISON. And that is the position of the Post Office Department?

Mr. OLSEN of Montana. That is the position of the Post Office Department and the position of the postal employees. And it is the position of the majority of us on the Committee on Post Office and Civil Service. The rural mail delivery service would have to be frozen at its present point. There could be no extension of the lines. Indeed, because there will be new patrons on the rural routes, there will have to be fewer deliveries to reach the patrons if the same number of employees is to serve.

There are going to be on July 1 of this year 110 new communities or communities that will be entitled to city delivery service under our regulations. But on July 1 of this year with this budget those 110 communities are not going to get city delivery service; and that means 110 congressional districts will suffer denial of city mail delivery.

The CHAIRMAN. The time of the gentleman from Montana has expired.

Mr. PILLION. Mr. Chairman, I yield 2 minutes to the gentleman from Ohio [Mr. Oliver P. Bolton].

Mr. OLIVER P. BOLTON. Mr. Chairman, I thank the gentleman for yielding me this time. I asked for the time in order to address a question to the last previous speaker, the gentleman from Montana. I should like to ask him this question. I do not understand his figures. It is my understanding that there is an increase recommended by the committee, for the Department's operations, $188 million. Furthermore, on page 16 of the report, the committee has pointed out that cuts can be made in one of three specific fields.

It does not state that there can be no additional personnel hired. It does not state that the routes will not be extended. It does not state that it will be impossible to extend city delivery. The testimony by the chairman of the committee in answer to my question, and by a gentleman of the committee on our side in answer to my question specifically stated that this was not the intent nor did the committee feel that this would be the result. This is the reason I have asked these questions. I should like the gentleman to explain his reasons, if he will.

Mr. OLSEN of Montana. As I understand, the explanation was that the committee said there had to be a cut some place and that the Post Office Department would have to compute that. There is a dispute here, of course, between the committee and the Post Office Department as to how rapidly and to what extent the volume of mail will increase, but it is granted that an increase in mail will come, and there will be extended routes for the increase in the number of patrons of the mail. The Post Office Department says that by their calculation of this increase in the volume of mail and the increase in patronage they must have more money for employees or they will have to spread employees over longer routes. If they do that, then they are going to have to have alternate days of delivery, for instance, in rural delivery.

Mr. CONTE. Mr. Chairman, will the gentleman yield?

Mr. OLIVER P. BOLTON. I yield to the gentleman from Massachusetts.

Mr. CONTE. May I ask the gentleman from Montana, cannot the Post Office Department save $1 million a year by knocking out the guideline system?

Mr. OLSEN of Montana. How much?

Mr. CONTE. One million dollars. That is what the postal union said when they came before us.

Mr. OLSEN of Montana. I do not know, but I of course have my own objections to the guideline system. But let us get back to the question of serving the patrons as well as the increasing volume of mail with a budget cut.

Let us look at alternatives given us by the committee.

The committee suggests three alternatives—reduce proposed programs, curtail automatic within-grade pay increases or cut postal delivery service.

Let us take a long, hard look at the three alternatives.

As to No. 1, the Department requested no money for new programs. But the committee is asking the Department to handle an increased workload of 2.4 billion pieces of mail—not with the same personnel it now has, but with fewer positions.

As to the second alternative, if automatic salary increases are indeed automatic, how can they be reduced?

So that leaves the third alternative—cutting mail deliveries.

Under this bill, the Department cannot extend mail service to 1 million new suburban homes, 75,000 new businesses, and well over 150,000 rural families next year.

That is bad enough, Mr. Chairman. But cuts in the Department's budget will surely force further cuts in mail service, including Saturday mail and three-a-week rural deliveries, denying 30 million farm families of good mail service.

I do not think the people will stand for these service cuts. I think they will retaliate. And when they do, it is going to be against those of you who have forced these service cuts in the false name of economy.

It is one thing to ballyhoo back home that you are saving the taxpayers money. But I would like to hear how you are going to explain that in order to save their money you had to cut off their mail service.

Mr. OLIVER P. BOLTON. I would rather not yield further, for I have only about 15 seconds left. If I can get more time I will gladly yield to the gentleman. However, I would like to say that in the reading not only of the hearings, but the report of the committee, I can only come to the conclusion that under the allocation, which is $118 million higher for this year than it was for last year, the Post Office Department will be able not only to put on additional personnel needed to extend service but to extend service where that service is justified to be extended. Coming from a district that has rapidly expanded, I know how much service needs to be extended, and under this bill, it is my understanding the Department has the funds to do so, not all it wants, but there is not enough money to do all we want in any field.

Mr. GARY. Mr. Chairman, I yield 5 minutes to the gentleman from Oklahoma [Mr. Steed], a member of the committee.

Mr. STEED. Mr. Chairman, it seems this subcommittee has prepared and brought to the House today a bill that has inspired two fields of thought. There are those who feel that the bill has been cut too much and there are some who feel that it has not been cut enough.

It has been a pleasure and privilege to me to work on this subcommittee. We have gone through many weeks of detailed work, many hours a day. We have one of the most careful and efficient chairmen in the Congress. He has provided us with the skilled leadership this year that makes it possible for me here in all good conscience to say that I think this is one of the finest bills that has been or will be brought before the House.

I think the Members would like to know the attitude of this subcommittee as it approaches its work with these two very big and important Departments of our Government. The Post Office Department and the Treasury Department probably touch the lives of more people in more ways and in more times during the year than any other agencies of our Government. We think they perform some of the most vital and important services that our people get from the Government. The members of this subcommittee feel when we work with these two Departments that we are working with them as partners and as their friends. We certainly are not enemies. Some of the finest and ablest people in all the Government work for these two Departments. They are people who take tremendous pride in doing a great and fine job. They do do a great and fine job, and this subcommittee knows it. I think I can say without any fear of contradiction whatever, there is not anyone on this subcommittee who would have the slightest intention of making any recommendation that they thought would work an undue hardship or impose an undue burden upon any of these agencies that are performing what we believe to be such a wonderful and such a well carried out service for the American people.

We have been in close contact with the people who run these Departments. We think they have made an honest and forthright presentation. I think they have tried their best to give us all the information they have that might help us. If that is true, then there have been some things said here on the floor of the House today about the attitude of the Post Office Department that has not come to the attention of this committee.

I just do not believe that men like Postmaster General Day and Mr. Frederick C. Belen and others in the Department are going around telling some Members of this Congress one story and telling this subcommittee another story. I think these gentlemen are doing a wonderful job. I think they have always leveled eye to eye with the members of this subcommittee. We believe what they say. On page 264 of the hearings, I would like to call your attention to where Mr. Belen was making his presentation to this committee. You will find detailed there some of the finest evidence of the type of skilled management that this Department of Government has been getting. I wish every Member would read it. Then, I think, you, too, would take pride in the kind of management that we are getting. We know that these men have done a good job, can do a good job, and are doing a good job. They will continue to do a good job. We believe they will continue to give the same kind of fine service to the American people that they have been giving in the past. If any of us thought that they could not do that job with the money that we recommend here, we would not have brought in these figures for your consideration. We are not trying to make a record here for economy just for the sake of economy. We know that these people bring in tight budgets. Of all the appropriation bills presented to the Congress, there are no two bills where it is harder to find places to reduce the amounts than these two bills. We know that. That is why we have been so careful as to where we made cuts. We have tried to remember that this is an austere budget and that this is an austere year.

We think the temper of the American people and of this House of Representatives is such that they want the budget to be operated on that basis. There are many things that would be most desirable which, if we were in a prosperous time, we could afford. There are a lot of customhouses that we would like to build. There are a lot of postal facilities that we would like to build. They are very desirable but they are not necessary at this time and some of them can be put off at the present time. When we thought the figure was high and that something could be put off, and should be put off, that was what we tried to do. I give the House my assurance that if I ever believed in anything that I have said in my life, I believe that if this budget becomes law, there will be no people now employed by the Post Office Department who will lose their jobs.

As a matter of fact, there will be several thousand more working a year from now than there are today. That can be done under this budget.

The CHAIRMAN. The time of the gentleman has expired.

Mr. GARY. Mr. Chairman, I yield the gentleman 3 additional minutes.

Mr. STEED. Mr. Chairman, I want the House to know that we have tried to keep this budget as low as it is possible to keep it, and at the same time give these agencies the funds that they have to have. We hope and believe there is no place in these bills where we have been pennywise and pound foolish. This is our best judgment after working hard weeks with the people who are charged with this responsibility. But, there is one thing I think the House ought to know. The total amount of money in these bills is a great deal more than last year. The reason for that can be charged to the Congress itself. The mandatory acts of the Congress is what keeps the cost of government going up. You cannot have these things that you are always doing and asking for and which cost more money and to give the people more service without expecting to pay for it.

I am not saying that these things are wrong, but I do think we should recognize the fact that day after day when we pass bills here authorizing new services someone is going to have to pay for it. There are several hundred million dollars in this bill caused by acts of the last Congress. That is not anybody's fault. I am not saying that is wrong, but that is some of the reason why it costs so much more money to carry on these agencies next year than it does this year. The Members of the Congress in their wisdom having made these increases and authorized these services, there is nothing this committee can do but accept it. There is not much to the budget when you get down to it that can be cut, for 75 percent of the Federal budget is more or less in the mandatory category. Your committee has been very careful in the places where it has made cuts. I think no bill will ever be brought before you with any greater skill used in its preparation than the one brought to you by this committee this year. The very fact that men of the caliber of the gentleman from Virginia, Congressman GARY, the chairman; and the gentleman from New York, JOHN PILLION, the ranking minority member, agree on what is in this bill I think attests this bill to the Members of the House more strongly than anything I can say. They are two of the most outstanding, forthright Members of this House. The bill is brought to you as nearly right as human ingenuity can make it.

It has been a pleasure to be associated with men who have worked with such sincere devotion. They have done a fine job.

The CHAIRMAN. The time of the gentleman from Oklahoma has again expired.

Mr. PILLION. Mr. Chairman, I yield the gentleman 2 minutes in order that he may yield the gentleman from Louisiana, [Mr. PASSMAN].

The CHAIRMAN. The gentleman from Oklahoma is recognized for 2 additional minutes.

Mr. PASSMAN. Mr. Chairman, will the gentleman yield?

Mr. STEED. I yield.

Mr. PASSMAN. Having served on the committee 15 years, I have a very deep interest in this legislation. Does the gentleman feel that there are sufficient funds in the Post Office bill to expand the service on rural routes and delivery by city carriers to keep pace with the population growth we have had?

Mr. STEED. The gentleman knows that, one: There is enough money in this bill to equal every facility they have had this year, including the pay raises, so certainly they can do next year the thing they are doing now. They have more than $100 million additional in operating funds alone and, of course, they can expand services to that extent.

Mr. PASSMAN. I asked the question because it had been stated earlier that they could not expand the rural service and business delivery and residential delivery in new communities. I, of course, feel as does the gentleman that there are adequate funds in the bill to take care of the growth and meet the demands for the expanded service.

Mr. STEED. We sincerely believe that all existing and anticipated needs have been adequately provided for.

Mr. PASSMAN. I thank the gentleman very much.

Mr. FOGARTY. Mr. Chairman, about a month ago the Internal Revenue Service announced a major reorganization of its field operations to be effective in January 1964. As a result of widespread congressional protests, the Secretary of the Treasury subsequently ordered a delay, advised that a study would be made of the proposal, and that no implementing action would be taken on it pending the completion of such a review.

This has done little to ease the burden for those employees who are under the gun and who know that, should the plan be reinstituted, the only choices left to them will be either to move their homes and start life anew in another State or to separate from the Service. There seems to be unanimous thought among IRS personnel that the holding action is a temporary thing and that the

Revenue Service is committed to its consolidation.

None of us in this Chamber, Mr. Chairman, would oppose any plan to increase the efficiency of operation of an agency of Government which was, at the same time, performing and maintaining the level of service to which its patrons were entitled. The problem in the proposed reorganization is that many of us know that efficiency of operation will not increase, the service to our constituents will be seriously reduced, and morale among the agency personnel will continue to be badly affected.

This is definitely true in the Providence, R.I., office. The transfer of supervisory personnel from Providence to Hartford, Conn., will undoubtedly be followed by the transfer of subordinate positions, files, and so forth, until eventually the Rhode Island taxpayer will have to journey into our neighboring State in order to process his tax return.

Mr. Chairman, I have no direct knowledge as to how the reorganization would affect other congressional districts but I am convinced that its impact on my State of Rhode Island would be harmful. It would be a distinct disservice to both the taxpayers and the employees of the Internal Revenue Service and a move which I would be forced to vigorously oppose. I strongly urge the abandonment of the proposal as it applies to Rhode Island so that Revenue Service personnel there can continue the excellent service they have always given the Rhode Island taxpayer.

Mr. BURKE. Mr. Chairman, I wish to associate myself with the distinguished chairman of the Subcommittee on Appropriations, the gentleman from Virginia [Mr. GARY], particularly in the recommendations of the committee as they affect the operating expenses of the Coast Guard. Included in these recommendations are provisions for the construction of one high-endurance cutter vessel costing approximately $14 million, three medium patrol craft costing approximately $11,250,000, one coastal tender for $2,500,000 and five small tenders for $3,100,000. These vessels are sorely needed in order that our Coast Guard can carry on its important responsibilities.

The Coast Guard Fleet should be kept modern and effective. A vessel replacement program should be in existence and it is very evident that the Appropriations Committee has this matter in mind. According to the report an increase of $17,670,000 in acquisition, construction, and improvements is contained in this legislation.

I wish to commend the chairman of the Subcommittee on Appropriations for his diligent efforts in maintaining a strong and effective Coast Guard.

Mr. FOREMAN. Mr. Chairman, I commend the committee for presenting a relatively good budget in this bill, comparatively speaking, particularly in view of the fact that they have reduced the 1964 request by approximately $150 million. I am concerned however that this bill, H.R. 5366, is an increase of better than $330 million over the 1963 budget for these same departments.

At a time when we are faced with a record high budget and increased deficit financing, I very seriously question the advisability of a kind of government planning that provides for the continually increasing size and cost of our Federal Government. If we want a balanced budget, and if we want reduced taxes, and I firmly believe that the vast majority of the American people want both of these, then we must cut spending. We are not, cannot, and will not, cut spending by upping the budget for every department each year, year after year, as is proposed by this bill.

I have the very highest regard and respect for my post office friends and, of course, as has been specifically pointed out here today, this bill will not cut the pay of any of our present fine postal employees, nor will any of them be relieved from their present jobs or duties as a result of the decrease in the 1964 estimate presented by the Post Office Department. This part of the bill I can approve as I do several other good parts and provisions of this bill.

I cannot, however, in good conscience, support such items in this bill as an increase of over 8 percent or some $42 million for the Internal Revenue Service to have 1,277 new employees. I cannot, at this time of deficit financing, see any responsible reasoning in the provisions of this bill that increase appropriations for the Office of the Treasurer by $250,000, the White House Office by $185,000, the Bureau of the Budget by $416,000, Mr. Heller's Council of Economic Advisors by $13,000, the National Security Council by $25,000, and many others.

If you do really believe in sound, responsible government, I urge you to carefully reconsider the many provisions of this bill that could easily be postponed until a later date at which time we might be better able to afford them. Let us give the folks of this country some consideration, let us give them a realistically sound budget so that we can give them a true tax cut, instead of the administration's proposed tax shift.

Instead of increasing the size, cost, and control of our bureaucracy, let us grant a little tax relief and increased freedom to the working people of America.

Mr. HALPERN. Mr. Chairman, I trust that our approval of the Internal Revenue Service's provisions in this bill will not in any way be interpreted as an endorsement of the Commissioner's plan for the elimination of the New York regional office through the merger with the Boston office of the Internal Revenue Service. I, and I am certain several of our colleagues, feel the proposal is fully unjustified. Any plans that the Treasury Department may have for this action, I hope, will be thoroughly reevaluated and that a full airing of the matter will be forthcoming.

I am strongly convinced it is unwarranted, inequitable, and countrary to the best interests of the taxpayers and of good administration.

It is difficult to see how the transfer of the important functions of the regional office of the IRS to Boston could result in anything but dissatisfaction, confusion, inconvenience, and administrative problems that far offset any of the arguments for coordination of activities that have been advanced.

The Treasury Department maintains that the elimination of the New York region will result in material savings to taxpayers. Frankly, this is hard to believe. The New York regional office employs about 670 persons compared with 375 in Boston. This is not a merger, this is a mass move to uncertainty and administrative headaches, one which, I predict, will end up costing the U.S. taxpayers a lot more than any anticipated savings.

The Department stresses the argument that the regional office should be in Boston because the service center is nearby. However, this is not a consistent argument. In Austin, Tex., the distance between the regional office and the service center is over 200 miles. The San Francisco regional office is separated from the service center in Utah by over 300 miles. The distance between the Chicago regional office and the Kansas City service center is 500 miles.

I say it is sheer nonsense for the IRS to claim that this proposed merger will develop a lean, efficient organization. The New York City region has the most efficient of the nine regional offices in the United States. By contrast, Boston is beset with management problems.

With the largest district in the United States—Manhattan—and the fourth largest district—Brooklyn—it just does not make sense to me to move this important regional office function outside of New York.

I do not dispute the responsibility of the Commissioner of the IRS to streamline his office. The Commissioner is an outstanding public official and is performing a superb job, unequalled in recent history, in one of the most difficult roles in Government service. My only question now is, how his admirable intentions compare with the facts and the realities of the New York situation.

The arguments against this move far outweigh the points, well taken as they may be, that have been advanced in its favor. It will take a tremendous amount of convincing in my opinion, and that of countless others, to even begin to justify this proposal.

I hope this entire matter will be reevaluated and reconsidered.

Mr. CLAUSEN. Mr. Chairman, I am taking this opportunity to oppose the adoption of this bill (H.R. 5366) after hearing testimony delivered before this House. In view of my 7 years experience in budget matters at a lower level of government, I have concluded that further economies can be achieved in this budget, without the so-called loss of service to our constituencies. With reference to my previous experience, I submit that there are very few budgets in public agencies that could not stand appreciable cuts without any extreme loss in services.

I would like to concur in the laudatory commendations of our able Postmaster General Day. Being a fellow Californian and somewhat familiar with his reputation in his business career prior to the acceptance of his high position, I am convinced that should further cuts be recommended by this Congress along with the request that the cuts be offset by initiating administrative economies, I have every confidence that our Postmaster General could and would meet the challenge in a manner consistent with his previously displayed executive abilities.

I have always endorsed the theory that adequate salaries for dedicated career employees is a must to insure the high quality of service to our people. Once again, I refer to my previous experience whereby tightening our belts and creating economies in the administration we were able to increase salaries to personnel as well as fringe benefits—yet hold the line and in certain cases decrease the operating costs of our governmental units. A statement that I made previously might be appropriately applied here in the House of Representatives and I quote, "Economy can be gained through wise spending." Being a freshman Member of this honorable body, I have much to learn. However, if I were to summarize my analysis of budget procedure at this level of government, I would like to suggest that the leadership and/or a majority of our Members issue a directive to the Executive Department and all administrative heads be instructed to present budgets that reflect a 10- to 15-percent cut in expenditures. This would place the responsibility squarely where it belongs and tend to expedite the orderly business of this body.

Mr. McCLORY. Mr. Chairman, in the Congress management of the financial business of our Federal Government the responsibility is reposed in the Members to attempt to balance Federal expenditures with Federal revenues.

At this stage of the present session of Congress it appears that sufficient funds will not be available to provide for the total appropriations set forth in H.R. 5366 as well as in the other appropriation measures which will come before the Congress at a later date. Until the total of all appropriations as well as total tax revenues can be gaged with greater accuracy, final action by this House on H.R. 5366 should be deferred. For these reasons, among others, I am impelled to cast my vote in the negative at this time.

Mr. BROYHILL of North Carolina. Mr. Chairman, I am deeply concerned about the expansion plans of the Internal Revenue Service and it seems to me the Appropriations Committee's assessment of the direction of this agency is going, needs to be underscored in this debate. The committee obviously feels that the Internal Revenue Service is attempting to move too rapidly. It asks, as do many Members of this House, when and how the new automatic data processing equipment being installed will show results in reductions in personnel.

The committee wisely points out:

> Other agencies in the Treasury Department have been able to realize substantial reductions in work force while at the same time handling a greatly increased workload. Those agencies have been able to reduce personnel substantially while in contrast the Internal Revenue Service continues to request several thousand additional personnel each year, as well as increasing the number of its temporary employees used in the data-processing system.

Certainly, Americans are a law-abiding people who pay their taxes and assume their just burden of the cost of Government. However, this year the Internal Revenue Service has conducted what seems to be a campaign of finger wagging at the people of this country—in effect, warning about the dire consequences of tax evasion and delinquency. Obviously, the administration needs to squeeze as many tax dollars from the American people as possible. The tax laws are also sufficiently complicated that many Americans wonder, as they face their tax returns, whether they are breaking laws they do not understand.

The accusatory tone the Internal Revenue Service has taken has been resented by many honest Americans and I should suppose some of the extra people in the Internal Revenue Service have been recruited for this purpose. This morning, I received a letter from one of my constituents in the Ninth District of North Carolina who expresses that feeling which so many other Americans join in resenting. Because it is appropriate to this debate, the letters is as follows:

> Representative JAMES T. BROYHILL,
> *New House Office Building,*
> *Washington, D.C.*
>
> DEAR MR. BROYHILL: For some time I have been considering writing to you about the growing problems of the U.S. system of taxation and, in view of the present news censorship situation in our Capital, I felt that I had better write while one of our few remaining freedoms, the freedom of speech, is still available to us.
>
> Our great Nation is facing a grave and even destructive future when the Internal Revenue Service begins to consider everyone guilty until proven otherwise. I realize that this business of tax collection is quite a problem but when the people of our land are constantly threatened via TV commercials and newspaper stories about the consequences of making false tax returns, it's time for a change.
>
> During the past several months, local television and radio stations (along with the newspapers) have been carrying public service announcements about filing tax returns. Before the public service is completed, the American citizen is told that, in essence, he is a crook and we (the IRS) are watching you.
>
> Personally, sir, I resent the fact that I am mistrusted and I'm sure many other Americans have the same feeling. May I suggest that the U.S. Congress begin immediately to overhaul our tax structure and to return to the American people the dignity and respect due them. After all, they're paying the way of Congress as well as the overstaffed Internal Revenue Service.

Mr. ALGER. Mr. Chairman, H.R. 5366 adds 11,044 new employees to the Federal payroll and $331 million to the astronomically high budget of last year, fiscal 1963. Last year's budget added many new employees and was a big spending boost over the previous year. Therefore, there is even less reason to swell the Federal bureaucracy now.

Who is for the downtrodden taxpayer who pays for this profligate spending? I am. Therefore, I shall vote to maintain this year's expenditures to last year's level. I shall oppose this bill. Preferably, I would reduce this year's spending to a straight 5- or 10-percent cut of last year's budget.

How do we balance the budget? We raise taxes or cut spending. I am for balancing the budget and against higher taxes, therefore, I shall try to cut spending. Meanwhile, the President and the liberals increase spending and talk about tax cuts at the same time, which is the course to fiscal suicide or fiscal socialism, as it has been so well called.

Worse yet, taxes have and are going up. Social security taxes are up, State and local taxes are up, unemployment compensation increase is threatened. What is the matter with us? Is it ignorance of the economic facts of life? Is it some kind of schizophrenia? Or are we just playing politics talking one way and doing another at the behest of the latest pressure group to threaten us.

We Congressmen should provide leadership in fiscal matters. That is our job. Why should Members be afraid to oppose the spending requests of specific pressure groups who fail to compute or to see the overall impact of all the requests of all the pressure groups combined.

We must remind the petitioning groups of the fiscal dangers confronting the United States, of deficit financing, inflation, gold outflow, and damaged confidence at home and abroad when we fail to balance income and outgo.

Look at the facts. We owe $1 trillion and $51 billion; that is $1,051 billion or $1,051 per minute since Christ was born in fixed obligations even before we add to the debt. The gentleman from Louisiana [Mr. PASSMAN] makes this debt abundantly clear.

Other appropriation bills will follow this one. We must set standards or guidelines and hew to them. The Treasury Department wants $103 million more than last year's $993 million; the Post Office wants $227.5 million more than last year's $4,657 million; the President wants $552,000 more than last year's $13.1 million. Of course these expenditures can be cut. Of course, impassioned pleas can be advanced for increasing any Government operation. Why get nervous or be taken in?

For myself, I am tired of the old double play we give the constituents. To baffle them, and talk on either side. Here's how it goes: We cut the budget so we economized. We increased the spending over last year so we have a heart and are for the program, whatever it is. This device is good for getting off the hook but it is hardly a firm position based on sound logic, particularly when we are deficit financing.

So there is no mistaking my position though it deprives me of the political device of being able to talk on either side of the issue. I am opposed to this year's budget. I was opposed to last year's budget. I am for a balanced budget. I am for helping the burdened taxpayer. I am for relieving the pressure of inflation and gold outflow. All of this presents no dilemma to me—nor impossible choice. I shall oppose increased spending, and shall vote for all possible cuts in spending. There is a clear choice—to be for a balanced budget, surplus, and tax cut on the one hand or for deficit financing, unbalanced budget, inflation, gold outflow, currency devaluation and fiscal suicide, that is socialism on the other.

I shall not take part in the repudiation of our national debt through the inflation resulting from Federal deficit spending which has watered our dollar to 44 cents since 1940. Nor shall I pass on to future generations the debts of our time. My conscience is clear.

It is my hope, my prayer, that my colleagues will reconsider and move to restore fiscal sanity and oppose the fiscal socialism of deficit financing typified by this appropriation bill.

The CHAIRMAN. If there are no further requests for time the Clerk will read the bill for amendment.

The Clerk read as follows:

CURRENT AUTHORIZATIONS OUT OF POSTAL FUND

ADMINISTRATION AND REGIONAL OPERATION

For expenses necessary for administration of the postal service, operation of the inspection service and regional offices, uniforms or allowances therefor, as authorized by the Act of September 1, 1954, as amended (5 U.S.C. 2131), including services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a); management studies; not to exceed $25,000 for miscellaneous and emergency expenses (including not to exceed $6,000 for official reception and representation expenses upon approval by the Postmaster General); rewards for information and services concerning violations of postal laws and regulations, current and prior fiscal years, in accordance with regulations of the Postmaster General in effect at the time the services are rendered or information furnished; expenses of delegates designated by the Postmaster General to attend meetings and congresses for the purpose of making postal arrangements with foreign governments pursuant to law, and not to exceed $20,000 of such expenses to be accounted for solely on the certificate of the Postmaster General; not to exceed $75,000 for expenses (including expenses of official reception) incidental to meetings in the United States of the Management Council of the Universal Postal Union's Consultative Committee on Postal Studies; and not to exceed $25,000 for rewards for information and services as provided for herein, shall be paid in the discretion of the Postmaster General and accounted for solely on his certificate; and settlement of claims, pursuant to law, current and prior fiscal years, for damages, and for losses resulting from unavoidable casualty; $83,500,000.

Mr. MORRISON. Mr. Chairman, I offer an amendment, and I ask unanimous consent that the committee may consider a series of amendments going to the same issue, notwithstanding the fact that these amendments go to various paragraphs that have not been read. In other words, this is to save time so the amendments will not be offered one at a time. They all refer to the $92 million which the amendment would replace in the bill that the committee took out.

The CHAIRMAN. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

The CHAIRMAN. The Clerk will report the amendments.

The Clerk read as follows:

Amendments offered by Mr. MORRISON:

Page 11, line 9, strike out "$83,500,000" and insert in lieu thereof "$85,700,000".

Page 11, line 19, strike out "$11,500,000" and insert in lieu thereof "$13,700,000".

Page 12, line 5, strike out "$3,890,000,000" and insert in lieu thereof "$3,955,814,000".

Page 13, line 2, strike out "$611,000,000" and insert in lieu thereof "$611,750,000".

Page 13, line 11, strike out "$185,000,000" and insert in lieu thereof "$195,000,000".

Page 13, lines 18 and 19, strike out "$104,000,000" and insert in lieu thereof "$111,000,000".

Mr. MORRISON. Mr. Chairman, I ask unanimous consent to proceed for an additional 5 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Louisiana [Mr. MORRISON]?

There was no objection.

Mr. MORRISON. Mr. Chairman, I offer these amendments to the Treasury-Post Office appropriation bill to restore the $92 million that the subcommittee took out of the appropriation, as requested by the Department and as approved by the Bureau of the Budget.

Mr. Chairman, we all are interested in effecting reasonable economies in the operation of our Government. I think the Appropriations Committee generally has done a noble job of eliminating areas of waste and short-circuiting possible attempts at extravagance. The committee has worked hard and well and it should be commended and congratulated.

However, in dealing with the Post Office appropriations, I feel the committee has been carried away by its own zeal and the suggested reduction of $92 million is both unrealistic and potentially harmful.

In the first place, the Postmaster General himself and his staff eliminated all possible fat from the budget before they submitted it. They voluntarily cut out $58 million before they sent the request to the committee. The committee's proposed additional cut of $92 million would bring the total to $150 million.

By far the most part of this reduction would come out of operations. In the Post Office Department, "operations" means people and services. The Post Office Department is different from any other agency of Government. It does not plan its programs; it does not plan its own growth and expansion. These things are done for them by the American people who use the mail.

In our dynamic economy the mail volume grows every year. In fiscal 1964 the volume will be at least 70 billion pieces, more mail than in all the nations in the free world. The annual increase in volume will be at least 2.3 billion. That increase alone is greater than the entire volume of many European nations.

Also, the American people are on the move. They are moving from the overcrowded cities to suburban areas. They are building new homes in new places. Each time this happens it means an extension of service, an increase in manpower, an extension of facilities.

The Post Office Department did not cause these problems, but the Post Office Department has to solve them, and it takes this additional $92 million to give this additional service.

They cannot be solved by holding a whip over the postal employee and making him work harder than any human being should be expected to work. The postal employees of this country have increased their productivity per employee by more than 4 percent each year. This has been going on for decades. It is a glorious record of achievement and it stands alone among all comparable industries in the Nation. In the past 17 years the productivity and the efficiency of our postal employees have risen by 62 percent. No one can expect better performance than that, and no one can get better performance than that, I do not believe. And, there is a limit to what a postal employee can do, no matter how dedicated and devoted he might be.

Because of the population increase and the movement to new areas where houses never existed before, there must be an increase of at least 1 million letter carrier stops each year. These added stops are not just added onto existing routes. By far the most part of them are on new routes, servicing areas where people are living in new houses, areas that never had mail delivery before. The major part—indeed almost the entire amount—of the cut in the operations budget affected these new routes.

There are 110 cities that after July 1 will be entitled to get additional mail-delivery service. If this budget cut stays in, they will not get that increase in new services. The rural carriers will not be able to extend their routes to give new service to new patrons. Saturday delivery by both the city carrier and the rural carrier could be eliminated, and you cannot take $92 million out, which practically all goes for service, or the great part of it, and expect to get the same service as if you left it in.

Now, a lot was said about the fact that the Post Office Department in 1962 turned back $46 million. Well, that certainly is a great accomplishment, and if there is any money left from this appropriation that they did not need, you could certainly expect the Postmaster General to turn it back. But, on the other hand, what you are doing is taking away this money that is going to be used for this personnel service, and 6,000 employees will be discharged, and the contemplated 15,000 that are necessary for handling the increase of annual mail.

Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. MORRISON. I yield to the gentleman from Michigan.

Mr. DINGELL. I heard one of my good friends, a predecessor on the floor, say that this would result in no loss of jobs or no loss of employment. I was wondering if the gentleman would want to comment on that point.

Mr. MORRISON. The Post Office Department estimates that there will be in excess of 6,000 jobs lost in fiscal 1964 if this cut stays in.

Mr. DINGELL. This is 6,000 employees who would be laid off; is that right?

Mr. MORRISON. That is right. I have a letter from the Postmaster General that says it will even be in excess of that.

Last year the Congress passed and the President approved a postal rate increase. That rate increase will bring into the Treasury during fiscal 1964 an estimated $580 million in additional revenues, over one-half billion dollars. The pay increase we voted, incidentally, will cost the Department $344 million, a lot less in the same period. The American people accepted this rate increase with good grace. There was very little grumbling about paying 5 cents for a first-class letter or for a 4-cent post card, or 8 cents for an airmail stamp.

But the American people will find out that they will be paying $580 million more for postage in fiscal 1964 to get less service than they ever received in their lives. The objections will be tremendous and overwhelming, as each of us knows. Almost every Member of this body represents some area in his district in which new homes are being built. Our constituents have invested their lives in these homes, serene in the belief that they will have their mail delivered to their door. When these new homeowners find out that despite these postal rate increases they have to travel to the nearest post office or collect and deliver their own mail, we shall hear from them, and promptly. The things we shall hear will be bitter and horrible. But worse than that it will be true, and it is a ridiculous spectacle, Mr. Chairman, for us to follow up this postal rate legislation where we have increased the rates and then give less service by taking away Saturday deliveries and by not giving these extensions in these services which will affect practically every major city and rural community in the United States.

Mr. Chairman, if the Bell Telephone Co. were to raise rates and then put all of its subscribers on party lines, the wrath of the people and the community would be terrible to behold. This is just what we would be doing with the mail service if we were to permit this drastic and unnecessary cut in appropriations to stand.

Mr. Chairman, my amendment would avert all this trouble by restoring this badly needed $92 million. And, I want to say this: There has been a lot said about what the Postmaster General figured and what he told the committee. I do not know what he told the committee because I am not on the Appropriations Committee. But I am a member of the House Post Office and Civil Service Committee, and here is what he told me. This is from the Postmaster General:

> In your letter of April 2 you asked what in my opinion would be the effect of the $92 million reduction in the appropriation for the Post Office Department recommended by the Appropriations Committee. According to our evaluation at the present time this reduction, if sustained, means that we cannot improve service.

That is what the Postmaster General, who has charge of the Department, and not the Appropriations Committee members, says.

I quote from the Postmaster General:

> We have to consider what services to the public can be eliminated.
>
> The central problem involves the "operations" appropriation. This appropriation covers the cost of personnel—practically all personnel in the Department—who collect, sort, and deliver mail and operate the 45,000 postal installations throughout the country.
>
> Our 1964 appropriation request was based on an estimated increase of mail volume and workload of 3.5 percent. The committee in its report indicated acceptance of this estimate of increased workload. However, the committee recommends a reduction of $69.8 million in the "Operations" appropriation.

The CHAIRMAN. The time of the gentleman from Louisiana has expired.

Mr. MORRISON. Mr. Chairman, I ask unanimous consent that I be permitted to proceed for 3 additional minutes.

The CHAIRMAN. The gentleman from Louisiana [Mr. MORRISON] asks unanimous consent that he may proceed for 3 additional minutes. Is there objection to the request of the gentleman from Louisiana?

Mr. STINSON. Mr. Chairman, reserving the right to object——

The CHAIRMAN. The gentleman from Washington reserves the right to object.

Mr. STINSON. Mr. Chairman, I have an amendment to the amendment which I would like to discuss when the gentleman from Louisiana finishes.

The CHAIRMAN. The Chair has asked whether there is objection to the request of the gentleman from Louisiana.

Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. MORRISON. Mr. Chairman, I desire to finish reading this letter, because there has been a lot said about the position of the Postmaster General, and you should know his position.

The Postmaster General further stated, as follows:

> The committee in its report indicated acceptance of this estimate of increased workload. However, the committee recommends a reduction of $69.8 million in the "Operations" appropriation.
>
> We are presently evaluating the kinds of service curtailments that would be necessary if the reduction is sustained. Complete elimination of deliveries on Saturday by city carriers and on rural routes has to be considered. We are reluctant to eliminate this service because we realize many individuals benefit from the Saturday delivery and many businesses depend on it. Still, the size of the reduction requires consideration of a major curtailment of this kind.
>
> Along with mail volume growth we are expecting substantial growth in the number of households during 1964. Household formation is almost certain to accelerate as the postwar generation reaches marriageable age. The formation of new suburbs will continue with the continuing shift of population to urban areas and will increase the demand for city delivery service.
>
> During 1964 the area eligible for city delivery service is expected to increase by at least 5.6 percent over 1963. The increase in number of carrier stops to service this growing area is estimated at 3.4 percent. We had requested an increase in city carrier employment of 2.6 percent in order to provide needed service.
>
> However the result of the reduction by the committee would be no increase in carrier employment with the consequency that we would have to consider putting a freeze on the present service in cities and on rural routes. This would mean that approximately a million households normally eligible for this service would not receive it in 1964.
>
> Since the new postal rates have gone into effect, users of the mail might well expect that mail service would improve. We must face the fact, unless our appropriation request can be restored, that the mail users will get less service for their added postage, not more.
>
> In order to adjust our "Operations" appropriation to the amount recommended by the committee, we estimate that we will have to eliminate approximately 17,000 positions from the number originally requested for 1964. We would have a reduction of about 7,500 positions from the number estimated for the end of the current fiscal year.
>
> The increase in productivity in recent years has been most encouraging. In 1962 we attached a 1.5-percent improvement in the clerk account. We budgeted a goal of an additional 1.5-percent improvement in 1963 and expect to attain it. Our 1964 submission was based on still another 1.5-percent improvement on top of the progress made in the 2 preceding years.

The CHAIRMAN. The time of the gentleman from Louisiana has again expired.

Mr. MORRISON. Mr. Chairman, I ask unanimous consent to proceed for 2 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Louisiana?

Mr. HALLECK. Mr. Chairman, reserving the right to object, and I am not going to object, the gentleman's request that his amendments be considered en bloc was agreed to. He has already had 13 minutes. I think, Mr. Chairman, we ought to move on to the accomplishment of final action today. I withdraw my reservation, but I express the hope that we may keep the debate within the limitation of the 5-minute rule and dispose of this matter.

The CHAIRMAN. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. MORRISON. To further continue with the Postmaster General's letter:

> The imposition of the reduction in our "Operations" appropriation so curtails available employment that the relationship between employment and workload requires a 3.4-percent increase in clerk productivity. This rate—more than double the highest rate of the best in recent years—is completely unrealistic. A restricted work force already performing with laudable efficiency cannot be expected to take on such a substantial increase in its work. The total amount of work would have to be reduced in the ways that I have indicated for consideration above.
>
> Other reductions recommended by the Appropriations Committee also face us with serious problems. For example, the $2.2 million reduction in "Administration and regional operation" means a reduction in the man-years of employment available to provide the management leadership at headquarters and in the field. This reduction of management capability of course compounds the difficulty of solving the operating problems imposed by the reductions in the "Operations appropriation."
>
> Sincerely,
>
> J. EDWARD DAY,
> *Postmaster General.*

I urge this House not to curtail our postal service and to vote for this amendmend so as to put back this $92 million, which is a sound, realistic, and reasonable approach. Practically all of it will be spent in service.

Mr. STINSON. Mr. Chairman, I offer an amendment to the amendment.

The Clerk read as follows:

> Amendment offered by Mr. Stinson to the amendment offered by Mr. Morrison: On page 12, line 5, strike out "$3,890,000,000" and insert in lieu thereof "$3,885,000,000"; and on line 22, strike out the period and insert in lieu thereof ": *Provided further,* That no part of the amounts appropriated by this Act may be used for the implementation or continuation of work measurement programs (formerly known as 'Guide Line') or similar production measurement programs in the Post Office Department."

Mr. STINSON. Mr. Chairman, I offer this amendment to the bill H.R. 5366 for the consideration of my colleagues who are interested not only in cutting down the budget in nonessential areas but also in the welfare of our post office employees.

This amendment will save the taxpayers a minimum of $5 million per year and will gradually improve the working conditions of the postal employees.

I trust, first of all, that you are familiar with the program now called the work measurement program, but which was once referred to as "Guidelines."

This program requires postal employees to keep track of each activity on a card for a week in each month. If an employee gets a tray of mail it must be entered on the card. If he goes for a drink of water it must be entered on the card. Or if he leaves his position for any purpose at all it must be entered on his particular card. On the surface some of you might think it a good idea to have this check on our postal employees. However, consider these results, or better yet, lack of results, of guidelines:

First. The system does not result in either promotions or demotions of employees.

Second. The several minutes each day that each employee must take to fill out the card adds up to thousands of man hours lost each year.

Third. Many of the postal employees that I have talked to maintain that the tension that occurs from this program actually brings about decreased production on the part of the employees.

Fourth. The postal supervisors have the responsibility of production of the employees and are perfectly capable of obtaining the maximum production from each one of those employees in their charge.

If measurements of mail production are required they are readily available. First, the number of bags of mail can be and are easily counted when they come into the post office. Second, postage canceling machines can give an accurate relative count of the amount of mail handled on a given shift.

In these times of deficit spending and mounting national debt, I sincerely hope you will support my amendment to eliminate $5 million from this appropriation. Five million dollars is the very minimum that would be saved if this program is eliminated. The actual saving, when we take into consideration the vast number of man-hours that will again be used for production, can easily run as high as two or three times that amount.

I ask your support for my amendment to eliminate this wasteful and useless program.

Mr. PILLION. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, there is some merit to this amendment, however, I would like to read from the record of this year's testimony on page 77 and I quote from Postmaster Day who says:

> We estimate that it would cost the Department a minimum of $100 million a year, if we had no work measurement system at all.

Then I quote further from the testimony. This is the gentleman from New York [Mr. Pillion] addressing Mr. Day:

> Is it your judgment as a manager of this whole system a policy decision that 1 week a month or 1 week in 4 weeks is the least amount of work measurement system for you to be able to act upon the results you get from that measurement system?

Mr. Day replies:

> Yes, it is, Mr. Pillion.

Then I posed the further question:

> After considering all the advantages and all the disadvantages, pros and cons, that this is the minimum amount of work measurement that it is necessary for you to get information upon which you can act to maintain a reasonably high level or high standard of work performance?

Mr. Day's reply is:

> Yes, that is our considered judgment in the Department after looking into this thing in great detail.

The subcommittee was very critical of the work measurement system. It has been reduced and it has been improved. I think there is possibly room for some improvement, but I do think it would be a great mistake if it were completely cut out and done away with. That I think would be a great disservice to the Post Office Department.

Mr. GARY. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, there has been a lot of talk about this work-measurement system. This program, installed in 1,183 large offices, is designed to furnish essential information on relationship between mail distribution workload and man-hours. Postal management at all levels now has a tool to measure and control distribution productivity of, first, the individual distributor—1 week out of 4—second, groups or tours of duty, and third, installations as a whole.

The work-management system aids in identifying those areas where supervisory direction must be reemphasized.

On the basis of experience to date, and as a further aid to attaining our productivity goal, refinements in this system are contemplated during this year.

That is the statement of the Post Office Department with reference to this work measurement system.

Mr. Chairman, this is nothing new. Every business in the United States employs some kind of work measurement system. Certainly it is not a hardship in the Post Office Department.

Mr. Chairman, let me read to you what was said about it in our hearings. Mr. Pillion was examining Mr. Belen, who is the Assistant Postmaster General in charge of operations. It is in operations that we are told we are going to do the greatest harm by this report that we have made here today and by this bill.

> Mr. Pillon. You quoted Mr. Day as saying that if you did not have the work measurement system you would lose $100 million a year in production.
>
> Mr. Belen. We would have to have $100 million more; yes, sir.

Here we are going to add to the amendment that has already been offered, another amendment that will require $100 million additional for the Post Office Department. That is according to their own statement, and I submit to you that the work measurement system is a management tool. We should leave it to management, and this Congress should not be dictating to management as to how they ought to run their department to that extent.

Mr. PASSMAN. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield.

Mr. PASSMAN. This is nothing more than a practice used in every business and manufacturing plant.

Mr. GARY. Absolutely.

Mr. PASSMAN. Without such a management tool, you would not expect to get much production in any business establishment.

Mr. GARY. That is true. That is exactly what the Postmaster General says. The Post Office Department has worked with the employees in trying to make the system absolutely fair and as little offensive to the employees as possible.

Mr. CORBETT. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. CORBETT. Would not the effect of this amendment to the amendment by changing the total amount to be appropriated at this point in the bill have the effect of wiping out all of the Morrison amendment?

The CHAIRMAN. The Chair does not construe that to be a parliamentary inquiry.

Mr. UDALL. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, as a member of the House Post Office and Civil Service Committee I urge that we vote down the amendment to the amendment and I urge that we support and adopt the Morrison amendment. The real issue—and I hope we can vote on it in a few minutes—is, are we or are we not going to restore $92 million?

Mr. WILLIS. Mr. Chairman, will the gentleman yield?

Mr. UDALL. I yield.

Mr. WILLIS. As a member of the committee, would the gentleman care to answer or comment upon the question of the gentleman from Pennsylvania? Because some of us are interested in the question.

Mr. UDALL. I do not have the knowledge to comment on that, but I will say that the guideline problem is an involved and controversial thing. The subcommittee has arranged for hearings on guidelines and work measurement systems. We are going to have the various departments, agencies, and organizations in to testify. I really think we ought to wait until that committee has finished its hearings before we legislate on the floor without knowing too much about it.

Mr. CORBETT. Mr. Chairman, will the gentleman yield?

Mr. UDALL. I yield.

Mr. CORBETT. In my reading of this amendment, if you are going to change the total amount in this amendment to the amendment it would have the effect of changing the total amount which the Morrison amendment carried and therefore set aside the so-called Morrison amendment.

Mr. UDALL. I am not an authority on the rules of parliamentary procedure.

Mr. MORRISON. Mr. Chairman, will the gentleman yield?

Mr. UDALL. I yield.

Mr. MORRISON. I think my distinguished colleague from Pennsylvania is right. If you want to vote for the $92 million restoration, vote down this amendment to the amendment and then vote the way you want to on my amendment to restore the $92 million. The gentleman from Pennsylvania is absolutely correct.

Mr. UDALL. I agree with the gentleman. I hope the Morrison amendment will be approved. Let me remark that last year the favorite indoor pastimes here in Washington were the J.F.K. Coloring Book, or Monopoly. This year the pastime is budget cutting. This is a game at which some of the regular inhabitants of this chamber seem to be pretty good this year.

The Appropriations Committee has done a good job. I do not quarrel with them. But we have to get the rules straight on this budget-cutting game. Any number of contestants can play. Some of them make up their own rules.

Some contestants put the list of budget cuts in an envelope and then talk about a $15 billion reduction. This adds secrecy and suspense to the game.

Other contestants have a handicap system. It works about like this: On the first big appropriation bill you vote more for bombers and submarines. Then you have a handicap. You have to cut down more and more to get the $15 billion cut.

Other contestants use the cliff-hanging method. You first vote for big authorizations and then you pull it out of the bag at the last minute by cutting down the appropriation.

There is another rule that is very vital in this budget-cutting contest. If you have a twenty-million-dollar harbor in your district, or a flood-control project, or a new post office, you never include those in your list of budget cuts.

Violation of this last rule may mean you cannot come back next year and play in the contest.

I say that the Post Office Department is essential. They have done a good job. We have the best administration in the Post Office Department we have had in a long time. This is the wrong cut, at the wrong place, and the wrong time.

Every year this country has added to its population three million more people. That is enough people to populate another Philadelphia, with all its schools, homes, businesses, and so forth. These people are entitled to the postal service. The Department cannot do anything about it.

People talk about economy. I want to get on the budget-cutting team here, too, before the session is over. Perhaps I can vote against cranberries and lobsters, or something like that. Already this week we have taken a good whack at the Interior appropriation bill. The game is being played rather well.

You can vote for the Morrison amendment and then go back to your office and announce that you have cut fifty million dollars more off the Kennedy budget. It is important to understand that even with the Morrison amendment added the overall bill will be $50 million under the administration budget request. So you can be a budget cutter today and still be in favor of an efficient postal service.

Mr. STINSON. Mr. Chairman, will the gentleman yield?

Mr. UDALL. I yield to the gentleman from Washington.

Mr. STINSON. This was intended to eliminate the guideline system. I am not an expert on the rules either, only being a freshman Member. But it was my understanding the only way I could eliminate the guideline system at this time was to cut the budget. This would cut the budget because it is in an appropriation bill.

Mr. UDALL. If the gentleman is against the guideline system, come over to our committee and testify.

Let me say further, our citizens, in the best American tradition, are seeking a better life. They are moving to outlying areas of their communities where they and their families can enjoy more room for living. The movement is a natural result of our improvements in transportation patterns, our modern highways, and our modern automobiles.

It is obvious that this new phenomenon in our national life is not the fault of the Post Office Department, but the Post Office Department must meet the problems that it creates. The problems are many, and they are expensive.

These new developments—if they are to receive modern mail service—mean that the Post Office Department must transport the mail out to them, and they mean that the Post Office Department must create new carrier routes to service them. This means the Post Office Department must have enough money to provide this service.

However, if the Congress permits this $92 million cut to stand, there is no possible chance that these new suburban areas will get modern mail service or, indeed, any mail service whatsoever. Are we to expect these new homeowners to pick up their mail at the post office every day—even though the nearest post office may be 10 miles away?

In fact, if the $92 million cut remains as is, it is entirely possible that existing services to suburban areas will have to be curtailed. Those now receiving mail at their front doors will have to revert to going to the post office every day. This reversion will cause intense unhappiness in every district in the United States.

There are many reasons why this money should be restored. This is just one of them. I simply cannot understand how we can justify to the American people the fact that we are charging them an extra penny on every piece of mail they send out and, at the same time, are refusing them basic services which they were accustomed to getting before the postage rates were raised.

Mr. Chairman, I support the amendment. The $92 million should be restored in its entirety.

Mr. GARY. Mr. Chairman, I ask unanimous consent that all debate on the amendment to the amendment offered by the gentleman from Washington do now close.

The CHAIRMAN. Is there objection to the request of the gentleman from Virginia?

There was no objection.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Washington to the amendment offered by the gentleman from Louisiana.

The amendment to the amendment was rejected.

Mr. DULSKI. Mr. Chairman, I move to strike out the requisite number of words.

Mr. Chairman, there are some things that I want to make absolutely clear relative to the appropriation that we have before us. I am in absolute support of the amendment offered by the gentleman from Louisiana [Mr. Morrison] and I hope that the amendment will carry by a big margin.

In fiscal 1962, the Post Office Department received $4,331 million. That year the Postmaster General returned $37 million. In the current year, fiscal 1963, the Department received $4,446 million; they had a request prepared for money to meet the pay increase in the amount of $211 million. The Budget Bureau, however, reduced this $211 million by $18 million in money for facilities and $40 million for operations. Operations represents primarily manpower. There is still pending before the Deficiency Appropriations Subcommittee a request for $163 million additional that will be needed to complete the year.

For 1964 the Post Office Department requested $4,633 million, plus $344 million for the pay raise, or $4,977 million.

I think it is well to point out that the rate increase provided for in Public Law 87–793 will bring in $261 million in 1963 and $580 million in 1964. As a result of the rate increases and as a result of the public policy program enacted by the Congress last year, the postal deficit, which amounted to $749 million in 1962, and $392 million in 1963, will amount to only $104 million in 1964, based on the Department's request in the budget. This will be the lowest postal deficit since the war years when the military took over a great many of the postal functions and made it possible for the Post Office Department to show a profit in its operations. In the face of this marvelous record, and in view of the increase in volume of business, which is estimated to be 2.9 percent for 1964, plus the fact that there are 2 more working days because of leap year and because of the fact that there are 53 Mondays and Tuesdays in 1964, the increase asked for by the Post Office Department is entirely justified.

To cut the appropriation by $92 million means that 9,555 additional jobs that are needed to take care of the rapidly growing population—an increase of 4½ million a year—will be knocked out of the bill, and it will be necessary for the Post Office Department to eliminate approximately 6,000 existing jobs. In the face of the current unemployment, running about 6 percent—in the face of the fact that we voted a postage rate increase last year and promised the American people better postal service—I do not see how any Member of the House of Representatives could support this drastic reduction in appropriations.

In addition to the reduction in personnel that will be necessitated by this proposed cut in appropriations, funds for acquiring sites for new post offices and for architect and engineering work for leased construction projects will be reduced by $10 million. The Post Office Department has poor plant facilities at the present time. With the growing population, we need 110 new post offices to take care of 110 city delivery authorizations that have already been issued for July 1, 1963, plus others that would be necessary in 1964. The post office buildings require a great deal of modernization and, in many instances, the motor vehicles used by the Post Office Department are in a dangerous, rundown condition and are a menace to life and limb.

We have to take the responsibility for providing the postal people with proper tools. We have to take the responsibility of living up to the promises we made to the American public last year when we increased first-class mail rates by 25 percent. We will be responsible for destroying jobs in our American economy if we support the appropriation cut recommended by the committee.

By all means we should support the amendment offered by the gentleman from Louisiana [Mr. MORRISON] and restore the necessary funds to the Post Office Department to properly operate that Department.

Mr. ROSENTHAL. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. ROSENTHAL. Mr. Chairman, it has always been an American tradition that if we pay more for something, we have a right to expect more in return. If we permit the cut in the Post Office appropriations to remain as is, we shall be reversing that tradition. We shall be establishing a tradition of pay more—get less.

This year the American people will be paying $580 million extra into the Treasury because of higher postage rates. Are we then going to permit this vicious cut in postal appropriations which will result in a curtailment in service? This is the only course the Postmaster General can take if we impose upon him this curtailment in his funds.

We are also in danger of reversing another traditional slogan: "Honesty is the best policy."

The Postmaster General has been criticized because he forthrightly returned to the Treasury $43 million in unexpended funds last year. This has actually been put forward as an argument why his appropriations should be cut this year. In my opinion, Mr. Speaker, the shoe is on the other foot. This is proof that we have in Mr. Day an honest administrator who uses only the money that he needs and returns what he does not need. He should be commended and encouraged—not penalized—for his honesty.

We also find the spectacle of a Postmaster General being penalized because he submitted an honest budget to the Congress. He voluntarily cut $58 million out of that budget in the interest of economy—although there is doubt that the economies that would be imposed by that voluntary cut are entirely wise. He then presents us with a budget request that has no fat in it. Would that every other administrator followed his lead.

But, instead of encouraging this type of honesty—and if it were universal throughout the Government we would have a really economic operation—we are in danger of crippling the operation of the Department because of it.

The moral has been reversed: "Honesty—evidently—is the worst policy." If you make an honest budget presentation you get clobbered.

If we persist in following this philosophy we shall never have hopes of seeing an honest budget presentation again. Every administrator in government will get our message. Honesty does not pay. Lard your budget with fat. A penny earned is a dollar lost. Take any of our traditional slogans and turn them inside out—and you will come up with the false moral we shall be preaching if we fail to restore this $92 million.

Mr. Speaker, I strongly urge support of the amendment to restore the money to the Post Office appropriations.

Mr. PASSMAN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman and Members of the Committee, ordinarily I save my firepower for the foreign aid bill. However, I am the ranking majority member of this subcommittee and it has been my privilege to serve on this subcommittee for a period of 15 years.

Mr. Chairman, since the effective date of the Constitution in 1789, we have collected in revenues from the American people $1.31 trillion. But for every dollar we have collected, we have incurred an obligation of $1.76. We are now overdrawn 1 trillion 51 billion for services previously rendered. Every person in the United States is in debt to the Federal Government in the amount of $5,500 for services previously rendered, not something that you are going to do in the future.

Mr. Chairman, $305 billion represents borrowed money. We have 108 statutes on the books that call for the payout of $746 billion in subsequent years for services previously rendered.

Mr. Chairman, permit me to give a brief explanation of this: The interest on the public debt covering much of our extravagance in the past is now $10.1 billion annually. We have approximately 5 million retired military personnel. We must pay those pensions. It is just as much an obligation to send that retired military man his check as it is to redeem our Government bonds. Then we pick up the judicial system. Then we pick up, first, the civil service cases, and then you go into the veterans benefit cases involving some $6 billion or $7 billion annually.

Mr. Chairman, we have borrowed from the future $1,051 billion. It is impossible to extract out of this economy sufficient money to meet the demands of all the people. Somewhere along the way history is going to record us in a way in which we do not like to be recorded, if we do not face up to our responsibilities and bring this thing under control.

Mr. Chairman, you and I know that we are spending unborn generations into destruction. It is a little disappointing to some of us, even though I approve of the system of the Congress working its will, to think that we sit for weeks and months and sometimes as long as five months trying to effect some small savings. Then when we bring the bill out, for some reason or other not necessarily inspired by the Members themselves, some pressure organization, is wiring and telling us "This is the way I expect you to act tomorrow when the bill comes up." I hope that we will face up to our responsibility and recognize that even a 1940 dollar will only buy about 44 cents worth of the 1962 redemption.

Mr. Chairman, the Members of the House know the way in which we are traveling. We should work together so we will not have to repudiate this public debt either directly or indirectly, and we are repudiating it indirectly by continuing to lower the purchasing power of the dollar.

Mr. Chairman, this is only a small cut. I have kept silent so far because I thought it could be cut deeper. But let us face up to our responsibilities and recognize that for 17 years this committee has handled this bill, and there has never been any harm done by following the recommendations of this subcommittee.

Mr. GARY. Mr. Chairman, will the gentleman yield to me?

Mr. PASSMAN. Yes; I yield to the gentleman from Virginia.

Mr. GARY. Mr. Chairman, I ask unanimous consent that all debate on the Morrison amendment and all amendments thereto close at 5 o'clock, reserving the last 5 minutes to the Committee.

The CHAIRMAN. Is there objection to the request of the gentleman from Virginia?

There was no objection.

The CHAIRMAN. The Chair recognizes the gentleman from New Jersey [Mr. JOELSON].

Mr. JOELSON. Mr. Chairman, I heard the preceding speaker talk about the terrible debt we are passing on to our children. I would like to say in just 1 minute that I would rather pass on to my children a debt than to pass upon them the prospect of living under a dictatorship. It is a plain fact that our debt in America is largely due to our participation in World War II, when it rose from $41 billion to $265 billion. It is going up because we are facing up to the challenge of communism around the world. I say that I would rather face a child and say to him that I am passing on to you a debt than to say to that child that I am passing on to you a miserable, bleak life under Communist or Fascist dictatorship.

Now, to get back to the issue at hand, we still hear talk about the so-called deficit in the postal department. To me, this talk is meaningless. Also it results in a disservice to the postal department, its employees, and the public.

The postal department renders a public service. Why should it alone of all Government departments and agencies be expected to break even financially at the end of each fiscal year? We do not demand this of any other Government service.

We say to the postal department that we cannot afford some of its services because of the postal "deficit." Can you imagine our telling the Army that we cannot afford bullets because the Army is not showing a profit this year? Should we stop the National Labor Relations Board from speeding up its caseload because it brings in no revenue?

If you want the postal department to operate without a deficit, why not go a step further and let Western Union operate it at a profit? It is simply ridiculous and unreasonable to demand that a public service operated by the Government end up without cost at the end of the year.

The CHAIRMAN. The Chair recognizes the gentleman from Pennsylvania [Mr. Corbett].

Mr. CORBETT. Mr. Chairman, the issue on the Morrison amendments is simply an issue whether or not you are going to give the American people what they are paying for in the way of postal services. Everyone here recognizes that the mail has to go through. Everyone recognizes that if we cut this budget too much we cripple the service until such time as a supplemental appropriation bill comes before us. We are simply saying to the Post Office Department that really needs this money, we are not going to give it to you now, we are going to give it to you in a supplemental sometime later. And we are saying to the American people that we increased your postal rates and now we are going to decrease your service.

To me this is one of the most amazing cuts in an appropriation bill that I have ever seen here. I do not believe under the increased volume that the Post Office has to handle that it can possibly be justified. If we are going to economize we have to do it in those services over which we have jurisdiction. We do not have jurisdiction over how many pieces of mail are dropped in the boxes.

So I believe very sincerely that we should pass these amendments and that we should continue to make the postal service better and give the people what they are paying for.

The CHAIRMAN. The Chair recognizes the gentleman from Montana [Mr. Olsen].

Mr. OLSEN of Montana. Mr. Chairman, the committee on page 16 of the report gives three alternatives to take care of the cuts in the appropriation. One, for instance, the Department did not ask for any increased money for new programs; they just asked for money to take care of the increase in the mails, the increased workload. The committee says that is one place you should cut. That is service to the public. That is the service to the public that the committee says is an alternative that can be cut.

Or, second, automatic salary increases can be cut. How can we cut automatic salary increases? I submit it cannot be done. They are established by law.

The third alternative is to cut mail deliveries; cutting mail deliveries, indeed when under the circumstances explained by the gentleman from Pennsylvania [Mr. Corbett] we have already increased the cost to the mail user everywhere in America for the use of the mail.

It seems to me we must restore every bit of the reduction of the Post Office budget in order to take care of the increased load of mail and the increased number of patrons.

Mr. WATSON. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the Record.

The CHAIRMAN. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

Mr. WATSON. Mr. Chairman, I yield to no man in my determination to see the Congress economize whenever and wherever possible. Yet, as I rise to support both the amendment by the gentleman from Washington and the amendment by the gentleman from Louisiana, I do so believing that such amendments are in the best interest of efficiency and the postal service for the people of America.

My support of the amendment to restore the operational cut to the Post Office Department is based, first, upon the fact that, notwithstanding the statements on the floor of this House by the proponents of the cut, the written report of the Subcommittee on Appropriations states specifically on page 16 thereof that such reductions would come from "automatic within grade salary increases for personnel on the rolls" and "the extension of postal delivery service," both of which proposals I believe to be detrimental to the postal service and the American people.

Mr. Chairman, my support of this amendment is further based upon the fact that the Post Office Department, unlike so many other Government agencies which render service only to certain segments of our population, renders an indispensable service to all of our citizens, rich and poor, urban and rural alike. In considering any reduction in postal operational expenses we should consider the fact that last year we required the American people to pay 25 percent more for first-class postal deliveries and for us to support any measure now which would not expand the service in keeping with the increased volume of mail and our expanding communities would be a disservice to the people of this Nation. They are entitled to what they pay for in the way of postal service.

Then, too, my support of these amendments is based upon the fact that the record proves that the Post Office Department returned to the Federal Treasury $37 million of its authorized budget last fiscal year and has absorbed some $58 million in salary adjustments this fiscal year. These savings could well be emulated by other Federal agencies, and this further convinces me that, should this amendment carry and the proposed increase not be used, that the Post Office Department would return the unused portion to the U.S. Treasury. Accordingly, there would be no unnecessary expenditures of this appropriation.

Mr. Chairman, as to my support of the amendment by the gentleman from Washington concerning the so-called work measurement system of the Post Office Department, I do so because I believe the elimination of this watchdog program would result in a saving of at least $5 million annually and, most importantly, this program presently presents a serious morale problem in many large postal facilities which is resulting in a loss of personnel efficiency. Obviously this loss of efficiency adversely affects the postal service itself and does not accomplish its intended purpose.

I believe that the best interest of economy and efficiency can be served by paying competent employees well, eliminating the incompetent, and guarding carefully the number and competency of new employees.

The CHAIRMAN. The Chair recognizes the gentleman from Iowa [Mr. Gross].

Mr. GROSS. Mr. Chairman, under the law the Postmaster General is directed to fix rates for fourth-class postal service based on the costs of that service. Today the Post Office Department is running a deficit of $100 million a year in fourth-class service because the Postmaster General has not brought about an increase in the rate according to law. If the Postmaster General had acted to fix fourth-class rates as so directed there would be another $100 million of revenue in the Post Office Department.

Mr. RHODES of Pennsylvania. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the Record.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. RHODES of Pennsylvania. Mr. Chairman, I am pleased to support the amendment for restoration of the necessary funds to operate the Post Office Department during fiscal 1964 on a basis equal to all of the patrons of the U.S. postal service. I note with interest on page 268 of the hearings before the subcommittee of the Committee on Appropriations, that the Post Office Department is anticipating a strong increase in the number of households during the next fiscal year. They point out an uncontestable statement that new household formation is almost certain to accelerate as the postwar generation reaches marriageable age. The Post Office Department anticipates population growth in no less than 110 new communities all of which will meet requirements for city delivery service.

I ask my colleagues in those 110 areas how they will be able to answer their constituents when demands are made to equalize delivery service in these areas with the same type of efficient service which is being rendered elsewhere.

Since the reduction in appropriations concerns especially the continuing establishment of city delivery service, it must be understood that without the necessary funds further extension of delivery service to postal patrons will cease, and the same people who have accepted the recent first-class postage rate increase will be diverted to a second-class type of postal service.

According to the same report of the Postmaster General, housing starts during the first 9 months of 1962 were up 10 percent, while multiple unit construction was up 32 percent.

With the continuing shift of populations from farm to urban life, and along with the household growth, it appears that the expected increase in areas which meet requirements for city delivery service will be even greater than anticipations during fiscal 1964.

Certainly when the Post Office Department displays such initiative, such splendid efficiency, such steady increase in productivity annually, it is the responsibility of the Congress to encourage such administration, and I urge that the reduction recommended be restored so that even greater efficiencies and even greater innovations can take place.

The CHAIRMAN. The Chair recognizes the gentleman from New Jersey [Mr. Daniels].

Mr. DANIELS. Mr. Chairman, as a member of the Post Office and Civil Service Committee, I urge you to support the Morrison amendment to restore the cut of approximately $92 million to the Post Office budget. I feel that the Appropriations Committee has done a wonderful job in almost every respect. Its chairman and its members have worked hard and conscientiously—but, in this case, they have cut too deeply and the cut would be—not a constructive but a destructive blow to postal services.

The Postmaster General and his staff prepared an honest and conservative budget presentation. They had voluntarily cut $58 million out of that presentation before it reached the Appropriations Committee. The budget, as presented, represented the bare bones of a budget for handling a mail volume of more than 70 billion pieces. It was a budget which would permit the supply of basic services to our expanding population—and nothing more. The massive slice which the Appropriations Committee would make in that budget would cripple the Department and would prevent it from supplying even the basic services which the American people have every right to expect. As for improvements in the service—they would be entirely out of the question. With this drastically reduced budget the Post Office Department would be hard put to stand still, let alone move ahead.

Our population grows by 4.5 million people every year. Our mail volume grows by almost 3 billion pieces every year. This is the standard rate of growth in America. It is a sign of our progress and our natural development. This growth is not planned, and there is nothing the Post Office Department can do about it except to meet the problems it presents.

If we were to permit this $92 million cut to stand—on top of the $58 million cut the Department already has imposed upon itself—we would be expecting the Post Office to meet the problems that growth imposes with a cut of $150 million in its appropriations. Since the budget originally prepared was an honest one—the prospect for the Department would be hopeless. They could not maintain the standards they are maintaining today. The only result would be retrogression and decline.

The normal requirement to meet the growth in our mail service is an addition of 1 million letter carrier stops a year. For the most part these stops are not added onto existing routes. They represent new routes, giving mail service to new housing areas, new developments, new suburbs. If this appropriations cut were to remain, these million stops could never be added. One million families—approximately 4 million Americans—would be denied the basic right of regular and convenient mail service.

Mr. Chairman, this would be false economy, particularly since it would come on top of a postage-rate increase which will add $580 million in postal revenues next year.

It is the American tradition to move forward—not backward. To permit this cut to remain, we would be moving backwards in an area in which forward movement is a national necessity. I support the amendment to restore the money and I urge my colleagues to do likewise.

The CHAIRMAN. The Chair recognizes the gentleman from Pennsylvania [Mr. Fulton].

Mr. FULTON of Pennsylvania. Mr. Chairman, I rise to strongly support the Morrison amendment, to provide an adequate and economical U.S. Post Office Department budget for fiscal 1964.

Mr. Chairman, this last year Congress voted a substantial increase in the U.S. postal rates. With the increase of the postal rates, the U.S. taxpayers naturally expect to get more and better postal service. The postal rate increase legislation produced approximately $300 million more revenue in fiscal 1963, and we expect to have $580 million more revenue in fiscal 1964.

We therefore have the additional money to provide for an adequate U.S. Post Office budget, to pay adequate and decent wages and salaries for all postal employees, and to provide fast, efficient, and regular postal services to all our U.S. citizens and taxpayers. I am tired of hearing of the sad plight of our underpaid and overworked postal employees. They do a magnificent job, and Congress should take off the blinders and recognize this good and loyal service.

I believe this reduction is not just economy but this is a cut in essential postal services and jobs. With 4,500,000 new U.S. population being added every year and 1 million new suburban stops for postal service that must be instituted each year, we really will need extra employees to carry out that service and give the good postal service our U.S. citizens are paying for and deserve.

Under this present proposed budget cut, if accepted, 6,000 employees now working in postal service jobs will have to be furloughed and laid off, or discharged completely. In addition, we will lose 9,555 jobs for carriers and clerks that are necessary to give good postal service to our rapidly expanding suburban areas. I represent south Pittsburgh industrial areas, and we need jobs in those areas, good jobs providing needed services, and not just leaf raking or boondoggling. This proposed budget cut would be a loss of 15,555 necessary jobs in these times of high unemployment. I therefore strongly urge that the cut be replaced and favor the passage of the Morrison amendment to restore $92 million approximately to the U.S. postal budget. This budget will still be $58 million below original budget estimates, so Congress will be voting an economical budget.

I like the fact that the Postmaster General has returned to the Treasury previously $37 million of his budget that was appropriated. To me, this is fiscal responsibility, and General Day is to be complimented on this businesslike action. Now when the Postmaster General needs this operations and facilities money to give good efficient postal service, I believe he deserves this confidence.

Our U.S. postal employees have received more pay by our action, but they certainly do not deserve to lose those jobs, or be laid off. We in Congress must be careful, we must be prudent, we must be economical, but we also must remember the postal service must be well run and efficient, and that the postal workers and their families are human beings. Our postal workers through their loyal service to the U.S. taxpayers and the public are entitled to look every Congressman straight in the eye and ask justice and fair treatment.

The CHAIRMAN. The Chair recognizes the gentleman from West Virginia [Mr. Staggers].

Mr. STAGGERS. Mr. Chairman, as a member of the Committee on the Post Office and Civil Service, I rise in support of the Morrison amendment. In saying that, I would like to observe that in my opinion Postmaster General Day is probably the most efficient, effective, and hard-working Postmaster General we have ever had. He is now trying to put into effect improvements for delivering mail across the Nation. Certainly instead of curtailing service we want to improve the service. We cannot do it by cutting $62 million out of the budget. Postmaster General Day says he needs this money to carry on effectively. If the cuts are made he will have to cut services.

I think it is the responsibility of the Congress to improve the postal service of America and give the Postmaster General the tools to do just that.

Mr. Chairman, I am in favor of the Morrison amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Michigan [Mr. Johansen].

Mr. JOHANSEN. Mr. Chairman, I was the author of the amendment to the pay bill last year calling on our Federal agencies to absorb so far as possible the additional costs involved in the pay increases. I believe the action of the Committee on Appropriations is in line with that objective and I shall support the cut. I believe, if it is found to be at fault or to provide inadequate funds for the Post Office Department, that there are methods by which additional funds can be provided. I believe we are laying an appropriate foundation upon which the other body is going to build a super structure, anyway.

I recall last fall just before the election when there were a lot of people forgetting about economy and voting for the rate bill and the pay increases. Today, judgment day, is here. We are going to have to face up to the facts. I wish last fall I could have heard some of the people now talking economy join the 20 of us who voted against the pay and rate increase bill. I wish they had then said what the committee report now says:

> During times of Government deficit financing and sizeable postal deficits, the committee believes that all programs should be limited only to the absolutely essential items.

Instead they voted out a whopping increase in costs last year and now the chickens are coming home to roost.

The CHAIRMAN. The Chair recognizes the gentleman from California [Mr. MILLER].

Mr. MILLER of California. Mr. Chairman, the Post Office Department has only one thing to sell, and that is service. If it cannot give service, it fails in its objective. If it cannot give service, the American people are the ones who pay for that lack.

Mr. Chairman, last year after long months of deliberation Congress enacted legislation increasing postal rates on all categories of mail.

The rate on first-class mail was raised from 4 to 5 cents.

Airmail was increased from 7 to 8 cents.

Similarly, the rate on other classes of mail was increased.

Coupled with these increases was the promise of maintaining our postal service at a high level. Implied was the hope that the service would be improved even beyond what it was at that time. Certainly a curtailment of service was not contemplated. Worded another way, Congress did not intend that the American public be asked to pay more for less service. However, that is the situation confronting us here today if the cut in the appropriation for the operation of our postal service is allowed to stand.

Mr. Chairman, the American public accepted the increase in postal rates without complaint. Large users of the mail as well as the private citizen has paid the increased postage without flinching. I think it would be little less than larceny to continue to demand the higher rate and at the same time curtail service.

I am opposed to this kind of action and, therefore, shall vote for restoration of the funds needed to operate the Post Office Department in an efficient manner.

The CHAIRMAN. The Chair recognizes the gentleman from New Jersey [Mr. WALLHAUSER].

Mr. WALLHAUSER. Mr. Chairman, as a member of the Post Office and Civil Service Committee, I rise in support of the Morrison amendment.

Certainly, economy is a very worthwhile objective. We all know this. But reducing funds does not necessarily mean economy in my judgment. Economy is directly connected with productivity and maintenance of service, and if reduction of $92 million is made below the request of the Post Office Department, I submit that productivity and service will lag in giving the public that to which they are entitled. The American public, of course, governs the postal service by depositing the amount of mail it requires to be sent. I do not, for the life of me, see how the Department can give service with $92 million less than the Post Office told us they needed. Especially, when a member of the Appropriations Subcommittee has told us that the Department has made an honest and forthright statement.

I believe that this justifies us in following their recommendation. I say that the Post Office Department has submitted a tight budget. Further, I maintain that the citizens paying increased postal rates are entitled to and demand better postal service. With this cut they will not get it.

Mr. ELLSWORTH. Mr. Chairman, my district in Kansas has one of the fastest growing populations of any congressional district in the United States. Johnson County, Kans., includes the suburbs for Metropolitan Kansas City, and of course Kansas City, Kans., and Lawrence, the home of the University of Kansas, are all growing fast. Over the entire United States, the Post Office has to add 1 million new delivery units every year, and of course most of these added delivery units are in the rapidly growing suburban areas such as Johnson County and fast-growing areas in my district in Kansas.

Last year we here in Congress passed a postage rate increase bill. We told the American people that, with the increased rates—a full 25 percent increase for the ordinary user—they could expect better postal service. This rate increase will bring in $580 million in 1964; and it will provide more than $600 million in 1956.

The cut in appropriations proposed by the distinguished Committee on Appropriations will mean sharp cutbacks in mail service. I can assure you, Mr. Chairman, that in my suburban district I am going to be pretty red faced trying to explain what happened to the postal service if this recommended cut is not restored. I am going to be even more red faced explaining to the people in my district where the good postal service we promised them last year has gone.

I think it is ironic that we are voting on this cut in 1963. In 1863, in the midst of a terrible war, the Government of the United States of America established city delivery service. This year we are celebrating the centennial of that city delivery service. Are we going to celebrate by cutting this fine service to the point where it is no longer a service—or are we going to vote the necessary amount of money to properly operate the Post Office Department and especially the city delivery service?

I urge support of the Morrison amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois [Mr. GRAY].

Mr. GRAY. Mr. Chairman, I rise to support the Morrison amendment to restore to the Post Office Department funds it requested in its appropriation for fiscal 1964.

In my opinion the cuts, if carried through and fully accomplished, will have dire effect on the operation of the Postal Service and also on the entire economy of the United States including hundreds of postal workers in the State of Illinois.

Every business letter that is delayed because of the failure of the Congress of the United States to provide the necessary funds to operate the postal service efficiently, is potentially a hazard to the prosperity of our Nation.

Every moment of anxiety in the heart of a postal employee because he fears that his pay adjustments may be in jeopardy will cause a hidden deterioration in the Postal Service and will result in securing less value from each postal dollar.

The cut in postal appropriations will have a very real impact on the economy of the entire Nation. The major problem however is the damage to the postal service because of any cuts. This is particularly true in that the largest cut is proposed for the Bureau of Operations.

Every action of the Bureau of Operations has an impact on the employees and on the mail-using public. It is doubly serious then that of the proposed total cut of $91,964,000, almost exactly $70 million is to be taken from the Bureau of Operations. I am sure that if Assistant Postmaster General Belen goes back and reads now the statement he made when he appeared before the Appropriations Subcommittee on February 21, he will wonder about his enthusiasm for "the support and encouragement of this committee."

On the occasion of his appearing before the subcommittee Mr. Belen said:

> I am happy to report that we are entering the homestretch of an eventful and productive year. We are pleased with the results of the efforts we have made to improve service and reduce costs. We recognize that these gains certainly would not have been possible without the support and encouragement of this committee.

Mr. Chairman, in my opinion the way in which the Congress of the United States may best show its confidence in the work being done by the highly qualified leaders of the Post Office Department, would be to restore the funds requested by Postmaster General Day.

Let us examine the reasons why it was necessary for the Post Office Department to request additional money for operation during fiscal 1964. Mr. Belen outlined six points:

> 1. [Request of] $38.6 million is for the additional man-years required to handle 3.5-percent increase in mail volume.

2. [Request of] $33.6 million is to cover cost for programed expansion of delivery service to 2.3 million additional patrons, operation and maintenance of a larger vehicle fleet, and the protection and maintenance of the additional space to be occupied during 1964.

3. [Request of] $46.6 million is for automatic step increases for all employees required by law.

4. [Request of] $11.8 million is to cover the cost for the 2 extra workdays of all employees, except clerks which are related to the additional volume generated on these 2 extra days.

5. [Request of] $124.5 million is to cover the cost for the annualization of increased pay under phase I of Public Law 87–793, effective October 13, 1962 ($78.8 million) plus the part-year cost of phase II of this law effective January 4, 1964 ($45.7 million).

6. [Request of] $3.1 million is to cover the cost for the increased amount of reimbursement to the Federal employees compensation fund.

Mr. Belen pointed out that the total cost of the installment on the pay increase which is due on January 1, 1964, will be $206.9 million, but that the Department is asking only $153.4 million. Forty million dollars is being absorbed and $13.5 million is being transferred from the allocation for "Plant and equipment."

Mr. Chairman, the Post Office Department is a big business and naturally, we expect that the managers of a big business should show themselves to be capable of efficient management. In my opinion, the fact that the direct outlay for the pay increase approved by this Congress is being reduced through such sound management by an amount of 25 percent is an administrative miracle and one which we should commend rather than condemn by withholding necessary funds.

Mr. Chairman, when the postal pay increase law was approved by the Congress of the United States, this body was virtually unanimous in its endorsement of that legislation. Let us act now to remove any apprehensiveness that might be in the minds of postal employees about the degree to which their pay increase is protected. The fact that the increase is not truly in jeopardy is of no significance. The postal employees are afraid that we in the Congress of the United States are breaking faith on the commitments we made. I ask my colleagues to support the Morrison amendment and that the full amount be provided in order that we may have a sound and efficient postal service in the year ahead.

The CHAIRMAN. The Chair recognizes the gentleman from California [Mr. Edwards].

Mr. EDWARDS. Mr. Chairman, I am a member of the Post Office and Civil Service Committee, and I am directing my remarks to the money in the bill allocated to postal operations where it seems very clear to me that insofar as postal operations are concerned, the bill provides for an actual cut for 1964, and this at a time when our national economy sorely needs the support of improved mail service.

True, in the postal operational area, where a 3.5 percent increase in mail volume must be handled for a growing population; it would grant an increase on paper of $188,137,000 over 1963.

However, all but $35 million of that is for the pending Pay Act Supplement, and automatic within-grade salary increases alone will require nearly $46 million, more than offsetting the $35 million paper increase—leaving an actual cut of about $11 million in 1964 to run the post offices and deliver the mail.

Incidentally, I fail to see how the within-grade increases can be curtailed, as the committe's report implies. These increases are mandatory under law—beyond the control of the postal service.

Mr. Chairman, I do not think that we should expect the Post Office Department to take an operation cut in 1964 when the workload will increase by 3.5 percent.

I urge approval of the Morrison amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Virginia [Mr. Gary] for 5 minutes to close debate on the amendments.

Mr. GARY. Mr. Chairman, let me say at the outset that a great many people seem to be disturbed by the language appearing on page 16 which says that the recommended reduction can be absorbed by reducing the proposed programs such as the request for 9,555 additional personnel at an estimated cost of $64,593,000; the automatic within-grade salary increases for personnel on the rolls, estimated at $46,600,000; and the extension of postal delivery service, estimated at $33,600,000.

We say the $46,600,000 may be more than is necessary for that item and, therefore, that is one item they can look to for some reduction.

The Department has overestimated its volume every year since I can remember and we think that maybe they have overestimated some of these other costs and that they should look into it.

Now, Mr. Chairman, I simply want to point out to the committee what we are called to vote upon by this amendment. This amendment will restore to this bill every single penny that the Appropriations Committee has recommended be cut from the bill, and it will give the Post Office Department every single penny they asked for.

Mr. Chairman, I have been a Member of this House for 18 years, and I have never seen that done during the entire 18 years I have served here. If this amendment is adopted, we will today break a precedent here that I have never seen broken.

Let me point out the fact that we have reduced this amount only $91 million on a $5 billion appropriation—1.8 percent.

I have the very highest regard for the Postmaster General and for his assistants who are administering the postal laws. I also have the highest regard for the postal employees. They are doing a grand job. We cut the Department budget 2 years ago. They said, "You have wrecked the Post Office."

But what happened? At the end of the year they were able to turn back $30 million to the Treasury, which was a real accomplishment.

By their ability to economize they were able to save and return to the Treasury, as I stated, $30 million.

Last year we cut them again. They said we were wrecking the Department. But they were able, out of the amount appropriated, to apply $58 million to the automatic salary increase in the present fiscal year 1963.

I am glad to say I have more faith in the Postmaster General and his assistants than do the authors of this amendment. I have too much faith in the Postmaster General to believe that he is going to close up the Post Office just because we cut $91 million out of a total request of $5 billion. I think he can absorb that. It is going to require some ingenuity, it is going to require some ability, but I want to see him use his ingenuity and his ability in this office. He can do it; he is doing it now and I want to see him continue.

If we give him the money that is requested in this bill, I believe he will be able to take care of the postal service without any curtailment whatever.

I trust the House will defeat the amendment.

The CHAIRMAN. All time has expired. The question is on the amendments offered by the gentleman from Louisiana [Mr. Morrison].

The question was taken; and on a division (demanded by Mr. Morrison) there were—ayes 107, noes 195.

Mr. MORRISON. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. Gary and Mr. Morrison.

The Committee again divided, and the tellers reported that there were—ayes 124, noes 212.

So the amendments were rejected.

The CHAIRMAN. The Clerk will read.

Mr. GARY. Mr. Chairman, I ask unanimous consent that the balance of the bill be considered as read and open to amendment.

The CHAIRMAN. Is there objection to the request of the gentleman from Virginia?

There was no objection.

Mr. GROSS. Mr. Chairman, I move to strike out the requisite number of words.

Mr. Chairman, I call attention to the item on page 18, "Advisory Commission on Intergovernmental Relations," for which an annual appropriation of $385,000 is provided.

In looking at the hearings at page 764 I find that this Advisory Commission on Intergovernmental Relations concerns itself, among other things, with telling the States how to invest their idle money. I do not know whether there is so much idle money in Virginia that they need Federal help to the tune of $385,000 to tell them how to invest it. I cannot believe they have to have that kind of help from the Federal Government. We do not have that problem out in Iowa.

Mr. GARY. Mr. Chairman, was the gentleman asking me a question?

Mr. GROSS. I would be glad to have the gentleman tell me just why we are spending $385,000 a year on this kind of a setup.

Mr. GARY. This Advisory Commission on Intergovernmental Relations was organized several years ago at the suggestion of President Dwight Eisenhower when he made his speech in Williamsburg. State and local governments and the Federal Government have membership on this Commission. The purpose of the Commission is to try to work out some of these problems that are confronting their States and to save some of our States rights on which he spoke at Williamsburg.

Mr. GROSS. I will say to the gentleman that what Mr. Eisenhower may have suggested several years ago does not make very much of an impression upon me, because I was not his most enthusiastic supporter in many governmental matters, as the voting record clearly shows.

Mr. GARY. I know that the gentleman believes in States rights. This Commission was set up in an effort to preserve our States rights and to see how we can work with the Federal Government instead of having them work us.

Mr. GROSS. You do not have to have an expensive setup here in Washington to tell you in the State of Virginia how to reapportion your legislature, do you? I am sure we do not in the State of Iowa. It seems to me that this is getting into States rights.

Mr. HALLECK. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Indiana.

Mr. HALLECK. It is true, as the gentleman from Virginia said, that this matter of intergovernmental relations is one of the things that was brought up in the 1952 campaign. For the gentleman's information, in the 83d Congress the late Senator Taft, of Ohio, introduced in the Senate and I introduced here in the House of Representatives a resolution to create the Intergovernmental Relations Committee. Our idea was then and I think it is still a good idea that we need to do everything we can to preserve for the States and the local governments those functions of government that ought to be theirs. I think some progress has been made, not nearly as much progress as I had hoped could be made, but some has been made. I want to say to the gentleman that speaking for myself, in my opinion a furtherance of that sort of idea of preservation to the States and the local communities and subdivisions of their right of government is one thing we really need in this country.

Mr. GROSS. I would further point out that this has gone from an original $50,000-a-year appropriation in 1960 to $385,000 now. This is a plush setup, and it is fat from the standpoint of salaries.

Mr. GARY. It was $50,000 when it was first started, because they were building up their personnel. They told us at the time that they estimated it would take about $375,000 to run the Commission, and when they got that they would level off. They have operated at $375,000 for the last 3 years, but this year they had a $10,000 increase merely because of the increase in salaries. There is not a single employee added to this Commission in this bill.

Mr. GROSS. It was $375,000, and you added $10,000 to take care of the increases in salaries?

Mr. GARY. Because of the increase in salaries paid, that this Congress voted last session.

Mr. GROSS. In addition to issuing reports dealing with reapportionment of State legislatures and telling State and local governments how to invest their idle cash, the experts for the Advisory Commission on Intergovernmental Relations are also reporting on the role of the States in improving the property tax. Is there nothing to be left to the States and municipalities to work out for themselves? And how can this organization make reports on these and a score of other issues without invading States rights?

I hope that the Appropriation Committee next year will take a long, hard look at this expenditure. I am convinced that the States are capable of managing most of their own affairs without this bureaucratic setup in Washington at an annual cost of $385,000. Let us amputate the interfering arm of the Federal Government rather than extend it.

Mr. FOUNTAIN. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the Record.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

Mr. FOUNTAIN. Mr. Chairman, apparently several Members of this body feel there is something unusual about an advisory commission's offering advice. It is perfectly clear, however, both from the legislative history and the statutory language itself that the Advisory Commission on Intergovernmental Relations was created for the express purpose of studying intergovernmental activities and problems and charged with the responsibility of making recommendations for improving relations between the separate levels of government in our Federal system.

I should like to remind my colleagues that the Congress established the Advisory Commission by Public Law 380 in 1959 only after extensive committee study of the need for a mechanism to give continuing attention to intergovernmental matters. The broad support in the Congress for this legislation is reflected in the rollcall vote of 335 to 31 by which it was passed in the House and the fact that it was passed without opposition in the Senate.

The basic objective of the Commission is to strengthen the ability of our Federal system to meet the problems of an increasingly complex society by promoting greater cooperation, understanding and coordination of activities among the Federal, State, and local levels of government.

Mr. Chairman, there has been some misunderstanding as to the nature and purpose of the Advisory Commission. The Commission, although financed by Federal funds for practical reasons, is a bipartisan body with its members drawn from all governmental levels and from both the legislative and executive branches. Actually, a majority of the Commission's members are officials of our State and local governments.

In reporting H.R. 6904 the bill which was enacted to establish the Commission, the Committee on Government Operations stated in this connection:

> The committee views the Advisory Commission as a political innovation—a new type of organization designed especially to cope with the changing problems encountered in our Federal form of government. It will be a genuine interlevel body, not an agency dominated or controlled by any one level of government.
>
> It is the committee's expectation that members will come to the Commission with open minds and with the intention of working toward the ultimate goal of responsible and effective government at all levels of our Federal system. In this connection, the committee also believes that the members will not regard themselves as primarily representatives of any particular group, level of government, or geographic area for the advancement of a special point of view. It is intended that the Commission will not urge a Federal solution simply because Federal action appears the easiest course. It is rather intended that it will encourage the assumption of responsibility by the appropriate level or levels of government with respect to any given problem.

During its relatively short existence the Commission has studied a variety of difficult subjects and has issued 16 formal reports plus several informational documents. The Commission's recommendations and suggestions have been directed, in many instances, to our State and local governments and in other instances to the Congress or the President. As the result of the Commission's work, I and other members of the Commission have introduced bills for the consideration of the Congress, and the Governors, State legislators, mayors, and county officials who serve on the Commission have taken similar appropriate action in their respective jurisdictions and through their organizations.

Those of us who have served on the Advisory Commission can attest to the high quality and objectivity of its work. The gentlewoman from New Jersey [Mrs. Dwyer], the gentleman from New York [Mr. Keogh], and I are presently the three Members of this body serving on the Commission. Other House Members who formerly served on the Commission are the gentleman from Arkansas [Mr. Mills] and former Representative Ikard, of Texas. While each of us may not agree with every one of the Commission's recommendations, I am sure we would agree that the Commission's work has been thorough and objective and that it functions as a democratic body with full opportunity for the expression of all shades of opinion. Dissenting or additional views are contained in some of the Commission's reports, although others have received unanimous support.

It should be noted also that the Commission's recommendations have been widely endorsed by such important State and local organizations as the Governors' conference, the National Legislative Conference, the American Municipal Association, the U.S. Conference of Mayors, and the National Association of

County Officials. A detailed table showing the endorsement by these organizations of the Commission's legislative proposals for State action appears on page 21600 of the CONGRESSIONAL RECORD, volume 108, part 16.

The Commission's work has also been favorably viewed by many national publications. As an example, I would call your attention to an excellent article written by John Gerrity in the Daily Bond Buyer of April 2, 1962, which I placed in the April 4, 1962, CONGRESSIONAL RECORD for the information of my colleagues. As the article clearly observed:

> [The Advisory Commission] has no power to command, as others do, nor even to criticize. It is a creature of Congress. But it owes its allegiance—in terms of performance—not only to the Federal Government, but to the 50 States and to their 90,000 political subdivisions, 35,000 of which are cities and towns of all sizes and kinds.
>
> Thus, it cannot even take, or receive, credit when any of its suggestions are translated into action. For credit, when it is merited, must go to those who do what they have been advised to do.
>
> It can act only as a catalyst to bring forth the best that is latent in the thousands of differing ambitions and aspirations that all who govern in scores of different ways must have for the governed.
>
> Yet despite its seeming lack of power the Advisory Commission has recorded a remarkable record of achievement in its short life—and this it has done, using mainly two effective weapons: The power of commonsense and the power of good example.

I think it only proper and fitting in concluding these remarks intended to clarify the role of the Commission that I refer to a letter of commendation of this Commission sent by the President to Mr. Frank Bane, the Chairman of the Advisory Commission, on February 26, 1962, at the completion of the Commission's first 2 years. The President said in part:

> The relationships existing among the various levels of government in this country are more complex and more important than at any other time in our Nation's history. It is obvious that the Federal, State, and local governments will be able to discharge their responsibilities more effectively if there is fuller understanding of the proper roles that each can and should perform.
>
> Problems resulting from the rapid growth of our metropolitan areas—including both the central city and the surrounding suburban area—require special attention. Studies already undertaken by the Commission on the subject contain valuable proposals identifying the proper responsibility of each level of government and recommending the most effective use of the combined resources of our cities, States, and National Government. You have properly called attention to the fact that State and local leadership, as well as national leadership, is essential to meet the needs of our growing urban population.

Mr. Chairman, I wish to include the President's complete letter at this point:

> THE WHITE HOUSE,
> *Washington, D.C., February 26, 1962.*
>
> Hon. FRANK BANE,
> *Chairman, Advisory Commission on Intergovernmental Relations, Washington, D.C.*
>
> DEAR MR. CHAIRMAN: On the occasion of the reconstitution of the Advisory Commission on Intergovernmental Relations, I wish to express my appreciation to those members who have served so well during the first 2-year term of the Commission's existence. I should like also to convey to those members, both old and new, who will carry forward the Commission's work my deep personal interest in the problems which will have the attention and collective experience and judgment of the Commission membership.
>
> The relationships existing among the various levels of government in this country are more complex and more important than at any other time in our Nation's history. It is obvious that the Federal, State, and local governments will be able to discharge their responsibilities more effectively if there is fuller understanding of the proper roles that each can and should perform.
>
> Problems resulting from the rapid growth of our metropolitan areas—including both the central city and the surrounding suburban area—require special attention. Studies already undertaken by the Commission on the subject contain valuable proposals identifying the proper responsibilities of each level of government and recommending the most effective use of the combined resources of our cities, States, and National government. You have properly called attention to the fact that State and local leadership, as well as national leadership, is essential to meet the needs of our growing urban population.
>
> The rising cost of government at all levels, coupled with the growing interdependence of national life, has called new attention to the strains placed on traditional governmental taxing practices. We must improve Federal, State, and local coordination of tax and fiscal practices and policies to achieve equitable taxation, increase administrative efficiency, and make it possible for our taxpayers to pay their taxes with a minimum of confusion and administrative burden. Equitable and reasonable intergovernmental tax policies will facilitate the free flow of trade among our States and will contribute to our economic growth.
>
> I am confident the Commission will address itself to these and other important problems of intergovernmental relationships. You have my sincere wishes that your efforts will help strengthen and improve our system of cooperative federalism.
>
> Sincerely,
>
> JOHN F. KENNEDY.

I think it is evident from these references that the Advisory Commission has been performing important work and that its studies and recommendations have been valuable to our State and local governments as well as to the Federal Government.

Mr. HAYS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I will not take 5 minutes, but I would like to say to my colleague from Iowa [Mr. GROSS] that I am sympathetic with what he said about the Intergovernmental Commission. I wish he had offered an amendment to strike out some of the money because I will tell you what that commission is—that is a place where all the Governors can go to beat their breasts for States rights and on their way home stop in Washington and get some more Federal funds to help out on their programs.

Mr. GARY. Mr. Chairman, I move that the Committee do now rise and report the bill back to the House with the recommendation that the bill do pass.

The motion was agreed to.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. THORNBERRY, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 5366) making appropriations for the Treasury and Post Office Departments, the Executive Office of the President, and certain independent agencies for the fiscal year ending June 30, 1964, and for other purposes, had directed him to report the bill back to the House with the recommendation that the bill do pass.

Mr. GARY. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time and was read a third time.

The SPEAKER. The question is on the passage of the bill.

Mr. PILLION. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. PILLION. I am.

The SPEAKER. The gentleman qualifies. The Clerk will report the motion.

The Clerk read as follows:

> Mr. PILLION moves to recommit the bill H.R. 5366 to the Committee on Appropriations.

The SPEAKER. The question is on the motion.

The motion was rejected.

The SPEAKER. The question is on the passage of the bill.

Mr. GARY. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 386, nays 17, not voting 31, as follows:

[Roll No. 16]

So the bill was passed.

The Clerk announced the following pairs:

Mr. Walter with Mr. Cramer.
Mr. Keogh with Mr. Avery.
Mr. Buckley with Mr. Harvey of Michigan.
Mr. Green of Pennsylvania with Mr. Bass.
Mr. Hébert with Mr. Burton.
Mr. Pilcher with Mr. Ayres.
Mr. Jennings with Mrs. Griffiths.
Mr. Kluczynski with Mr. Pirnie.
Mr. Brademas with Mr. Cederberg.
Mr. Celler with McIntire.
Mr. O'Brien of Illinois with Mr. Diggs.
Mr. Macdonald with Mr. Dawson.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. GARY. Mr. Speaker, I ask unanimous consent that all Members have 5 legislative days in which to revise and extend their remarks on the bill just passed, H.R. 5366.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

There was no objection.

COMMITTEE ON APPROPRIATIONS—SUPPLEMENTAL APPROPRIATION BILL, 1963

Mr. GARY. Mr. Speaker, I ask unanimous consent that the Committee on Appropriations have until midnight Friday to file a report on the supplemental appropriation bill for 1963.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

There was no objection.

Mr. FORD. Mr. Speaker, I reserve all points of order on the bill.

SECTION 155 OF PUBLIC LAW 87-543—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States, which was read and, together with the accompanying papers, referred to the Committee on Ways and Means:

To the Congress of the United States:

Pursuant to section 155 of Public Law 87–543, I transmit herewith a report of the Secretary of Health, Education, and Welfare regarding experience under subsection (a) of that section.

JOHN F. KENNEDY.

THE WHITE HOUSE, *April 4, 1963.*

GOVERNMENT EMPLOYEES TRAINING ACT—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States, which was read and, together with the accompanying papers, referred to the Committee on Post Office and Civil Service:

To the Congress of the United States:

As required by section 18(c) of the Government Employees Training Act (Public Law 85–507, approved July 7, 1958), I am transmitting forms supplying information on those employees who, during fiscal year 1962, participated in training in non-Government facilities in courses that were over 120 days in duration and those employees who received training in non-Government facilities as the result of receiving an award or contribution.

JOHN F. KENNEDY.

THE WHITE HOUSE, *April 4, 1963.*

LEGISLATIVE PROGRAM, WEEK OF APRIL 8

Mr. ARENDS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. ARENDS. Mr. Speaker, I ask for this time in order to inquire of the majority leader if he will advise us of the program for the balance of this week and for next week.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. ARENDS. I yield to the gentleman.

Mr. ALBERT. Mr. Speaker, we have completed the legislative business for the week and it is my intention after announcing the program to ask unanimous consent that when the House adjourns tonight it go over until Monday.

Monday is District Day. There is no business.

On Tuesday, the 1963 supplemental appropriation bill will be called up.

Tuesday is a Jewish holy day, the Jewish Passover, and I ask unanimous consent that all votes on Tuesday except on rules or procedural matters may go over until Wednesday.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. ALBERT. For Wednesday and Thursday the program is as follows:

H.R. 5389, purchase of silver.

H.R. 3845, Lead-Zinc Small Producers Stabilization Act amendments.

H.R. 3120, simplification administration of Lead-Zinc Small Producers Stabilization Act.

H.R. 1989, Virgin Islands, general obligation bonds authority.

H.R. 1762, outdoor recreation coordination program.

These bills may not be called necessarily in the order listed.

There will be no session on Friday.

This announcement is made subject to the usual reservation that conference reports may be brought up at any time and that any further business may be announced later.

ADJOURNMENT UNTIL MONDAY, APRIL 8

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet on Monday next.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

DISPENSING WITH BUSINESS UNDER CALENDAR WEDNESDAY RULE

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the business in order under the Calendar Wednesday rule be dispensed with on Wednesday next.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

EASTER RECESS

Mr. ALBERT. Mr. Speaker, I desire to advise the House that at the close of business on Thursday, April 11, 1963, it is planned to recess until the morning of Monday, April 22, 1963.

Mr. ARENDS. Mr. Speaker, will that be under a 3-day recess agreement?

Mr. ALBERT. I advise the House that we plan to do this by resolution, so that Members may govern themselves accordingly.

FRANCIS E. WALTER DAM

Mr. DAVIS of Tennessee. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 5367) to designate the Bear Creek Dam on the Lehigh River, Pa., as the Francis E. Walter Dam.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the dam known as the Bear Creek Dam authorized to be constructed on the Lehigh River in the Delaware River Basin in the State of Pennsylvania by the Flood Control Act of 1946 (60 Stat. 644) shall be known and designated hereafter as the "Francis E. Walter Dam". Any law, regulation, map, document, record, or other paper of the United States in which such dam is referred to shall be held to refer to such dam as the "Francis E. Walter Dam".

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

JAMES L. McDEVITT

Mr. BARRETT. Mr. Speaker, I ask unanimous consent that I and other members of the Democratic delegation from Philadelphia may be permitted to extend our remarks at this point in the RECORD in eulogy of the late James L. McDevitt.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. GREEN of Pennsylvania. Mr. Speaker, I rise to pay tribute to a distinguished citizen and an old personal friend whose sudden passing on March 19 was a grievous blow to the Nation.

James L. McDevitt was known to many in this Chamber as the national director of the committee on political education, the political arm of the AFL–CIO. But his service in that capacity, distinguished though it was, did not even suggest the full measure of his contributions to his community, his State, and his Nation.

Jim McDevitt was born in my home city of Philadelphia, on November 3, 1898. After attending parochial school, he became an apprentice member of Local No. 8 of the Plasterers Union. But before he had completed his training, the United States became involved in the First World War.

Characteristically, Jim McDevitt enlisted in the service of his country. He fought in France with the Army Air Corps.

When he returned, after the armistice, he resumed his apprenticeship. Once he became a fullfledged journeyman in 1920, he rose quickly through the ranks of local No. 8 from recording secretary to president and then to business representative.

In 1928, he was elected president of the Philadelphia Building Trades Council—just in time to meet the problems of the great depression.

Within the labor movement, Jim McDevitt fought to preserve wage standards against the pressure of unemployment. He fought off the attempts of the Communists to infiltrate the unions and to capitalize on the plight of the jobless. His name and his deeds became known throughout the State, and in 1938, he was chosen as president of the Pennsylvania Federation of Labor, one of the largest in the Nation.

For more than a decade, Jim McDevitt guided the State federation through the turbulent years of depression, recovery, and war. I can assure you, Mr. Speaker, that the political pitfalls were numerous in Pennsylvania; but Jim McDevitt avoided them. He avoided them so skillfully that in 1951, he was summoned by the national AFL to direct its new political action organization, Labor's League for Political Education.

When the AFL–CIO merger took place 4 years later, Jim McDevitt became codirector of COPE; and when his former CIO counterpart retired in 1957, he assumed the directorship alone.

But this is merely a bare outline of his career. What is still more significant, Mr. Speaker, is the role this busy man was playing apart from his trade union concerns.

I am not referring only to service on public bodies. True, Jim McDevitt served on the building code commission and the housing authority in Philadelphia. He was Labor Relations Director for the WPA in the city, and a member of the regional labor board.

Later, he was a member of the State unemployment compensation commission board of review, the State planning commission, and many other bodies having to do with labor relations, vocational education, and occupational safety. To a degree, these were related to his position as a union leader.

But beyond that, Jim McDevitt actively led fund-raising drives for community chests and the Red Cross. He was deeply interested in the displaced persons commission, on which he served.

He was an executive committee member of the Pennsylvania Council for a Fair Employment Practices Commission. He was a member of the National Conference of Christians and Jews, the National Association for the Advancement of Colored People, and the National Trade Council for Palestine.

In short, Mr. Speaker, James L. McDevitt, a trade union leader, was above all a citizen; a citizen who was not only concerned about the well-being of the community, and about the plight of the unfortunate, but who tirelessly devoted his time and his talents to building a better America. We need more such citizens in every walk of life; and I think it is most appropriate, Mr. Speaker, for this House to note with sorrow the loss of so outstanding an example.

Mr. BARRETT. Mr. Speaker, the eulogies that have been paid to my old friend, James L. McDevitt, are heart warming, even though I am still stunned by his sudden passing.

It is difficult to express the nature of a man in words. The facts of his career must largely speak for themselves, even though they are inadequate.

Mention has been made of Jim McDevitt's concern for the disadvantaged—the Negroes, the Jews, the displaced persons and all the rest. This stemmed, it seems to me, from an inherent faith in the goodness of man; and it was related to his ability to take a partisan side without enmity.

This was equally evident in his own trade union field. At the time Jim McDevitt became president of the Pennsylvania AFL, the rivalry between the AFL and the new CIO was at its height. The disputes were so bitter that the rival organizations often found it impossible to work together, even when their objectives—as in the case of legislation—were identical.

But this was not the case with Jim McDevitt. When feelings ran highest, he still maintained a working relationship with the rival CIO forces—a relationship based upon mutual respect, and a recognition that the ultimate good was more important than immediate advantage.

This was a key element in his character; and it is the reason, I believe, why his loss is so deeply felt by all of us who knew him, on both sides of the aisle.

Mr. TOLL. Mr. Speaker, I would like to add to the tribute paid by my distinguished colleague to the late James L. McDevitt. I knew him personally for many years; I was counseled by him in labor matters when I served in the General Assembly of Pennsylvania; my late father was a plastering contractor and hired men from local No. 8, of which Jim was the business agent.

I was glad to note that the national chairmen of both political parties expressed their sorrow at his death, and praised the contributions he had made to our national life.

It seems to me that this truly represents the man himself. As many Members of the Congress are well aware, Jim McDevitt was a partisan; but his basic partisanship was on behalf of a more perfect democracy.

As COPE director, he took part in campaigns in opposition to some of us and in support of others. Yet his greatest objective was the full participation by every citizen in the electoral process, so that the outcome, whatever it might be, would truly represent the will of the people.

Surely that is an objective that should be shared by every American.

Moreover, Mr. Speaker, I do not know of any case in which Jim McDevitt's partisanship was tinged with personal rancor. He stood on the principles in which be believed; and he fully recognized the right of others to do the same.

Therefore, it can be said, I think, that in this political world, of which we are all a part, Jim McDevitt had many friends; he had many opponents; but he had no enemies. For this quality alone, he will be sorely missed.

Mr. BYRNE of Pennsylvania. Mr. Speaker, there is little I can add to the eloquent words of my distinguished colleagues in memorializing James McDevitt.

He was a man of warmth, of humor, of deep sincerity. He was a man of his word—a man you could trust.

In a field that is contentious by nature, he was a powerful advocate without spite or venom. His goal was not the accumulation of power, but the advancement of principle.

As a labor leader, as a politician and as a citizen, Jim McDevitt represented the best qualities of democratic life.

I will miss him as a friend; the labor movement will miss him as a leader; and the Nation will miss him as an example of the democratic faith in action.

I deeply appreciate this opportunity to join in a tribute to his memory.

Jim McDevitt was kind to everyone and it is my earnest prayer that the good Lord will be kind to him.

RUSSIA CANNOT EQUAL UNITED STATES

Mr. BOLAND. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and to include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. BOLAND. Mr. Speaker, one of the best newspaper headlines to stir pride and confidence in the people of this great Nation is emblazoned in this afternoon's Washington Daily News. Emphatically and boldly it proclaims "Russia Cannot Equal U.S. Power in Our Lifetime: McNamara."

It is good to be reassured of the posture of our national defense and strength. The people—all of us—across the length and breadth of this land will sense a feeling of satisfaction, and may I add, relief as we harken to the words of Secretary McNamara. It is good that he speaks out at this time. For, Mr. Speaker, too often, the arena is left to carping critics who constantly downgrade the Nation's security and its strength.

The country's position vis-a-vis Russia with respect to our capability is due, of course, to many factors. First and foremost has been the willingness of the people of this Nation to sacrifice so much of their material gains to insure the best and the finest of military hardware. They have been ready and eager to shoulder the very heavy burden of taxes that make possible the achievements that guarantee our survival. Behind our people stand the long line of completely dedicated officers and men of our Military Establishment; our magnificent industrial capacity of research, machines, and workers; the executive and legislative branches of the Federal Government who have risen to the challenge. And finally, Mr. Speaker, this country can point with pride to men like Secretary of Defense Robert S. McNamara who, under oft times difficult and trying circumstances, has brilliantly marshaled all of these forces into the most powerful and effective military force the world has ever known.

Mr. Speaker, I wish to insert in the Record excerpts of Secretary McNamara's testimony before the Senate Armed Services Committee:

McNamara Says United States Leads Reds

Defense Secretary Robert McNamara has told Congress that Russia's economic and military power complex will not equal that of the United States "in our lifetime."

Mr. McNamara's confident appraisal of the U.S. defenses was contained in testimony given to the Senate Armed Services Committee in February. It was made public today by the committee.

The Defense Secretary said that all-out nuclear war was "improbable," but his testimony made it clear he thought the United States was ready to fight if necessary—and win.

Mr. McNamara said that all Premier Khrushchev's actions "indicate the conclusion that he knows we can destroy his society today should he attack us from the ground, the sea, the atmosphere, or space."

Responding to criticism from committee members for some Pentagon decisions, Mr. McNamara defended his policy of phasing out manned bombers, canceling the the Skybolt missile, and other steps he has taken.

He also said the United States would be stronger—not weaker—if a treaty banning nuclear testing could be negotiated with the Soviet.

Mr. McNamara said he was confident this country would continue to have the ability to penetrate Soviet defenses with strategic payloads, even without further U.S. nuclear weapons tests in the atmosphere to perfect warheads.

REPUBLICAN BUDGET CUTS

Mr. SISK. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. SISK. Mr. Speaker, at last the Republican budget cutters have been exposed in all their irresponsibility.

For the past month—since March 5—they have called for a $15 billion cut in the fiscal 1964 budget.

But not once during this month did they submit a bill of particulars.

Not once did they publicly say where they were going to cut—and how much.

Not once did they inform the taxpayers where their tax dollars supposedly would be saved.

And yet, if we are to accept their statements at face value, their cuts would have been made solely for the benefit of the taxpayers.

But we can never accept the Republicans at face value unless we first tear away the mask of fiscal responsibility that covers up a ruthless and irresponsible partisanship.

And it is for this reason that the distinguished majority leader [Mr. Albert] speaking for the Democratic leadership yesterday rose in the House of Representatives to tell the Nation what the Republican budget cuts would do.

He presented in detail—down to effect in cities and towns—the results of a $15 billion budget cut.

He presented the Republican formula for "America Last."

He presented it because the Republicans had not stood up and supported their wild charges.

Why?

Because they know the American people would never submit to the Republican budget ax turning the American dream into a nightmare.

In my own State of California, for example, a 15-percent cut in the NASA budget would put 9,200 people out of work in space industries, and kill the jobs of other thousands in related activities. And that would only be a start.

A Republican cut in the manpower training and development program would mean that 2,262 Californians would be denied a chance to learn new skills that would give them a chance to earn a good living in our technological society.

How many of these 2,262 persons have families? What would a denial of training do to them, to their children? They would be forced to go on relief rolls.

So to save $2.5 million in California, the Republicans would send people begging; they would increase the relief rolls so they could pose as savers of the Nation's dollars.

They would rather have people hungry than give them a chance to learn new skills so they can feed themselves.

Then there is the accelerated public works program.

By cutting this program 15 percent, dozens of California projects would be eliminated.

What do the Republicans plan to do instead?

How would they compensate for the flood control projects at Los Angeles and Santa Ynez that would be stopped? Or the seven watershed projects?

What about airports?

At least 25 California airports would have to forget about improved safety devices.

Bakersfield, San Diego, and Stockton could not have new equipment that would improve their existing instrument landing systems.

For another example, take the Veterans' Administration program.

Cuts here would mean that Long Beach, Los Angeles, Palo Alto, and San Francisco would have a poorer quality of care in VA hospitals.

California would lose weather stations, too.

And a reduction in the maritime fleet would mean the loss of shipbuilding contracts at Bethlehem Steel Co. of San Francisco, National Steel and Shipbuilding Co. of San Diego, and Todd Shipyards of San Pedro.

Wherever you turn, California, like every other State in the Nation, would be hit hard by the irresponsible Republican budget cuts.

Because these are cuts that eliminate jobs, that put people on relief, that eliminate public works projects designed to stimulate the economy, and that even will risk air safety for the sake of saving a few dollars.

As I said earlier, at last the full scope of Republican irresponsibility has been made public.

They had their chance to explain for 1 full month when we asked them day after day for a bill of particulars.

Their answer to the American people was only silence.

We will not permit them to make America last.

REPUBLICAN BUDGET CUTS

Mr. ROSENTHAL. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The **SPEAKER** pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. ROSENTHAL. Mr. Speaker, I would like to compliment the Democratic leadership for the intensive study it has made of the effect of the $15 billion budget reduction proposed by the Republicans.

I think it is most significant that even after the majority leader made his excellent presentation on Tuesday, the Republican leadership still refuses to pinpoint its $15 billion emasculation of the budget.

The truth is that $15 billion cannot be cut out of the budget without seriously damaging this Nation and its people—their defense, their livelihood, their educational system—the whole gamut of projects, functions, and programs in which the Federal Government plays a vital role.

The Republican leadership knows this, I am sure.

It is across a barrel.

It refuses to admit it is wrong and either will not or dare not admit the effect of what it proposes.

In the meantime it sits on its so-called statistics and makes noises like an outraged elephant.

This great Nation must be first in defense, first in education, first in economic growth, first in all those things vital to the strength of a free people.

We dare not weaken our Nation at this crucial time.

We must not permit a crippling of essential Federal programs.

In my State of New York, for example, the following vital Federal operations would be cut back or abolished if the Republicans had their way:

First. Ten employment security offices would be closed, sending 575 employees to other offices to collect their own unemployment insurance benefits.

Second. A cutback in NASA's space budget for Project Apollo would put 1,840 New Yorkers out of work—240 at the Kollsman plant at Elmhurst and 1,600 at the Grumman factory at Bethpage.

Third. The continued operation and high quality of care given the patients at Veterans' Administration hospitals at Castle Point and Northport, Long Island, to say nothing of the proposed new Veterans' Administration hospital we so desperately need on Long Island.

Fourth. Planned or pending improvements to the following airports:

New York—Idlewild: Instrument landing system, third facility: New standards approach light system, runway, and identification lights, and visual approach slope indicators.

New York—Jamaica: Airport traffic control center operation, aircraft movement information service.

Elmira, Binghamton, Utica: Airport traffic control tower instrument landing system.

Niagara Falls: Approach light system.

Islip: Airport traffic control tower instrument landing system.

White Plains: Airport surveillance radars.

De Lancey, Dunkirk, New York—LaGuardia, Utica, Watertown: Distance measuring equipment.

Ogdensburg, Saranac Lake: Terminal very high frequency radio directional ranges.

Binghamton, Buffalo, Islip, New York—Idlewild, Niagara Falls, Peconic, Rochester, Syracuse, Utica, White Plains: Equipment to improve the reliability of instrument landing systems.

Buffalo: Air traffic control radar beacon.

Albany, Buffalo, Elmira, Watertown: Doppler direction finding equipment.

Plattsburg: Tactical air navigation equipment.

This action would seriously impair safety to both air travelers and persons living adjacent to some of the world's busiest airports.

Fifth. Weather Bureau operations at LaGuardia Airport, New York City, Rochester, Binghamton, and Albany.

Sixth. Corps of Engineers pending and incomplete projects at Flushing Bay and Creek, Fire Island Inlet to Montauk Point, Buffalo Harbor, Rochester Harbor, Herkimer, and Buttermilk Channel.

Seventh. National Park Service projects: Rehabilitation of the Statue of Liberty National Monument, Federal Hall and Hamilton Grange National Memorials, Saratoga National Historical Park, construction at Sagamore Hill—home of Theodore Roosevelt.

Eighth. Work pending or in progress on flood control and watershed projects.

Flood control: Buffalo Creek.

Watershed: Conewango Creek, Cowaselon Creek, Genegantslet Creek, Ishua Creek, Nanticoke Creek, and Upper Five-Mile Creek.

Ninth. Accelerated pending public works projects:

Waddington's application for $45,000 for a new sewer system creating 45 man-months of onsite labor.

Tonawanda's application for $225,000 for a new water system generating 225 man-months of onsite labor.

Lake Placid-Saranac Lake Hospital in Ray Brook's application for $900,000 for a new hospital to replace two existing hospitals creating 900 man-months of onsite labor.

Sharon Springs' request for $70,500 for additions to the sewage treatment plant generating 70.5 man-hours of onsite labor.

The Republican effort to reduce essential activities in my State would be duplicated in every State of the Union. Certainly, the people of New York State won't buy this penny-wise, pound-foolish policy of so-called savings. Nor will the people of the rest of the country.

While all these projects and activities are essential, none more pointedly demonstrates the grotesque effect of a meat-ax slash prepared by the Republicans than does the possibility of a shabby and unkempt Statue of Liberty. Surely, Mr. Speaker, they cannot be serious.

LET US NOT SWEEP THE PLIGHT OF OUR PUBLIC SCHOOLS UNDER THE RUG

Mr. PERKINS. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The **SPEAKER** pro tempore. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

Mr. PERKINS. Mr. Speaker, there is widespread defeatism regarding Federal aid for our public elementary and secondary schools, and justly so, since the needs of our public schools grow more serious with each year of inaction. Criticism of this inaction is growing.

Such criticism was so aptly summarized last Friday by the noted journalist, Marquis Childs, in his syndicated column. He stated:

> What is most striking is the fact that the alarm of only 5 or 6 years ago over the public schools has seemed to fade away. It is as if the problem of overcrowding, underpaid and overworked teachers, antiquated and even dangerous school buildings had by some unseen force been solved.
>
> But what has happened, in the view of knowledgeable observers, is that out of frustration with repeated failure to make any progress the whole question of the deteriorating American educational system has been swept under the rug. Plagued by the religious controversy, legislators have shunted the challenge of aid to elementary and secondary schools into the background. Apparently in the conviction that out of sight, out of mind, all except a few conscientious Members of Congress are content to let it stay there.

I wish to disassociate myself completely from those—in or out of the U.S. Congress—who are willing to sweep the plight of our public schools under the rug.

I also wish to disassociate myself from the position being taken by some of our colleagues that we can ignore the plight of our public schools and consider that we have met the Federal responsibility toward education by providing aid to colleges. Throughout the hearings on H.R. 3000—the so-called omnibus education bill—I have insisted again and again that to aid only higher education is like putting a roof over a house without solid foundations. We must have both higher education and public elementary and secondary school assistance. The basic strength of American education must be reinforced from the ground up.

I do want to associate myself with President Kennedy's statement that "excellence in education must begin at the elementary level" and with those Members of Congress who agree with me that the Congress has for too long abdicated its proper responsibilities to public education. Of course we need more doctors, more scientists, more teachers, and more technicians, but we must recognize that the place to begin to prevent the loss and waste of potential talent is in our public schools. For it is in our public schools that the chain reaction is first set off. Ignore this basic fact and you are ignoring the basic problem itself. What good is it to try, at much greater cost, to wipe out adult illiteracy and school dropouts without assuring that weaknesses at the foundations of education will not constantly feed replacements into the national pool of the uneducated?

Each year that action is postponed—action to help the States get American education moving forward at a more rapid pace, action to end overcrowding of classrooms and to provide needed quantity and quality of teachers—means millions of children permanently deprived of a sound education. These are the children who eventually swell the lists of school dropouts and illiterates. Unless we begin to concern ourselves with the fundamental problems of our public schools, we shall scarcely be able to survive as a free people in a free world.

Our counterparts in the legislatures of our 50 States face the same problems we face in providing funds for public education. For the past many years, our school enrollment has increased at the rate of 1 million pupils each year—requiring more classrooms and teachers. While the States and localities have taken action to meet this challenging problem, what contribution have we made?

The extensive congressional debates on the subject of Federal aid to education have not been a complete waste of time but have served a very useful function. They have eloquently expressed the yearning of the American people for the best possible public educational system for their children. They have emphasized that under our system of government, primary responsibility for education is a State and local function, that we are in fact a Nation of 50 separate State school systems—each in turn made up of local school districts representing a variety of educational patterns—and finally, that a way must be found to provide needed Federal aid without overruling State and local education authorities on what and how elementary and secondary school pupils are taught.

There is general agreement that American education is in need of many changes and much improvement. Millions of dedicated citizens, through participation in parent-teacher associations, local school boards, and our State and local legislative bodies, are taking part in the day-to-day process of improving our schools. Many gains have been made in recent years. But much more needs to be done. A high proportion of the local and State tax dollar is now being voted for our public educational systems, but the competition for the limited State and local tax dollar is becoming more and more severe. Increasingly, the average citizen is becoming aware that almost two-thirds of his tax dollars go to the Federal Treasury. Increasingly, he is asking that some of it be returned to the State where it can be added to State and local funds and used to accelerate the solution of the most pressing educational problems.

The needs of our public schools are clear and I believe that our duty in the U.S. Congress is clear. I intend to press for action because it is urgently needed in the national interest.

Several days ago, I introduced a bill, H.R. 5344, the Public Education Improvement Act of 1963, which provides for a new approach to Federal aid for public elementary and secondary schools. This proposal follows the basic principles of the Bipartisan Citizens Committee for Public Elementary and Secondary Education and the policies of the Council of Chief State School Officers.

The members of the Bipartisan Citizens Committee have differed in the past as to the proper role of the Federal Government in the financing of education. As individuals, they undoubtedly remain less than unanimous on particular details. Despite such differences, however, they have joined together to support a bipartisan approach to legislation and have formulated a series of principles for constructive legislative action. My bill follows these principles closely, and I do believe that they provide a basis for ending the impasse and achieving the enactment of a sound general education bill. Following is the membership of the citizens committee and its "Statement of Principles":

BIPARTISAN CITIZENS COMMITTEE FOR FEDERAL AID FOR PUBLIC ELEMENTARY AND SECONDARY EDUCATION

(Members serve as individuals—titles are for identification)

Chairman: George J. Hecht, publisher, Parents' Magazine and chairman, American Parents Committee Inc.

Executive vice chairman: Bernard Locker, 4107 Davenport Street NW., Washington, D.C.

William Benton, chairman of the board, Encyclopedia Britannica, former U.S. Senator from Connecticut.

Barry Bingham, editor and publisher, Courier-Journal and Louisville Times.

James B. Conant, president emeritus, Harvard University.

Gardner Cowles, editor and president, Look magazine.

Lawrence G. Derthick, former superintendent of schools of Chattanooga, Tenn., and former U.S. Commissioner of Education.

Walt Disney, chairman of the board, Walt Disney Productions.

Arthus S. Flemming, president, University of Oregon, former Secretary of Health, Education, and Welfare.

Marion B. Folsom, director, Eastman Kodak Co., former Secretary of Health, Education, and Welfare.

Edgar Fuller, executive secretary, Council of Chief State School Officers.

Nelson C. Jackson, associate executive director, National Urban League.

Eric Johnston, president, Motion Picture Association of America, former president, Chamber of Commerce of the United States.

Austin J. McCaffrey, executive director, American Textbook Publishers Institute, former State commissioner of education of New Hampshire.

Earl J. McGrath, executive officer, Institute of Higher Education, Teachers College, Columbia University, former U.S. Commissioner of Education.

William C. Menninger, M.D., president, the Menninger Foundation.

M. D. Mobley, executive secretary, American Vocational Association.

James S. Peters, board chairman, Bank of Manchester, Ga., and chairman, Georgia State Board of Education.

Walter P. Reuther, president, International Union, United Automobile Workers.

Mrs. Anna Rosenberg, public and industrial relations counsel, former Assistant Secretary of Defense.

Harry Scherman, chairman, Book-of-the-Month Club and trustee, Committee on Economic Development.

Howard K. Smith, news analyst, American Broadcasting Co.

Jesse G. Stratton, farmer, member Clinton, Okla., school board, former president, National School Boards Association.

Adm. Lewis L. Strauss, former Chairman, Atomic Energy Commission.

STATEMENT OF PRINCIPLES

In our efforts to promote sound legislation to provide Federal aid to accelerate necessary improvements in public elementary and secondary education, the following principles serve as our guidelines:

Bipartisan approach: The legislation should be formulated, sponsored, and supported on a bipartisan basis. Only a truly bipartisan bill can serve as a rallying point for Democrats and Republicans—both in and out of Congress—who favor the principle of Federal participation in the financing of public elementary and secondary education, without controlling or supplanting State or local efforts.

As a committee, we neither support nor oppose any particular bill at this time. What we do urge is a determined and concerted effort by both the administration and the Congress to stop dealing with this vital matter on a partisan basis, and to give the highest priority to the consideration of a sound and meaningful education bill developed on a truly bipartisan basis.

Make Federal control illegal and impossible: The legislation should be based on clear and unequivocal recognition that education is constitutionally a primary function of the States and that Federal funds for education should not be used in any way to control education programs and activities at either the State or local level. In line with this all-important principle, the Citizens Committee urges that any legislation include the following provisions to allay honest fears of Federal control.

1. Federal funds should be invested in ongoing State aid education systems, as authorized by the legislature of each State, and for which the States are annually appropriating more than $6 billion of State funds.

2. Federal funds should, by Federal law, be deemed to be State funds upon receipt by the State, with subsequent responsibility for reporting to the Federal Government confined by law to the official State agency for education.

3. The commingled Federal and State funds would be distributed to local school authorities for public education purposes, as defined by State law, using the same processes through which State funds are now distributed, thus making Federal control impossible since the Federal dollar would be indistinguishable from the State dollar.

4. The State and local educational authorities should continue, as at present, to determine which are their most critical educational needs and priorities and how they can best be met.

Under this new approach, the issue of Federal aid for private and parochial schools is not a question for the Federal Government to decide. This is because each State would be left full responsibility to define the public education purposes for which Federal funds may be used.

Aid in proportion to need: Federal funds should be apportioned among the States on an equalization basis so that the poorer States would receive proportionately more than the wealthier States, and each State should be left free to extend its own program of allocation to local districts so that the purposes of equalization of financing within each State will be fully served with the combined State and Federal funds directed to the points of greatest need.

Encourage greater State and local effort: The legislation should include necessary safeguards to prevent Federal funds from being substituted for State and local funds, and should also stimulate increased State and local financing. This could be accomplished in several ways:

1. By requiring the States to match Federal grants with "new" State funds, with the poorer States matching proportionately less than the wealthier ones.

2. By penalizing a State through a reduction of Federal aid when total State and local funds for public education are reduced.

3. By providing an incentive for increased State and local appropriations for public education.

State planning for action: Finally, the legislation should encourage each State to conduct a complete and comprehensive study of its system of public elementary and secondary education, determine its own priorities of educational needs, and set forth its own program to use Federal as well as State and local funds in accelerating needed improvements.

POLICY OF INACTION AGAINST CUBA

Mr. BECKER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks and include a newspaper article.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. BECKER. Mr. Speaker, on March 4 I referred to the President's changing moods with reference to conditions in the country and in the world. I have an article here on the policy of inaction against Cuba. Just a couple of years ago, President Kennedy, while in Canada, lauded the Cuban rebels for trying to free their country, and, of course, we all laud them for that. Today, the President has changed his mood. Now he states that we must prosecute and we must expel the Cuban rebels for trying to free their country. This is a double standard because in Vietnam we are supporting the fight against North Vietnam which is being helped by the Russians. We have lost 60 American military lives there. The Russians have troops in Cuba and they are furnishing and moving all the military supplies in there that they need. Now President Kennedy is not going to permit the Cuban rebels to fight for the freedom of their own country. What kind of changing mood is this that the President is in today and when are we going to get some kind of policy off the ground that will solidify our position with respect to Cuba and take the necessary action to support these people who want to give their lives to free their country.

Mr. Speaker, the newspaper article to which I referred, by David Lawrence, in the Washington Evening Star, is as follows:

Policy of Inaction Against Cuba—U.S. Efforts Against Anti-Castro Attacks Described as Result of Confusion

(By David Lawrence)

Confusion, if not frustration, today characterizes the policy of the administration toward Cuba.

Nearly 2 weeks have passed since President Kennedy told a news conference that the Soviet Government had withdrawn only 3,000 troops out of the 17,000 stationed on Cuban soil. He then added:

"We are waiting to see whether more will be withdrawn, as we would hope they would be. The month of March is not finished yet, and we should have a clearer idea as to what the total numbers should be in the coming days."

The month of March has passed, but the "clearer idea" has still not materialized. The only action that has been taken by the administration is a sharp warning—not directed to the Russian Government—but to the poor Cubans who have bravely attempted to raid ports and start guerrilla action such as Fidel Castro himself employed when he fought his way into power.

It seems to be regarded as legitimate for the United States to encourage and assist in guerrilla-type warfare in South Vietnam against Communists there, but somehow the effort of the Cuban patriots to rescue their own country by similar tactics is frowned upon officially in formal announcements from the Department of State and the Department of Justice. Neutrality laws are cited as standing in the way. It is announced that such laws will be enforced by the arrest of those Cuban patriots who attempt to launch from American territory any expeditions to wrest their homeland from Mr. Castro and the Soviet troops.

Contradiction after contradiction, moreover, has emerged to becloud the statements issued by the U.S. Government. To take refuge in the neutrality laws seems to be in conflict with the following declaration on March 12 by Secretary of State Dean Rusk:

"Then we have felt, along with many others of our allies, that the kind of Cuban regime that we have today not only is not fit to participate as a regime in the activities of the inter-American system, but that with its declaration of subversive and other types of war upon the hemisphere, it is not entitled to normal economic or other relations with the free world."

The neutrality laws were plainly designed to apply to expeditions started on U.S. territory against countries with which the United States maintains friendly and normal relations. But a state of war now exists, for all practical purposes, between Cuba and the United States. Also, a blockade was undertaken last autumn, and foreign ships were intercepted by the U.S. Navy. In recent weeks Soviet-built Migs, flying from Cuba, have attacked unarmed American ships.

In the last several months, moreover, a hostile military operation, involving the erection of bases equipped with missiles as well as bomber planes, had been carried on inside the territory of Cuba. This was aimed at the United States. One wonders what more proof the Government here needs that any steps taken by this country to protect itself are proper under international law and that so-called "neutrality" laws do not apply in the present circumstances to Cuba.

Actually, the constant use of air surveillance by the United States over Cuban territory is not really in line with the customary interpretation of the concept of "neutrality." The continuous pressure by the Government here upon other governments to boycott all trade with Cuba is also hardly neutral.

Secretary Rusk, in his March 12 speech, said:

"Now, we are discovering with regard to Cuba that, having failed to take the steps that might have prevented in years past the establishment of a Marxist-Leninist regime in Cuba, that the problem of finding a cure is more difficult."

The foregoing might well be paraphrased and applied today as the administration, instead of finding a cure, permits the Soviets to strengthen their hold inside Cuba. It has even enlisted the help of Great Britain's navy to keep Cuban patriots from attempting to regain their homeland.

Mr. Rusk also said in his speech that "the presence of Soviet forces in this hemisphere cannot be accepted as a part of the normal situation in this hemisphere."

But the Soviets not only have been infiltrating Guatemala and Brazil, they are still maintaining a military force in Cuba, less than a hundred miles away from the coast of this country.

Senator Stennis, Democrat, of Mississippi, Chairman of the Senate Subcommittee on Military Affairs, said in a speech the other day that, "without positive action on our part, our neighbors to the South may fall one-by-one until the entire hemisphere is lost to us." He added that he was convinced that "the Cuban situation is the most immediate, pressing, and important problem facing our Nation today."

Yet the administration is using its influence to discourage a counterrevolutionary movement against the Castro regime, which deliberately invited the Soviet Government to send troops and build missile bases in Cuba. How can the United States justify a policy of inaction against the Havana regime and invoke "neutrality" laws against the only individuals who wish to risk "their lives, their fortunes and their sacred honor" to overthrow a tyrannical dictatorship?

A THREAT TO THE PEACE

Mr. RYAN of New York. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the Record and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. RYAN of New York. Mr. Speaker, I have been deeply disturbed by reports of German scientists working in Egypt to develop Egyptian rocketry. Such activity not only threatens Israel but also the peace of the entire area. I have asked the Secretary of State for a full report on this explosive situation and have called upon the Secretary of State to urge the West German Government to discourage such activities.

On April 2, 1963, the New York Post published an editorial which points out that the West German Government is seriously considering measures to discourage their scientists from aiding the Egyptian Government. The West German Government should be encouraged by us to pursue vigorously such a policy. The New York Post editorial also suggests that steps be taken to initiate area disarmament in the Middle East. Disarmament in that area would reduce tensions in one of the most explosive spots in the world and would be a major step toward world peace. I recommend the following editorial to my colleagues:

GERMANS IN EGYPT

An Associated Press dispatch from Cairo recently quoted authoritative sources as saying that most of the German scientists in Egypt are working on a supersonic fighter plane, not on rockets and missiles, as the Israelis have alleged.

Unhappily for the Egyptians, this denial collided with official admissions in Bonn that German scientists were working on rocket projects in Egypt. The West German Government, after an initial tendency to shrug off the Israel charges, is now taking them with great seriousness.

The charges were discussed at a Cabinet meeting which authorized a condemnation of German citizens who worked on the production of weapons of annihilation in areas of international tension. It also ordered a study of measures by which such citizens could be persuaded to return home.

This is a far sounder attitude than the earlier inclination to take shelter behind the alleged legal difficulty of preventing German citizens from working in Egypt.

In view of modern history, the Israel complaint merited more than a legalistic reply. For the specter of German science enlisted in the service of those who would destroy Israel is an intolerable sequel to the Nazi nightmare.

But this is not only a German responsibility. This is an area that urgently calls for regional disarmament, starting if necessary with an arms freeze.

All that is required is for the Great Powers who are the suppliers of the more sinister weapons littering the region to agree on a cutoff. Why not? It should be clear by now that arms purchase no lasting friendship in the Middle East for either East or West.

IS HITLER'S TOP AVIATION DESIGNER, WILLY MESSERSCHMITT, HELPING THE EGYPTIANS BUILD A MACH 2 FIGHTER AIRPLANE TO THREATEN THE SECURITY AND PEACE OF ISRAEL?

Mr. STRATTON. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. STRATTON. Mr. Speaker, I have been greatly disturbed by a report which has just come to my attention from the March 31 issue of the London Sunday Telegraph to the effect that Hitler's top aviation designer, Willy Messerschmitt, is now in Egypt heading up a team of 300 German aviation technicians helping the Egyptians in building a mach 2 fighter aircraft.

This report is disturbing indeed because, if true, it would represent a grave threat to the peace of the Middle East and to the security of the State of Israel. It would also represent a violation of the West German Constitution which prohibits, "actions designed to disturb the peaceful coexistence of nations or to prepare a war of aggression."

Mr. Speaker, it is incredible that countries which receive our aid, and with one of which we are closely allied should be permitted to participate in military development activities which clearly threaten the security and independence of Israel.

This report states, Mr. Speaker, that included among these aviation technicians are a former Nazi stormtrooper colonel and a physician who fled from Germany because he is wanted there for medical atrocities at Buchenwald for which he was responsible.

The published report also indicates that a number of vital parts of this fighter being developed in Egypt have been manufactured in the same Messerschmitt factory in Germany which is currently producing parts for the F-104 under provisions of a NATO contract.

Mr. Speaker, I have today wired both the Secretary of State and the Secretary of Defense and asked them to investigate the facts alleged in the article and to report to me their findings. I have further requested that if these reports prove to be true, these officials advise me what steps the U.S. Government could take to help put an immediate end to these activities. I wait eagerly for their replies.

Under leave to extend my remarks, I include the article referred to:

GERMAN TELLS OF WORK FOR NASSER—MESSERSCHMITT MEN BUILD FIGHTERS

(By Sefton Delmer)

Munich.—A German engineer who until January of this year was a member of a team of 300 German aircraft technicians working in Egypt under Hitler's ace designer, Prof. Willy Messerschmitt, has talked to me here in Munich for 2 hours with complete candor.

He gave me the first account of this extraordinary operation, by which West Germans, including former leading Nazi functionaries, are helping President Nasser with his plan to liquidate the survivors of Hitler's terror, and the State they built in Palestine.

The information the engineer gave me made it irrefutably clear that Professor Messerschmitt and his men are violating Germany's basic law. This forbids "actions designed to disturb the peaceful co-existence of nations, or to prepare a war of aggression."

For he revealed to me that the powerful jet fighter the German experts are building for President Nasser in two vast factory complexes at Helouan on the Nile is designed as a powerful weapon of attack. It is to be capable of a speed of mach 2.

AIRCRAFT PARTS SUPPLIED

More than that, Professor Messerschmitt is also violating the article of the basic law which lays it down that "instruments of war may be transported or put into circulation only with the permission of the Federal Government."

The Messerschmitt works in Germany, the engineer revealed, not content with producing essential parts of the American F-104 multipurpose fighter-bomber under a NATO contract, have also been manufacturing and forwarding to Helouan a number of parts vital to the German-designed Egyptian fighter.

Among the parts he mentioned specifically were undercarriages and canopies. A number of other German firms, and Swiss ones too, are manufacturing machine tools for the Messerschmitt operation in Egypt.

I find it unthinkable that Dr. Adenauer's government, which has always shown itself fully aware of the need for the Federal Republic to atone for the crimes committed under Hitler against the Jewish people, could have authorized the Messerschmitt exports.

WORK GIVEN UP

The engineer asked me to keep his name secret. I readily agreed.

"I gave up my work in Egypt," he said, "partly because I fell sick, but mainly because of my growing misgivings concerning it. I could not stand the everlasting anti-Jewish fulminations of the ex-Nazi element among my colleagues.

"Above all, I felt that it was morally and politically indefensible for Germans to be associated with this enterprise, which one day was bound to end in conflict with Israel, in view of our very special situation with regard to the Jews.

"And I did so even though I appreciate fully the arguments that if we West Germans back out of this project our places will most likely be taken by Communists. The Germans of the Soviet zone, and the Czechs are both eager to take it on."

The engineer categorically denied that the Messerschmitt men or the factory installations built under Professor Messerschmitt's directions had been used for the production of missiles.

"The work on missiles," he said, "is the job of an entirely separate team, also consisting mostly of Germans and Austrians. Their plant is near Heliopolis, some way down the road to Suez.

"Our two plants are at Helouan. We had nothing whatever to do with the missile team.

"In fact I did not even know of their existence until one day we heard the sound of exploding rockets and saw three missiles soaring through the clear blue sky in the direction of the western desert."

The Messerschmitt team itself is divided into two production units. Each has its separate plant and equipment. The first headed by the Austrian Hans Schöubaumsfeld, and installed in military factory No. 36, is concerned with the elaboration of the frame of the new Egyptian super-fighter which the Germans call "T Cell."

The second, under the direction of another Austrian, Ferdinand Brandner, is exclusively concerned with the design and construction of a new jet propulsion unit. It is housed in military factory No. 35.

Herr Brandner's unit, my engineer informant declared, was the more rabidly Nazi of the two, for Brandner, an old-time Nazi, held the rank of Stormtroop Colonel.

BUCHENWALD DOCTOR

One of Brandner's first decisions was to appoint, as medical officer to his unit, the notorious Dr. Eisels, who escaped to Egypt from Germany to avoid being sentenced for the medical atrocities he committed as camp doctor at Buchenwald.

According to the plans made when Professor Messerschmitt agreed to take over the project in 1960, the Egypt superfighter—a development of the HA-300 which he built in Spain after the war with Bristol jet engines—was to be ready for mass production by 1965.

Although President Nasser has poured close to £100 million of Suez Canal revenues into the Helouan project—Professor Messerschmitt insists on cash down for every screw delivered—the prototype is nowhere near ready for testing. The main reason being that Brandner is badly behind with the production of the new power unit.

Among Nasser's circle of advisers there are many critics of Brandner, even though Brandner himself enjoys the personal friendship of Col. Nasser. What apparently particularly attracts the Egyptian dictator is Brandner's unconventionality in solving problems.

When, for instance, production of the Messerschmitt jet trainer, the HA-200, threatened to be held up because the French would not deliver to Egypt the Marbre jet engine which went with it, or grant Helouan a license to build it, Brandner simply went ahead, my informant said, and built it without a license.

"You can get away with that sort of thing if you are working for the Soviet Union," the engineer said, "but I doubt whether the French will let him get away with it in Egypt."

COLONEL NASSER IMPRESSED

Brandner's enthusiasm and optimism, however, constantly fires President Nasser's imagination and pride. Brandner is promising that his engine is to power an Indian jet fighter being built for Mr. Nehru by Dr. Tank, another of Hitler's jet designers.

Indian experts have been visiting Helouan, and, according to a dispatch from Anthony Mann, a further conference between Professor Messerschmitt and Helouan's men took place recently in Delhi.

All this is sheer joy for the ambitious Colonel Nasser, who dreams of making Egypt at one jump the premier military and industrial power of the Afro-Asian bloc. Other Egyptians however, are pressing that priorities should be given to the production of missiles and that the fighter project should be scrapped.

My engineer informant fears that there is a real possibility that this may be done, if under German Government pressure, or as the result of Egyptian dissatisfaction with the superfighter's progress, the Messerschmitt team is sent home.

THE TRUTH OF THE SITUATION AT GREENWOOD, MISS.

Mr. COLMER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and to include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

Mr. COLMER. Mr. Speaker, characteristic of racial disturbances in the South, there has been considerable misinformation and slanted reports in the press and other media of communication about the true situation at Greenwood, Miss. Efforts to dramatize and, I fear, to bring about racial discord, certain newspaper reporters and television reports have attempted to give the country a distorted picture of what is happening in this Mississippi community.

The general tenor of these reports is to the effect that the law enforcement officers of this little city of 20,000 people are resorting to brutal methods of preventing Negroes from registering to vote. The truth is that those city officials, responsible for maintaining peace and order, are merely carrying out their obligations as peace officers and officers of the community to prevent disorderly conduct and prevent bloodshed.

The real trouble at Greenwood today is similar to the trouble that has occurred in many other southern cities. The mayor and city commissioners of Greenwood have prepared a statement, giving their side of the controversy which, apparently, in most instances, has been ignored by the press. They point out that no Negro is being denied the opportunity to go to the registrar's office and register to vote. They are merely insisting that this be done in an orderly manner. They object to large and disorderly groups marching through the streets of the city and upon the registrar's office. They particularly resent, and rightly so, these outside agitators coming into the community and stirring the emotions of the citizens of both races. They demand, and rightly so, that those who seek to register to vote do so singly or in groups of two or three. They fear that the gathering of these large groups and the efforts of the outsiders will get out of hand and bring about a tragedy similar to that which has happened in other cities. I am sure that all fair-minded people will recognize, when they learn the true story, that the efforts of these city officials are not only legal but reasonable.

Mr. Speaker, each of the Members of the House of Representatives from Mississippi has been furnished with a copy of the statement of the mayor and commissioners. As dean of the Mississippi delegation, I have been requested by my colleagues, Messers. WHITTEN, ABERNETHY, WINSTEAD, and WILLIAMS, to present this statement to the House in order that it might appear in the CONGRESSIONAL RECORD where it will receive wide circulation. The statement made by Mayor Charles E. Sampson and Commissioners W. G. Mize, Jr., and B. A. Hammond is as follows:

STATEMENT OF MAYOR AND COMMISSIONERS OF CITY OF GREENWOOD, APRIL 2, 1963

During recent weeks, Negro groups from elsewhere, working hand in hand with the Justice Department of the United States, have made an all-out effort to create incidents and to manage and control news emanating from Greenwood with reference to these incidents so as to formulate public opinion against our city and its people. It is now obvious that the purpose of this activity has been to lay the predicate for unwarranted and unprecedented interference by the Federal Government into the affairs of this, until now, peaceful and orderly Mississippi community.

We are glad that there are now in our city some responsible members of the press; and it is our hope and belief that they will fulfill their obligations to the people of this area and of the Nation as a whole by advising the American public of the entire truth about the things that have been happening in and to the city of Greenwood. We strongly feel that the people of the United States are entitled to know the following listed facts, and we urge the press representatives here to investigate them and to make a full and impartial report to the American people of the results of their investigation.

1. Negroes for many years have been applying for voter registration in Greenwood, Miss. No instance has been cited where any applicant, colored or white, has ever been intimidated, molested, or in any way interfered with. During recent years, and particularly during recent weeks, many representatives of the Justice Department have observed firsthand that registration procedures here have been orderly and uneventful. They have observed that the registrar of voters treats colored and white applicants alike and that Negroes are given full opportunity to qualify for the privilege of voting. We do not feel that these facts have been sufficiently emphasized by the national press. On the contrary, the news has in some reports been so managed as to create the impression that it has been and is the local policy to prohibit Negroes from applying to vote. The Justice Department has copies of all applications and other voting records of Leflore County up until March 16, 1963.

2. The so-called activist groups here have attempted to persuade the Nation that local people are making violent resistance to Negro voter applicants in Leflore County. Little or no effort has been made to inform the public that the first act of violence occurred in Leflore County, Miss., on the night of February 27, 1963, when a car occupied by five Negroes allegedly tried to run down some white youths who were walking alongside the highway. Arrests were made and charges of felonious assault were lodged against the five Negroes involved. They are now out on bond awaiting the action of the grand jury. This episode has either not been mentioned or has been watered down in news reports. The FBI investigated this matter, and we invite the press to obtain the full details about this incident from local law enforcement officials and from the FBI and to report them to the people.

3. The next night, that is, on the night of February 28, 1963, in the immediate area involved in paragraph 2 above, and no doubt as an unfortunate result of the events involved in said paragraph 2, three white men shot into a car occupied by Negroes. The local sheriff's department made an intensive investigation in connection with this shooting, located the car driven by the white men, and shortly arrested three white men who were promptly charged with felonious assault. They are now under bond awaiting grand jury action. The FBI also made an investigation of this matter, and its files will reflect the diligence of the local law enforcement authorities in connection therewith if the press desires to seek them.

4. On the night of March 6, 1963, Samuel Block, a Negro activist who has been here for many months, complained that a car occupied by him and three other Negroes was shot into by white men. Block's car was, in fact, shot into by a shotgun, and the shots went through both the left and the right front door glasses. Block stated that he and another person were sitting on the front seat at the time of the shot. However, either by good luck or prearrangement, none of the occupants of the car was injured by the gunfire. So far local officials have found absolutely no evidence that white persons were in any way involved. The FBI has investigated this shooting, but has not indicated to us that there is any evidence that a white person was the guilty party. However, without any proof whatsoever, effort has been made by virtue of managed news to create the national impression that the shooting was done by a white person resentful of Negro voting activity. This was done despite the fact that Block was known by the Justice Department and others informed of his activities to be entirely irresponsible and to have made several false reports of injuries and attempted injuries to Negroes by whites. Three of Block's representations which were then known to the Justice Department to be untrue are set out below. A fourth false report, made by Block subsequently, will be set out in paragraph 5 to follow.

(a) In August 1962, Block reported to the Justice Department of the United States and to the press that on the previous day he had been severely beaten for 5 minutes by 3 unidentified white men. His statement was carried by some agencies as a major news item. Immediately thereafter Block was engaged in his usual activities, and was observed by many persons, including the publisher and editor of the local newspaper, to have no sign of injuries. Full investigation proved his charges to be wholly untrue, but the false picture created by the giving of nationwide publicity to Block's statement has never been corrected. The FBI investigated the matter, and it is our belief that the Department of Justice has full knowledge that Block's accusations were not true. However, the FBI report of this investigation has not been shown to us and has not been made public. It has, no doubt, been given full burial rites by the Justice Department, and we urge the press to disinter it and give it full publicity.

(b) Two nights later, Block and Robert Moses, one of the Negroes presently in Greenwood, reported to the Justice Department and to the press that a number of white men came to Block's office to injure him and some of his workers and that they escaped by sliding down a television antenna. This accusation on the part of Block was given widespread publicity. Investigation revealed that Block was again guilty of a complete fabrication, but this fact has not been passed on to the Nation as a whole. The FBI also investigated this episode, and we further urge that the report of this investigation be obtained by the press and publicized.

(c) On February 20, 1963, three adjoining buildings occupied by colored businesses caught fire. These buildings were plainly marked as a cafe, a pressing shop, and a garage, and were obviously not office buildings. Block's office was over a block away from the fire on the opposite side of the street, and bears no resemblance whatsoever to the buildings which were burned. However, Block issued a statement, which was also widely publicized, that white people had mistaken the burned buildings for his office and had set fire to same in reprisal for the food distribution activities being carried on by Block's organization. Investigation revealed that the garage and pressing shop where the fire started both contained much combustible material and that arson was not involved. Nevertheless, no effort was made to inform the American people that another of Block's statements which had been passed on to them had been shown to be false.

5. On March 24, 1963, Block reported that the building occupied by him and his helpers had been set afire, and that two white men had been seen running from the area. Despite Block's previous record of fabrication, this statement was not verified, but was released to and carried by the national press as a big news item. Some pertinent facts developed by the investigating authorities in connection with this fire are as follows:

(a) Block and his group had been instructed by the colored owner of the building to vacate it immediately, and they were preparing to move out.

(b) According to Block's own statement, he locked the building with a padlock at approximately 10:30 p.m., and he had the only key or keys to the padlock used.

(c) The fire occurred between 11:30 p.m. and 12 o'clock midnight.

(d) When the fire was investigated, there was no evidence of forcible entry, and the door which Block stated he had padlocked, with a padlock to which he had the only key, was open. It had not been forced open, and the padlock was found on the scene, unbroken and undamaged. Therefore, the door was obviously opened by the person having the key. That person, namely, Block, has not produced the key to investigating officials, advising the authorities that he has lost it.

Further investigation of the fire has proved that no white person was seen in the area and that white persons were in no way involved therein. Nevertheless, little effort has been made to correct this further false impression that has been created in the minds of the Nation at large. The FBI has investigated this matter, too, and we again urge the press to obtain and advise the public of the contents of the FBI file.

6. On the night of March 26, someone shot into the house of a local Negro. Again, through good fortune or advanced planning, no one was hurt. It was then known to everyone here, including representatives of the Justice Department, that the Negro organizations presently in Greenwood were deliberately framing criminal charges against white people for crimes against Negroes. Yet, despite the known unreliability of these colored groups, the American public has been led to conclude that the shots were fired by white persons in retaliation for voting activity among the Negroes.

The investigation in connection with this last shooting is continuing by local authorities and, presumably, by the FBI. As yet, it is not known who did the shooting, but so far there is no proof that a white person was in any way responsible. Nonetheless, by virtue of "managed" press releases, the white people of Greenwood stand condemned in the national mind, again on the basis of unconfirmed reports made by individuals proven to have made untrue reports in the immediate past.

7. If white persons did shoot into the Block car and the Greene house, they were not doing so as representatives of the city of Greenwood. They were, in fact, acting contrary to the wishes and beliefs of nearly all the citizens of this city. If a crime occurs in a community, it does not follow that the community is peopled by criminals. We make no claims to perfection, but we join with most civilized people in being unalterably opposed to violence.

8. We have received much unfavorable publicity because we have dispersed, with the use of one police dog, large groups of Negroes marching along the public streets in Greenwood. This action is not designed to prevent or impede voter registration procedures. In fact, the groups dispersed are advised by the police that they can proceed to the courthouse in orderly fashion if they desire to do so. Little effort has been made to explain to the American public that there is no plausible reason for the marches, and that the officials of Greenwood have dispersed the marching groups solely because they consider it necessary to peace and order that no large groups, colored or white, be allowed to make public demonstrations at this particular time of public excitement. The acts of violence and alleged violence set out above have created an inflammatory situation in this community, and have consequently made it necessary that extraordinary precautions be taken to insure the public safety. We have never had race riots in Greenwood, and we want none now.

It is difficult for us to comprehend why the Justice Department of the United States should dictate to us what should or should not be done to preserve safety on the streets of Greenwood, Miss., when it is common knowledge that they either cannot provide or do not provide protection for the people using the public streets of Washington, D.C., the Nation's Capital, and the headquarters of the Justice Department, itself.

The Greenwood situation has been highly publicized, and we have no way of controlling the inflow into Greenwood of potential troublemakers, Negro and white, from other areas. If we allow Negroes to march, we would also have to allow whites to march, if they desire to do so. If we allow 50 to march, this 50 will soon very probably increase to 100, and then to several hundred, eventually putting the matter beyond the control of our comparatively small police department. Flareups of violence would be the inevitable result. If we did not use our police powers to prevent the development of situations calculated to produce serious disorder, we would be derelict in our duty in the community we serve.

As yet no one has been seriously hurt in Greenwood. We want to maintain this record and are exercising every effort to do so.

CONTINUATION OF HIGH SCHOOL TRIPS TO THE CAPITAL

Mr. O'KONSKI. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. O'KONSKI. Mr. Speaker, in the 21 years it has been my privilege to represent the people of my district in Washington, one of the greatest constant pleasures and thrills I receive is to see the stream of visiting high school students to this Nation's Capital.

Certainly in no other city can these youngsters get a sounder and more realistic feeling of the greatness and the stability of this country than by seeing history being made day by day. They actually live through the experience of the processes of legislation, executive action, and the administering of justice under the law—the three facets of the great democratic process under which we live.

Recently I have been disturbed by statements in the press and in other media about the danger to students visiting this city. Because of my fondness for this city and wishing to see every high school student in the country take advantage of a visit to this Federal City, I have done some investigating of the prospects of anything unfortunate happening to a visiting student. The facts I have discovered are most revealing. Police figures in Washington show that of the approximately 600,000 students who visited Washington in 1962, only 1—and I repeat—only 1 from outside the area of the District of Columbia, Maryland, and Virginia was the victim of an assault; and this was a case of simple assault. Certainly this does not indicate that any school group need have any hesitancy about coming to this great city.

Further evidence on this matter of crime in the District shows that of the 16 cities in its population bracket, the District ranks seventh in the rate of serious crime reported. Obviously, there are many other cities in the country in which the crime rate is greater than it is here.

But we must face the fact that what happens in this world capital makes news everywhere. There are perhaps more accredited highly qualified news correspondents in this city than in any city in the country and they do report on all happenings here. Consequently, an event here gets publicity everywhere. Therefore, while I am not trying to minimize our crime rate, I am convinced that while it is not the highest, it is certainly the most widely publicized.

I emphasize that our high school students from throughout the country should continue to take advantage of the opportunity to visit this great Capital of the United States.

TIMBER TAXATION

The **SPEAKER**. Under previous order of the House, the gentleman from Florida [Mr. SIKES] is recognized for 15 minutes.

Mr. SIKES. Mr. Speaker, I am seriously concerned with and vigorously opposed to the proposal of the Secretary of the Treasury to change drastically the provision for timber taxation. This proposal would, in my opinion, if enacted seriously damage the forest industry and curtail the incentive that has brought our timber resources to a high level of productivity. One-third of the U.S. land area is classed as commercial forest land, 488 million acres. Four and a half million Americans own this timberland. Over a million citizens are employed in the forest products industries and thousands of communities are almost entirely dependent upon timber production for their livelihood. Forestry and forest products are one of the principal stays of the Nation's economy. Thus, any changes which damage the timber industry will have a profound effect upon our entire Nation.

Over half of the farm forest land, commercial forest land, lumber and pulp industry is located in the South. Therefore, as a Floridian and a southerner, but especially as an American concerned with our economic welfare, I am strongly opposed to the plan now being considered by the Ways and Means Committee to radically curtail capital gains taxation of the timber industry. These proposals would eliminate capital gains treatment for corporations on the cutting or sale of timber, and would limit capital gains treatment for individuals to gains less than $5,000 per year. It seems remarkable to me that these proposals are being entertained at all, for it is apparent that timber production is a form of capital investment.

Timber is not a regular crop, and can only be produced by a long-term investment in a stock of growing trees, profit on which is realized years or even decades later by cutting. Throughout the life of the tree, the producer must run risks of fire, insects, and windstorm damage. He must wait years for a return on his investment. In general he is dependent upon a harvest of one crop in 20 years. Timber production is a risky business and because of its nature, forest production is clearly "new capital formation," a classic definition of investment, and should be treated as such for tax purposes. If we are to remove capital treatment on timber production, we should also remove it on other investments in order not to discriminate against one sector of the economy. It must be remembered that local assessments are constantly increasing and that rising local and State taxes are also a serious problem to the timber growers.

The present tax provisions have helped materially to bring timber growth well ahead of timber removal for the first time in recent history. Section 631 of the Tax Code has a direct cause-and-effect relationship with reforestation. If the forest industry is to maintain an adequate supply of wood products in the face of increasing demand, we must be sure to encourage the initiative to plant and care for new growth. Should section 631 be abolished, I fear this initiative would be stifled. Unfavorable tax treatment could well force the forest industry to return to the destructive policy of "cut and run" prevalent before the enactment of section 631 in 1944. Those who recall that destructive timber harvesting policy and who saw the ruined forests which resulted realized how far we have progressed in a positive direction. It would be unthinkable to return to the old practices, but this could be the result of a change in timber tax laws.

Possibly, the Secretary's recommendations for increased taxes on timber are predicated on the belief that the forest industries are presently receiving too much profit. However, it is significant that the net aftertax rate of return of the lumber and paper industry from 1944 to 1960 was approximately equal to the average for all manufacturing industries, being higher in 5 years and lower in 12 years. This can scarcely be considered excess profit.

The Secretary of the Treasury acknowledges that proposed tax changes would impose a heavy burden upon large timber producers, but insists that their number is small. This is a misleading picture. Repeal of section 631 would seriously affect some 23,000 forest industry operators who own 13 percent of the forest land, some 62 million acres with average holdings of 2,660 acres each. In addition, more than a million corporate shareholders who own forest land derivatively would be injured.

The Secretary's report to the Ways and Means Committee acknowledges that the timber industry is confronted with a variety of serious economic problems, including foreign competition, intercoastal shipping regulations, public timber sales policies. But in practically the next breath it calls for measures to further burden forestry. It states that "the industry generally suffers from overcapacity," and then proposes that higher taxes be levied in order to "help restore a healthy competitive balance in the industry." How governmental action which could force the larger, more efficient producers out of the market can be considered healthy competition is not explained.

The fallacies inherent in these proposed tax changes should be apparent to all. The basic fact is that capital gains tax treatment of forest production has contributed substantially to sound timberland management, a fair and equitable return to investors, and an ample and inexpensive supply of wood and wood products for all. To repeal the capital gains tax would be to jeopardize the future of timber production, and penalize unjustly those who have attempted to carry on sound forestry practices through confidence in our Nation and in its future.

ACADEMY OF FOREIGN AFFAIRS

Mr. ROOSEVELT. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The **SPEAKER**. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. ROOSEVELT. Mr. Speaker, I have today introduced a bill to establish a U.S. Academy of Foreign Affairs. Its enactment will have far-reaching effects on our future diplomacy and relations with the rest of the world.

May I call to the attention of my colleagues the remarks of the President at his press conference yesterday concerning the need for such an Academy of Foreign Affairs. The President noted the urgency of the situation by pointing out that our Ambassadors face a multitude of specialized problems in the trouble spots of the world, and therefore need special training in close cooperation with the Department of State.

Quite frankly, I have been greatly concerned over the past few years at the numerous remarks dealing with the quality of our Foreign Service—remarks such as "Today we have probably the largest, best paid third-rate service in the world." This comment was made in an article by William P. Cochran, Jr., which appeared in the Foreign Service Journal of March 1963. What is more alarming is that it comes from a man who had devoted 30 years of his life to the Foreign Service of his country, and no doubt knows what he is talking about.

Mr. Speaker, we pride ourselves that our Nation leads the world in every field. Can we afford to be represented by officers who are not sufficiently seasoned and are intellectually unprepared for the challenges of our nuclear space age? The answer is obvious.

In my judgment, the time to act is now. The need for the Academy is urgent, for the only kind of diplomacy that we can afford today is the best, and this does not mean in quantity, but in quality.

DEPENDENT WIVES AND CHILDREN OF CERTAIN NONCOMMISSIONED OFFICERS

Mr. DAVIS of Georgia. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The **SPEAKER**. Is there objection to the request of the gentleman from Georgia?

There was no objection.

Mr. DAVIS of Georgia. Mr. Speaker, I have this day introduced two bills which have as their purpose the protection of dependent wives and children of certain noncommisioned officers, who, under existing statutes have no legal remedy against a runaway pappy.

Several instances have already occurred in my own constituency wherein certain noncommissioned officers have dishonored their obligation and disregarded their responsibility to support their wives and children. Since the effective date of Public Law 87-531, dependents have sought relief in civil courts only to find that the courts of most States interpret the Soldiers' and Sailors' Civil Relief Act as giving the serviceman immunity from actions for support and maintenance. They have sought redress from the military only to find that appropriate machinery does not exist to compel these servicemen to provide support.

I wish to call the attention of the Members of the House to the pertinent portion of a letter dated March 27, 1963, which was written to me by Gen. David M. Shoup, Commandant of the Marine Corps, and which acknowledges, quite properly, the inability of the military to compel its personnel to furnish support for dependents:

> I might point out the following difficulty which will be encountered in resolving nonsupport problems under the new legislation (Public Law 87-531). In accordance with the Marine Corps policy, a member who fails to provide support for his dependents may become subject to disciplinary action. Such action will not, however, serve to force the member to provide support for dependents against his wishes. This can only be accomplished by a civil court of competent jurisdiction.

One of my bills provides without equivocation that servicemen shall not be immune to actions for support. While this, to be sure, will not enable the plaintiffs in such actions to effectuate any withholding of the serviceman's pay, the following results would obtain:

First. Real and personal property of the serviceman would be subject to attachment.

Second. A civil court of competent jurisdiction would be empowered to assume jurisdiction of the issue, to hear both sides of the controversy and to render a judgment in keeping with the evidence in each case.

Third. Civil courts would have power to adjudicate such a serviceman to be in contempt upon a showing that he possessed the means of complying with its judgment and that he had willfully failed and refused so to do.

Fourth. A valid and binding judgment against the serviceman would accumulate against him should he not make such periodic payments as the judgment might require. His dependents would be free to enforce the full amount upon his return to civilian life.

The second bill which I have introduced amends Public Law 87-531 so as to restore the requirement that specified senior enlisted personnel grant an allotment to their dependents in order to be eligible to receive quarters allowances.

Public Law 87-531 increased the amount of the quarters allowances to which members of the Armed Forces are entitled for their dependents where they are not occupying government quarters and eliminated the requirement that certain senior enlisted personnel grant an allotment to their dependents in order to be eligible to receive such quarters allowances. This, in effect, has permitted these senior members to receive personally the Government quarters allowances with their basic pay and other allowances to which they may have been entitled.

While this change did not in any way relieve these noncommissioned officers of their obligation to support their dependents, as I have earlier noted, I have been shocked to find that a significant percentage of these servicemen are willfully and flagrantly abusing the privileges bestowed upon them by this act in that they are refusing to support their wives and children.

While the overall purpose and intent of this provision of Public Law 87-531 was undoubtedly well-intended, the resultant hardship which has been imposed upon innocent women and children is not worth whatever benefits might have flowed from this change.

THE FEDERAL GOVERNMENT AND THE ARTS

The SPEAKER. Under previous order of the House, the gentleman from New York [Mr. LINDSAY] is recognized for 30 minutes.

Mr. LINDSAY. Mr. Speaker, the idea that the Federal Government should assume an active role in support of the arts is not new; but in recent years, it has been a source of heated controversy and profound misunderstanding. Too often existing confusion has been compounded by the artistic community itself. I wish to address myself today to the role of the Federal Government in the advancement of the arts in our national life. The growth and development of the fine arts in the United States are certainly in the national interest. We are presently engaged in a great effort to strengthen our security. Surely it is also in the national well-being to enhance the cultural life of our civilization.

It is my great privilege to represent in Congress the area in New York City which is undoubtedly the leading hub of cultural activity in the United States. Within the bounds of the district are the Metropolitan Opera, Carnegie Hall, Broadway's Great White Way, the New York City Ballet, the Metropolitan Museum of Art, the Museum of Modern Art, the New York Public Library, the Seagram Building, the Guggenheim Museum, Greenwich Village, Yorkville, Gramercy Park, Rockefeller Center, the New York Coliseum, Central Park, Cooper Union, New York University, the United Nations, Union Square—the centers of book and music publishing, the Nation's leading daily press, advertising, all major national radio and TV networks, scores of galleries, bookshops, and coffeehouses. The list could be extended indefinitely.

There is mounting evidence of increased interest in the arts in America. I am impressed and heartened by such signposts as the growth of the quality paperback, by the increase in symphony orchestras, and by the increased patronage of our Nation's art galleries. It must be pointed out, however, that while these hopeful signs are indicative of increased cultural consumption, they do not indicate that the creative climate is as healthy as it should be.

I think it is fair to state that our national leaders expressed a more profound concern with the growth and development of the fine arts in the early years of the country than they do today.

For example, George Washington in his first annual address to the Congress, January 8, 1790, declared "that there is nothing which can better deserve our patronage than the promotion of science and literature." John Quincy Adams in his first message to Congress called for the founding of a national university and for the passage of laws for the encouragement of the arts, sciences, and literature.

In 1846, the Smithsonian Institution was created to take advantage of a bequest of James Smithson to the United States. The Institution has expanded over the years and now includes no less than 10 bureaus, 4 of which are directly concerned with the arts: the U.S. National Museum, the National Collection of Fine Arts, the Freer Gallery—which operates only partly on Federal funds—and the world-renowned National Gallery of Art.

In 1910, Congress created the Commission of Fine Arts as guardian for the L'Enfant plan for the development of the District of Columbia. The Library of Congress operates a music division which not only collects material relating to music, but also conducts a performance program. The General Services Administration is charged, among other things, with the responsibility of design and construction of all public and administrative buildings of the Federal Government. Its annual payments to architects, muralists, sculptors, and painters are considerable. For many years, the Department of Agriculture has had a program of making and using motion pictures in its educational program. The National Park Service has a program for the conservation of our national historic and architectural monuments. The Office of Education has several specialists serving in areas related to the arts.

The Department of State has engaged in cultural enterprises for a number of years. Particularly since World War II under the foreign building program, the Department has brought in leading architects to design many of our new embassy buildings. Under our educational and cultural exchange program, representatives of our artistic community have traveled throughout the world, testifying to the vitality of our national life.

The Federal arts projects of the 1930's marked an extensive effort to participate in the artistic development of our country. Although primarily geared to the problem of employment, these projects had a significant effect on our national life.

So it is clear that Federal participation in the arts is hardly a new development. It has gone on with a large degree of success for many years. The hostility that has been expressed to a Federal entry is justified only when one examines the problem of Government control.

Institutions of American culture are confronted with a number of difficulties, the greatest of which is financial instability. No one embarks on a career in the arts to secure a "comfortable" existence as long as there exists a scarcity of opportunities and a surplus of hopefuls seeking them.

As the House hearings on this subject, held in 1961, pointed out, production costs have far outpaced reasonably available revenues, and great patrons of the arts who once gave of their personal fortunes to support cultural activities are disappearing.

How then can we as a Nation help to restore these institutions to financial vitality and to give the individual artist an opportunity to do what long and arduous years of training have prepared him to do.

It seems clear that Federal subsidies to the arts are not necessarily the answer to artistic development in this country. Rather the role of an enlightened citizenry is of paramount importance. It is the responsibility of individuals in all parts of the country—the general public as well as the wealthy patrons and benefactors—to provide the principal basis of support for the artistic community. Private enterprise and the American labor movement too must continue to bear a heavy share of this responsibility. There has been heartening progress in this area in recent years. Let us hope that it continues.

Further, financial support is only part of the problem. The function of the Federal Government should be to create healthy environmental conditions so that the arts can grow and flourish. Too often, Government, through such restraints as inequitable tax treatment, actually hinders artistic expression and surrounds the practice of the arts with unnecessary restrictions.

A number of State and local governments are providing increased assistance to the arts, and it is to them that we can turn to observe some of the more hopeful developments in the relationship between Government and the arts. A number of cities and States already have established executive offices whose purposes it is to give due recognition and status to the arts. New York State, under Governor Rockefeller, has developed one of the best within the last 2 years. Many more are developing programs for the systematic improvement of the arts. It is on the local level that these programs should begin, for it is there that all the vast community resources for private participation can be best utilized.

The New York State Council on the Arts has been a great success in fostering and encouraging the arts, and in the words of Governor Rockefeller is "providing a pattern for emulation both for the Federal Government and for many of our States."

On the Federal level, there is little likelihood that legislative action can be taken until the various groups and individuals interested in the arts can achieve a better coordination of their efforts, place their combined best interests ahead of their internal dissensions and take a more active interest in the legislative process. Spokesmen are urgently needed in the States and in Washington, and coherent programs of action based on priorities must be established.

As I pointed out earlier, the Federal Government has taken an active role in support of the arts for a number of years. There is nothing new about this. However, widespread confusion exists because many people mistakenly assume that all Federal assistance to the arts must necessarily involve direct subsidies. In my opinion, subsidies are not the first order of business.

THE ROLE OF THE FEDERAL GOVERNMENT—A FEDERAL ADVISORY COUNCIL ON THE ARTS

The step that the Federal Government should take at this time in promoting the development of the fine arts in the United States is to establish a Federal Advisory Council on the Arts. Both the previous and the present administrations have called for the creation of such a council, but the measure has been consistently stymied in the House where it has failed to clear the Committee on Rules. This has always been a bipartisan proposal and has received widespread support throughout the country. I am today reintroducing this bill with my colleague, the gentleman from New Jersey [Mr. THOMPSON].

As we have pointed out many times, the proposed Council would have no authority or funds to dole out subsidies. The cost for its first year of operation would be extremely modest. But my colleague and I are realists. We are not optimistic about the chances of getting Rules Committee clearance for this measure. It is regrettable that Congress has failed to act on this measure and that the administration has failed to exercise the strong leadership necessary to insure its passage.

Mr. Speaker, in view of the legislative deadlock, I urge the President to establish an Advisory Council on the Arts by Executive order and to place the Council in the Office of the White House.

The precise structure and membership of the Council should be up to the President no matter how the Council is created. Certainly, it should be composed of individuals with broad judgment and the finest credentials. The Council should have the power to study the state of cultural resources in the United States, to propose methods of increasing private initiative in the arts, to support increased cooperation among local, State, and Federal departments and agencies so as to foster greater activity in the forms and practice of the arts.

FEDERAL TAX RELIEF

The Federal Government should remove unnecessary restrictions upon the creation, practice, and appreciation of the arts in America. Federal tax relief is therefore essential. New York City has repealed its 5-percent admissions tax on Broadway legitimate theaters. I have long urged that the Federal Government repeal its 10-percent admissions tax on live dramatic performances. The resultant saving could in part be passed on to the public in the form of lower ticket prices and in part to the theater itself to stimulate the creation and production of more and better plays which could employ the idle talents of many of our citizens.

Unfortunately, the Treasury Department persists in lumping the dramatic arts together with other failing industries. To the Treasury, the dramatic arts, shooting galleries, dog races, and flea circuses are all the same. The Treasury Department retains the hidebound view that what is right for an industrial organization is right for the theater industry. Naturally, this position is conveniently overlooked when the Government, in response to Soviet competition, uses the arts as instruments of foreign policy in our cultural exchange program. But the Treasury Department fails to recognize that without a healthy environment for the creation of new plays, new works of music and the like, there would be little or nothing to export. If this is the view of Government, then it is placing a strong barrier in the way of a free and healthy creative climate.

Another change in the tax law which I have sought to bring about through legislation is more equitable tax treatment to authors of literary, musical, or artistic compositions in the event that they sell the rights to their works. Under present law, tax treatment for authors of literary, musical, or artistic compositions is discriminatory. Benefit of capital gains tax treatment is given to the author of a patent in order to stimulate inventive activity. We should have a comparable means of stimulating literary, musical, and artistic creation. The bill (H.R. 2519) would repeal the exclusions which presently prohibit copyrights and literary, musical, and artistic compositions from considerations as capital assets. The bill further provides that transfer of copyrights or composition rights in the hands of the creator shall be considered a sale or exchange of a capital asset. Under present law such sales are taxed as ordinary income. Persons who acquire an interest in such property from the creator prior to the substantial completion of the copyrighted work would also receive this treatment. In order to avoid difficulties which could arise in the operation of this legislation, two limitations have been written into the bill. A transfer would apply only with respect to work that has been substantially completed. Second, only one copyright or composition of a taxpayer year would be eligible for this treatment. This bill came very close to being reported out by the Ways and Means Committee in the last Congress. It was stopped by the administration, which lobbied long, diligently, and senselessly against it.

A third area which merits remedial action is the problem of authors, composers, and artists including performing artists who receive income in fluctuating amounts from year to year and whose earnings may be concentrated in a comparatively short period while the completion of the work itself may have taken several years. I have introduced a bill (H.R. 2520) which would permit writers, musicians, and artists to spread the compensation that they receive from a work of art over the period in which they have worked on the project in computing the tax on this income.

This bill will remove the discriminatory treatment of writers, musicians, and artists under the present law. The nature of their work leads toward fluctuating incomes; and under a progressive tax schedule, a year of relatively high income results in taxation at unreasonably high rates. This bill will permit the writer, musician and artist to spread his income and will avoid the bunching problem that arises under present law.

I am extremely pleased that the President's tax message this year gives some recognition to the problem that has concerned me for some time.

I regret, however, that in some respects, the treatment under the formula in the Treasury program would not give the relief afforded under my bill. The Treasury bill does not deal with unused deductions and exemptions, and with small income variations. The Treasury bill does, however, cover more trades and professions. I am hopeful that the Committee on Ways and Means will consider all the proposals in this area and will report favorably on some provision that will extend relief to artists, writers, and musicians.

The present law has such a provision for inventions and artistic works but the provision in present law applies only under quite restrictive circumstances. At least 80 percent of the income from the work must be bunched in 1 year and the work on the project must have covered at least 24 months.

Under H.R. 2520, these restrictive provisions of present law are removed for all amounts received in respect of an artistic work created by the taxpayer. If the writer, for example, receives payments for a book in 1 year, he may compute the tax on these amounts as though they had been received over the period during which he worked on the book whether or not this is as long as 24 months or whether or not 80 percent of the income is received in 1 year.

I am pleased to say that Senator Javits, one of the national leaders in this area, has joined me in sponsoring my bill in the Senate.

Another proposal which I believe has genuine merit has long been sponsored by the gentleman from New York [Mr. Keogh] and the gentleman from Missouri [Mr. Curtis] both veteran members of the Committee on Ways and Means. Their bill would provide a charitable contribution deduction of up to 30 percent for contributions by an individual to nonprofit museums, libraries, and other facilities in support of the arts. Under present Federal income tax law, a deduction for charitable contributions by an individual is limited to 20 percent of his adjusted income in all cases except gifts to churches, schools, and colleges, and certain types of hospitals and medical research organizations where the limitation is 30 percent. The proposed legislation would permit an added 10 percent to libraries and museums of art, history, or science. Senator Javits has sought to add societies and organizations conducted for the sole purpose of maintaining symphony orchestras and operas. John D. Rockefeller III has suggested that ballet, repertory drama, and community art centers also be included. As former Secretary of Labor Goldberg said in his statement on "The State of the Performing Arts" which was included in his findings in the Metropolitan Opera dispute "this is obviously a matter worthy of the attention of an advisory council on the arts." In fact, all suggestions which have been proposed to aid the arts either through tax and tariff relief—the Tariff Act could well be liberalized with respect to the importation of works of art—the construction of physical plants (buildings, concert halls and the like) or by direct Federal subsidy should receive the closest and most detailed study from an advisory council on the arts. We could all benefit from the increased understanding that would result.

THE PROBLEMS OF SUBSIDIES

There is always the danger that Government aid, if unchecked, could result in Government censorship and control. Then, too, there is no convincing evidence that direct subsidies can enhance creativity and artistic development. A thorough study of the WPA Federal artists projects of the 1930's could shed some needed illumination on this question. I think it is well established that these projects provided needed employment to writers, actors, artists, and musicians, renewed their faith in America and helped bring the arts closer to the daily life of our Nation's citizens. An example, the American guide series of the Federal writers project remains, even with all its faults, a thoughtful contribution to the literature of the period. Many of the guidebooks have been updated for present-day use. Some have remained unmatched in quality since their publication a quarter century ago.

But these projects did have their pitfalls. Bureaucratic snarls, waste, extravagance, and inefficiency were rife, and marred the constructive and lasting achievements of the projects. As I have stated, these projects should be studied in greater detail in order to aid our thinking about what must be avoided in future Federal participation in cultural matters. Certainly, a Federal advisory council on the arts could profit greatly from such a study in formulating and presenting its recommendations to the American people.

I have devoted a great deal of time in trying to think through a plan to enable worthy institutions of the arts to receive Federal assistance without suffering the hardships of Federal interference. Such a plan may be impossible to achieve, for it would have to be written in such a way to assure the public and the artistic community that a Federal grant-in-aid program operated by a Government-appointed panel would not dictate cultural tastes in America.

Although I do not at present advocate or favor a direct subsidy approach, I would like to suggest an arrangement for public discussion which might be successful in avoiding some of the dangers of Federal control and could prevent councils, departments, and bureaucracies generally from exercising artistic judgments to determine which organizations are most worthy of receiving Government funds. It would go something like this:

Let us hypothesize that in a given year Congress were to appropriate $5 million to aid in the production of plays, operas, concerts, and so on. Various groups seeking Federal aid would present evidence to the United States Treasury of private, individual or foundation contributions made to them. The Treasury would allot a portion of the available funds proportionate to the private aid given. This system would allow the public to choose what organizations receive Government aid. To be eligible, an organization would have to prove private support over a certain minimum figure. This would compel the organization to prove itself with the public before receiving Government aid.

Ideally, the system would also provide for matching funds from the States. Thus, if a group in New York were to receive money, New York State would have to provide a certain amount.

If handled by the Treasury Department, the problem of councils, departments, and outspoken individuals doling out money to suit their particular artistic fancies would be avoided.

This system has other advantages. If Congress seriously did not like the results of the program, it could reduce the appropriations, but it could not single out one particular organization to discipline. This would be the responsibility of the public, exercised by withholding private aid.

Also in its favor is the ease of its operation. The program requires no additional office space, no additional staff to initiate, to implement or revise a policy.

As a safeguard, a ceiling—say 3 percent of the total appropriation—should be set on the amount any single organization could receive. This would prevent a single group from capturing the whole Federal kitty.

This system is only a suggestion, designed to avoid most of the pitfalls usually bound up in a Federal subsidy scheme. It is far from perfect. It seems to equate value with the amount of private contribution, and this is clearly no criterion for accurate judgment of the worth of an organization. But it is probably better, however inaccurate it may be, than for the Federal Government to appoint a panel to decide which group should receive how much.

But it is important to accept the fact that subsidies do not have to be the first order of priority in this program. Local offices, arts councils, and tax relief come first. The approach must be step by step. It must be made with regard for the potential effectiveness of local government. And it must be undertaken with awareness of the pitfalls and expense possibly involved.

Before Congress can embark on a unified, purposeful program of art patronage for the Nation, it must be confronted with a compelling need, a feasible plan, precise cost calculations, and a clear and unmistakable call from the conscience of the people. That means a response from everyone who cares.

CONCLUSION

In the course of these remarks, Mr. Speaker, I have pointed to much that is hopeful in the artistic taste and expression of this Nation. But for all that is full of promise, there is much that is shoddy and distressing. Bad city planning has crowded out reason and justice. New construction too often destroys the good with the bad. Roads encroach upon precious solitude. Entertainment aims at the lowest common denominator. These may afford satisfaction for the moment but how much will endure? Artistic endeavor in America must not be judged by false or ersatz criteria. When we mistake the package for the product, the shadow for the substance, quantity for quality and consumption for creation, we do ourselves a disservice as a nation.

The great ages in the life of a civilization have been those in which the arts have flourished. The Age of Pericles in democratic Athens was as noted for its philosophers, sculptors, and playwrights as for its generals and statesmen. We should not forget this. It was hardly an accident. The quality of a society is measured as much by its culture as its political and economic attainments.

A wise gentleman who has never lost sight of this and whose insight and counsel are richly valued by those who know him personally or through his writings and his appearances throughout the country is my friend, August Heckscher. In his role as Special Consultant on the Arts to the President, Mr. Heckscher has labored diligently to help this country dedicate itself to the promotion of the arts as an integral part of a national quest to provide for the public happiness.

I would like to close my remarks by bringing to the attention of the House Mr. Heckscher's illuminating analysis of the problems as well as the opportunities that could be afforded through a proper partnership between Government and the arts. Mr. Heckscher's analysis is contained in an article in the March 1963 Music Journal entitled "Government and the Arts." As stated by Mr. Heckscher in this article:

> To establish between the artist and society the right relationship to avoid his subservience yet to assure his involvement in the national purpose—this is one of the great and challenging tasks before our democracy today.

The article follows:

GOVERNMENT AND THE ARTS

(By August Heckscher)

The arts have been recognized in almost all ages as being closely related to the quality and the well-being of a people's life. Great epochs have been those in which the arts flourished. Conversely, when political life seemed to decline, when the people succumbed to a general listlessness and boredom, the arts, too, sank to a low ebb. It is, of course, possible for a lonely genius to be produced in any period, even amid the least favorable circumstances. His skill and vision will assert themselves regardless of the surrounding mood. But that contagion from a wide circle of talent, infusing the whole artistic life with brilliance and vigor, exists only when all parts of a society are self-confident and genuinely alive.

The greatest ages have been marked by what may be called a common style. Not only have the various forms of art shown an affinity, but there has been a recognizable connection between the achievements of the artists and the great figures in other fields of life. Thus we can recognize quite clearly a Greek or a Roman style. Keats, in one of his letters, speaks of "the undefinable gusto of the Elizabethan voice." The accents of that voice may be heard as clearly in the great explorers and men of action as in the playwrights and poets of the age.

The full expression of artistic genius has been recognized by rulers in all periods as a chief mark of their glory—second, perhaps, only to military conquest. And in comparison to military conquest, artistic achievements have proved incomparably the more durable. The empire of the Spain of Ferdinand and Isabella is of little moment to us now. The extraordinary flowering of the arts which marked their reign has never been forgotten. What one writer has called the beneficent residue is all that speaks to us of a past age; and the works of painters, writers, musicians, architects and playwrights form that residue—not the political quarrels or the military victories and defeats which seemed so important at the time.

In the formative period of our own history, a high value was placed on these marks of a high civilization. Laws and institutions seemed vitally important. So did outward forms that would reflect the hopes and ambitions of the young Republic. Cities spaciously laid out, public buildings displaying both grandeur and taste, painters capable of preserving for posterity great scenes and moments—these were ardently desired, and within the limits of that still rough and struggling society were effectively promoted.

Modern America lost something of this first concern for the arts. The tasks of opening a continent and multiplying its material wealth consumed enormous energies. Education was highly valued throughout the 19th century; but it was an education leading toward practical skills, not to the full expression of those inner values and visions which are the soil of artistic achievement. The cultivation of art was left largely to a few very rich patrons, in that period of their life when all other possibilities for acquisition and power had been exhausted.

It was natural that the pendulum should swing, and from all the evidence it has recently swung very far in the opposite direction. Today we recognize that the arts are an overwhelmingly important element in the total picture of America which the world forms and upon which it acts. Indeed the rivalry of the cold war, like most great rivalries of history, may ultimately turn upon this point. It is significant that in the worst days of the Berlin crisis of 1961 General Clay sent back word urgently requesting that a first-rate exhibition of art be sent over to the beleaguered city. And it may be worth remembering that during the tensest hours of the recent Cuban crisis, Mr. Khrushchev was reported as spending 4 hours at the opera.

At home, and in the everyday conduct of our democracy, the arts seem no less related to the attainment of our national purposes. It is difficult to see how we shall make the change from being a people rural in heart and soul to a great urban civilization unless the arts in all their forms make city life seem both entertaining and ennobling. A city without a brilliant cultural life must always be a dreary spectacle—a soul-deadening crowd cut off from the sources of its being. In the same way it is difficult to see how we shall keep ourselves alive amid an ever-expanding leisure except as the arts become a dominant interest among the people.

We aspire to greatness as a world power, to happiness as a people, to vitality as the first mass democracy that has ever been able to combine a deepening spiritual life with unparalleled physical and material well-being. For all these reasons the arts have a close relationship to the Nation. They are part of the common life, not of individual existence alone.

Promotion of the arts is therefore a legitimate public concern. The question of how they can be promoted is difficult and open to many interpretations. We would probably all agree that if by spending a certain number of billions of dollars we could attain results as definite and predictable as in scientific research the money would be well spent. But actually we do not know how to produce genius. The expenditure of public funds, however useful and necessary within strict limits, might well be done in such a way as to defeat the very ends we are seeking. The Government could build theaters, but it would have no assurance that the stages would evoke another Shakespeare. It could subsidize schools of art, but would have no proof that a Leonardo would emerge.

In this field, as in all new fields of political activities, a tentative, experimental and perhaps piecemeal approach should be pursued. The following considerations are among those which should guide policy formation.

1. Government must be careful to supplement and encourage, but not to undermine, the complex structure of private support for the arts which has been characteristic of this country. The United States is rich beyond any other country in the habit of voluntary giving, with the accompanying sense of participation and involvement. To disregard this would be to leave our cultural life the poorer, no matter how generously government funds might be spent.

2. The role of the States and localities must be encouraged. New York has pioneered with a state Arts Council with funds sufficient to allow the diffusion of the best in its arts, the cultivation of new talent in smaller communities, and perhaps the ultimate support of major cultural institutions. Other States are now watching New York closely. To the extent that they follow its lead, the Federal Government would find it a natural and easy step to support these efforts with matching grants.

3. Government at various levels must be careful to act in such a way as not to limit the freedom and variety of the arts. It is quite possible, in this as in other fields, to establish boards and committees independent of political control. It is reasonable to believe that the judgment of such bodies will be increasingly respected by political authorities. Besides, there is much that government can do in the form of simple housekeeping—maintenance and building of plant, or the hiring of the services of artistic institutions—which create very little opportunity for interference in the artistic management.

4. Government itself, in all it does in the ordinary pursuit of its business, can take care to set an example and to maintain the highest standards. In what it builds, at the points where it determines the shape of the landscape as in the planning of roads and urban regions, it must move with an awareness of aesthetic considerations. In the objects upon which it sets its mark, from the post box at the corner to the White House at the center of the Nation's life, it must concern itself with excellence.

"Literature can take care of itself," said Pitt, when appealed to for help on behalf of one of England's great authors. "Yes," answered Robert Southey, "it will take care of itself, and of you too, if you do not look to it."

Carlyle, who records this interchange, adds characteristically that of all priesthoods and governing classes now extant in the world, "there is no class comparable for importance to the priesthood of the Writers of Books." To make the generalization convincing, we have to include the composers and artists in all fields.

To establish between the artist and society the right relationship—to avoid his subservience yet to assure his involvement in the national purpose—this is one of the great and challenging tasks before our democracy today.

EXECUTIVE PRIVILEGE

The **SPEAKER**. Under previous order of the House, the gentleman from Michigan [Mr. Ford] is recognized for 30 minutes.

Mr. FORD. Mr. Speaker, this is the first time I have taken the floor of this House to speak on a subject which for several years has been of increasingly serious concern to my colleagues on both sides of the aisle in both Chambers of Congress. But then this is the first time I have had personal experience with this issue. I refer to the claim by the Congress of its right to obtain information from the executive branch of Government in the face of a claim by the Executive of a right to deny the information because of its executive privilege.

From Febraury 6 through February 14 of this year, Gen. Maxwell D. Taylor, Chairman of the Joint Chiefs of Staff, was before the subcommittee on Department of Defense appropriations of which I am the ranking minority member. During the course of our committee's lengthy interrogation of Secretary of Defense Robert S. McNamara and General Taylor, the subject of the Bay of Pigs invasion of 1961 was raised. The committee members were concerned about the events of that effort, for although it took place 2 years ago it is still a matter of considerable controversy and discussion. Further, it was felt that a full understanding of what happened there would enable the committee to better exercise its judgment of the financial needs of the military establishment. It is our subcommittee which has original congressional jurisdiction each year of the budget for the Departments of the Army, Navy, and Air Force. Because of the group's control over funds for the military and related agencies, it has specific concern with and responsibility for Army, Navy, and Air Force, policies, programs, and procurements.

Mr. McNamara was questioned first, but he avoided implication in the problem by stating that U.S. forces as such were not involved in the invasion. Then General Taylor was questioned on that subject, first on February 7 and again on the following day. His knowledge of that incident should be just about the most complete in the land. At the President's request he directed a study Board consisting of Attorney General Robert Kennedy, Chief of Naval Operations Arleigh Burke, and former CIA Director Allen Dulles. The Board looked into all phases of the invasion attempt and filed a report with the President. Our questions were directed to the information which General Taylor was thus in a position to tell us about the invasion attempt. The testimony has been published in censored form by the subcommittee, but I shall only summarize its contents here.

First, public statements and testimony before us revealed that President Kennedy instructed the four members of the Board not to reveal their findings except to him. Second, Admiral Burke apparently followed these instructions and did refuse to discuss it with reporters from U.S. News & World Report. Third, Attorney General Robert Kennedy did reveal part of the findings in a long interview published in the same magazine January 28, 1963, and also to David Kraslow of the Knight Newspapers in an interview published January 21, 1963. Fourth, General Taylor refused to discuss this report or any findings of the study Board before our committee and claimed that his refusal was prompted by President Kennedy's order and the concept of executive privilege.

Now it is true that America has heard, seen and read a great deal about the Bay of Pigs in the last 2 years. This is understandable, for it certainly is one of the most unfortunate, embarrassing and shameful incidents with which our country's name has ever been connected. I would venture to say that it will loom larger on the landscape of history as the years pass. It seems that not a month goes by without some new disclosure of our Government's fumbling role in that disastrous operation. Some "wise old owls" have complained that we Republicans are "beating a dead horse" by our references to that occasion. To that I simply reply that in our subcommittee we are trying to do our part of the job Congress is supposed to do—get the facts, study them and then pass the laws and appropriate the funds for the operation of the Government.

Why has General Taylor refused to reveal his knowledge of this incident? Certainly not for security reasons. I asked him:

> How would it endanger the security of the United States (to discuss the Bays of Pigs)?

He answered:

> I think it would result in another highly controversial, divisive public discussion among branches of our Government which would be damaging to all parties concerned.

Now I ask you gentlemen, is Congress to be denied this information because to reveal it would stimulate controversy? What General Taylor has said, in effect, is that he won't tell us the facts because the President told him not to, because the public should forget it ever happened, and because the administration might be embarrassed if the truth were known.

So General Taylor does not claim that the national security is at stake. But even if it were, even if intelligence matters were involved, this would not justify refusal to tell the members of the subcommittee the full facts as collected and digested by this high-level committee of four appointed by the President. All of us on the Defense Appropriations Subcommittee are fully cleared for access to this sort of information. We handle state secrets regularly. We see to it that these secrets are kept on a classified basis. Only those Members of Congress with a demonstrated "need to know" have access to this information.

I am astounded that General Taylor should offer as grounds for his refusal to testify on that matter the possibility that controversy might result. Surely he and President Kennedy are not so short on memory that they forget their own separate and consistent challenges of Eisenhower policies, attitudes, and decisions in military and foreign affairs, and the controversy their remarks generated.

To date, then, this subcommittee has access to only part of the story of the Bay of Pigs invasion—the part which Attorney General Robert Kennedy managed to give a newspaper reporter and a news magazine. The information in that article is the subject of legitimate criticism and controversy. In our efforts to resolve some of that controversy, the subcommittee is blocked by a decision of the immediate superior and older brother of the very source of the controversial material.

The facts at issue are past happenings; events of history; things over and done with. Supposedly, they have been carefully reviewed and analyzed. What better time is there for Congress to investigate this subject and obtain this information?

I would remind the House of a commendable statement made by President Kennedy in this Chamber on January 29, 1961:

> For my part I shall withhold from neither the Congress, nor the people, any fact or report, past, present, or future, which is necessary for an informed judgment of our conduct and hazards.

My personal experience with General Taylor on the subject of the Bay of Pigs leads me to the conclusion that these carefully selected and beautifully spoken words are wholly meaningless.

This brings me to some basic questions which have troubled me a good deal lately. Can Congress permit this kind of refusal to go unchallenged? What can we do? What should we do?

Please believe this next statement. We must keep this whole discussion on a nonpartisan level. Certainly there are partisan possibilities in my questions of General Taylor. His answers, if given, might have publicized the inability of the Kennedy administration to conduct a well integrated military effort or some such finding which the Republicans would enjoy exposing. But the basic issue of congressional access to executive information is far more important than fanning partisan flames.

I need only remind you of the important work in this field done by the very able gentleman from Virginia [Mr. Hardy], and his fellow Democrats, the gentleman from California [Mr. Moss], and the gentleman from Connecticut [Mr. Monagan], as well as my distinguished friend, the gentleman from Michigan [Mr. Meader], to underscore the nonpartisan nature of this issue.

We all know that this problem has come up in various guises many times over the years. It has cut back and forth across party lines. There even are examples of both Democrats and Republicans who argued on one side of the issue when they served in Congress and on the other side when they served in the executive branch.

I shall not attempt here to review the legal problems and precedents involved in this concept of executive privilege. I decline to refer to it as a doctrine. One man's doctrine is another man's myth. Suffice it to say that the traditional arguments seek to answer this question: who has the authority—the Congress or the Executive—to decide what information must be given to Congress for the conduct of its investigations?

Unfortunately, the Constitution is silent on this problem. Proponents of the privilege say the constitutional concept of separation of powers extends to allow the Executive to do as he likes with his information. But at the same time, the Constitution's system of checks and balances provides for certain overlapping of powers. Examples of such exceptions to the separation-of-powers idea are the Senate's authority to pass on treaty agreements and the President's veto power. Nothing is said in the Constitution about any Executive right to keep Congress in the dark, and I seriously doubt that this was the intention of the framers.

If it were their intention, the Constitution would have given the executive branch the power to write its own record of the facts on any given issue. That power, the power to collect facts from many witnesses, challenge the accuracy of those facts and analyze their importance—that power belongs to Congress.

In the courtroom, there are several recognized types of "privilege." These are the privileged relationship between the lawyer and his client, that between a priest and parishioner and that between a husband and wife. But I submit that the Chief Executive of the United States enjoys no such privileged relationship with the people of our country or their representatives in Congress. The Executive exists to serve the people by administering laws and the Congress exists to legislate in the best interests of the people. To maintain that the executive has the right to keep to itself information specifically sought by the representatives of the very people the Executive is supposed to serve is to espouse some power akin to the divine right of kings.

Further, no court has ever been faced with the issue, and until it is the debate will likely continue.

This is not to say that we could not force such a case. The House has, in fact, two paths open to it if it should choose to force General Taylor to provide the requested information on the Bay of Pigs investigation. First, the committee could sponsor a House resolution citing the general in contempt of Congress and presenting the case to the Attorney General for admission to a grand jury and subsequent prosecution. Obviously in the present circumstances it would be ridiculous for us to put the case in the hands of the Attorney General. Even under ideal circumstances, any Attorney General would tend to reflect the attitude of his own boss in handling any executive privilege case. Second, we could call the general to the floor of the House, and, if he still fails to answer the questions, find him in contempt. He then would be placed in the custody of the Sergeant at Arms and jailed, presumably to the end of the congressional session.

I do not suggest either course of action for two reasons. First, such direct and highly charged confrontations probably would produce more heat than light. The mutual confidence and rapport which exists between the two branches could be damaged beyond immediate repair. We must have this rapport among all three branches to properly govern our land. Second, I do not suggest either type of confrontation because I have doubts that this particular incident presents a classic enough case to justify formal action in either of the two legal arenas previously mentioned. General Taylor's refusal has not stopped the defense subcommittee in its tracks, but I am convinced that the hidden information would be of significant value in performing our subcommittee's responsibility. I do not see how any committee could recommend a specific sum for the military or intelligence operations of our Government without knowing how well the previous appropriation has been spent. It might waste the taxpayers' money by appropriating too much, or jeopardize our security by being too stingy. Surely as we face the challenge of a new era in Latin America, the Congress has the high responsibility of insuring military and intelligence capabilities which are able to cope with such problems as have already arisen and may confront us again.

However, there is a fine distinction between preventing the committee from functioning and preventing it from functioning as well as possible. And it is such distinctions which have a way of becoming all important in the courtroom.

What I do suggest is that this incident be remembered as another in a long series of executive department claims of special privilege. In a frightening proportion of these cases, the claim was made to cover up dishonesty, stupidity, and failure of all kinds. We have only to recall that the Teapot Dome of Harding's administration, the tax scandals in Mr. Truman's, and the Laos foreign aid mess in the last administration all were initially covered up by the "executive privilege" blanket. There have been many more instances. You all have seen that pattern develop. First the suggestion of wrongdoing is made. Congress demands the records. The people downtown in the ivory tower of the executive branch stall and say the investigation is silly. Then they simply refuse to give the information. Something eventually leaks out and the scandal spills over for all the world to see. Then someone resigns and his resignation is accepted with regret. Congress cannot help but conclude that executive privilege is most often used in opposition to the public interest.

My fear is that there may be far more trouble if we permit this concept to take deep root. The key idea is that while the powers of Congress and the Executive certainly must be separated, so must the traditional system of checks and balances have real meaning. The investigatory power of Congress is well founded in law and so basic to its legislative function that without freedom to investigate thoroughly Congress can have no effective check on the executive branch. It should be superfluous to say that without adequate information no investigation can succeed.

I would further suggest that the Committee on Government Operations, through its Subcommittee on Foreign Operation and Government Information, give priority consideration to this problem of executive privilege and offer proposals to resolve this dilemma. It may be possible, for example, for Congress to find another way to bring the matter to court without going through the Attorney General. This would serve to prompt meaningful debate on an issue now hopelessly fogged in by Executive jealousy and congressional pride.

I would also alert the entire membership of this House to the existence of this critical problem and warn you that none of your committees would be immune to the stifling influence of executive privilege if the President found it expedient to invoke it tomorrow. This affects us all as Members of the House, and through us it affects all America. We cannot abide its existence one whit longer than necessary.

Whenever the concept of executive privilege is discussed, special emphasis is given the fact that it has been so traditional a problem that even President Washington faced it. First, may I insist that the passage of time has no bearing whatsoever on the legality of this concept. Indeed, the mere fact that an idea has been thought acceptable by some for 170 years is probably a very good argument for challenging its validity today. More important, however, is the striking parallel between the incident which spawned the problem in Washington's time and the one which prompts my comments today.

In 1791, President Washington sent Maj. Gen. Arthur St. Clair into the midwestern wilderness to stop a series of Indian raids along the Ohio-Indiana border. On November 3 of that year, General St. Clair's troops were surprised by the Indians and nearly half of the 1,400 soldiers were wiped out. It was one of the worst military fiascoes in our country's history. The next spring Congress appointed a special committee to investigate the facts and in the process demanded all relevant papers and reports from the executive branch.

President Washington and his Cabinet mulled the problem over for several days, completely aware of the important precedent they were setting. As it turned out, President Washington agreed that there was not one report or paper which could not be produced for the examination of Congress and, in fact, they were produced. The results? The Congress learned that mismanagement and a lack of supplies were the largest factors in the defeat.

The St. Clair defeat bears relation to the Bay of Pigs defeat in that our Government suffered a badly damaging blow in both cases. Both cases involved serious mismanagement. Both cost American lives. Both were events in history that were over and done with and investigated by the Executive by the time the Congress began its inquiry. The difference, apparently, is that while Washington was willing to bare the records so that errors could be corrected before they were repeated, President Kennedy is not willing to follow that example.

To conclude, let me stress that while we must always protect the general public's right to full information, the basic issue here is full disclosure to Congress—to that same group of Congressmen who regularly review issues of the most sensitive national interest and make decisions in behalf of the public.

Let me urge you all to think of this not in terms of the Bay of Pigs invasion or in terms of a minority Congressman who objects to actions of a President of the opposite party. This is a critical problem of vast scope. It would exist even if we had only one Congressman making all the law for a one-man executive branch. It is one of the great legislative challenges of our time and we must either face it or accept the certainty of continued assaults upon Congress' right to know.

Mr. MEADER. Mr. Speaker, will the gentleman yield?

Mr. FORD. I yield to the gentleman from Michigan.

Mr. MEADER. Mr. Speaker, first permit me to commend my colleague, the gentleman from Michigan [Mr. FORD] for having called attention to this very important and basic problem facing Congress in its relations with the executive branch of the Government. I think the gentleman's statement is an excellent one.

I want also to refer to the suggestion whch has been made by the gentleman that the Foreign Operations and Government Information Subcommittee of the House Committee on Government Operations undertake an inquiry with respect to the exercise of executive privilege.

I am privileged to serve as the ranking minority member on that subcommittee and also on that subcommitte on the minority side is the gentleman from New York [Mr. REID] and the gentleman from Michigan [Mr. GRIFFIN]. While the gentleman from California [Mr. MOSS] is the chairman of that subcommittee, the gentleman from Virginia [Mr. HARDY], the gentleman from Connecticut [Mr. MONAGAN], the gentleman from Wisconsin [Mr. REUSS], and the gentleman from Florida [Mr. FASCELL] form the remainder of the majority side of that committee.

Naturally, the committee will conduct inquiries into government information practices and this is one of the most important ones.

Mr. Speaker, I notice also that the gentleman from Michigan [Mr. FORD] referred to the inherent contempt power of the House of Representatives. Unfortunately, in my opinion we have in the past 30 years or so relied more upon section 102 of the Revised Statutes and have had the U.S. Attorney General in effect enforce our powers by using that criminal statute rather than using our contempt powers ourselves.

In fact, the last case—and I think it might be interesting in light of the gentleman's discussion to have this reference in the RECORD—the last case was the case of *Jurney* v. *MacCracken*, 294 U.S. 125. That was decided February 4, 1935, and that is the last time, to my knowledge, that either the Senate or the House of Representatives sought to enforce obedience to its orders, subpenas, by using its own contempt power.

As the gentleman said, if we would exercise the contempt powers, it would be a confrontation with the executive branch of the Government and would be the exercise of our power to its full limit and might strain the equilibrium between the three branches of our Government which must of necessity, in view of their autonomy, get along with each other, rather than each pushing its power to the limit.

But it seems to me that while there is no case of the exercise of the investigative authority of the Congress against an official in the executive branch of the Government, there is ample authority for the congressional subpena to reach the records of private citizens. It certainly seems to me that that should be a precedent for the command of the House of Representatives addressed to an official in the executive branch of the Government to produce records regarding the expenditure of public funds or the discharge of public authority, because he acts as a steward or a trustee. And certainly if we can reach the private lives of our citizens we ought to be able to reach the official lives of our public officials.

Mr. Speaker, I think the gentleman has contributed, and I hope will contribute in the future, to the proper exercise of a very important power of the legislative body. It cannot act intelligently unless it has the facts and all the facts. That is what is basic. I certainly hope that a way can be found to get the executive branch of the Government to cooperate without pushing Congress to the ultimate limit of its power.

Mr. FORD. Mr. Speaker, I thank the gentleman from Michigan for his enlightening and helpful comments. Since this was my first personal experience with this problem I must confess that I did not really appreciate the full implications and ramifications of the refusal of a member of the executive branch of the Government to testify before a committee.

Mr. REID of New York. Mr. Speaker, will the gentleman yield?

Mr. FORD. I yield to the gentleman from New York.

Mr. REID of New York. Mr. Speaker, first I should like to compliment the gentleman from Michigan for his enlightening, forthright, and nonpartisan statement here today. It strikes me as important to the future of the United States in the relations between the coordinate branches of the Government, between the Executive and the Congress.

Beyond complimenting the gentleman from Michigan, I would like to add that it is my purpose here today not to question proper prerogatives of the Executive versus the Congress in matters of Executive privilege, but I do believe nonetheless that the Executive privilege like all privileges can go too far. And here I think the distinguished gentleman from Michigan has pointed out clearly the situation in his reference to General Taylor's testimony. The general responded that he could not supply the necessary information to the appropriate subcommittee because it would be controversial and would contribute to divisive public discussion.

This does not seem to me to be a legitimate reason.

Second, I think the President has made clear in the statement the gentleman from Michigan reported that he has believed in the past and I am sure does for the future, and I quote:

> For my part, I shall withhold from neither the Congress, nor the people, any fact or report, past, present, or future, which is necessary for an informed judgment of our conduct and our hazards.

Finally, let me say that I am delighted the distinguished gentleman from Michigan has suggested that the Government Operations Committee, and specifically the Foreign Operations and Government Information Subcommittees, should look into this. I think it is a matter that clearly concerns the future role of the Congress. It is a coordinate responsibility. I believe deeply that the right of the Congress, that is to say, the right of the people, to know essential facts must be maintained, must be clear, and that the Executive must never under any circumstances preclude the opportunity for the Congress to know the facts. Executive privilege should not be a cloak for any area of mismanagement or inefficiency. The Congress' right to know must be maintained.

May I again compliment the gentleman from Michigan.

The **SPEAKER** pro tempore. The time of the gentleman from Michigan has expired.

(By unanimous consent, at the request of Mr. MEADER, Mr. FORD was given permission to proceed for 5 additional minutes.)

Mr. MINSHALL. Mr. Speaker, will the gentleman yield?

Mr. FORD. I yield to the gentleman from Ohio.

Mr. MINSHALL. Mr. Speaker, I should like to commend my colleague from Michigan [Mr. FORD] on the excellent and outstanding statement he has made here today on executive privilege. I think it should be called to the attention not only of all Members of the House but of all Americans. I, too, am a member of the Defense Appropriations Subcommittee of which the ranking member is my good friend and colleague [Mr. FORD].

When General Taylor testified before our committee I was shocked and amazed to see his attitude when he refused to answer a simple and forthright question about the Bay of Pigs fiasco. I asked him if he thought any violation of security would be involved at this late date by disclosing what happened at the Bay of Pigs. He merely answered it would be unfortunate to open up the case at this time.

I should like to point out to the House that in the early part of the session I introduced a joint resolution calling for a full investigation of what happened at the Bay of Pigs. I also call to the attention of the House that the leadership has not seen fit to give this resolution any attention to date.

ALLENTOWN, PA.: AN ALL AMERICA CITY

The SPEAKER pro tempore (Mr. LIBONATI). Under previous order of the House, the gentleman from Pennsylvania [Mr. CURTIN] is recognized for 10 minutes.

Mr. CURTIN. Mr. Speaker, the city of Allentown, which I have the honor to represent in our Eighth Pennsylvania Congressional District, has just been named an All America City by the National Municipal League and Look magazine. Ten other outstanding cities throughout our Nation have received the same distinctive honor.

It is fitting that Allentown should be accorded this coveted award just a few short months after conclusion of a memorable series of significant events that marked the 200th anniversary of the founding of the city in 1762 by Judge William Allen. It comes as a most satisfying climax to a wonderful bicentennial observance.

Today, on the main street of Allentown, a visitor to the city will see flying proudly in the breeze the red, white, and blue banner that is emblematic of the All America City Award. Hundreds of these flags grace our distinctive flowering light standards on Hamilton Street, the main thoroughfare of Allentown's central business section. And near the foot of Hamilton Street, close to the site of Lehigh County's now-abuilding new courthouse overlooking an area about to be transformed by urban renewal into an attractive complex of modern dwelling units, is a larger flag. This flag was raised in a public ceremony in front of the courthouse at noon Monday, April 1.

Allentown's entry, which was sponsored by the Allentown Chamber of Commerce, was based specifically on four phases of community betterment—its historic renaissance, economic advancement, civic development, and cultural achievement.

All four of these attributes were noted in the work of eight specific agencies whose contributions to civic betterment had been cited in the chamber's entry.

These participating agencies are: YMCA, YWCA, Allentown Art Museum, Trout Hall, the Library Bell Shrine, the Industrial Development Corp. of Lehigh County, the Allentown Redevelopment Authority, the County of Lehigh, and the city of Allentown.

While these were listed as the most significant for their contributions during the past year—the basis for the judging of the awards—the presentation made by the chamber directed the award jury's attention to other noteworthy organizations and activities of the city over past years.

Included among these was the work of the chamber itself, the activities of the Lehigh County Bar Association, Park & Shop, the Allentown Symphony Orchestra, the Civic Little Theater, Operation Help, the Jewish Community Center, and the creation of the Allentown Catholic Diocese under Bishop Joseph McShea.

All of these, it was pointed out, reflected the spirit of the community, its striving for cultural eminence, its fight to continue as a city with sound economic assets, a community with a heart, and a soul firmly rooted in a rich heritage.

The official presentation advancing the city's eligibility for the award noted:

> Our community has been beset by all the typical problems facing an American city of today. But with marked citizen participation we have effected a year of progress without parallel in Allentown's history.

WILL MEET CHALLENGES

It was also noted in this:

> We believe the activities recorded here are indicative of the initiative and industry that have marked the citizenry of Allentown since early colonial beginnings. We are confident that our ability to work in a great team effort will enable the residents of Allentown to meet the challenges of the future.

The individuals listed as the most active leaders responsible for the success of the winning efforts were listed in the presentation according to category.

The four leaders listed for historic activities are Dr. Morgan D. Person, Louis E. Dieruff, Melville J. Boyer, and Mrs. John H. Leh.

In the cultural field the leaders were Attorney William B. Butz, Donald P. Miller, Austin Gavin, and Mrs. John S. Cartwright.

Leaders in the economic category were listed as I. C. Gutman, Clarence A. Reichard, and Ralph C. Swartz.

Civic leaders were listed as Edmund F. Corkery, Mayor John T. Gross, and Earl S. Kester.

Allentown's bid for the All America City citation was made by Mr. Reichard, then president of the chamber of commerce, and W. Reese Super, executive vice president of the chamber. They appeared before the 12-member panel of judges in Washington, D.C., on November 16.

Among the outstanding civic achievements that were weighed by the jury in making this award to Allentown were the building of the new Liberty Bell Shrine, which houses a replica of the Liberty Bell in the basement of Zion United Church of Christ in the original spot where the bell was hidden during the Revolutionary War; the huge center-city rejuvenation centered on the Fourth Street urban renewal project, which will soon bring into being an imposing civic center that includes a new city hall and county courthouse; the reopening of Trout Hall, a colonial structure built originally by the city's founder, William Allen; the national recognition of the Allentown Art Museum; the completion of a $1.5 million new home for the Allentown YMCA and YWCA; the yeoman work of the Industrial Development Corp. of Lehigh County, which last year alone provided sites for 16 new companies involved in new locations or expansions, with 1,000 job potentials.

Mr. Speaker, I know that the Members of this House join with me in saluting Allentown—a city that has not only a rich heritage of history as the refuge for the Liberty Bell in the dark, troubled days of our Nation, but a city that nearly two centuries later is a vibrant, alert community that looks to the future with confidence.

FORUM ON NATIONAL SECURITY AND DISARMAMENT

The SPEAKER pro tempore. Under previous order of the House, the gentleman from New York [Mr. RYAN] is recognized for 30 minutes.

Mr. RYAN of New York. Mr. Speaker, it has long been my belief that a Representative has a responsibility to encourage the discussion of substantive issues by his constituents. Democracy depends upon citizen participation. In our mass society we must find the means for the individual citizen to participate in and to more closely control his community and his government.

Since my election to Congress, together with the Reform Democratic Clubs of Manhattan's West Side, I have sponsored an annual all-day community conference. The nonpartisan conferences permit a sharing of knowledge and ideas on the problems facing a troubled world.

Mr. Speaker, on March 9, 1963, we sponsored our third annual all-day conference. This year the forum was concerned with the issues of national security and disarmament. More than 1,000 interested citizens attended the forum at Riverside Church. The enthusiastic response and great interest indicate a deep desire of our citizens to be informed on the vital questions of our times. This kind of public discussion, open to everyone, can do a great deal to invigorate the whole political life of our country. The public cares; it wants to know. Our annual community conferences are one attempt to bring closer together the citizen, the experts from our government, our universities, our research, and labor organizations and the issues. We hope this will engender greater citizen participation and control of political parties, public officials, and government.

Mr. Speaker, we are indebted to Arthur M. Schlesinger, Jr., special assistant to the President; Herman Kahn, director of the Hudson Institute; and Arthur Waskow, senior staff member of the Peace Research Institute, who participated in the plenary session, and the experts on the six panels for their enlightening contributions to this democratic dialog.

The participating clubs were: Independent Democrats of Inwood, Heights Reform Democrats, Fort Washington-Manhattanville Reform Democrats, New Colonial Reform Democratic Club, the Riverside Democrats, FDR-Woodrow Wilson Democrats, West Side Democratic Club, Reform Independent Democrats, J.F.K.-Midtown Democrats, and the New Chelsea Club.

Mr. Speaker, I want to congratulate Mrs. Hermine Brucker, the forum chairman, whose magnificent efforts, along with the efforts of all those who worked so hard with her, made the conference such a success. Daniel J. Nelson, the forum cochairman; and the panel chairmen, Carol Chauls, Robert Clampitt, Elinor Finkelstein, Emil Schattner, and Joseph Sugarman, made a great contribution to the program. I also want to thank Sara Silon, reception chairman; Barbara Jeffers, club coordinator; Robert V. Engle, program design chairman; and Eileen Lottman and Carmen Pertierra, publicity cochairmen.

Mr. Speaker, many of the ideas adopted for the 1963 conference were innovated by the late Gertrude Miller, chairman of the 1962 Forum on Foreign Policy, who symbolized the volunteer in politics.

Mr. Speaker, I include at this point in the RECORD an article by Jack Newfield, editor of the West Side News, which appeared in that paper on March 14, 1963, and described the conference:

The ideal of the amateur Democrat was honored last Saturday, as a capacity audience jammed the Riverside Church for the plenary session of an all-day conference on national security and disarmament, sponsored by Congressman WILLIAM F. RYAN and the reform Democratic Clubs of the West Side.

With amateur Democrats, students, housewives, and clean-shaven peace activists filling every cranny of the marble assembly hall, Representative RYAN opened the plenary session with a tribute to the spirit of the amateur in politics.

"Mass society, mass media, giant corporations, even our two-party system," he said, "at times seem to negate the individual * * * if this kind of conference were held everywhere, the political life of this country would be greatly invigorated."

Then came Arthur Schlesinger, Jr., Pulitzer Prize winner at 28, historian, and special assistant to President Kennedy.

"The historical trend of the 20th century," he began, "has been the disassociation between liberalism and the use of force. The great early heroes of democracy—Garibaldi, Bolivar, Jackson—saw no contradiction between democracy and force."

Zeroing in on his target, Schlesinger recalled, "After the Second World War there emerged a new totalitarianism and a new weaponry that created a cruel paradox for Democratic progressives."

COGENCY AND CLARITY

And then, with his legendary cogency and clarity, Schlesinger eviscerated the strawman of unilateral disarmament. "Unilateral disarmament," he asserted, "would very likely prevent verifiable disarmament, the only way to force the Soviets to accept a program of international arms control, is to convince them we are dedicated to staying in the arms race as long as they are.

"The better-Red-than-dead position, argued so gracefully by Stuart Hughes, is sheer folly," he added.

Schlesinger rounded out his carte blanche defense of the administration's deterrence policy by asserting, "The argument that the American economy requires a cold war is demonstrably unconvincing. The American economy would survive disarmament, just as it did in 1946."

The second half of the plenary session was a debate between Herman Kahn, the author of "On Thermonuclear War," and Arthur Waskow of the Peace Research Institute.

Waskow, scholarly and detached, began stating his objective: a warless world. Addressing himself to Schlesinger's defense of deterrence, he said, "America has not learned that the more bombs there are in the world, the more fear there is about using those bombs."

HELP DEMOCRACIES

Waskow climaxed his opening remarks with a plea to President Kennedy to "start dismantling our military superiority and start building political victories. Turn our military superiority to helping libertarian democracies all over the world."

Kahn proved to be not the bogeyman he has been caricatured by the peace movement. He did concede "New York might be blown up by accident. He did seem to savor rolling the numbers, "20, 30, 50, million dead" off his tongue, and he did mention he was reading the life of Ghenis Kahn.

But essentially Kahn's position was no different than Schlesinger's, and in fact, he said, "If forced to choose, I would say everyone Red rather than everyone dead. But I would say "A lot of people dead rather than a lot of people Red". Ask any Russian today and he will say he preferred 25 million dead to Hitler.

His support of deterrence, however, was less theoretical than the President's assistant "At least 20 incidents since the Second World War," he said, "would have resulted in the third world war in a less balance of terror environment. Only nuclear deterrence can assure the warless world Mr. Waskow dreams of."

"I am no apologist for the current system," concluded Kahn, "but it is the least undesirable of a bad lot."

LIBERTY AND BOMBS

In his rebuttal, Waskow again raised the ideal of democracy. "You simply cannot protect political liberty in a world that continues to produce H-bombs. Nuclear weapons did not allow us to advance political liberty in Hungary or Cuba."

Kahn's rejoinder proved it is not his ideas, but his choice of images that enrages the peace movement. "An 8-ton nuclear warhead, to me, means peace, justice, democracy, and security," he said.

Schlesinger's thesis continued to provoke refutations at an afternoon panel discussion, billed as prospects for enforcing arms control.

* * * * *

Afterward, as the crowd filed out, the conference was certified an unqualified success by all parties: sponsors, participants, and audience. It was, indeed, an inspiring example of what the ideal of the amateur in politics could accomplish.

Mr. Speaker, I also include at this point in the RECORD a summary of the plenary session and the six panel discussions, which was prepared by Mrs. Eileen Lottman, chairman of the forum publicity committee, and Neil Cowan:

OVERFLOW AUDIENCE ATTENDS FORUM ON NATIONAL SECURITY AND DISARMAMENT

(By Eileen Lottman and Neil Cowan)

Arthur M. Schlesinger, Jr., special assistant to President Kennedy, spoke to an audience of over 1,000 people at the open forum on national security and disarmament, Saturday, March 9, 1963, the third annual community conference to be sponsored by Congressman WILLIAM F. RYAN and the reform Democratic clubs of Manhattan's West Side. The conference included three morning panel discussions, three afternoon panels, and a plenary session, all open, free to the public, which responded by filling every seat and crowding the standing room at the huge Riverside Church (121st Street and Claremont Avenue).

The conference was keynoted by Congressman RYAN at the plenary session when he stated, "This conference was held to discuss the greatest danger man has ever faced." The speakers then discussed the issues of how man must face the threat of nuclear annihilation, how to thwart it, and, in the meantime, how to live with it.

After pointing out the great public concern with this problem, indicated by the overcapacity audience, Congressman RYAN introduced Mr. Schlesinger.

Mr. Schlesinger traced the progressive-liberal view of international politics from the Founding Fathers through Theodore Roosevelt, from Woodrow Wilson through two World Wars. Concluding his historical review, he pointed to the paradox facing liberals since the end of World War II—a desire for peace and a desire to halt Communist aggression. After discarding popular approaches, such as denying the existence of either the need for peace or the Communist threat; admitting the paradox but trusting to human ingenuity to solve it; cynically asserting that the paradox is necessary for the economy; or simply adhering to one side of the paradox rather than the other on the grounds that it is more important; Mr. Schlesinger posed his own solution for the achievement of disarmament in face of the Soviet nuclear threat.

Accepting the truism that total war means total destruction, Mr. Schlesinger stated that the United States must maintain its military security and and accept the reality of nuclear weapons. When the Soviet Union is convinced that the United States will always remain strong, the futility of maintaining such a balance of terror will be clear. The only reasonable alternative then will be disarmament. The stockpiling of these weapons and the maintenance of such a large defensive complex is a tragic choice, but a choice that we must live with if we expect to hold onto our position as a free nation.

Mr. Arthur Waskow, senior staff member of the Peace Research Institute and author of "The Limits of Defense" and coauthor with Stanley Newman of "America in Hiding," spoke next. He views peace in the nuclear age as something which must be achieved through the United Nations or a similar world body.

"Historically," said Mr. Waskow, "the United States has always depended upon military superiority for its national security. The advent of nuclear weapons has resulted in a change in this position—the more bombs we have, the more we fear to use them. In the search for military superiority we have developed weapons that are so destructive there is little likelihood that they will ever be used. We have become frozen in a policy and a political climate which affords no alternative; the rationalization for our position is that no real choice exists.

We must now learn how to carry out the national interest without reliance on military strength and potent weapons systems. We must establish a means to protect our boundaries and to maintain our liberty and power. We desire an institution that will prevent rearmament, but one that will not impose its values on us. Thus, we are seeking those avenues whereby the free world is expanded and, at the same time, political victories can be won. This can be achieved by directing those resources, now part of the military establishment, into other areas. The manpower used in the waging of war could be employed in a great Peace Corps project. The result of these projects would be the maintenance of fredom and power by the United States. The Soviet Union would find herself in a position of either matching the performance of the United States or losing whatever sphere of influence she now has. By taking such a lead, Mr. Waskow said, the United States would become, as Jefferson phrased it, man's last best hope on earth.

Herman Kahn, the third speaker at the plenary session, author of "On Thermonuclear War," spoke in opposition to Mr.

Waskow's views. He sees the problem as one which must be solved by what we have on hand, with a marked contrast existing between what is most feasible and what is most desirable.

Mr. Kahn foresees a world with three possible shapes by the beginning of the 21st century. In the first, the major blocs would be politely hostile, but because of a careful definition of terms and fear of ultimate consequences the hostility will go no farther than minor incidents.

The second possible shape, most desirable but least feasible, in Mr. Kahn's view, is that of a world government formed as a result of either a third world war or some other crisis that dissolves national sovereignty and national self-interest to a higher cause. This supragovernment, a result of external pressures, would be forced upon nations by the political climate of the times. This is not feasible, for men would rather have self-government than good government.

The third shape, the one Mr. Kahn foresees as most feasible, if least desirable, is a continuation of present policy of nation-states seeking world empires, maintaining the careful balance of polite hostility. There would be minor incidents, Mr. Kahn stated, but the nuclear weapons system itself would prevent them from turning into major wars.

Mr. Kahn does not believe that the present system of deterrence and defense will last forever. The tendency to violence will create crises, but the final result will probably not be the destruction of the major powers, national self-interest being the deterrent to national suicide. The answer to the choice of Red or dead is answered by Mr. Kahn. The choice applied to everyone is obviously, "better Red than dead"; however, if the choice is applied to only a relative few, nations would prefer to lose millions rather than give up their own power and nationality.

Three morning panels were held on the topics: "History of Disarmament Negotiations," "Economic Consequences of Disarmament," and "Social Values in the Nuclear Age." The three afternoon panels were focused on: "The Spread of Nuclear Power," "Prospects for Enforcing Arms Control," and "Ideological Barriers to Disarmament."

The participants in the panel discussions were experts from government, universities, research and labor organizations, and communications media. A brief summary of each discussion follows.

HISTORY OF DISARMAMENT NEGOTIATIONS

Robert Matteson, senior adviser, U.S. Arms Control and Disarmament Agency.

Robert H. Cory, Jr., Quaker program of the United Nations.

Professor Richard Swift, New York University, Department of Government and International Relations.

Moderator: Professor Abramo Organski, Brooklyn College, Department of Political Science.

Professor Swift traced the history of disarmament negotiations to the first U.N. discussions in 1946, divided at first into control of atomic weapons and conventional arms. The large U.N. Commission has since been split into several subcommittees whose work has been truly fruitful and positive. Professor Swift discussed the Baruch plan for an international authority to own and control atomic energy, which was outdated with the development of the Soviet bomb in 1949. When monopoly no longer existed, a check system needed to be developed on the number of weapons each nation possesed. This is where we stand today. He pointed out that in the history of negotiations since 1949 it has been suspicion on both sides which has precluded agreement.

Mr. Cory spoke of the small nations of the world as the "voice of reason" in our age. In the first 10 years of negotiations the big powers had primary responsibility and power to act; somewhere in the middle of the last decade the smaller nations began to demand a voice in the future of the world. Banding together as neutrals in the Disarmament Commission of the U.N., the smaller countries have been able to put pressure on the great powers to study the situations thoroughly as they arise and to keep propaganda to a minimum.

Mr. Matteson agreed with Professor Swift that secrecy and suspicion has always been the stumbling block to negotiations and stressed that proposals must be studied from both points of view. It is clear that with increasing security of built-up arms and second-strike capability the Soviet powers might be more likely to agree to a test-ban treaty. The history of negotiations since 1957 does show that limited objectives can be obtained with bilateral negotiations.

Professor Organski concluded the discussion with the observation that the arms race, when viewed in historical perspective, shows us that the weapons themselves are part of a double underlying problem—world power and world politics. Many of our objectives are the same; it is these shared areas of interest which can lead us to agreement.

ECONOMIC CONSEQUENCES OF DISARMAMENT

Prof. Emile Benoit, Columbia University, author of "Europe at Sixes and Sevens."

Prof. Seymour Melman, Columbia University, author of "The Peace Race."

Henry D. Wyner, Economics Officer, U.S. Arms Control and Disarmament Agency.

Moderator: Jack Sessions, Education Department of the AFL–CIO.

Our Government is seriously interested in disarmament, stated Mr. Wyner, and this is evidenced by the active interest on the part of the administration in the Arms Control and Disarmament Agency, as well as the studies in this field authorized by Congress. Mr. Wyner stated that there are three general areas in which economic problems might be in conflict with disarmament in this country: (1) the major role of the defense program in our economy; (2) the adjustments which must be made to keep the country economically strong; and (3) the long-range goals—defining the values and desires of American society. Disarmament would mean reduction in the size, the force, the inventories of our producing defense industry, and controls over production and force. The U.S.S.R. is faced with no such problems. Possible methods of dealing with these problems must be researched and developed.

It is the responsibility of the Government to gather analytical data, and this we are doing.

Professor Benoit pointed out that disarmament comes about for reasons of physical safety rather than reasons of economic advisability. He proposed a long-range plan involving both the U.S.S.R. and the United States, plus a higher power such as the United Nations in assuming the burden of finding workable substitutes for a military and defense-based economy.

Professor Melman discussed the conversion of military activities into other channels. We are living in a period of military superabundance. This "overkill" could be safely turned right now into peaceful industrial progress. The individual States in this country which are affected by cutoff of military funds should be addressing themselves to problems of conversion to industry, and management and trade unions should face these problems and come up with answers.

Professor Melman urged the turning of our strength and energies and wealth to opening opportunities to grow and options of freedom for the rest of the world. The transfer of resources on our part would place the Soviet Union in a position which would force that power to concentrate on the challenge we would be setting with underdeveloped and uncommitted nations.

SOCIAL VALUES IN THE NUCLEAR AGE

Prof. Robert Engler, Sarah Lawrence College.

Dr. Jerome Frank, psychiatrist, Johns Hopkins Medical School.

Col. Amos Jordan, U.S. Military Academy, West Point.

Moderator: Richard Heffner, vice president and general manager, Educational Broadcasting Corp.

Professor Engler called the nuclear bomb an example of the continuing industrial revolution with the huge industrial organization and giant military apparatus in this country increasingly narrowing the range of public debate, restricting the privacy of the individual, and producing a "what can I do" outlook in the general public. "The extent to which the American press is used as an arm of the state is something that needs a full investigation," he declared. Our military-industrial complex has led us into a potentially totalitarian system, and it is vitally important to examine the roots of the conflict now. Russia and the United States are actually the aristocracy of the world, and the conflict may one day develop into a fight between the developed and the underdeveloped countries of the world.

Dr. Frank examined several social values which need to be modified in the nuclear age. He considers patriotism a dangerous trait in its inference that a nation has the right to pursue its own interests at the expense of any and all other nations. Dr. Frank stated that now no nation can flourish unless all do. The accepted social assumption that war is a proper and feasible way to solve differences, accepted for milleniums and equating armed strength with courage, must be altered. A "just war" based on emotions is no longer possible. The nonviolent techniques recently effective in India and in the United States have proved to thousands of people that courage does not necessarily mean killing. However, geographic distances between the two major powers makes nonviolence a nonrealistic solution.

Colonel Jordan, emphasizing that he was not a spokesman for the Army or the Government, expressed the opinion that conflict will be the rule rather than the exception in the next decade. The military of the United States differs from that of other countries in important and key ways, in that it is impossible here for the military ever to come into power through political coupe. "U.S. officers are trained to think of the welfare of the Nation and to serve the country," he stated, and added that the citizenry must take the responsibility of keeping alert to the dangers of too much control over communications by a few major companies and/or the Government. The strategy of deterrent nuclear build-up, he stated, is the best course to follow until a better strategy is developed.

THE SPREAD OF NUCLEAR POWER

Arthur Barber, Deputy Assistant Secretary of Defense.

Peter Dobell, First Secretary, Delegation of Canada to the United Nations.

Prof. Warner Schilling, Institute for Peace and War Studies, Columbia University.

Prof. John Stoessinger, Hunter College, author of "The Might of Nations."

Moderator: Lawrence Finkelstein, Vice President, Carnegie Endownment for International Peace.

Mr. Dobell traced the influences which affect the development of nuclear power to three main sources: geography, economic development, and political systems. He stated that the Government of Canada was able to make atomic bombs at the close of World War II, with plentiful supplies of uranium and highly trained and experienced technicians on hand. The decision of the Government not to make bombs is still standing.

He traced several reasons for this decision, including the fact that Canada has no aspirations for greater power and that it counts on the United States for defensive help if necessary. He outlined the current conflict in the Government of Canada regarding nuclear power; the new Democratic Party wishes to resist in every possible way the spread of nuclear weapons; the Conservatives feel that Canada should not accept nuclear warheads under any terms; the Liberal Party wishes to accept the weapons and then be in a position to negotiate for their withdrawal and control. Mr. Dobell stated that decisions are forced upon governments not by threats, but by political considerations.

Professor Schilling pointed out the inequities between nations with power and nations without power—one example is that we ask other nations to join with us in foreign aid, but protest their joining us in sharing nuclear weapons. The countries which do not have the nuclear force find themselves in the position of deciding whether to pour all their resources into establishing such a force, leaving themselves with little else to contribute in other areas.

Professor Stoessinger introduced into the discussion the alternative of an international agency which would administer and control nuclear power for peaceful purposes. He traced briefly the history of the International Atomic Energy Administration, which has not been effective since nuclear powers do not stay within it in their negotiations. Professor Stoessinger foresees no other alternative to keeping the spread of nuclear power within a rational framework.

Nuclear weapons have become a symbol of national prestige, Mr. Barber explained. As a result nations are sacrificing industrial development for military buildup. We should try to persuade people that it is not necessarily in their national interests to build nuclear weapons. The prestige value of nuclear power should be discouraged so that national resources can be used for economic development and a proper climate established for disarmament.

Mr. Finkelstein noted that China will inevitably explode a nuclear devise, and all attention will be turned to negotiating with that power. The response of the United States will reflect international policy, and it is probably that we will defend whoever is attacked by China. If a test-ban agreement is to be reached, it must be done before this occurs.

PROSPECTS FOR ENFORCING ARMS CONTROL

Nelson Bengston, chairman of the Committee for World Development and World Disarmament.

Prof. Amitai Etzioni, Columbia University, auothor of "The Hard Way to Peace: A New Strategy."

Dr. Leonard Rodberg, senior physicist, U.S. Arms Control and Disarmament Agency.

Moderator: Prof. Walter Goldstein, Brooklyn College, Department of Government.

Mr. Bangston spoke of the peace resolution of the United Nations which has been effective in Korea, Suez, Hungary, and the Congo. This resolution depended largely upon the prestige and leadership of the United States, but in the present situation with Cuba, this country has been depreciating its prestige by acting outside of the UN.

Mr. Rodberg brought out that inspection is not control, and that inspection, per se, is neither a barrier to arms control nor a problem of disarmament. A nation can only be induced to control its armaments if it is in that nation's own national interest. Agreements between powers will depend, therefore, on two approaches: (1) to verify the letter of the agreement—this requires extensive access which is incompatible with distrust; and (2) security protection against significant violations. The real use of inspection is to provide other parties with reassurance that significant violations are not taking place, so that others can maintain their compliance with the international agreement.

Professor Etzioni stated that the United States talks disarmament, but does not take it seriously, as evidenced by the veto of arms control by the Pentagon. Arms control carries no surcease from dangers of accidental wars or insane wars brought about by unstable military powers. It also freezes the balance and puts a premium on scientific breakthrough. What is needed, he stated, is arms reduction, down to an eventual zero, with control.

Professor Etzioni suggested that the U.S. Senate would never ratify a treaty carrying any implications of give-and-take in an inspection agreement with the U.S.S.R. Dr. Rodberg stated that our Government would support general and complete disarmament if it could get adequate inspection, but it might be better to settle for partial disarmament if we could get significant inspection and verification.

Professor Goldstein brought up the problem of nuclear disengagement for Africa and Latin America. The panel agreed that in this area control depends upon balance being maintained; that critical weakenings of one side or another would bring about a unilateral disarmament.

IDEOLOGICAL BARRIERS TO DISARMAMENT

Arnold Beichman, International Confederation of Free Trade Unions.

Prof. Saul K. Padover, New School for Social Research, author of "To Secure These Blessings."

Prof. Alexander Dallin, director of the Russian Institute, Columbia University.

Gerald Steibek, foreign affairs director, Research Institute of America.

Moderator: Daniel Nelson, assistant research director, International Ladies Garment Workers.

Mr. Beichman opened the discussion with his view that the Soviet Union was antagonistic to disarmament on the grounds that it would weaken her position vis-a-vis China.

Mr. Steibel felt that a failure of understanding on the part of the West has resulted in failure to achieve any disarmament treaty. The West believes that the Soviet Union is becoming more rational.

This is probably a bad assumption. The West seeks to maintain the status quo, which in this case is a stalemate; the Soviets seek change. It is important to remember that disarmament will come when it is profitable to both sides. Thus, national self-interest is the prominent factor.

Dr. Padover stated that the Russians often act out of fear of the West, that suspicion and mistrust act as psychological blocks and thus the barriers to agreement are emotional, not rational. It is important to our self-interest that the Soviets become convinced that we are not seeking to conquer them. At the same time we should maintain our power so that our friendliness will not be turned against us.

Professor Dallin looks upon Khrushchev's demand for disarmament at the U.N. as pure progaganda. The changing world will encourage the Soviets to disarm because of their great faith in the flow of history bringing countries into their camp. The maintenance of the status quo forces them to rely on arms. Their basic distrust is reflected in the question: Who watches the watchers?

Mr. Beichman disagreed on the point that the United States is a status quo nation. He pointed to the statistics of people leaving their home countries to come here, which is not true of the U.S.S.R. If we have not convinced the Russians of our nonaggressive attitude, he added, we never will.

Mr. Steibel felt that on the issue of test inspections the Russians cannot be trusted. If we agree to their terms, they will have won a major victory and will be more difficult to deal with in the future.

The panelists agreed that the issues center on two factors: basic distrust between the two great powers and the issue of status quo versus change.

PAUL W. CRONIN

Mr. HARRISON. Mr. Speaker, I ask unanimous consent that the gentleman from Massachusetts [Mr. MORSE] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wyoming?

There was no objection.

Mr. MORSE. Mr. Speaker, a remarkable young man has just been elected to the post of selectman in Andover, Mass. Mr. Paul W. Cronin at 25 has been chosen by the voters of that community to serve on the board, making him one of the youngest ever to serve and possibly one of the youngest selectmen in the Commonwealth of Massachusetts today. Mr. Cronin combines intelligence and experience extraordinary for one of his years. I wish him all the best in his new office.

I, under unanimous consent, include an article by Frank J. Dyer, which appeared in the Lawrence, Mass., Eagle Tribune on March 26, in the CONGRESSIONAL RECORD describing the achievements and convictions of a distinguished young American:

A SELECTMAN AT 25

(By Frank J. Dyer)

GOT EARLY START

"He combines idealism and practicality, energy and judgment, youth and maturity in a most unusual way."

This description of Andover's new selectman, Paul W. Cronin, was made by his former teacher, George Blackwood, associate professor of political economy at Boston University and coauthor of "The Alienated Voter" and "The Complete Politician."

Cronin, 25, is one of the youngest selectmen elected to office in Andover and is possibly one of the youngest selectmen in the State today.

His political ambitions were nurtured young in life.

"I handed out political cards at the polls when I was 9," he said. He also attended selectmen's meetings while in high school.

The new selectman earned his degree at Boston University, where he carried a double major in economics and government. He has resided in Andover for nearly 20 years.

Cronin, who campaigned under the slogan, "A secure future for Andover," acknowledges the "broad base of support" he received from his campaigners, a support that helped him win over his nearest opponent by a 1,000-plus plurality.

Selectman Cronin believes that townspeople should be willing to devote their time and efforts for the benefit of the community.

"If you're going to maintain democracy as we know it and if we are to strengthen our system, this power has to come from the people," he says. As far as committee appointments are concerned, Cronin feels that "qualified townspeople should be willing to step forward and give of themselves for the benefit of the town."

He says that, "all too often" interest in town government isn't generated until "late in life." He believes this interest should be instilled in the citizen while young.

While campaigning, Selectman Cronin publicly stated that he was opposed to the controversial urban renewal proposal. However, he says he does believe that certain areas in Andover should be revitalized.

"I believe that the native ingenuity of the townspeople will prove to the Nation that Andover was the town that could solve its own problems * * * that Andover could do it on its own."

He adds that if changes are to be made to the face of Andover, they should not be "total or abrupt."

Repeating a statement he made while campaigning, Selectman Cronin says he intends to be "liberal in my time in dealings with townspeople, conservative in areas of fiscal responsibility, yet firm on policy matters."

Cronin is a corporate staff member of the industrial relations firm of Edgerton, Germshausen & Grier, Boston. He is married to the former Kathleen Sears and the couple have two preschool children, Kevin and Kimberly. They live at 96 Maple Avenue.

MINORITY STAFFING STATEMENT BY GOV. ALF LANDON

Mr. HARRISON. Mr. Speaker, I ask unanimous consent that the gentleman from Kansas [Mr. ELLSWORTH] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wyoming?

There was no objection.

Mr. ELLSWORTH. Mr. Speaker, one Kansan who has been watching closely and with great interest the fight for increased minority staffing under the leadership of the House Republican conference subcommittee on increased minority staffing is former Gov. Alf Landon, of Kansas. Governor Landon, the 1936 Republican presidential standard bearer, has during recent years become again increasingly active in speaking out courageously on issues confronting our Nation. His leadership last year in connection with the passage of the Trade Expansion Act of 1962 was one of the highlights of Governor Landon's legislative year. In Washington last year we were also fortunate to have several talks by the Governor to Members of Congress and to the press. Governor Landon is interested in an increasingly strong, vigorous, and constructive Congress. He also feels that the Republican Party, in order to be a vital forward moving force in this fast moving world, should be able to contribute to the utmost in the Halls of Congress. Individual Members of Congress have asked me from time to time about Governor Landon's views, and I have been happy to share these with them. Governor Landon recently wrote a letter to the chairman of the Republican conference subcommittee on increased minority staffing, the gentleman from Iowa, Congressman FRED SCHWENGEL, the full text of which follows below:

TOPEKA, KANS., *March 26, 1963.*

Hon. FRED SCHWENGEL,
House Office Building,
Washington, D.C.

DEAR FRED: Glad to notice you're pounding away on more representation for minority staff members. I think this is a highly important factor. Keep up the good work.

I watched the returns from Iowa last fall with a lot of interest and was happy to see that you won a well-deserved reelection.

Hope the goose continues to hang high and the smoke goes up the chimney for you and yours.

ALF M. LANDON.

Mr. Speaker, it would be appropriate at this time to pay tribute to the persistent and unselfish leadership of the Congressman from the First Congressional District of Iowa, Congressman FRED SCHWENGEL. Many of the constructive things which have been done in the minority staffing fight have been the result of long hours of overtime on the part of the gentleman from Iowa [Mr. SCHWENGEL] and his associates. Many of the facilities, letters and conferences have been initiated and executed by FRED SCHWENGEL, and he has done all of this in addition to his conscientious service to the people of the First Congressional District of Iowa as well as to the Public Works Committee and the District of Columbia Committee.

I join this distinguished Kansan in paying tribute to Congressman SCHWENGEL and to public-spirited citizens both here in the Nation's Capital and throughout the country who are becoming increasingly active in the fight for effective minority staffing on congressional committees. I hope in the future Governor Landon will consent to come to Washington again and share with Members of this body and the other body his impressions of what is going on in the world today. There is a great deal of wisdom and knowledge in this distinguished American's mind, and we need to have the benefit of it. Kansas is still proud of the many contributions to the betterment of American life made by Governor Landon.

HOW SOUND IS THE DOLLAR?

Mr. HARRISON. Mr. Speaker, I ask unanimous consent that the gentleman from New Hampshire [Mr. CLEVELAND] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wyoming?

There was no objection.

Mr. CLEVELAND. Mr. Speaker, in yesterday's RECORD the distinguished gentleman from Missouri [Mr. CURTIS] made an excellent statement concerning expenditure reforms. He reminded us that international communism plans to defeat us economically rather than on the battlefield.

The distinguished gentleman from Missouri put it in this way, and I quote:

> I remind all of you of what Lenin and other Communist leaders have said that they are not going to defeat America on the battlefield. We will get America to spend itself to death.
>
> And, indeed, if they succeed we will then go down the same trail of oblivion as so many other nations in history have gone. We will not go out in a blaze of glory but in a whimper.

FORCES AFFECTING THE DOLLAR

The distinguished gentleman from Missouri has well stated the end result of foolish fiscal policies. There are many forces adversely affecting the value of the U.S. dollar. Among these are inflationary policies at home and a growing balance-of-payment problem with respect to other countries. In combination, they have produced doubts concerning the soundness of our dollar.

President Kennedy's proposed budget deficit of $12 billion, if enacted, may well further erode the value of the U.S. dollar. Even suggesting such a huge budgetary deficit is creating a bad psychological climate for our currency.

RUMORS ABROAD

In European financial capitals, there has been increased speculation suggesting a dollar crisis in 1964. Such rumors add fuel to the fire and tend to destroy faith in the U.S. dollar. These rumors subsist on faulty economic statements made by this administration.

GOLD FLOW PROBLEM

Another factor damaging to the dollar is America's poor gold position. Gold still influences the credit standing of our Government although we have been off the gold standard for some 30 years.

Possession of gold reserves has remained a standard for judging the fiscal soundness of governments, even though their currencies are not directly convertible into this precious element.

On April 1, 1963, the Citizens Foreign Aid Committee issued the following statement on America's gold reserve position:

FACTS ON FOREIGN AID—OUR GOLD RESERVE

The Clay Committee report to the President, released March 20, 1963, rightly reveals "increasing concern * * * over the contribution of foreign aid to the persistent deficits in our international balance of payments. These deficits have produced a sustained decline in our gold stock and a marked increase in foreign-owned dollar balances." Facts supporting this increasing concern are supplied by the Citizens Foreign Aid Committee:

CLAIMS ON U.S. GOLD RESERVE

Federal Reserve notes, deposit liabilities, and U.S. notes outstanding, require by law a backing in gold of $12,066 million.

By swap arrangement the Federal Reserve has obtained calls on foreign currencies, repayable in kind totaling $1,100 million.

For the first time in history the U.S. Treasury has been compelled to issue obligations, payable not in dollars but in foreign currencies. These borrowings amount to $529 million.

Monetary silver reserves are disappearing. The Treasury has asked the Congress for authority to substitute Federal Reserve notes for the silver certificates outstanding. This transaction will require, in gold as reserve backing, $540 million.

The International Monetary Fund (IMF) sold $800 million of gold to the U.S. Treasury for Treasury notes, to be repaid in gold $800 million. U.S. gold obligations total $15,035 million.

Accordingly, we have obligated $15,035 million of our gold reserve which, since aid began, has dropped from $24,500 million to $15,878 million. But this is not all. Principally due to foreign aid, foreign central banks now hold $24,980 million in short-term dollar credits, redeemable in gold. Increasingly apprehensive over a possible devaluation of the dollar, foreigners hold its fate in their hands.

THE ONLY REMEDY

Our unfavorable balance of payments runs some $2 billion annually. To preclude another unfavorable balance of payments and thereby prevent risking a ruinous run on our dwindling gold reserve, the Congress should cut in half the foreign aid request for fiscal 1964.

Mr. Speaker, in the foregoing statement, the principal reason for our unfavorable gold flow is attributed to foreign aid. Although foreign aid is unquestionably of major importance in this matter, the funds we spend in maintaining U.S. Armed Forces abroad is a large factor.

We cannot overlook increased imports into the United States and decreased exports to other countries as being important to our balance of payments. We are pricing ourselves out of some markets and losing others through unfair discriminatory practice.

Brig. Gen. Bonner Fellers and the Citizens Foreign Aid Committee are to be commended for the clear picture they have presented about our gold obligations to other countries.

TAX POLICY AND THE PURITAN ETHIC

Mr. HARRISON. Mr. Speaker, I ask unanimous consent that the gentleman from Missouri [Mr. HALL] may extend his remarks at this point in the RECORD and include an address by Mr. CURTIS.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wyoming?

There was no objection.

Mr. HALL. Mr. Speaker, my esteemed Republican colleague from Missouri [Mr. CURTIS] who serves with such ability and distinction in the House and as a member of the House Committee on Ways and Means and the Joint Economic Committee has established a national reputation as a foremost authority on tax policy. To his responsibilities as one of the leaders on tax policy in the Congress, TOM CURTIS brings an outstanding professional competence as a lawyer as well as great capability as a learned student of economics.

Congressman CURTIS has made and is making a major contribution to public awareness and understanding of the tax policy issues now before our Nation. He has addressed citizen groups throughout the Nation, he has participated in the congressional hearings on tax policy, and he has written extensively on the subject.

Recently TOM CURTIS spoke at a public affairs forum conducted by the St. Louis Chamber of Commerce on tax policy. The subject of his address was "Tax Policy and the Puritan Ethic." He spoke of the need for expenditure reform as a prerequisite to tax rate reduction. He described the sense of our people to believe that we should pay our way for adequate but frugal government as a strong moral conviction—a Puritan ethic.

Mr. Speaker, I will include my colleague's remarks before the St. Louis Chamber of Commerce at this point in the RECORD. I commend the reading of these remarks to everyone interested in sound tax policy. I commend the Honorable TOM CURTIS for his able commentary on this important issue.

REMARKS OF HON. THOMAS B. CURTIS BEFORE THE ST. LOUIS CHAMBER OF COMMERCE MEETING, MARCH 29, 1963

TAX POLICY AND THE PURITAN ETHIC

My fellow Americans, my friends and neighbors, I am pleased to return again to my home community to talk for the second time in as many weekends on matters involving tax considerations.

Indeed, I was at first somewhat concerned about talking again on the same subject because of the prospect that I would be repeating myself and thus possibly subject the unwary to the agony of hearing me again. My staff in Washington has in some measure quieted my fears with the reassurance that surely no one who heard me last week would make the mistake of coming back so soon. Be that as it may, I have succeeded this evening in at least having a new topical theme, namely, "Tax Policy and the Puritan Ethic." I apologize if some of my substantive comments may have been heard last week by any of you present tonight.

Before I begin my principal remarks I would like to commend the St. Louis Chamber of Commerce for sponsoring this public affairs series. I know that great good will come of it and it is to be hoped that the example you set will be followed by other citizen organizations in our home community and throughout our State and Nation. Such public forums have a great potential for good.

Citizen laxity about public affairs has helped to produce a deterioration in the moral quality of service to country by our people. Too often we satisfy our sporadic citizenship urge by dealing with issues involving our liberty, opportunity, and security armed only with platitudes and devoid of knowledge of the facts because acquiring the latter would take time.

President George Washington in his first annual address in January 1790 has this to say about the importance of citizen knowledge:

"Knowledge is * * * the surest basis of public happiness. In one in which the measures of government receive their impression so immediately from the sense of the community as in ours it is proportionably essential. To the security of a free constitution it contributes * * * by convincing those * * * entrusted with public administration, that every valuable end of government is best answered by the enlightened confidence of the people * * * by teaching the people themselves to know and to value their own rights (and to) provide against invasions of them * * *."

The wisdom of George Washington on the need for citizen knowledge is certainly pertinent today. With these forums you gentlemen will be helping to develop that citizen knowledge that he said is the surest basis of public happiness.

During the next several minutes it will be my purpose to comment on the subject "Tax Policy and the Puritan Ethic." I will attempt to appraise the present factors influencing tax policy. I will offer my views as to the tax policy that is in the best interest of our Nation.

I propose to express myself forthrightly in terms of fiscal principle and economic conviction, letting the political chips fall where they may. I hasten to add that I will not offend your hospitality by making a deliberately partisan speech. However, I will accept the invitation of the President of the United States made in his now famous Yale speech to engage in a national debate on the subject of tax policy.

Indeed, some of you know me pretty well and it will come as no surprise to you that I accepted this challenge almost, if not actually, before it was uttered. I have expressed my views on the tax policy issue in such places as New York, Chicago, Pittsburgh, Detroit, Washington, and now St. Louis. I must admit that the "other fellow" may have received more publicity but I have reason to believe that I have received a better response from the thoughtful citizens of our Nation.

Based on my exposure to the public sentiment in regard to the conduct of America's fiscal affairs:

I sincerely believe that the puritan ethic of paying our way for adequate but frugal government is still a strong moral conviction of our people.

I sincerely believe there is a growing awareness that we cannot preserve our liberty while seeking to solve every human problem by recourse to compulsive spending out of a depleted Federal Treasury.

I sincerely believe that the bankrupt policy of seeking national affluence through deficits—of trying to spend ourselves rich, smart, and secure by Government credit card—is declining in public acceptance.

With those prefatory comments, I turn to my topic for the evening: "Tax Policy and the Puritan Ethic."

The English satirist Samuel Butler, in a book published in the early 1870's entitled "Erehwon"—nowhere spelled backward—described a Utopia—also nowhere spelled frontward in Greek—in a way that ridiculed the absurdities and contradictions of then modern society. In this book he told about a man "who makes a colossal fortune in the hosiery trade, and by his energy has succeeded in reducing the price of woolen goods by the thousandth part of a penny in the pound—this man is worth 10 professional philanthropists. So strongly are the Erehwonians impressed with this, that if a man has made a fortune of over 20,000 pounds a year they exempt him from all taxation, considering him as a work of art, and too precious to be meddled with; for they say, 'How very much he must have done for society before society could have been prevailed upon to give him so much money.'"

Implicit in that excerpt are principles that are essential elements in any tax policy that purports to be conducive to sustainable economic growth. One principle we find is the incentive for ingenuity and enterprise. We also find economic opportunity multiplying into greater economic opportunity. We find technological progress advancing the national weal. We find the essence of our American free enterprise system—the opportunity for reasonable profit for productive effort. I do not advocate that we go the Erehwonian route to the extent of total tax exemption but we might well better heed the lesson these fictional people offer us in terms of greater reward for greater effort.

In the period of the past three decades our tax structure has developed according to the pressures of political expediency rather than economic concept and principle. In a relative sense we have tended to encourage consumption and in an absolute sense we have discouraged investment. As a consequence, capital investment in the United States as a percent of gross national product compares unfavorably—falls disturbingly short—of the experience in the other industrialized nations of the world. This shortsighted tax policy has levied on capital, impaired investment, and created obsolete productive capacity. The result is that job opportunities in private enterprise are not as abundantly available as they would otherwise be.

Therefore, it behooves us to seek a tax policy that will encourage entrepreneurial investors to rid our economy of obsolete production facilities through expanded modernization so that we can compete more effectively in domestic and world markets, thereby enhancing the job opportunities available to our citizens. It also behooves us to train the aptitudes and skills of our people so that they can fill the jobs that are now going unfilled and the jobs that technology will create in the future. Parenthetically, it is to be observed that much of our all too high unemployment today comes not so much from an absence of jobs as from an alarming absence of usable skills among the jobless.

Tax policy of the past three decades has sought the political objective of redistributing the existing wealth among our citizens rather than the sounder economic objective of creating greater wealth for all our citizens. Our confiscatory tax policy has led us to the result that in 1962 the total tax payment to governments equaled one-third of the value of the Nation's total output. One revealing light in which this startling statistic might be viewed is as a measure of the extent to which we have gone in socializing the productive endeavors of our citizens—one-third of the product of your labor is taken by governments. The Federal tax burden alone takes about one-fifth of the net national product or substantially upward from $100 billion.

Has this staggering tax burden paid for the Government goods and services that have been provided? Tragically, the answer to that question is known to all—at home and abroad—and is a shameful "No." Eighty percent of the time in the last three decades the Federal budget has been in the red. We have had deficits in war and in peace, in recession and prosperity—largely because we as voters thought the politicians were spending someone else's money—and it is only in recent months that there seems an awareness that the only someone else involved other than ourselves is our children. The compulsive spending by Government has vastly exceeded the productivity our citizens have been willing to pay in current taxation. Hence, the future generations will find their productive efforts encumbered by the more than $1 trillion of debt and unfunded obligations we have amassed and will leave unpaid when the certainty of death relieves our generation from concern over the certainty of taxes.

But we need not go back 30 years to find cause for concern. The budget experience of the past few years has brought an alarming worsening in our fiscal affairs. Spending for the fiscal year 1964 is projected at $22.3 billion higher than was spent in the year 1960—the last year in which we had a budgetary surplus. This is an increase of 29 percent. The cumulative total of just the increases over the 1960 level that have been spent or are scheduled to be spent in the years 1961 through 1964 is more than $56 billion; an amount that exceeds our annual total Federal spending as recently as 1951. Our deficits and debts are keeping pace with our spending growth. We have not had a surplus since 1960 and we are told that we will not have a balanced budget again until 1967 at the earliest and more likely it will be into the 1970's before the budget is next balanced. In the 4 years 1961 through 1964 the prospect is we will add a minimum of $31 billion to our Federal debt and $75 billion is predicted as the debt addition before our next expected surplus.

Has this record of unprecedented spending and record debt given pause to the compulsive spenders? Not at all. With new programs and bigger programs, with soaring new obligational authority requests, the architects of profligate government blandly forecast higher spending and admonish that Government frugality will generate economic decline.

I know one perhaps impolite but not profane word that properly describes the spurious economics of these neo-Fabians and that word is "balderdash." Where are the prosperity, the growth, the jobs, the vigor—or is it rigor?—we have been promised year after year? What has happened to the economic upturn we were promised if we just let the spenders add a few billion more to the spending level and the public debt? We have an economy that lacks advance and forward thrust not because we are spending too little but, if anything, because we are spending too much and because apprehension has replaced confidence.

After these many billions spent on revived New Deal programs, we are now told that what we really need is something the New Deal never did try and that is tax reduction. Eureka. Now we are going to spend more, tax less, and pay off some of the national debt. I wonder how it happened the Erehwonians left that one to the New Frontier to think of? Some of us in public life—Republican and Democrat alike—hailed the idea of a tax cut as long overdue but when we proposed an expenditure cut to make the tax cut consistent with principles of fiscal integrity we were accused of having that loathsome malady know as a "puritan ethic."

My friends, my ailment has been properly diagnosed. I do have a puritan ethic and it is as compulsive in me as the proclivity to spend the taxpayer's dollar seems to be in some other people. I earnestly submit to you that it is the fiscal principles of the puritan ethic that alone will make meaningful tax reduction a responsible reality.

In the time that remains I will briefly apply my puritan ethic to considerations of tax policy. I will outline a prescribed course of action for the Congress and the citizens of our Nation in achieving urgently needed reform of our tax rate structure. Your attention is specifically called to my use of the word "reform" in connection with changes in our tax rate structure. To me, the tax change that has the highest priority is the reform and restructuring of our rate schedules. Substantive reforms can come later over a period of years after careful study and need not detain either the Congress or us at the present time or this year.

The first step and prerequisite to subsequent steps in the tax reduction program must be a minimum $5 billion cut in the proposed budget spending and an even larger slash in the proposed new obligational authorities. And in making these cuts there must be cooperation between the legislative and executive branches to make the cuts stick so the deleted amounts will not be restored in supplemental appropriation bills. When we get on the subject of Government economy a frequent cry of the spenders is to "Name where you will cut." To them I have this answer—any budget that has grown by $22 billion or 29 percent in 4 years inevitably contains extravagances that can, should, and must be cut. I also call to their attention the observation of our fellow Missourian, the Democratic chairman of the House Appropriations Committee, the Honorable CLARENCE CANNON, who said of the 1964 Budget:

"I have listened to messages from Presidents here in the House for 40 years, but in all that time I have never seen or heard a budget message like this one, and neither have you, nor has anyone else. This admittedly tenuous budget is too high. It can be cut. It ought to be drastically revised."

The Congress in acting on spending to make tax reduction a responsible reality should hold the spending line at a level not in excess of the 1963 level and as much below that as possible. This frugality should continue not just for 1 year but for several years so that growing revenues can be devoted to debt reduction.

With success in budget cutting established as a prerequisite to tax cutting we can now turn our attention to what kind of tax cuts. On this point let me say at the outset that everyone's tax burden is too high because our spending is too high and our debt is too high. Unfortunately, as long as we have the critical fiscal problems and balance of payments problems that we have, a general tax cut merely for the sake of making the tax burdens of Government less onerous is not feasible.

We have to seek in the initial stages of our tax rate reform program the maximum economic good from the minimum revenue loss. To this end, I propose that the maximum tax rate applicable to individual and corporate incomes be made 49 percent effective July 1, 1963. This would have a full year revenue impact of approximately $2 billion. To the demagog's charge that I am giving the initial tax relief to upper income taxpayers and corporations, I would point out that under present law the corporate rate is scheduled to become 47 percent this July so that actually I am providing for a tax increase in this area. The important thing is, however, that my proposal would provide a release of funds for investment out of earnings and would be a step toward the restoration of confidence to induce such investment.

Next a proportional tax rate adjustment in the middle and lower brackets should be made for individuals in the magnitude of $5 to $8 billion in revenue loss effective in July or October depending on our success in cutting spending. The corporate rate should be allowed to become 47 percent by July 1, 1964, and at this time we should begin an 8 year transition toward putting corporate tax payments on a fully current basis. The current payment proposal would also provide a revenue gain to offset partially at least the revenue loss from the corporate rate adjustment to 47 percent. It should be our goal to manage our affairs in such a way that further tax rate reform can be implemented within 3 to 6 years from now so that our rate schedules could eventually approximate a range of from 15 percent to a top percent of not more than 40 percent.

These are tax objectives that are not only meritorious but are essential if our free enterprise economy is going to work the way we want it to. Our present tax structure perverts initiative, impairs opportunity, and discourages job-creating risk taking. The political tax reduction program urged by the administration will restore neither the confidence nor provide the incentive that we need in America to grow and go. We must use economic sense and not political cunning in our fiscal decisions that affect our tax policy.

My friends, I close on this note. America is facing problems that demand the earnest attention of us all as we seek the truth and knowledge essential to the development of wise and enduring solutions. Not the least of these problems involves our fiscal and monetary affairs. Our military strength will be meaningless and our economic aspirations empty if we continue to pursue the path of expediency in our fiscal and monetary concerns. The protection of human freedom, the encouragement of individual opportunity, and the safeguarding of our Nation's security must be sought within the framework of sound fiscal policy. The puritan ethic that believes in government frugality, individual responsibility, and the industry of society cannot be abolished by executive decree nor repealed by legislative enactment. The puritan ethic is the hope of our future, not its despair.

Thank you.

WASHINGTON MONUMENT IN THE DISTRICT OF COLUMBIA

Mr. HARRISON. Mr. Speaker, I ask unanimous consent that the gentleman from California [Mr. BOB WILSON] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wyoming?

There was no objection.

Mr. BOB WILSON. Mr. Speaker, I have today introduced a joint resolution providing for appropriate ceremonies in connection with the raising and lowering of the 50 U.S. flags surrounding the Washington Monument. The specific wording of my resolution reads as follows:

> *Resolved by the Senate and House of Representatives of the United States of America in Congress assembled,* That the Secretary of Defense, after consultation with the Secretary of the Interior, shall arrange for appropriate ceremonies to be conducted in connection with the raising and lowering of the flags of the United States surrounding the Washington Monument in the District of Columbia.

It is my belief that greater significance should be accorded this stirring ceremony at the Washington Monument site for it would be a memorable and inspiring experience for our many visitors who come from every corner of our Nation and from all over the world. The monument area with its flags rippling in unison is one of the most beautiful sights in Washington. The very sight of it is enough to make every American proud of this country and his flag.

Presently, instead of exploiting this procedure for Washington's many visitors, the Interior Department has assigned the chore of daily raising and lowering the flags to a maintenance crew. I feel this duty should be accomplished proudly and with due flourish. Previously the Interior Department advised that they favor such a procedure as I suggest, and they stated they have been trying to get something like this instituted for a long time.

Generally, it takes about an hour for the maintenance crew to raise and lower the flags. At one point in the past, the Interior Department had to reprimand the maintenance crew because they were reportedly shoving the flags into a basket like Mrs. O'Leary's wash.

The 50 American flags fly so splendidly at the base of the Washington Monument it is a wonder that a sensible and simple ceremony has not been enforced before this.

ADVISORY COMMISSION ON FEDERAL EXPENDITURES

Mr. HARRISON. Mr. Speaker, I ask unanimous consent that the gentleman from Missouri [Mr. CURTIS] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wyoming?

There was no objection.

Mr. CURTIS. Mr. Speaker, at his press conference April 3, President Kennedy was asked by Mrs. May Craig what his reply was going to be to the request of the minority members of the Joint Economic Committee that a Presidential Advisory Commission on Federal Expenditures be appointed to begin the difficult task of fashioning an objective and nonpartisan reform of Federal expenditure policy. The minority request to the President was contained in both the minority views to the 1963 annual report of the Joint Economic Committee and in a letter to the President dated March 19.

Essentially, the President's reply was that the Budget Bureau and the Appropriations Committees of the Congress were responsible for expenditure policy and that he was satisfied with the present arrangement.

Frankly, I am surprised that the President would express satisfaction over an expenditure system which has not produced a budget surplus since 1960, but which instead will produce a series of steadily mounting deficits totaling $30 billion from fiscal 1961 through 1964, and with no end in sight.

Quite clearly, the present system is not adequate to cope with the insistent multitude of pressures to increase Federal spending. If one believes that spending on certain programs can be reduced without damaging the national interest—and I believe any reasonable man must reach this conclusion—then we must seek means to produce this result. A Commission, such as I and my Republican colleagues on the Joint Economic Committee suggest, is one way to do the job.

We have in the Clay Commission a recent example of what a committee of thoughtful, respected, and responsible Americans can achieve when they examine objectively and dispassionately an important area of Federal spending. The recommendations of the Clay Commission, including its statement that foreign aid could be cut by $500 million, did not evoke cries of alarm and charges of recklessness. Instead, there was general approval of the Commission's report, even by the strongest champions of foreign aid. The administration, itself, has recognized the soundness of the Commission's recommendations and has reduced its foreign aid request for 1964 by $400 million as a result.

This example of what respected and intelligent men, standing apart from the pressures and commitments of the political arena, can do and of the great weight that their recommendations carry lends powerful support to the concept which the Republican members of the Joint Economic Committee have put forth.

While recommending a Presidential commission, however, we also recognize that an improvement in procedures under the existing system would be helpful in promoting expenditure reform. In our minority views, we urged the creation within Congress of a Joint Committee on the Budget, and we also suggested that one of the functions of a Presidential Advisory Commission should be to recommend improvements in the budgetary process within the executive branch.

Those who believe that certain approaches to reducing spending are reckless, irresponsible, and heedless of the national welfare should welcome this particular approach. Personally, I support continuing efforts in other directions to reduce Federal spending and believe they represent responsibility of the highest order. But, at the same time, I support this approach as well and feel that in no wey could it be branded reckless or irresponsible. Indeed, selective and prudent reductions in Federal spending, such as a Presidential commission would be likely to recommend, would promote the strength of the Nation.

While we have not yet received a written reply from the President, I sincerely hope he will give our proposal his most careful consideration. The President should regard this proposal as exactly what it is—an honest attempt to devise a method to bring about expenditure reform. In this way, we can bring the budget into balance within the very near future and thus avoid the serious consequences of continued deficit financing and at the same time pave the way for badly needed incentive tax reduction and reform.

I ask unanimous consent that Mrs. Craig's question and the President's reply be included in the RECORD.

TRANSCRIPT OF PRESIDENT KENNEDY'S NEWS CONFERENCE, APRIL 3, 1963

QUESTION. Mr. President, 2 weeks ago six Republican members of the Joint Economic Committee, House and Senate, wrote you a long letter of suggestions about Federal expenditures, including a request that you establish a Presidential Commission on Federal Expenditures, somewhat similar to the Clay Commission on Foreign Aid—headed by retired Army Gen. Lucius Clay. What would be your position on that suggestion?

THE PRESIDENT. Well, I think we have the Bureau of the Budget which oversees and gathers together all of the recommendations which we wish to make for programs. We then submit it to the Congress, the House and the Senate, and they finally appropriate the money. We do not. So that the House and Senate has its opportunities with its staff, the Appropriations Committees. We have probably the most effective staff in Washington, for the amount of work they do and the men employed, in the Bureau of the Budget. I am very satisfied with this procedure.

BALANCE OF PAYMENTS

Mr. HARRISON. Mr. Speaker, I ask unanimous consent that the gentleman from Missouri [Mr. CURTIS] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wyoming?

There was no objection.

Mr. CURTIS. Mr. Speaker, the apparent improvement in the U.S. balance of payments over the past 2 years was largely accomplished by the use of special techniques—some of which have received very little public attention—which amount to borrowing from the future. In other words, improvements in the balance of payments in 1961 and 1962 were at the expense of future years. It is my belief that without these special techniques the balance-of-payments deficit in 1962 would have been as large as $3.6 billion instead of the $2.2 billion actually reported.

Thus, in both 1961 and 1962, the balance of payments showed an improvement of nearly $700 million because of advance repayments of foreign debts. Debt payments made in advance, while they help the balance of payments currently, eliminate a source of balance-of-payments credits in the future when the debts normally would have been paid.

It is my understanding that in 1962 the administration developed some additional techniques which resulted in a temporary improvement in the balance of payments which could have amounted to as much as $800 million. These new techniques included the sale to other governments of $250 million in U.S. Government obligations denominated in foreign currencies. In addition, $460 million was set aside for the credit of the U.S. Government by Germany for military purchases in advance of firm orders for the supplies and equipment. Payment normally is made and reflected in the balance of payments at the time of order or of delivery. Finally, when our subscriptions to certain international organizations came due in 1962, the United States paid the subscriptions—totaling about $100 million—in noninterest bearing, nonmarketable Government securities. These will be turned back to the United States for dollars as they are required and will cause balance-of-payments debits at that time.

On April 2, I addressed a letter to Secretary of the Treasury Dillon setting forth in more detail these observations and asking for his comment upon them. If my understanding of these transactions is correct, then our balance-of-payments problem in 1962, far from being improved, actually grew worse. This would have important consequences for economic policy and, in order that the subject be better understood, I ask unanimous consent that a copy of my letter to Secretary Dillon be included in the RECORD.

HOUSE OF REPRESENTATIVES,
Washington, D.C.

Hon. C. DOUGLAS DILLON,
Secretary, U.S. Treasury,
Washington, D.C.

DEAR MR. SECRETARY: Part of the reason for the apparent improvement in the U.S. balance of payments over the past 2 years has been advance debt repayments by foreign governments of about $700 million in both 1961 and 1962. To the extent that advance repayments improve our current payments position, they eliminate a source of balance-of-payments credits in future years when the debts normally would have been paid. In this sense, foreign debt prepayments represent borrowing from the future.

It is my understanding that in 1962 the administration began using a number of additional techniques based upon the same principle of borrowing from the future in order to improve the current balance-of-payments position. Without the use of these new techniques, excluding debt prepayments, it is my impression that the balance-of-payments deficit in 1962 would have been as much as $3 billion, instead of the $2.2 billion reported. If debt prepayments also are considered, the deficit would have been over $3.6 billion or about as much as the average in the 1958–60 period.

Since these techniques have received little or no public attention, there is a widespread impression that our balance-of-payments position is steadily improving. In order that the Congress and the public have a clear idea of what progress actually is being made, I wish to set forth my understanding of these techniques and to ask for your comment.

One of new techniques being employed is the sale to foreign governments of nonmarketable U.S. Government obligations denominated in foreign currencies. This technique accounted for an improvement in the balance of payments last year of $250 million. In 1963, an additional $279 million of these obligations have been sold. When these obligations are finally paid off, there will be an equivalent debit item in our balance of payments.

Another new technique which temporarily improved the balance of payments in 1962 by as much as $460 million, was the firm commitment of foreign funds for military purchases in the United States. This was achieved when the German Government, on January 1, 1962, deposited this amount to the credit of the U.S. Government. These funds, which were set aside for the eventual purchase of military supplies and equipment, thus showed up as a credit in the U.S. balance of payments in advance of firm orders for the equipment and supplies. Normally the German payments would have appeared as a credit only after the equipment and supplies had been actually ordered or delivered. To the extent that this is the case, any improvement in the balance of payments in 1962 from this source was at the expense of the balance of payments in a later year.

Finally, the balance of payments appears improved by about $100 million because the United States has paid its subscriptions to certain international organizations as they came due, not in dollars, but in non-interest-bearing, nonmarketable securities. Sometime in the future, the international organizations will exchange these for dollars. In other words, the debit in our international payments represented by these subscriptions has been postponed from 1962 until a subsequent year.

I will appreciate having your comments on these observations.

Respectfully yours,
THOMAS B. CURTIS.

REMOVING IMPEDIMENTS TO ECONOMIC GROWTH

Mr. HARRISON. Mr. Speaker, I ask unanimous consent that the gentleman from Missouri [Mr. CURTIS] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wyoming?

There was no objection.

Mr. CURTIS. Mr. Speaker, I am including with my remarks an article by David Lawrence entitled "Factors for Economic Growth."

Mr. Lawrence makes the valid point, which was stressed in the minority views to the 1963 Annual Report of the Joint Economic Committee that a tax cut is only one of a large number of steps needed to remove impediments to economic growth. Action is also needed in the area of improving corporate profits, international trade, labor legislation, enlarging America's sales opportunities abroad and in foreign investment. Mr. Lawrence's point is so important and so well made that I hope it will receive the careful attention of all those interested in this Nation's economic progress.

FACTORS FOR ECONOMIC GROWTH

(By David Lawrence)

The American people are being told repeatedly that a tax cut will bring prosperity. Yet it's just one of five or more major factors that are essential to the economic growth of the United States. If the other incentives are ignored—as is the case today—a depression of the severest kind can conceivably confront this country in the next few years.

One trouble is that figures are being given out currently to generate optimism, but they are not being explained to the public in true perspective.

Thus, an announcement this week from the U.S. Department of Commerce forecasts business expenditures for new plant and equipment this year at a "record $39.1 billion."

But of what good are generalities about "record spending" when it turns out that the increase in projects for plant and equipment in 1963 will be the second smallest in 17 years? There have been increases in 13 out of the last 17 years. It is the rate of increase, rather than the total figure, that counts.

Take also the item of profits of corporations. Economists estimate that profits will total $27.5 billion in the fourth quarter of 1963. This could be emphasized by the over-optimistic as equaling the highest record in history. But what kind of record is it for corporate profits to reach $27.5 billion this year, when they were the same exactly 13 years ago in the last quarter of 1950? This hardly indicates progress.

Furthermore, in 1950 these profits were 9 percent of the gross national product, but in 1962 they were only 4.7 percent. If the rate of profit in terms of the gross national product keeps going down and the total profits make no increase over what they were 12 years ago, the word to use is not "progress" but "stagnation."

President Kennedy is putting all his eggs in one basket. He is depending on a tax cut alone. The emphasis seems to be on stimulating spending by means of a tax cut of $10 billion spread over the next 3 years. Pumppriming of this kind, however, has failed again and again to bring sound business conditions and has resulted instead in a series of setbacks every few years. The main reason is that other factors have been neglected. Lasting improvements rather than temporary palliatives are needed.

What seems most unfortunate is the complete indifference exhibited here in Washington to the factors that could produce a well-balanced and sound economy in the decade ahead. Among them are the following:

(1) Removal of Government barriers to marketing operations that could increase the total volume of sales.

(2) An increase in the rate of profit per dollar of sales. This would involve encouragement of automation and a general reduction of costs, but it also would mean more volume of business. The big telephone companies, for instance, employ more people since they introduced automatic phones than before. Employment is reallocated due to automation, but the sum total of jobs is increased.

(3) Legislative action to permit a system of fair competition in which interferences with marketing are eliminated, and no monopolies by any company or labor organization are tolerated.

(4) A prohibition against industrywide "bargaining" for labor agreements, because they tend to produce monopolies by forcing marginal companies out of business through high labor costs and by bringing about mergers that reduce or eliminate competition within an industry.

(5) An encouragement of trade with the rest of the world by a comprehensive plan which would include not merely a system of reciprocal tariffs and trade arrangements with large areas or regions embracing several countries, but also a wider investment of American capital abroad.

(6) A reexamination of the whole range of foreign investment so that individual

American companies will be protected against confiscation or harassment at the whim of changing regimes, especially in Latin America. A formula by which the U.S. Government guarantees a certain portion of the investment would probably achieve this purpose, especially since in times of default or domestic turbulence the protests of one or more private businesses are futile, whereas the power and influence of the American Government is bound to insure a large measure of protection for the investors.

While the growth in American exports in the last decade has been considerable, and imports have increased, too, the surface has hardly been scratched on what can be done to enlarge American sales opportunities abroad. Not enough time has been given by Congress to the study of how America's domestic economy can be enlarged by production of materials and finished goods needed in other countries to raise standards of living for the people.

These projects could be financed by foreign governments in cooperation with American companies that do business abroad. To blend the private and public sectors in foreign trade projects has been an objective often expressed, and some progress has been made along this line through various international financial institutions. But the amounts forthcoming are still negligible, and the impact on world trade is infinitesimal compared to what it could be.

Permanent measures that will take the brakes off the national economy and rid it of impediments to progress are the crying need of the times.

COAST GUARD SHOULD BE KEPT MODERN AND EFFECTIVE

Mr. HARRISON. Mr. Speaker, I ask unanimous consent that the gentleman from Maine [Mr. TUPPER] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wyoming?

There was no objection.

Mr. TUPPER. Mr. Speaker, while I am in general sympathy with the aim of greater economy in Government, I believe we must be extremely careful when cutting items important to our national defense. I wish to place on record my serious misgivings to the cut of over $12 million in the estimate for the U.S. Coast Guard, $9 million of this in their construction program.

Here is one more example, if we need another, of how this "orphan" of our armed services is constantly penalized by being under the Department of the Treasury instead of Defense during peacetime.

The Congress has shown great reluctance to reduce requests of the Department of Defense; indeed, we often give them funds they do not want. Yet, here is a service with important military missions effecting our security, as well as vital air-sea rescue missions and enforcement of many maritime regulations, with few spokesmen willing to raise a voice of protest in this body.

The committee feels it has been most generous in allowing the increase of $17,670,000 over appropriations to date for 1963. I do not agree. We must consider that the Treasury Department, in an effort to set a good example for all departments, always keeps a restraining hand on the Coast Guard and its budgetary requests. In fact, such tight rein has been exercised in the past, that the U.S. Coast Guard has suffered. Ranking Coast Guard officials have also been at fault over the years, for most have not wished to displease the Secretary of the Treasury.

It does not take an expert to realize that the U.S. Coast Guard needs many new ships and helicopters. In my own State of Maine, with a broken coastline that would extend many hundreds of miles in a straight line, we know of the great value of this seagoing service. Our thousands of commercial fishermen and the many yachtsmen that sail our coast, can attest to the great contributions this service is making with its rescue work.

Recently, the U.S. Coast Guard has been asked to take on additional duties off Florida to prevent violations of U.S. laws that might inadvertently set off a major war.

I think there is perhaps a natural feeling that the Coast Guard is not really a military service. If Members could have been with me several weeks ago in Guantanamo Bay, Cuba, and could have boarded the Coast Guard vessel, *Barataria*, then patrolling off Guantanamo, they would have seen no difference between this service and identical Navy vessels performing the same important task. Let there be no mistake about it. The U.S. Coast Guard is a military service, performing in addition other most important missions.

For the first time in years the Secretary of the Treasury, fully realizing the absolute necessity that the Coast Guard immediately embark upon a stepped-up construction program, consented to budget requests that would make it possible.

The requests, while amounting to a substantial increase in terms of percentages, are still modest.

The committee says that they feel that the—U.S. Coast Guard—fleet "should indeed be kept modern and effective," yet that the U.S. Coast Guard plans for moderization are "slightly too ambitious." This is ridiculous. It is not ambitious enough in terms of duties imposed upon the service or in terms of U.S. security.

If the U.S. Coast Guard cannot be brought rapidly up to required strength under the Treasury Department, it should be transferred to the Department of Defense. I would hazard a guess that if and when this is done, the Coast Guard would fare infinitely better as far as appropriations are concerned.

As a member of the U.S. Coast Guard Subcommittee, I have listened to Admiral Roland, Commandant, U.S. Coast Guard, and Assistant Secretary of the Treasury James Reed discuss current needs of the service. I would be remiss if I did not say the country is indeed fortunate to have men of this caliber in these responsible positions. Each time I have had occasion to meet with these gentlemen concerning problems of the Coast Guard, I have been genuinely impressed. Both are highly intelligent, with a broad viewpoint not always found among those heading a branch of an armed service.

During the period from 1959 through 1963 rescue missions by Coast Guard vessels increased 21 percent. During this period recreational boating has doubled. In the words of Admiral Roland, the condition of Coast Guard vessels is "approaching a stage of block obsolescence."

By 1964 five of the Coast Guard's major cutters will be 30 years old, six others 25 years old. All have been subjected to heavy usage over the years. They have been converted, reconditioned and modernized in an effort to keep them useful. Some of them are completely ill fitted for their present tasks.

Communication equipment, machinery, and other equipment are poor and crews have substandard living space.

The experience of the Coast Guard with this equipment during the recent Cuba quarantine demonstrated how inadequate the floating equipment is.

There is a need to expand and modernize the U.S. Coast Guard helicopter fleet. They should have at least another 14 amphibious helicopters. Along the entire Stae of Maine coastline, there is presently not a single Coast Guard helicopter for air rescue work, with 6,000 fishermen engaged in their livelihood off the coast as well as several more thousand island residents, all looking to the Coast Guard for help in case of emergency.

I think cutting the Coast Guard budget request by $12 million is an example of being "penny wise, pound foolish," particularly at this time.

I have requested the distinguished gentleman from Maryland, chairman of of the Subcommittee on U.S. Coast Guard, Coast and Geodetic Survey, and Navigation, to have the subcommittee undertake a thorough study of the adequacy of the U.S. Coast Guard's present equipment, to review and evaluate their planning for the future, and to report to the Committee on Merchant Marine and Fisheries and subsequently to the Congress.

I think it is long past the time when Congress must acknowledge paternity of this offspring and support it in a much better fashion.

Our overall defense effort demands that we give the Coast Guard more attention.

U.S. SHIPYARD INDUSTRY

Mr. OLSEN of Montana. Mr. Speaker, I ask unanimous consent that the gentleman from California [Mr. SHELLEY] may extend his remarks at this point in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Montana?

There was no objection.

Mr. SHELLEY. Mr. Speaker, along with a number of my colleagues, I have been concerned by two recent developments affecting the U.S. shipyard industry. The logical end result of these developments could mean more unemployment for skilled workers in California as well as in all other States in which both private and public shipyards are located.

These alarming situations stem from the frequent evidences that in the executive agencies "the right hand doesn't know what the left hand is doing." But, in the doing, a very grave problem of potential unemployment is being created which might well confound the best efforts of both the right hand and the left hand. It seems to us that a time for a clear, unequivocal national policy in these respects is overdue.

As the first illustration of my point, let me read the following press release No. 316–63 issued by the Department of Defense Press Office on March 8:

> NAVY AWARDS CONTRACT FOR CONVERSION OF TWO OILERS
>
> The Bureau of Ships is awarding a $14,949,563 fixed price contract to Puget Sound Bridge & Dry Dock Co., Seattle, Wash., for the conversion of two fleet oilers authorized in the fiscal year 1963 shipbuilding and conversion program.
>
> The U.S.S. *Navasota* (AO–106) and the U.S.S. *Waccamaw* (AO–109) are the first of the AO's scheduled for jumboization. This conversion of each vessel will increase the petroleum cargo capacity by 50,000 barrels.
>
> Twenty-three firms were invited to compete for this contract, which was formally advertised, and seven submitted bids. Pudget Sound Bridge & Dry Dock Co., the lowest responsible and responsive bidder, submitted a bid which was approximately $1.6 million lower than that submitted by the second lowest bidder.
>
> The Navy has determined that the lowest bidder's offer conforms in all respects with the Buy American Act as currently implemented and as carried out by policies of the Defense Department and with other requirements of law.
>
> The conversion of each vessel will consist of increasing the petroleum cargo capacity from 100,000 to 150,000 barrels, replacing and renovating pumps and deck gear to increase the rate of transfer of the cargo, and installation of an auxiliary machinery plant which will give the ship a capability of higher speed during replenishment operations.
>
> Both vessels are approximately the same size, having an overall length of 551 feet, a maximum beam of 75 feet, and a full load displacement of 25,500 tons. After conversion the ships will be 644 feet long, and have a full load displacement of 34,600 tons.

Unsaid and unwritten in this press release is the fact that a considerable portion of this contract will be procured from a shipyard in Japan. Involved are the equivalent of more than $5 million in shipyard work and nearly 6,000 tons of steel. Little imagination is needed to equate this foreign procurement in terms of lost employment for U.S. workers. Little imagination is needed to understand the contribution that this transaction has on the precarious balance of international payments with which the White House and the Treasury Department are at this moment feverishly struggling.

The inconsistency of the Department of Defense and the Department of the Navy in this instance is even more startling when one realizes that the Pentagon in August of last year saw fit to reverse a procurement of 2,000 tons of steel from West German and Japanese manufacturers by the Navy in the national interest.

Has the national interest improved so much in a short period of months to the extent that we must now rely on foreign sources for essential naval vessels? I say no. Has the national interest improved so much that the Defense Department or the Navy Department should not change existing procedures and policies to prevent a repetition of this type of procurement? I have no evidence that the Pentagon has any intention whatsoever of changing this harmful practice—harmful to the national interest. To the contrary, I am forced to conclude, on the basis of the facts, that the Pentagon is wholly insensitive to the feelings and livelihood of U.S. shipyard workers.

The second situation is also an example of this insensitivity. Permit me to quote from an article by the very able journalist, Allen M. Smythe, which appeared in the Washington Evening Star on March 22:

> The Navy, the taxpayers, and the local communities would be better off if 6 of our 11 obsolete Navy yards were given to the cities in which they are located. Several others should be drastically reduced in size.
>
> However, it took 40 years to abandon our cavalry posts and you can obtain swords and saddles now in our supply depots.

This statement by an unidentified Navy officer typifies the undercurrent of rumors which have been floating around for some time. By comparison, the distinguished Chief of Naval Operations, Admiral Anderson, said in San Francisco a few weeks ago, that as far as the Navy is concerned there is no plan for elimination of, or reduction in the size of, any naval shipyards. For the Navy's part, that might be true, but what of the Defense Department? Are they planning to cut back on the functions of the naval shipyards?

I wish I knew. The American people are entitled to know. The workers whose jobs are at stake are entitled to know. The answer can come only from the Pentagon, and it should come forward immediately.

On the first point of foreign procurement, since the Pentagon is unwilling to take the initiative, we, in the Congress, can do something about a solution on behalf of the shipyard workers of the United States. To that end, I have introduced a bill, H.R. 5401, to insure that shipyard work on naval vessels will be done exclusively in the United States. In its consideration of this measure, the Armed Services Committee can perform a great service by making sure that the right hand knows what the left hand is doing.

WHEAT REFERENDUM

Mr. OLSEN of Montana. Mr. Speaker, I ask unanimous consent that the gentleman from California [Mr. HOLIFIELD] may extend his remarks at this point in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Montana?

There was no objection.

Mr. HOLIFIELD. Mr. Speaker, I have always been interested in any legislation that will save taxpayers money. I was unhappy with previous farm price support programs that permitted the stockpiling of feed grain and wheat to such an extent that it was costing us a million dollars a day in storage, interest, and handling charges.

The new feed and wheat programs have done much to cut into these surplus stocks and I am told we are already saving over $700,000 a day by reason of reduced surpluses.

This is one of the reasons I supported the 1964 wheat program because it would guarantee permanent reduction of wheat stocks to a reasonable level.

I hope farmers approve the program in this referendum. If they do not, I am going to be sorely disappointed. If farmers think we will pass new wheat legislation in the event they turn this program down, they will be disappointed too.

I say, let them live with dollar wheat for a year if that is their choice. By 1964 I predict they will vote the program back in the next referendum. They can because the wheat program will still be on the books, waiting to be put into operation. But farmers are the ones that will have to do it. Congress cannot do anything more for them.

FREE THE EXILES TO FREE CUBA

Mr. OLSEN of Montana. Mr. Speaker, I ask unanimous consent that the gentleman from Florida [Mr. ROGERS] may extend his remarks at this point in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Montana?

There was no objection.

Mr. ROGERS of Florida. Mr. Speaker, freeing Cuba is a job for Cubans, and a national goal as stated by the President and the Department of State.

The President has wisely drawn the distinction between U.S. responsibility for Cuban exiles launching hit-and-run raids on Castro's seacoast. In an effort to avoid U.S. involvement in a Caribbean war, he has made it clear to the Communists that the United States will not be responsible for such raids when they originate outside U.S. jurisdiction.

It is argued that hit-and-run raids which have occurred served little purpose against Cuban communism. It is true that Castro has survived them to date. However, reports are that discontent grows inside Cuba.

If allowed to be launched outside U.S. territory, these raids can offer great encouragement to anti-Castro elements inside Cuba. Such raids can also serve notice to the world that there are still a great many Cubans who concern themselves with freedom.

Castro himself used hit-and-run tactics to give momentum to his own revolution. It is plainly evident that Cuban-trained Communist agents are using these same hit-and-run tactics to subvert this entire hemisphere.

It is our national goal to see Cuba free. This goal would be greatly aided by the United States unleashing Cuban exiles eager to base their anti-Castro efforts outside U.S. territory.

SPEAKER OF THE HOUSE JOHN W. McCORMACK

Mr. OLSEN of Montana. Mr. Speaker, I ask unanimous consent that the gentleman from Oklahoma [Mr. Albert] may extend his remarks at this point.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Montana?

There was no objection.

Mr. ALBERT. Mr. Speaker, the following comment is in tribute to our Speaker, the gentleman from Massachusetts, the Honorable John W. McCormack, which was broadcast by Joseph F. McCaffrey, Tuesday evening, April 3, 1963, WMAL–TV, Washington, D.C.:

Speaker of the House John W. McCormack

Good evening. Capitol Hill is crawling with tourists these days. Members find it difficult getting from their offices to the floor because of the guided tours clogging the corridors. This, most Members admit, some loudly, is a bit irritating.

But there is one Member of Congress who thinks more Americans should visit Congress.

"This," says this man, looking at you intently, "is their House; this is their building; I would like to see 10,000, 20,000 Americans stream in here every day of the year.

"And everyone here has orders to treat these men and women with respect and courtesy, because these people are the employers of everyone who works here. These are the people who have a vested interest in the building and everything that goes on inside it."

What this man said counts because he is more than a civics teacher, he is one of the Nation's outstanding political scientists. He also holds the country's No. 3 job as Speaker of the House of Representatives.

John McCormack may be a Democrat, he may be a Bostonian, but first and foremost he is a practicing American. This week I stood in the back of his high ceilinged office and listened to him chatting with a group of young girls from Pennsylvania State University.

To questions critical of Congress, the Speaker neither apologized for the House and its procedures nor did he defend them. He did something better, he explained them. And this professor's view of the political system is the view which is missed by classroom professors; his theme is the role of human nature in politics.

Speaker McCormack views his colleagues in the House not as Democrats or Republicans, but as individuals. And by the same token, to the Speaker, any one of those girls from Penn State was just as important, just as essential as his most powerful committee chairman.

After his little seminar was over, the Speaker walked down to the House Restaurant, saying, "I wish I could see everyone who visits this building."

"If I had the time, I'd like to talk with every guided party that comes through here. The more people realize that they are a real, important part of this Congress, the more interest there will be in government and the better government each one of us will get."

To Speaker John McCormack the key to American Government is the individual.

WIDENING OF SHIPPING LOCKS AT BONNEVILLE DAM

Mr. OLSEN of Montana. Mr. Speaker, I ask unanimous consent that the gentleman from Oregon [Mr. Ullman] may extend his remarks at this point and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Montana?

There was no objection.

Mr. ULLMAN. Mr. Speaker, the full use of the mighty Columbia River is of first importance in the progress of the Pacific Northwest. The Columbia River potential for navigation and trade depends upon the great dams on the river, and on the locks provided for shipping. House Joint Memorial 18 recently passed by the Oregon State Legislature petitions Congress to provide for the enlargement of the locks at the Bonneville Dam:

House Joint Memorial 18

To the Honorable Senate and House of Representatives of the United States of America, in Congress assembled:

We, your memorialists, the 52d Legislative Assembly of the State of Oregon, in legislative session assembled, most respectfully represent as follows:

Whereas the Columbia River is the main navigation artery for Astoria, Portland, The Dalles, and other communities in the Pacific Northwest; and

Whereas an uninterrupted flow of commerce on the Columbia River is of vital importance to the economic development of the Pacific Northwest; and

Whereas the shipping locks at Bonneville Dam are less in width than those at the upstream dams on the Columbia River: Now, therefore, be it

Resolved by the Legislative Assembly of the State of Oregon:

1. The Congress of the United States is memorialized to appropriate sufficient funds to widen the shipping locks at Bonneville Dam on the Columbia River so as to conform with the width of the shipping locks at The Dalles Dam and McNary Dam and thereby provide for an uninterrupted flow of commerce on the Columbia River.

2. The secretary of state shall send a copy of this memorial to the President of the United States, and to each Member of the Oregon congressional delegation.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. Healey (at the request of Mr. Multer), for Thursday, April 4, 1963, on account of illness.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. Davis of Georgia, for 15 minutes, today.

Mr. Curtin, for 10 minutes, today.

Mr. Reuss (at the request of Mr. Olsen of Montana), on April 10, for 60 minutes, and to revise and extend his remarks and to include extraneous matter.

Mr. Ryan of New York, for 30 minutes, today, and to revise and extend his remarks and include extraneous matter.

Mr. Broomfield (at the request of Mr. Harrison), for 45 minutes, on April 8, 1963.

Mr. Minshall (at the request of Mr. Harrison), for 30 minutes, on April 11, 1963.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the Congressional Record, or to revise and extend remarks, was granted to:

Mr. Hosmer and to include extraneous matter.

Mr. Wydler.

Mr. Pucinski.

Mr. White.

(The following Members (at the request of Mr. Harrison) and to include extraneous matter:)

Mr. Harsha in two instances.

Mr. Alger.

(The following Members (at the request of Mr. Olsen of Montana) and to include extraneous matter.)

Mr. Addabbo.

Mr. St. Onge.

Mr. Nix.

Mr. Marsh.

Mr. Evins.

Mr. Edmondson.

Mr. Ullman in two instances.

BILL AND JOINT RESOLUTION PRESENTED TO THE PRESIDENT

Mr. BURLESON, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, a bill and a joint resolution of the House of the following titles:

H.R. 4374. An act to proclaim Sir Winston Churchill an honorary citizen of the United States of America; and

H.J. Res. 282. Joint resolution designating the 6-day period beginning April 15, 1963, as "National Harmony Week," and for other purposes.

ADJOURNMENT

Mr. OLSEN of Montana. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 32 minutes p.m.), under its previous order, the House adjourned until Monday, April 8, 1963, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

641. A letter from the Director, Bureau of the Budget, Executive Office of the President, relative to plans for works of improvement relating to the following watersheds: Istokpoga Marsh and Jumper Creek, Fla.; Held, Iowa; Callahan Creek, Mo.; Apache-Brazito-Mesquite, N. Mex.; Conetoe Creek, N.C.; Harmon Creek, Pa., and W. Va.; and Upper Little Minnesota River, S. Dak., pursuant to section 5 of the Watershed Protection and Flood Prevention Act, as amended (16 U.S.C. 1005), and Executive Order No. 10654 of January 20, 1956; to the Committee on Agriculture.

642. A letter from the Director, Bureau of the Budget, Executive Office of the President, relative to plans for works of improvement relating to the following watersheds: Upper Rock Creek, Md.; and Buck Creek, Ky., pursuant to the section 5 of the Watershed Protection and Flood Prevention Act, as amended (16 U.S.C. 1005), and Executive Order No. 10654 of January 20, 1956: to the Committee on Public Works.

643. A letter from the Secretary of the Army, transmitting a draft of a proposed bill entitled "A bill to amend title 10, United

States Code, to provide for the disposition of certain nationals of the United States in foreign countries who are alleged and determined to be of unsound mind, and dangerous to persons or property, and for other purposes"; to the Committee on Armed Services.

644. A letter from the Administrator, Housing and Home Finance Agency, transmitting a draft of a proposed bill entitled "A bill to provide additional housing for the elderly"; to the Committee on Banking and Currency.

645. A letter from the President of the Board of Commissioners of the District of Columbia, transmitting a report of the use being made of such specifically exempted property, and of any changes in such use, with recommendations, pursuant to Public Law 846, 77th Congress; to the Committee on the District of Columbia.

646. A letter from the President of the Board of Commissioners of the District of Columbia, transmitting copies of reports showing and explaining property in the District of Columbia exempt from taxation during calendar year 1961, pursuant to Public Law 846, 77th Congress; to the Committee on the District of Columbia.

647. A letter from the Chairman, U.S. Civil Service Commission, transmitting a draft of a proposed bill entitled "A bill to amend section 7 of the Administrative Expenses Act of 1946, as amended, to provide for the payment of travel cost for applicants invited by a department to visit it for purposes connected with employment"; to the Committee on Government Operations.

648. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting reports concerning visa petitions which this Service has approved according the beneficiaries of such petitions first-preference classification, pursuant to the Immigration and Nationality Act, as amended; to the Committee on the Judiciary.

649. A letter from the Attorney General, transmitting a draft of a proposed bill entitled "A bill to provide penalties for certain offenses committed in connection with highway construction"; to the Committee on the Judiciary.

650. A communication from the President of the United States, transmitting a draft of a proposed bill entitled "A bill to provide an elected mayor, city council, and nonvoting Delegate to the House of Representatives for the District of Columbia, and for other purposes"; to the Committee on the District of Columbia.

651. A letter from the Deputy Administrator, National Aeronautics and Space Administration, transmitting a report showing adjustments in contracts authorized by the Administration during the calendar year 1962, pursuant to 72 Stat. 972; to the Committee on the Judiciary.

652. A letter from the Postmaster General, transmitting a draft of proposed legislation entitled, "A bill to repeal the provisions of law relating to the fixing by the Postmaster General, with the consent of the Interstate Commerce Commission, of rates of postage on fourth-class mail"; to the Committee on Post Office and Civil Service.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. BOLLING: Committee on Rules. House Resolution 305. Resolution for consideration of H.R. 12, a bill to increase the opportunities for training of physicians, dentists, and professional public health personnel, and for other purposes; without amendment (Rept. No. 184). Referred to the House Calendar.

Mr. SISK: Committee on Rules. House Resolution 306. Resolution for consideration of H.R. 1762, a bill to promote the coordination and development of effective Federal and State programs relating to outdoor recreation, and for other purposes; without amendment (Rept. No. 185). Referred to the House Calendar.

Mr. SISK: Committee on Rules. House Resolution 307. Resolution for consideration of H.R. 1989, a bill to authorize the government of the Virgin Islands to issue general obligation bonds; without amendment (Rept. No. 186). Referred to the House Calendar.

Mr. SISK: Committee on Rules. House Resolution 308. Resolution for consideration of H.R. 3120, a bill to simplify administration of the Lead-Zinc Small Producers Stabilization Act of October 3, 1961 (75 Stat. 766); without amendment (Rept. No. 187). Referred to the House Calendar.

Mr. SISK: Committee on Rules. House Resolution 309. Resolution for consideration of H.R. 3845, a bill to amend the Lead-Zinc Small Producers Stabilization Act of October 3, 1961 (75 Stat. 766); without amendment (Rept. No. 188). Referred to the House Calendar.

Mr. OLSEN of Montana: Committee on Post Office and Civil Service. H.R. 1159. A bill to amend the Classification Act of 1949 to authorize the establishment of hazardous duty pay in certain cases; with amendment (Rept. No. 189). Referred to the Committee of the Whole House on the State of the Union.

Mr. HENDERSON: Committee on Post Office and Civil Service. H.R. 1819. A bill to amend the Federal Employees Health Benefits Act of 1959 to provide additional choice of health benefits plans, and for other purposes; without amendment (Rept. No. 190). Referred to the Committee of the Whole House on the State of the Union.

Mr. UDALL: Committee on Post Office and Civil Service. H.R. 3517. A bill to amend the Retired Federal Employees Health Benefits Act with respect to Government contribution for expenses incurred in the administration of such act; without amendment (Rept. No. 191). Referred to the Committee of the Whole House on the State of the Union.

Mr. OLSEN of Montana: Committee on Post Office and Civil Service. H.R. 3545. A bill to amend section 131 of title 13, United States Code, so as to provide for taking of the economic censuses 1 year earlier starting in 1968; without amendment (Rept. No. 192). Referred to the Committee of the Whole House on the State of the Union.

Mr. DANIELS: Committee on Post Office and Civil Service. H.R. 3612. A bill to define the term "child" for lump-sum payment purposes under the Civil Service Retirement Act; without amendment (Rept. No. 193). Referred to the Committee of the Whole House on the State of the Union.

Mr. HAYS: Committee on Foreign Affairs. H.R. 5207. A bill to amend the Foreign Service Buildings Act, 1926, to authorize additional appropriations, and for other purposes; without amendment (Rept. No. 194). Referred to the Committee of the Whole House on the State of the Union.

Mr. SELDEN: Committee on Foreign Affairs. Report pursuant to House Resolution 55 pertaining to Castro Communist subversives in the Western Hemisphere, (Rept. No. 195). Referred to the Committee of the Whole House on the State of the Union.

Mr. FARBSTEIN: Committee on Foreign Affairs. Report pursuant to House Resolution 55 on Arab refugees in Palestine; (Rept. No. 196). Referred to the Committee of the Whole House on the State of the Union.

Mr. COOLEY: Committee on Agriculture. H.R. 5067. A bill to amend the Agricultural Adjustment Act of 1938, as amended; with amendment (Rept. No. 197). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BURKHALTER:

H.R. 5454. A bill to amend the Internal Revenue Code of 1954 to allow a taxpayer in certain cases to deduct as a medical expense the additional cost of modifying or specially equipping an automobile to permit its use and operation by an individual (himself, his spouse, or a dependent) who is physically handicapped; to the Committee on Ways and Means.

By Mr. CELLER:

H.R. 5455. A bill to enforce constitutional rights and for other purposes; to the Committee on the Judiciary.

H.R. 5456. A bill to extend for 4 years the Commission on Civil Rights as an agency in the executive branch of the Government, to broaden the scope of the duties of the Commission, and for other purposes; to the Committee on the Judiciary.

By Mr. DAVIS of Georgia:

H.R. 5457. A bill to amend section 302(h) of the Career Compensation Act of 1949 with respect to the payment of quarters allowances; to the Committee on Armed Services.

H.R. 5458. A bill to amend the Soldiers and Sailors Civil Relief Act of 1940 to permit civil actions against members of the Armed Forces for support of their spouses and children; to the Committee on Veterans' Affairs.

By Mr. DOLE:

H.R. 5459. A bill to amend section 1(14)(a) of the Interstate Commerce Act to insure the adequacy of the national railroad freight car supply, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. FINO:

H.R. 5460. A bill to amend title 38, United States Code, to provide free insurance protection for members of the Armed Forces serving outside the United States; to the Committee on Veterans' Affairs.

By Mr. FULTON of Pennsylvania:

H.R. 5461. A bill to promote the security and welfare of the people of the United States by providing for a program to assist the several States in further developing their programs of general university extension education; to the Committee on Education and Labor.

H.R. 5462. A bill to amend the Internal Revenue Code of 1954 to allow a taxpayer a deduction from gross income for tuition and other expenses paid by him for his education or the education of his spouse or any of his dependents; to the Committee on Ways and Means.

By Mr. GIBBONS:

H.R. 5463. A bill requiring all clerks hired by Members of the House of Representatives to perform compensated services at certain specified places; to the Committee on House Administration.

By Mr. HALEY (by request):

H.R. 5464. A bill relating to the Indian heirship land problem; to the Committee on Interior and Insular Affairs.

By Mr. HARVEY of Indiana:

H.R. 5465. A bill to amend the Internal Revenue Code of 1954 to provide an additional income tax exemption for each dependent who is a full-time undergraduate student at a college or university; to the Committee on Ways and Means.

By Mr. MILLER of California:

H.R. 5466. A bill to authorize appropriations to the National Aeronautics and Space Administration for research, development, and operation; construction of facilities; and for other purposes; to the Committee on Science and Astronautics.

H.R. 5467. A bill to amend title 38, United States Code, to provide for the payment of pensions to veterans of World War I and their widows and dependents; to the Committee on Veterans' Affairs.

H.R. 5468. A bill to provide credit or refund of self-employment tax in certain cases; to the Committee on Ways and Means.

By Mr. PELLY:

H.R. 5469. A bill to amend the Internal Revenue Code of 1954 with respect to the liquidation of corporations; to the Committee on Ways and Means.

By Mr. RHODES of Arizona:

H.R. 5470. A bill to incorporate the Young Engineers and Scientists of America, for the purposes indicated by Public Law 85-875; to the Committee on the Judiciary.

By Mr. ROOSEVELT:

H.R. 5471. A bill to establish the U.S. Academy of Foreign Affairs; to the Committee on Foreign Affairs.

By Mr. ROSENTHAL:

H.R. 5472. A bill granting exemption from income tax in the case of retirement annuities and pensions; to the Committee on Ways and Means.

H.R. 5473. A bill to increase the personal income tax exemptions of a taxpayer (including the exemption for a spouse, the exemption for a dependent, and the additional exemption for old age or blindness) from $600 to $1,000; to the Committee on Ways and Means.

By Mr. ST. ONGE:

H.R. 5474. A bill to amend the Career Compensation Act of 1949 with respect to the payment of quarters allowances to enlisted members; to the Committee on Armed Services.

By Mr. SENNER:

H.R. 5475. A bill to provide for the construction and improvement of certain roads on the Navajo and Hopi Indian Reservations; to the Committee on Interior and Insular Affairs.

By Mr. WATSON:

H.R. 5476. A bill to amend titles 10 and 32, United States Code, with respect to technicians of the National Guard; to the Committee on Armed Services.

H.R. 5477. A bill to authorize and direct the Administrator of General Services to convey certain surplus property to the Aiken County Historical Commission for use as a historic monument; to the Committee on Government Operations.

By Mr. YOUNG:

H.R. 5478. A bill authorizing a survey of the Frio River in the vicinity of Three Rivers, Tex., in the interest of flood control and allied purposes; to the Committee on Public Works.

By Mr. CAREY:

H.R. 5479. A bill to provide Federal assistance to schools in the initiation of educational programs for the preservation of our national heritage; to the Committee on Education and Labor.

By Mr. EVINS:

H.R. 5480. A bill to amend the Small Business Act, and for other purposes; to the Committee on Banking and Currency.

By Mr. GROSS:

H.R. 5481. A bill to provide for more uniform application of section 4369 of title 39, United States Code, which pertains to filing of information relating to second-class mail publications; to the Committee on Post Office and Civil Service.

By Mr. HARRIS:

H.R. 5482. A bill to amend the Public Health Service Act to provide a grant program for the prevention and control of dental diseases and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. PERKINS:

H.R. 5483. A bill to amend section 2 of the Railroad Retirement Act of 1937 to permit individuals who are permanently disabled for work in their regular occupation to receive annuities after the completion of 10 years of service, and to permit the payment of a spouse's annuity to the wife of individuals who are retired for disability, without regard to the age of the individual or the wife; to the Committee on Interstate and Foreign Commerce.

H.R. 5484. A bill to amend the Railroad Retirement Act of 1937 to provide an increase of 10 percent in pensions and annuities paid to retired employees and an increase of 20 percent in annuities paid to widows of deceased employees; to the Committee on Interstate and Foreign Commerce.

By Mr. ROUDEBUSH:

H.R. 5485. A bill to amend title 38, United States Code, to provide a conclusive presumption of service connection in the case of the death of certain veterans who have suffered from service-connected total disabilities for 15 or more years; to the Committee on Veterans' Affairs.

By Mr. SCHWENGEL:

H.R. 5486. A bill to extend the apportionment requirement in the Civil Service Act of January 16, 1883, to temporary summer employment, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. UDALL:

H.R. 5487. A bill to provide for more uniform application of section 4369 of title 39, United States Code, which pertains to filing of information relating to second-class mail publications; to the Committee on Post Office and Civil Service.

By Mr. VAN DEERLIN:

H.R. 5488. A bill to amend section 411(a) of title 38, United States Code, to increase the rates of dependency and indemnity compensation payable to widows of veterans dying from service-connected disabilities; to the Committee on Veterans' Affairs.

By Mr. CHARLES H. WILSON:

H.R. 5489. A bill to authorize the establishment of a Youth Conservation Corps to provide healthful outdoor training and employment for young men and to advance the conservation, development, and management of natural resources and recreational areas; and to authorize State and community youth employment programs; to the Committee on Education and Labor.

By Mr. MORGAN:

H.R. 5490. A bill to amend further the Foreign Assistance Act of 1961, as amended, and for other purposes; to the Committee on Foreign Affairs.

By Mr. CAREY:

H.R. 5491. A bill to amend the Internal Revenue Code of 1954 to allow income tax deductions for certain payments to assist in providing for the education of the taxpayer, his spouse, or a dependent; to the Committee on Ways and Means.

By Mr. FINDLEY:

H.R. 5492. A bill to amend section 1(14) (a) of the Interstate Commerce Act to insure the adequacy of the national railroad freight car supply, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. GURNEY:

H.R. 5493. A bill to provide for the tariff classification of certain particleboard; to the Committee on Ways and Means.

By Mr. LINDSAY:

H.R. 5494. A bill to provide for the establishment of a Federal Advisory Council on the Arts to assist in the growth and development of the fine arts in the United States; to the Committee on Education and Labor.

By Mr. ROBISON:

H.R. 5495. A bill for the relief of the city of Binghamton, N.Y.; to the Committee on the Judiciary.

By Mr. THOMPSON of New Jersey:

H.R. 5496. A bill to provide for the establishment of a Federal Advisory Council on the Arts to assist in the growth and development of the fine arts in the United States; to the Committee on Education and Labor.

By Mr. UDALL:

H.R. 5497. A bill to amend title V of the Agricultural Act of 1949, as amended, and for other purposes; to the Committee on Agriculture.

By Mr. ASPINALL (by request):

H.R. 5498. A bill to promote the sale and beneficial use of public lands by amending section 2455 of the Revised Statutes, as amended (43 U.S.C. 1171), and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. GAVIN:

H.R. 5499. A bill to amend the Area Redevelopment Act so as to provide preference in the awarding of certain Government contracts to contractors in areas of substantial and persistent unemployment; to the Committee on Banking and Currency.

By Mr. DONOHUE:

H.J. Res. 373. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. ROBERTS of Alabama:

H.J. Res. 374. Joint resolution proposing an amendment to the Constitution of the United States relating to the establishment of a Court of the Union, which shall reveiw the exercise of power or jurisdiction by the Supreme Court in certain cases upon demand of the legislatures of five noncontiguous States; to the Committee on the Judiciary.

By Mr. BOB WILSON:

H.J. Res. 375. Joint resolution providing for appropriate ceremonies in connection with the raising and lowering of the flags of the United States surrounding the Washington Monument; to the Committee on Armed Services.

By Mr. HAYS:

H. Con. Res. 129. Concurrent resolution expressing the desire of the Congress that the President of the United States study the feasibility of the reciprocal exchange of nonvoting delegates between the Congress of the United States and the Parliament of the Dominion of Canada; to the Committee on Foreign Affairs.

By Mr. LONG of Maryland:

H. Con. Res. 130. Concurrent resolution requesting the President to initiate action leading to the adoption of a United Nations resolution calling for the withdrawal of Soviet troops from Lithuania, Latvia, and Estonia; the return of exiles from these nations from slave-labor camps in the Soviet Union; and the conduct of free elections in these nations; to the Committee on Foreign Affairs.

By Mr. MORSE:

H. Con. Res. 131. Concurrent resolution providing for the annual observance of the Liberty Bell anniversary; to the Committee on the Judiciary.

By Mr. TUPPER:

H. Con. Res. 132. Concurrent resolution to request the President of the United States to urge certain actions in behalf of Lithuania, Estonia, and Latvia; to the Committee on Foreign Affairs.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

By Mr. DADDARIO: Memorial of the General Assembly of the State of Connecticut memorializing Congress and the President of the United States to honor Revolutionary War hero Lt. Col. William Ledyard by giving his name to a new submarine being built at Groton, Conn.; to the Committee on Armed Services.

By Mr. LIBONATI: Senate Joint Resolution No. 18 of the 73d General Assembly of the State of Illinois; to the Committee on the Judiciary.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. COHELAN:

H.R. 5500. A bill for the relief of Lt. John P. Mann; to the Committee on the Judiciary.

By Mr. COLLIER:

H.R. 5501. A bill for the relief of Wieslawa Marianna Borczon; to the Committee on the Judiciary.

By Mr. CONTE:

H.R. 5502. A bill for the relief of Giuseppe LaVersa; to the Committee on the Judiciary.

By Mr. CURTIN:

H.R. 5503. A bill for the relief of Jose J. Quintero; to the Committee on the Judiciary.

By Mr. DELANEY:

H.R. 5504. A bill for the relief of Vittorio Danovaro; to the Committee on the Judiciary.

H.R. 5505. A bill for the relief of Stavroula G. Regakos (Regakou); to the Committee on the Judiciary.

By Mr. DERWINSKI:

H.R. 5506. A bill to revive the office of General of the Armies of the United States and to authorize the President to appoint General of the Army Douglas MacArthur to such office; to the Committee on Armed Services.

By Mr. FEIGHAN:

H.R. 5507. A bill for the relief of Michal Goleniewski; to the Committee on the Judiciary.

By Mr. FINO:

H.R. 5508.A bill for the relief of Francesco Barone; to the Committee on the Judiciary.

H.R. 5509. A bill for the relief of Domenico and Giuseppa Di Roma and their minor child, Catalina; to the Committee on the Judiciary.

By Mr. FRELINGHUYSEN:

H.R. 5510. A bill for the relief of Carmela Macaro; to the Committee on the Judiciary.

By Mr. HALPERN:

H.R. 5511. A bill for the relief of Konstantin P. Veliskakis; to the Committee on the Judiciary.

By Mr. HUTCHINSON:

H.R. 5512. A bill for the relief of Mrs. Maria de Jesus Umali; to the Committee on the Judiciary.

By Mr. MURPHY of Illinois:

H.R. 5513. A bill for the relief of Fang-Tsun Kuo and his wife Agatha Mei-Tso Kuo; to the Committee on the Judiciary.

By Mr. SENNER:

H.R. 5514. A bill to direct the Secretary of the Interior to sell certain public lands in the State of Arizona; to the Committee on Interior and Insular Affairs.

By Mr. SIBAL:

H.R. 5515. A bill for the relief of Sebastiano Nicolia; to the Committee on the Judiciary.

By Mr. SMITH of California:

H.R. 5516. A bill for the relief of Leslie Freeworth (also known as Laszlo Freiwirth); to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

Foster's Test Ban Treaty Fallacies

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1963

Mr. HOSMER. Mr. Speaker, on April 2 Disarmament Agency Director William C. Foster directed a letter to Members of the Congress relating to the administration's test ban treaty proposals. I have sent the following letters to colleagues discussing the Foster letter. The American Security Council Washington report referred to in the first letter has been reprinted at pages 4914-4915 of the CONGRESSIONAL RECORD:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., April 4, 1963.

DEAR COLLEAGUE: If a nuclear test ban treaty will serve to reduce the world's risks, it is only an effective treaty which will do so—one which in fact stops nuclear weapons progress equally on both sides of the Iron Curtain.

Negotiation of an ineffective treaty would surrender the benefits an effective one might achieve.

Disarmament Agency Director William C. Foster wrote you on April 2 declaring "significant Soviet advances" by cheat testing "would require a series of tests." He added that under present U.S. treaty proposals "the probability is high that any meaningful series would be discovered by seismic and intelligence means."

I respectfully differ with Mr. Foster based on scientific facts brought to light during recent hearings on the Joint Committee on Atomic Energy.

The AEC's Director of Military Applications testified that all nuclear weapons of military interest except very large super H-bombs, which the Soviets have anyway, can be developed by underground tests which create seismic signals of very small size.

The Defense Department's seismologist testified about the inherent limitations on seismic instruments to detect and identify as cheat tests signals of this very small size (10 millimicrons and less).

The net effect of this testimony was that intelligent Soviet cheating would create signals which might be detected outside the U.S.S.R., but would be too small to identify as cheat tests. This is because such signals cannot be distinguished from the seismic signal of hundreds of small earthquakes occurring annually in Soviet territory.

Therefore, there exists a big hole for cheating and clandestine development of Soviet nuclear weapons superiority under U.S. nuclear test ban treaty proposals.

This big hole can be closed, and an effective treaty achieved, only by U.S. insistence on manned seismic stations inside the U.S.S.R. Unmanned black boxes won't do the job because they are not tamperproof.

Although Mr. Foster mentions "intelligence" as another means to spot cheating, when one recalls the difficulties even of finding out what is going on in nearby Cuba, wisdom dictates little reliance be placed on this alternative.

Sincerely,

CRAIG HOSMER,
Member of Congress.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., April 3, 1963.

Re nuclear test ban treaty.

DEAR COLLEAGUE: Yesterday you received a letter from the Director, Arms Control and Disarmament Agency, mentioning the risk of "surprise abrogation" inherent in test ban treaty.

This would be the situation if Soviet's prepared clandestinely in their laboratories for a vital testing series. This could be done over a period of years behind the secrecy of the Iron Curtain. The Soviet Union then would suddenly announce withdrawal from the treaty and capitalize on this surprise factor by conducting intensive tests.

The Director states the risk of Soviet achievement of nuclear superiority in this manner could be reduced by a U.S. policy of maintaining readiness to test in such eventuality.

However, the impossibility of keeping U.S. progress up under these circumstances was adequately stated by President Kennedy on March 2, 1962, in announcing U.S. test resumption following the breach of the then existing informal testing moratorium.

The President's words were as follows: "In actual practice, particularly in a society of free choice, we cannot keep top-flight scientists concentrating on the preparation of an experiment which may or may not take place on an uncertain date in the future. Nor can large technical laboratories be kept fully alert on a standby basis waiting for some other nation to break an agreement. This is not merely difficult or inconvenient—we have explored this alternative thoroughly and found it impossible of execution."

The Director's letter briefly mentions arguments for a test ban treaty. A more complete and fair discussion can be found at pages 3234-3236 of the CONGRESSIONAL RECORD of February 28, 1963.

The subject also is covered in the American Security Council's March 18, 1963, Washington Report which accompanies this letter.

Sincerely yours,

CRAIG HOSMER,
Member of Congress.

What Economy Program?

EXTENSION OF REMARKS

OF

HON. WILLIAM H. HARSHA

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1963

Mr. HARSHA. Mr. Speaker, I would like to take this opportunity to point out that the continual expansion of Federal governmental activities and increased civilian employment by the administration are the major reasons why Federal budgets and deficits continue to grow.

Since taking office, the present administration has added 132,901 civilian employees to the Federal payroll. In addition, the President requested 36,500 new jobs in his 1964 budget.

The average annual wage of these employees is $5,800 and this places an added burden of approximately $1 billion per year on the budget, excluding the necessary expenditures for equipment, office space, etc.

These facts belie the administration's claim of a vigorous Federal job economy program.

Bartlesville Wins All-America Honors

EXTENSION OF REMARKS

OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1963

Mr. EDMONDSON. Mr. Speaker, a signal honor was recently bestowed upon a community in Oklahoma's Second Congressional District when the National Municipal League and Look magazine designated the city of Bartlesville as a recipient of the annual All-America City awards.

This is a distinguished honor for which all Oklahoma is proud. Bartlesville is 1 of 11 American cities to be singled out for this outstanding recognition out of the nearly 70 applicants that were considered.

The basic criterion for selecting the award-winning cities is effective citizen action in addition to good local government.

Bartlesville well qualifies in this regard. The community leaders and citizens of Bartlesville have a fierce community pride and they work together on various projects which are greatly beneficial to the city and to the State of Oklahoma.

The junior chamber of commerce is an excellent example of the spirit and enthusiasm with which the citizens of Bartlesville tackle community projects.

The Jaycees spearheaded many projects, among them being a statewide drive that secured 220,000 signatures to a petition for reapportionment of the State legislature, thus forcing a referendum vote.

The April 23 issue of Look magazine, which highlights the All-America City winners, points up other Jaycee-community activities such as the successful 5-month campaign to raise $612,760 for a new 52-acre city park and an adjoining 160-acre 18-hole golf course.

Bartlesville residents enthusiastically supported this drive and all funds needed for the project were collected from local contributors. This same generous response was given to the local community fund and United Health-Service Fund campaigns.

The Bartlesville Jaycees are planning a celebration on April 19 and 20 in honor of the city's recent recognition, and an outstanding program is being formulated.

I had hoped to be on hand personally for the celebration and to congratulate the residents of Bartlesville personally, but will be unable to do so because I will be on active duty as a Naval Reserve officer and will be visiting Guantanamo and fleet and Marine units in the Cuban area at that time.

However, I know I speak for all Oklahomans in extending our sincere congratulations to the city of Bartlesville and to its citizens and leaders whose work and efforts have brought this great honor to our State.

Statement of Draper Daniels, National Export Expansion Coordinator, Before House Small Business Committee

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1963

Mr. EVINS. Mr. Speaker, at the hearings held last week by the House Small Business Committee, of which I have the honor to serve as chairman, it was refreshing to find that the President and his administration appear to be moving forward in assisting businessmen, and particularly small businessmen to enter into an expanded program of foreign trade. Although there is much that needs to be done, it appears that definite and positive progress have been made by the administration in this direction.

Mr. Draper Daniels, the newly appointed National Export Expansion Coordinator, appeared before the House Small Business Committee and, in explaining his functions, quoted the President's memorandum to various agencies involved concerning the functions of this new post. The memorandum quoted by Mr. Daniels and which explains the scope of his office follows:

> On July 12, I appointed Draper Daniels, of Illinois, National Export Expansion Coordinator.
>
> Stationed in the Department of Commerce and reporting to Secretary Hodges, the National Coordinator functions across departmental lines.
>
> Anything designed to facilitate the expansion of this country's export sales is his concern, and increased exports help our balance of payments which is the concern of all of us.
>
> Specifically, he is charged with coordinating all parts of the export expansion program, regardless of origin, with keeping the program focused on major and meaningful targets, and with moving it toward specific and possible goals on a workable timetable.
>
> All programs in being designed to aid export expansion should be reviewed with him and any new programs to be initiated should be reviewed with him.

Although Mr. Daniels has been in his post only since July of 1962, the presentation he made to our committee indicates that his office is already beginning to function effectively in coordinating activities of various agencies in relation to foreign trade. In summarizing his statement, Mr. Daniels briefly set out some of the accomplishments in this field, which I believe will be of interest to my colleagues and others. The conclusion of his remarks follows:

> This has been a long statement, Mr. Chairman, and I expect that you and the committee may be wondering, "What if anything has happened as a result of all this?"
>
> If I may summarize quickly as a result of the combination of things I have been talking about:
>
> One thousand one hundred and ninety-seven new exporters were introduced to international trade through Department of Commerce field offices and completed at least one successful international transaction in 1962.
>
> Businessmen attending export seminars in 1962, 36,000.
>
> The Department of Commerce Field Office Director estimates that 85 to 90 percent of these were small businessmen.
>
> Of all applications for export credit insurance through FCIA 17½ percent came from firms that had never before exported.
>
> U.S. exports increased to $20.901 billion, an increase of 4 percent.
>
> If this sounds good, let me assure you that it isn't nearly good enough. If we are to solve our balance-of-payments problem by increasing our exports, we need to do more than twice as well.
>
> I do not believe that this is at all impossible.

Conservation

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1963

Mr. ULLMAN. Mr. Speaker, the Honorable Ralph Harding, of Idaho, is already well known for his defense of the public interest in matters involving the protection of our great natural resources. In particular, his advocacy of sound soil conservation practices marks him an expert in this field which is of such vital importance to the continued prosperity of our Nation.

On March 29 Representative Harding appeared before the House Agriculture Appropriations Subcommittee in support of additional funds for conservation activity for the coming fiscal year. In his statement he spoke not just on behalf of the farmer who works the soil, but for everyone—producer, processor, and consumer. His remarks reflect my interest in the need for adequate funds for important conservation programs. Under leave to extend my remarks in the Record, I include his statement to the subcommittee.

We cannot hope to adequately meet the demands of the future unless we take the steps needed to conserve what we already have. Representative Harding asked that funds be provided to allow merely a realistic minimum program of conservation. I commend his statement to the attention of my colleagues.

Representative Ralph Harding Testimony Before House Appropriations Committee, Agriculture Subcommittee on Appropriations, March 29, 1963

Mr. Chairman and members of the subcommittee, I appreciate your courtesy in granting me sufficient time to come personally before your Agriculture Subcommittee on Appropriations to discuss with you again this year some of my concerns as I look over the funds which have been requested for conservation purposes in the fiscal 1964 budget.

First I would like to say that while I represent an agricultural State and serve on the House Agriculture Committee it is not strictly my interest in the farmers alone that brings me before your subcommittee today.

For conservation of our natural resources concerns all groups in our country, the businessman in the metropolitan area just as much as the farmer. There is no one who does not directly or indirectly benefit from the wise use of our soil and water resources.

That is why so many of us from widely divergent areas are following your actions on these appropriations so closely and hoping that adequate funds to meet the increasing needs for resource improvement and development can be provided.

My first concern this year, as last year, is over the fact that sufficient funds have not been set aside to increase the level of technical people to staff our soil conservation districts.

It is true that the fiscal 1964 budget sets aside an additional $1,072,500 for existing soil conservation districts. But let us take a close look, if we may, at what this amount means when it is distributed on a State basis.

In my State of Idaho, where soil conservation districts number 54 and some 18,598 persons are participating in resource improvement activities, I am informed that of this amount only $12,000 additional will be forthcoming if the total appropriation requested is approved.

And how many additional technicians can be added to these Idaho soil conservation districts where the man-years of technical assistance for each office are continually decreasing as the workload grows, not more than 1½ persons for the entire State.

Conservation district supervisors, both in my State and nationwide, report that each of these districts if adequately staffed would need 1½ additional persons or a total of 81 statewide.

Recognizing the great demands on the budget for other purposes, it was hoped by the National Association of Soil and Water Conservation Districts, as well as the Idaho association, that this staff increase of 1½ persons for each district might be accomplished over a 4-year period.

If this were the case, Idaho should have funds to employ 20 more technicians this year instead of the 1½ persons the present budget would allow.

Right here let me point out that in many ways our conservation program is an unusual one. Locally people organize themselves into conservation districts, choose unpaid leaders and then come to the Federal Government for the technical assistance they need through the Soil Conservation Service. These districts also seek financial help from local and State governments.

If adequate technicians are not available, it can only serve to stifle local initiative and progress. And I am afraid this will be the case in Idaho if we cannot soon provide our people with the aid they request and require.

States the Yellowstone Soil Conservation District in Fremont County in their annual report mailed to my office the middle of this month:

"Requests for assistance from the district are increasing quite rapidly from all phases of agriculture; irrigated, dryland, woodland, and range. The most consistent requests come from the irrigated section, because this area is within short distance of the district office. These requests alone are enough to keep the present work unit staff busy."

The Yellowstone district reports to me that they need at least two more technicians to handle their workload. And this report is typical of the workload situation in the other conservation offices in Idaho and throughout the Nation, I know.

Adequate technical people must be supplemented by sufficient soil and water research staff and facilities. They are part of the same package. One cannot operate efficiently and progressively without the other.

Yet a look at the fiscal 1964 budget reveals that not only are funds for the construction of new research facilities being curtailed, but inadequate funds have been set aside to utilize already existing facilities.

For example, the middle of this month at the Snake River Conservation Field Station at Kimberly, Idaho, we had a dedication and cornerstone laying ceremony with great enthusiasm evident among the participants over what this facility was going to add to the State and to the agricultural industry in particular from the soil and water research planned there.

The construction of the project is well ahead of schedule, I am told, and should be ready for occupancy in July, but the funds set aside in the budget for this plant would leave it standing nearly idle for at least a year. The budget request for an increase of about $50,000, along with other funds in the State which can be allocated for this field station, provide for only a little over $100,000 for this research facility which will benefit not only Idaho, but also our surrounding neighbors—Wyoming, Nevada, Oregon, Montana, Utah, and California.

I urge that the increase for the coming year be $643,300 required to complete the projected implementation instead of the $50,000 included in the budget.

Proving that conservation does concern more than the farmer, the Twin Falls, Idaho, Chamber of Commerce joins the conservation districts in this plea for more funds for the Snake River Field Station.

"We feel there must be some error in providing funds. At the present time the level of proposed appropriation would leave the plant standing substantially idle for at least a year. This would be most difficult to explain and understand."

Then there are the research facilities at Pullman, Wash., whose assignment is to investigate water erosion control on the frozen wheatland soils of the Palouse region. Although not located in my State, Idahoans, too, have much to gain from the results of these studies.

Therefore, I again join Idaho soil conservation experts in urging that the present budget request of $78,000 be increased by at least $200,000 which they tell me would "provide for a sizable effort to tie in with wheatland work proposed at the Snake River station at Kimberly and the proposed soil and water research activities at Pendleton, Oreg."

Last year when I appeared before the subcommittee I expressed my concern over the fact that the authorization for agricultural conservation program assistance for aiding farmers and ranchers in bearing the cost of accomplishing soil and water conservation measures had been reduced by $100 million from the $250 million of the previous year to $150 million.

The current budget again carries this proposed reduction. As you know, the committee last year restored this to $250 million. I commend you for this action and urge that this be done again.

Greater emphasis is also needed on weed control research which causes greater agricultural losses than any other pest or crop impediment.

In view of the fact that the University of Idaho is so ideally geared to research of this type, I hope that when such a facility is established it can be at this land-grant college.

Now I ask your subcommittee to look closely at the need for greater emphasis on watershed planning. As perhaps many of you read in the national press, Idaho was hit by raging floodwaters in the early spring of 1962 and again early this year.

The areas most severely damaged are small farming areas in need of the kind of structural and land treatment assistance which can be provided under the Public Law 566 program.

I am told by Lee T. Morgan, Idaho's State conservationist, that in our State alone we need to be engaged in watershed planning at at least double the current rate and the Idaho State Association of Soil Conservation Districts assures me this is true on a nationwide basis.

The water problems in Idaho are extremely complex and frequently it is necessary for the local people to call on the services of both the Soil Conservation Service and the Corps of Army Engineers. As we all know, the corps' work is devoted to the main water stems, but their efforts need to be supplemented by work upstream on the small watersheds.

The need for greater watershed planning is no more dramatically demonstrated than looking at what happened in the little community of Bancroft, Idaho, hit twice by the floodwaters since 1962.

It is the view of the supervisors of the local soil conservation district that an adequate watershed treatment program, carried out under Public Law 566, could have reduced the amount of runoff during these two floods almost in half and saved many damaged homes and businesses in their community.

I would prefer to provide funds now for adequate watershed development than to extend our tax money on flood recovery after the precious water has been lost and taken a terrific toll of public and private property.

The current budget request of $5½ million, which is the same amount as appropriated for fiscal year 1963, for watershed planning enables Idaho to handle only two water planning applications a year. The National Association of Soil Conservation Districts has asked that this be increased to $7½ million.

I urge the approval of these additional funds as does the Idaho Soil Conservation Association.

But watershed planning is just the beginning. Funds spent for planning are not of value unless these plans can be carried out.

The current requests for construction under the watershed program provides for only 36 new starts for 1964 nationwide. This is less than one per State I urge, as do conservation experts, that this be increased by $20 million.

It is noted that the budget request for conservation contains a new item—$6,275,000 for resource conservation and development projects. These were authorized last year under Public Law 87-703. It is the hope of the Secretary of Agriculture and the Administrator of the Soil Conservation Service that 10 projects can be initiated in 1964.

Several soil conservation districts in my State are interested in this and busy at work with county commissioners and other local people developing applications for consideration.

While one of these initial projects may not be located in my congressional district, nevertheless I want to support this item since indirectly any work of this type does benefit my State and the Nation generally.

I also note in going over the agricultural appropriation requests that there is only $500,000 in the budget for scabies control and eradication. While this departs somewhat from my emphasis on conservation needs, I did not want to overlook this opportunity to call your committee's attention to the need for adequate funds to eradicate this disease which attacks sheep.

My own State of Idaho has fortunately not had a scabies outbreak for many years, but as long as it exists in other areas it does constitute a threat to our sheep industry in the Western States.

Since the States contributed over $1 million last year to fighting scabies I would hope the Federal Government could more adequately supplement their efforts by at least matching the amount of money they are expending for eradicating this disease and eliminate the need for the amounts we spend annually for control purposes.

While I am sure your Subcommittee hears mostly requests for funds and gets few commendations on the vital decisions you must make on appropriations, I do want to take this opportunity to commend you for the action taken last year in strengthening the snow survey and water forecast phase of our program. This has proved of inestimable value in my State in that we have been able to increase the number of soil moisture stations, have added snow survey courses and currently provide our water users with the best forecasts that have ever been available.

With current reports indicating that the snow in Idaho this year is at the lowest level ever recorded, this information will enable our farmers to start immediately to use their short supply of water to the best possible advantage.

I hope you will allow me one last comment on the work on the Soil Conservation Service generally. In my travels throughout my congressional district I am continually impressed with the excellent reports I am given on the work which is being provided by these technicians and the local conservation districts. I have yet to hear one complaint which as your subcommittee members know is unusual for any program, be it Federal, State or local.

These soil conservation people are doing a tremendous job, and I hope the Congress can give them the monetary assistance they so desperately need to carry out their vital work programs.

The 41st Anniversary of Carl Follen Unit No. 103, Steuben Society of America

EXTENSION OF REMARKS

OF

HON. JOSEPH P. ADDABBO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1963

Mr. ADDABBO. Mr. Speaker, today, April 4, 1963, marks the 41st anniversary of the establishment of Carl Follen Unit No. 103, Steuben Society of America. This unit has its headquarters in my congressional district and most of its members reside in the Seventh Congressional District of New York.

The aims and purposes of the Steuben Society of America, in part, call upon the members to loyally support the Constitution of the United States of America by advocating the proper application of its provisions and inculcating the principles underlying true democratic government. Truly, it can be said that the Carl Follen Unit No. 103 has in every way exemplified this aim of the society. Its members are active in local, State, and National matters of importance to our citizenry. Many of them have risen to important positions in their community, State, and Nation. My predecessor in the House of Representatives, Albert H. Bosch, has been a member of this unit since he reached the age of 21.

It gives me pleasure today to congratulate Carl Follen Unit No. 103 on its 41st anniversary and wish for the membership many long years of continued good fellowship and service.

American Agriculture in a Changing World

EXTENSION OF REMARKS

OF

HON. RUSSELL B. LONG

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Thursday, April 4, 1963

Mr. LONG of Louisiana. Mr. President, recently the Senator from South Dakota [Mr. McGOVERN] was guest speaker at the Independent Bankers Association 29th annual convention at the Roosevelt Hotel in New Orleans. While in my State addressing this meeting, he delivered an interesting message with reference to the situation of agriculture in a changing world. I thought each Member of the Senate would be very much interested in what the Senator from South Dakota had to say on this occasion and I, accordingly, ask unanimous consent that the address be printed in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICAN AGRICULTURE IN A CHANGING WORLD

(Address by Senator GEORGE McGOVERN, Democrat, of South Dakota, at the 29th Annual Convention of the Independent Bankers Association, March 26, 1963)

In the early years of our national history, Thomas Jefferson observed that "the small landholder is the most precious part of the state."

Jefferson asserted his conviction that "those who labor in the earth are the chosen people of God, if ever He had a chosen people * * *."

Throughout our history, most Americans have shared to varying degrees Jefferson's lofty view of the importance of agriculture in American life.

It is true that for many decades the glitter of the city has held a strong attraction for American farm youth. No one has fully answered the question: "How ya gonna keep 'em down on the farm after they've seen Paree."

But at least until recent years, agriculture has occupied a high place, not only in public opinion, but also in the Congress of the United States.

Senator ELLENDER, of Louisiana, chairman of the Senate Committee on Agriculture, told me that when he first came to Washington 26 years ago, Senators considered agriculture and appropriations the two most desirable committee assignments open to any Senator.

Yet, this year I was the only Member of the Senate to request assignment to the Committee on Agriculture, and five Senators presently on the committee asked to get off. Only three of them were permitted to do so.

What has happened in recent years to explain this turn of events?

I suspect there are several factors.

First of all, agriculture has become an extremely complex industry afflicted with problems that are frustrating and difficult to solve.

Secondly, the farm population which embraced 9 out of 10 Americans in Jefferson's day now comprises only 8 percent of the American people. This inevitably spells a relative decline in the political power and public appeal of agriculture.

Thirdly, there is no organization to speak for agriculture with a single voice. This not only frustrates the friends of the farmer in Congress; it means that the farmer's story is told poorly to the Nation.

I am constantly appalled by the distorted views on agriculture of my urban friends. For example, they labor under the false impression that the farm price support program results in excessively high food prices to the American housewife. Actually, consumer food costs are $4 to $6 billion a year less than if farm prices had increased as much as prices in other parts of the economy in the last 8 years.

Again, urban taxpayers look askance at the $6 billion budget of the Department of Agriculture and assume that this is a gigantic subsidy to farmers. Of course, the major portion of this budget is not a farm subsidy at all. Much of it goes to finance such programs as the school lunch and special school milk program, our oversea food-for-peace program, the consumers meat-inspection program, repayable loans for rural electrification, management of our national forests, and storage fees to commercial storage companies.

Many city dwellers call for oversimplified "solutions" to the farm problem, such as eliminating the "marginal" farmer. This recommendation overlooks the fact that thousands of farmers who are now at the margin of financial failure would not be in that plight if they were receiving a fair price for their produce.

I know that the independent bankers of America are keenly aware of both the problems and the importance of agriculture. Because you are in daily association with the hopes, the anxieties, and the difficulties of our farm families, you know better than most of us the integral relationship between a healthy agriculture and a prosperous main street.

One of the most eloquent statements on the current challenge to American agriculture was delivered by one of your distinguished spokesmen, Mr. Pat DuBois, before a congressional committee a year ago. That statement refuted in unmistakable language the false notion that we can eliminate the farm problems simply by eliminating farmers.

As Mr. DuBois put it: "Move the people from the farms and you also remove the banks and other service institutions. The farmers came to the prairies before the towns and when the farmers are gone there will be no further need for the towns."

If we could assure the farmer a fair return on his products, it would be a powerful stimulus to business and industry. Prosperous farmers are the Nation's best customers for basic commodities such as steel, rubber, machinery, appliances, and a host of other items that keep the factory wheels turning. The most effective way I know to reduce unemployment, get the economy moving, and retard the exodus of young people from the rural areas to the cities is to strengthen our farm economy. In my view, if we could correct the imbalance between agriculture and the rest of the economy, it would do more to stimulate the economic life of the Nation than the President's proposed tax cut.

A strong and prosperous agriculture is essential not only for the welfare of our farm families and our domestic economy but in a broader sense because the food and fiber of America is one of our most valuable assets in today's world.

As the former director of the Nation's food-for-peace program, I came to a new appreciation of the enormous advantage this Nation has in our marvelous capacity to produce food.

Indeed, I believe that the productivity of American agriculture is coveted more by our competitors in Russia and China than any other U.S. asset.

Having traveled in most of the underdeveloped nations of the globe, I am equally convinced that the most serious barrier to the development of those nations is their backward agricultural system—inefficient production, lack of rural credit, and a decadent system of land ownership and taxation.

One of the major weaknesses of our foreign assistance program has been its overemphasis on industrial development at the expense of more urgently needed rural development. The capital investments we made in Western Europe under the Marshall plan were effective because Europe had the technical and administrative experience to use such aid efficiently. But those factors are missing in Latin America, Asia, and Africa. Basic rural and community development must come first. We take our own food production for granted, but this is the crying need in most of the rest of the world.

We have been awed by the achievements of our astronauts in outer space. But the world which these remarkable men left behind for a few hours is a world where two-thirds of the inhabitants till the soil with crude implements and primitive techniques—little changed in the past 3,000 years.

It is still the fate of most of the inhabitants of the earth to see their children suffer the listlessness of body, the dullness of mind, and the weariness of spirit that are the companions of malnutrition.

This paradox of plenty in the midst of hunger prompted Congress to enact in 1954 one of the most imaginative laws ever placed on the U.S. statute books.

Public Law 480, passed with broad bipartisan support, made American surplus food available to friendly countries who were unable to meet their needs through traditional commercial arrangements.

Since its passage in the summer of 1954, U.S. food and fiber valued at over $11 billion have moved to more than 100 countries and territories under concessional sales arrangements or as outright grants.

In the opening hours of his administration, President Kennedy gave new force to Public Law 480 by an Executive order creating a food-for-peace office in the White House which I was privileged to head. The President called for an expanded effort to use our "agricultural abundance as a national asset to meet foreign policy objectives."

This far-reaching Executive order has given a dynamic new dimenison to American food reserves. It has done much to replace the negative concept of surplus disposal with a positive view of U.S. agricultural abundance as a precious national asset. It has given the American farmer a vital stake in foreign policy. It has focused worldwide attention on the achievements of American agriculture in a world of food shortages. It has strengthened the political and moral position of the United States in international affairs.

There is, of course, a double thrust behind food for peace. It is first of all clearly in the self-interest of the American people to reduce costly storages, to protect our farm economy from price-depressing surpluses, to stimulate our shipping industry by massive food shipments, and to develop long-range commercial markets. Food for peace does all of these things.

But the other thrust behind food for peace stems from the philosophy of the scriptural admonition to "feed the hungry." No one can doubt the genuine, humanitarian desire of the American people to see our food reserves shared with the world's hungry.

There have been two especially important breakthroughs in food for peace recently which hold exciting future prospects. The first of these is the use of food to pay the wages of workers engaged in building schools, roads, clinics, and rural improvements.

Today in a dozen countries, American cereals and other foods are financing part of the wages of workers employed on valuable public works projects. Wheat and corn and rice and milk from across the Nation are being converted into classrooms, roadways, and better communities abroad.

A second challenging breakthrough is a greatly expanded oversea school lunch program. The most precious asset of any nation is its children. Their health and education are the twin foundations of social growth.

School lunches not only give new physical energy and health to the children, they result in sharply improved school attendance and academic performance. A pilot school lunch agreement with Peru resulted in a 40-percent increase in school attendance in its first year of operation. Eight and one-half million children in Latin America are now enjoying this American assisted school lunch program. Thirty-five million school children around the world are now participating in our food-for-peace program.

In Japan where the program has been operating since the end of World War II, the Japanese have now taken over the entire responsibility. Japanese children who learned at school to enjoy American milk and wheat flour and other U.S. commodities help explain why Japan has become our best dollar customer for American farm products.

America's agricultural know-how has not only resulted in invaluable contributions of food to a hungry world; it has also enabled us to offer vitally needed technical assistance to the developing countries. Through our overseas point 4 program and our Peace Corps units, we have offered the skills of hundreds of our trained agricultural technicians. We are also cooperating in the U.N. Food and Agriculture Organization and the Freedom From Hunger campaign.

When one considers that three-fourths of the people of the world are rural residents, it is clear that the amazing efficiency of the American farmer is our most appealing material asset. This is one area of competition in which we have no serious challenge from the Communist world. It is, perhaps, our greatest opportunity to lead the rural societies of Latin America, Africa, and Asia into the solid social and economic growth which makes peace and freedom possible.

I would like to think that more of our enormous reservoir of agricultural technicians, extension workers, and retired farmers might become involved for a time in pointing the rural people of the world toward higher standards of life.

There is one final challenge that I think is worthy of the careful thought of everyone concerned with the future of American agriculture—the European Common Market.

This new trading bloc composed of France, Italy, West Germany, Belgium, Holland, and Luxembourg—absorbed a third of our entire oversea dollar sales of agricultural produce in 1962. Other West European countries including the United Kingdom are seeking entrance to the community and will doubtless be admitted eventually.

The burning question for U.S. agriculture turns on whether or not this huge historical outlet for our farm produce will throw up a trade wall to hold out future agricultural shipments from the United States.

Recent actions by West Germany against American poultry and some of the pronouncements of the French are genuine cause for concern on the part of the United States. There is other solid evidence of European efforts to block imports of American farm products.

Our Government, and especially Secretary Freeman, has very properly sounded a strong note of protest against these efforts. If the United States were to lose a major part of our agricultural markets in Western Europe, it would have a disastrous impact on our farm economy and also on our balance of payments.

It is hoped that the Trade Expansion Act of 1962 will strengthen the President's bargaining power with the Common Market countries. It is imperative, however, that the President keep agriculture and industry in a package when he negotiates our arrangements with the Common Market. He must not grant trade concessions to European industrial producers who desire to sell in the United States until we are assured of favorable treatment for our normal agricultural exports to Europe.

In addition to vast economic aid to Western Europe after World War II, the American people have, for many years, financed a significant portion of the cost of Europe's defense. Our troops and weapons commitments to Berlin and the NATO forces have been most generous. These commitments have seriously affected our balance-of-payments position.

I think, therefore, that if necessary, the President should make it clear to the Common Market countries, that if they exclude our farm exports, we may find it necessary to withdraw part or all of our military forces from Europe. The defense of Europe is now primarily a European responsibility in any event, and we can permit no further deterioration of either our balance-of-payments position or our agricultural economy.

The trade negotiations ahead will not be easy, especially in view of Mr. de Gaulle's apparent desire to use French agriculture as his chief instrument in establishing a Western Europe that is much more independent of the United States.

But in the long run, if our negotiators are tough and intelligent, we can face the future in the firm knowledge that the unparallelled efficiency of American agriculture will assure us of an expanding trade.

Nearly a quarter of a century ago, the Department of Agriculture published a great yearbook entitled, "Farmers In a Changing World." In a postscript to the foreword of that 1940 publication, the editor identified the underlying theme of the book as the necessity in the modern world for constant and adequate adjustment to change.

And he added: "The fundamental problems of our agriculture are not likely to be lessened by the changing international situation. They are more likely to be intensified, and there will be more need than ever to meet them with courage and intelligence in order that we may strengthen our country to the utmost."

I can think of no more fitting words on which to conclude this consideration of the prospects facing our farmers in a changing world.

Why Shackle Cuban Freedom Fighters?

EXTENSION OF REMARKS

OF

HON. JOHN O. MARSH, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1963

Mr. MARSH. Mr. Speaker, patriotic anti-Castro Cubans—in the United States, in Latin America, in their unhappy homeland—must harbor feelings of bewilderment, frustration, and anger after reading the stern statements of our State Department spokesman in regard to Alpha 66 raids on Cuba, and noting the extraordinary measures being taken by our Government to curb these forays.

Cubans who live for the day of their country's liberation may be able to appreciate the undesirability of open encouragement of these harassing tactics, but they must be mystified by this strong condemnation from the Government which once led them to bitter disappointment at the Bay of Pigs.

As long as Alpha 66 is going it alone, why could not our State Department spokesmen content themselves with the simple statement, "We don't know anything about it"?

Proposed Shift of the Internal Revenue Service From New York to Boston

EXTENSION OF REMARKS

OF

HON. JOHN W. WYDLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1963

Mr. WYDLER. Mr. Speaker, I am strongly opposed to the proposed shift of the Internal Revenue Service office from New York to Boston, and, while I believe in more efficient Government operations, find it difficult to understand how moving operations to the area of lesser demand will save money. It appears to me that just the opposite will be the result.

The Senate Finance Committee will meet in executive session tomorrow, April 5, to study the matter, and I have made my views known to that august body, recommending that the Secretary of the Treasury be requested to reconsider this decision.

The text of my letter to Chairman Byrd is submitted for the future consideration of my colleagues:

> I want to place my views and recommendations before the Senate Finance Committee for consideration at the executive session tomorrow, April 5, being held to investigate the reasons behind the removal and transfer of the New York City regional internal revenue office to Boston.
>
> The announced reason is that a consolidation of the two district offices will save money. If this is true, I think it would also be true that more money will be saved by consolidating the much smaller district into the much larger district.
>
> The logic of this, it is argued, is upset by the proximity of the Boston site to the Record Center. I submit that unless the proximity is such that material is under the same roof no substantial saving will be realized for this reason.
>
> The plain fact is that the New York district is the main district, and geographically is much better located than the proposed Boston area.
>
> I have just been informed that although it has been publicly stated that the Secretary of the Treasury is reviewing this matter, the entire transfer is proceeding without delay. New York's top officials were sent to Boston on March 15 to arrange the transfer, and on April 3 officials from Boston will come to New York so that plans might be completed by May 1. It would appear that the Secretary's announcement may just be an instance of managed news.
>
> I request the Senate Finance Committee to ask the Secretary of the Treasury to reconsider this decision.

Dollar Benefits of Youth Conservation Corps Work in National Forests

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1963

Mr. ULLMAN. Mr. Speaker, recently I wrote to the Secretary of Agriculture to see if estimates could be made of the dollar benefits that would result from the work of a Youth Conservation Corps in our national forests. I found his answer to be rather startling.

A very conservative estimate by the Forest Service indicates that the direct and indirect dollar benefits of a Youth Conservation Corps would be about $7,000 per enrollee as compared to the annual cost per enrollee of $3,895.

I think my colleagues would be interested in reading the Forest Service's full report. Under unanimous consent, I insert in the Congressional Record a copy of the report along with copies of my correspondence with the Agriculture Department:

April 2, 1963.

Hon. Orville L. Freeman,
Secretary of Agriculture,
Department of Agriculture,
Washington, D.C.

Dear Mr. Secretary: As you know I have joined with other of my colleagues in sponsoring legislation to authorize a Youth Conservation Corps. While it is my own feeling that the most significant argument for this legislation is the personal benefits for the individual enrollee, I am also quite aware of the great benefits that would result in the work of conserving our natural resources.

I would very much appreciate it if the Forest Service could make estimates of the actual dollar benefits that would result from the work of YCC members in the national forests. If possible, would you also include the delayed and indirect benefits such as eventual timber sales and recreational revenues.

With continued best wishes.

Sincerely yours,

Al Ullman,
Member of Congress.

U.S. Department of Agriculture,
Forest Service,
Washington D.C., April 3, 1963.

Hon. Al Ullman,
House of Representatives,
Washington, D.C.

Dear Mr. Ullman: This acknowledges your letter of April 2 to Secretary Freeman, who has referred it to us for reply.

Attached is a statement which has been prepared showing the potential benefits from a Youth Conservation Corps program. We believe that it will serve the purpose you had in mind in your inquiry to the Secretary.

Sincerely yours,

W. S. Swingler,
Acting Chief.

Possible Estimate of Dollar Benefits From Youth Conservation Corps Work

There is over 300,000 man-years of development work on the national forests that is available for accomplishment by a Youth Conservation Corps.

The direct financial revenues to the Treasury from the national forests, if all of this work was accomplished, would rise to over $200 million annually by 1972. Payments from national forest revenues for county schools and roads would increase correspondingly. The capital value of the timber, forage, and lands of the national forests would increase by about $2 billion.

The timber stand improvement and reforestation work would contribute materially to a long-term investment resulting in timber production of 21 billion board feet of sawtimber annually by the year 2000, worth $350 million annually in timber sales.

In addition to direct financial income to the United States as a result of national forest development, there will be both substantial secondary benefits and very real intangible benefits. Secondary benefits include such things as numbers of people employed directly on the program work and the harvesting of national forest timber and other products and the value added to those products by manufacture, distribution, and marketing.

In timber alone, it is estimated that for every dollar of national forest stumpage sold, the end products will be worth about $20 by the time they reach the ultimate consumer. The estimated employment directly associated with the utilization of timber harvested from the national forests will amount to about 800,000 man-years annually by 1972. This will be more than twice the current level.

Development of the recreation facilities on national forests would serve the recreationists who will be putting into trade channels by 1972, $1.5 billion for sporting equipment, transportation, licenses, lodging, and other items.

Development and improvement of the small and big game habitat and fishing waters by a Youth Conservation Corps would increase the use of many national forest areas by hunters and fishermen. It is estimated that fishermen and hunters spend about $10 for each man-day visit to national forests. Increase of this use through improvement of the wildlife habitat would put a large share of this man-day expenditure into the local economy.

Of the reservoir of national forest work available to a Youth Conservation Corps program and the resultant total benefits, the following examples indicate possible benefits attributable to the program.

On a national average, recreationists spend about $5.50 per person-trip day. It is estimated that national forest recreation visitors spend about half of this average, or $2.50 per man-day. Every family recreation unit constructed by a Youth Corps on the national forests, at an approximate cost of $1,000 per unit, would return approximately $1,060 annual expenditures by recreationists into the local economy in a year or two. It is estimated that a Youth Corps of 15,000 enrollees could conduct at least 12,000 family recreation units annually, which would return approximately $12 million into the local economy in a year or two.

Millions of acres of young growth timber stands on the national forests or of timber stands partially or completely denuded by fire, insects, diseases, or other causes will, when culturally treated, return $5,000 or more in 10 years on a $3,000 investment. There are nearly 30 million acres of national forests lands in need of such treatment. A 15,000 Youth Corps could accomplish about 2,000 man-years or $7 million worth of such work annually. This would

return about $11.7 million annually in 10 years.

Similar benefits can be indicated in wildlife habitat improvement to increase use of many national forest areas by sportsmen; watershed restoration to stabilize soil, improve streamflows, and enhance water quality; insect and disease control to prevent annual losses in timber of about $94 million annually; and forest road and trail maintenance and construction to increase public use and access to resources.

A very conservative dollar estimate of the direct and indirect benefits of a Youth Corps is a return of about $7,000 per enrollee or $7,000 for a $3,985 annual cost per enrollee.

A Voluntary Medical Care Plan for the Elderly

EXTENSION OF REMARKS

OF

HON. WILLIAM H. HARSHA

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1963

Mr. HARSHA. Mr. Speaker, one of my colleagues, the gentleman from Ohio, FRANK BOW, has had the foresight to present to this Congress a constructive program dealing with the problem of providing adequate medical care for our elderly citizens. The Bow bill is a progressive approach to the problem, meeting it head on and provides the care required by the free enterprise approach without the stigma of socialized medicine. On April 1, 1963, my distinguished colleague presented his program to the American Academy of General Practice at Chicago, Ill. In this speech he explains the merits of his bill and I am happy to include his speech in my remarks:

A VOLUNTARY MEDICAL CARE PROGRAM FOR THE ELDERLY

(Address of Representative FRANK T. BOW, of Ohio, before the American Academy of General Practice, at Chicago, Ill., April 1, 1963)

In his invitation to me, Dr. Rhoades suggested that I might be considered the middle-of-the-road member of this panel. Perhaps that is a fair description, because in almost every aspect of political philosophy I am certain I stand far to the right of Secretary Nestingen, and with respect to medical care for the elderly, I am certainly to the left of those who want to stand pat on the present laws or programs in this field.

Insofar as the provisions of my own legislation are concerned, I am neither left nor right of them but far out in front for I propose to do more and do it better than either of them.

As I said to some of you in Detroit a few weeks ago, you are entitled to an explanation of why FRANK BOW, a conservative member of the House Appropriations Committee, is here at all, for it is most unusual to find such a man sponsoring something drastically new in the field of social legislation.

GOVERNMENT CONTROL OF HEALTH CARE

Let me say, first, that I have been concerned by efforts to federalize—or nationalize or socialize, you can choose your own term—the health care of this Nation for many years. My interest was stimulated 16 years ago when I became the counsel of the Harness Committee, a congressional committee investigating the lobbying activities of Federal agencies. One of the worst offenders of that era was the Federal Security Agency, predecessor of the Department of Health, Education, and Welfare. Oscar Ewing, Chief of the Agency, was engaged in a widespread lobbying campaign to place the Federal Government in control of all health services of the United States and guarantee cradle-to-the-grave security for every American, the object of his affections was the old Wagner-Murray-Dingell bill. His principal agent, who has now returned to Government as a close associate of my fellow panelist, was Assistant Secretary Wilbur Cohen.

The Forand bill of several years ago, the King-Anderson bill of the 87th Congress, and the present Kennedy bill are the direct descendants of the Wagner-Murray-Dingell measure.

When it was discovered that Americans were not ready to accept Government control of all medicine, and compulsory health insurance for everyone, the approach was modified in the Forand bill to include everyone who receives social security benefits. And when the American people refused to buy that package, it was further modified to include only people over 65 who are covered by social security.

Each step of the way Mr. Forand and the other sponsors of the legislation assured their supporters that the retreat was temporary. They say that if we can get hospitalization for the aged under social security, we can get the next Congress to add doctor bills and house calls, and the next Congress to add widows and orphans, and so on, year by year, until we will cover everyone for every health need by a compulsory tax. That would be a sad day for the American people, for as I have often said, government medicine is not good medicine.

ELDERLY NEED PROTECTION

However, I find merit in the proposal to provide a special program to help retired men and women meet the cost of medical care. I am convinced that this is a serious problem and one that deserves the attention of the Federal Government. It is a problem because people who retire must live on reduced income, sometimes greatly reduced. They often lose the group health insurance benefits that protected them during their years of active work or, if they can afford it, they can continue the protection at higher individual rates. However, sadly enough, very many of our retirees cannot afford to pay the premiums necessary to obtain adequate protection.

Most of these people can get along insofar as the customary expenses of a modest or even frugal living are concerned. Their difficulty arises when they are confronted with an unusually large extra expense, such as that of a severe illness, and they simply cannot meet such additional expenses on retirement income.

As members of the medical profession, you know far better than I some of the hardships that older people encounter.

The administration proposal as presently advanced does not solve the problem. The Kerr-Mills law does not solve it, for these people are not medical indigents. They become so only after severe illness wipes out their resources.

It seemed to me that someone must develop a better plan than King-Anderson or Kerr-Mills, and that it should be a plan embodying these fundamentals:

1. It should be voluntary.
2. It should provide generous coverage to take care of major medical expenses, to the maximum possible extent.
3. It should avoid establishing a new Federal bureaucracy.
4. It should avoid Federal control or interference in health care.
5. It should cover everyone who cannot afford to take care of himself.
6. It should be supported by all of the people of the United States who pay taxes, just as almost every other national need is satisfied out of national income.
7. It should encourage family responsibility toward older people.

THE BOW BILL

The basis of the Bow bill is incentive. The incentive is found in tax credits. We state that the United States believes in medical care insurance for everyone. We believe that the special problems of retired people merit a special incentive to encourage insurance protection for them.

I would allow a tax credit up to $150 for each individual over 65 who is covered by a comprehensive medical care policy. The credit would be equal to the actual cost of premiums up to $150. In the income group covered by the bill, those with incomes less than $8,000 per year per couple, there are probably at least 2 million who could take advantage of this tax credit themselves.

Among the other 12 million, many, and I think the great majority, could obtain the same protection if someone else would buy the insurance for them. My bill offers them an incentive to do so. A son for his parents, or perhaps an older man for his widowed sister-in-law, could get a tax credit up to $150 if he provided the protection.

And finally, this, I think, is most important for the future, the tax credit would be made available to any employer who provides the protection for retired employees.

These are incentives that would work.

There will always be some who cannot take advantage of these incentives. For them the bill provides that a medical care insurance certificate with a value of $150 will be issued which may be used by the individual to enroll in an insurance plan. The certificate will be redeemed for cash by the Treasury from the insurance carrier who provides the protection.

PROTECTION AFFORDED

The entire plan would be administered insofar as the Government is concerned by the Internal Revenue Service. That service already handles the special exemptions for the aged. It handles millions of collections and refunds each year. It would be no great administrative burden to add this program.

My bill establishes the minimum benefits which must be included in a medical care insurance policy if the insured wishes to take advantage of the Government incentive or assistance.

These minimum benefits were developed with the help of experts in the insurance business. They inform me that either of the two plans spelled out in the bill could be offered for $150, although this is close to the pure premium cost. And they assure me that if Government assistance opens up a market of 14 or 15 million people, the competition for that market will make certain even richer benefits than the bill prescribes. Approximately half of these people already have some kind of health insurance, and they will be encouraged to provide better protection for themselves. The remainder will certainly take advantage of at least the minimum $150 package.

There are two plans, one a "first dollar" coverage which includes up to 90 days hospitalization, ancillary charges up to $120, physicians services, convalescent home care and surgical charges on the basis of a $300 fee schedule.

The second plan is a co-insurance plan with a deductible feature, which makes it possible to offer more comprehensive benefits.

Either plan offers the elderly person far more protection and assistance than is proposed by the administration bill.

The burden of the plan, on the Federal Government, would appear as a reduction in income rather than an added cost. And it would not be as expensive as my critics claim. If one multiplies $150 by some 14.5 million people the cost appears to exceed $2 billion. We must remember, however, that the protection provided would relieve Federal, State, and local governments of a great part of their current spending for medical care of the aged, and to a large extent it would eliminate the deductions for medical care that are now taken by elderly taxpayers. These considerations bring the actual loss of revenue down to approximately $1.25 billion. This is far more favorable than the unrealistic and far underpriced estimates of the cost of the President's program.

POLITICAL FACTS OF 1963

I regret that there are many people in this country, including many of my friends, who are willing to go along with me on tax incentives, but who draw the line when I propose taking care of those less fortunate who cannot take advantage of the tax incentives for themselves, because they have no income to be taxed, and who have no relatives or former employers able or willing to provide the insurance and take the credit. For some this appears to be too radical, and they tell me that these people can be cared for under the Kerr-Mills Act, or the excellent welfare programs of some States, or by the charity of individual physicians.

I can tell you this today just as surely as I can tell you that I enjoy sharing this fine meeting with you. We are going to do something to take care of the health problems of persons of small income over 65 on a private, voluntary, free enterprise system such as I have proposed, or we are going to have forced upon us a Federal compulsory health system with Federal control and direction of hospitals, doctors, nurses, and everything else connected with hospital care. The provisions of King-Anderson made this self-evident.

My friends who wish to stand pat on Kerr-Mills, those who each day must check nervously the attitudes of members of the House Ways and Means Committee or Senate Finance, those who rely on one or two men in one or the other of these committees to hold off socialized medicine, they are going to lose this battle unless they adopt some constructive alternative, something better.

And it must be done soon.

The Bow bill is not a perfect vehicle, but it is a vehicle around which can be built a satisfactory bill, a program that will serve its purpose, and one that will take the entire issue out of the political arena once and for all.

INADEQUACY OF PRESIDENT'S PLAN

How different would be the case if Congress were to enact the President's proposal.

As you know, he has modified it somewhat. He proposes to give an option on the kind and extent of hospital coverage an oldster can get. This is in answer to our criticism of the $90 deductible feature. The bill last year presumed that an indigent person who needed hospitalization could pay the first $90, and that is not true. Also, he is covering out of general revenue those old people who are not members of the social security or railroad retirement system, a concession to another point of criticism of his 1961 proposal.

The bill is admittedly inadequate. If it were enacted steps would be taken in the next Congress, as Mr. Forand has promised, to broaden the benefits and then to broaden the age group covered and these enlargements of the plan would be accepted and we would be on the way to complete Federal control of health care from the cradle to the grave. That is the alternative to something like the Bow bill.

SOCIAL SECURITY FINANCING

I would like to speak for a moment about financing the administration's proposal.

As you may know, it is supposed to be financed by an increase of one-half percent in the social security tax and an increase in the base to $5,200. This is expected to yield $1.3 billion per year. Social security estimates that the King-Anderson bill will cost only $1.06 billion per year, but these figures are open to serious challenge. Experts in the health insurance industry who have experience in this field estimate the first-year cost at $2.2 billion.

At best, social security financing is in precarious balance. If the health insurance experts are even half right, the proposed tax increase will fall far short of paying the bill. I am inclined to place my faith in the experts in this matter.

And what does that mean to the present system of social security benefits? Admittedly, the present payments are woefully inadequate and they become less adequate as this administration continues its inflationary course. The average retired woman worker receives $62.40 in benefits, the average aged widow $65.40, and the average retired couple $127.10. Social security was supposed to supplement other retirement funds, but in fact it has encouraged many to put off the thought of acquiring such funds.

Also, we must remember that the people of whom we are talking reached maturity about the time of the First World War, came home from war to encounter a bad recession, weathered a 10-year depression at about the time when they should have been in their years of highest earning power. It has been very difficult for the people of that generation to lay aside a great deal for retirement.

PRESENT PROGRAMS INADEQUATE

If we are going to increase social security taxes, we should do something about the present rockbottom benefits. We should do something about the widow who at age 55, having never worked a day, finds herself left on her own without benefits until she reaches 62. We should do something about the high school student whose orphan benefits run out at his 18th birthday, while he has perhaps a year of high school remaining, and who may be forced to drop out and go to work. We should continue those benefits until he graduates from high school. What about the man who is 10 years older than his wife, who retires at 65 when she is 55, and they must struggle along on his meager benefit until the wife's benefit becomes available. There is plenty of room for improvement in the present social security system if social security taxes can be raised, and I think it is dangerous indeed to ignore these needs and jeopardize the entire program by adding this hospitalization experiment to the load.

For there is a limit to what people will pay. Social security taxation is a levy against gross income. There are no deductions. It falls most heavily on the person whose income is least, on young people raising families, working people everywhere. Present law will increase it to 9¼ percent of the first $4,800 of gross income by 1966. Senator RIBICOFF, when he was Secretary of Health, Education, and Welfare, predicted that people would not be willing to pay more than 10 percent. Increase the base to $5,200 and the tax to support medicine, and we may have reached the limit on our social security program.

Perhaps I have been dwelling too much on why I believe it is important to reject the social security approach.

FREE ENTERPRISE SOLUTION

Let me close on a positive note. The cost of medical care is a problem of our old people. It can be solved without unnecessary Federal interference by using tax incentives and assistance and the facilities of the free enterprise health insurance carriers of the Nation. I believe this is the proposal that must win support of all people who believe, as I do, that big government is always the enemy of freedom and must be closely controlled by a people who wish to preserve their liberties.

If you agree with that philosophy, you will join me in rejecting absolutely every suggestion for a Government program that is not clearly required in the public interest. And this carries with it the obligation to propose comprehensive and constructive solutions, in accord with our ideas about liberty, whenever new problems clearly require Government intervention. It is easy to say "No" to everything but it is not always right.

I hope that I have contributed something, from the practical political viewpoint, to your thoughts about the medicare issue. I will welcome your comments and suggestions concerning my proposal, for I know that you who are so close to the problem will have a great deal to offer those of us who are dealing with the issue in the Congress.

Congress Should Restore Allotments for Servicemen's Families

EXTENSION OF REMARKS

OF

HON. WILLIAM L. ST. ONGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1963

Mr. ST. ONGE. Mr. Speaker, I am today introducing a bill to amend the Career Compensation Act of 1949 with respect to the payment of quarters allowances to enlisted members in the Armed Forces.

My bill seeks to correct a grave injustice that has been done to dependents and the immediate families of servicemen. The injustice, to be sure, was not committed intentionally, but it exists nevertheless and many of these dependents are now suffering the consequences.

On July 10, 1962, Public Law 87-531 was enacted by Congress to amend certain sections of the Career Compensation Act of 1949 and the Dependents Assistance Act of 1950. These changes went into effect on January 1, 1963. The major change is that under the new law noncommissioned officers in all branches of our Armed Forces, having 4 years of service or more, are no longer required to have a class Q allotment in effect for their dependents. In other words, the law gives the serviceman full authority for the disposition of his pay. If he so desires, he may arrange for continued direct payment to his dependents; if he chooses not to do so, he need not make such arrangements.

Since December 31, 1962, all class Q allotments have been terminated, except for certain enlisted members in the lower grades. The result is that many of the men in service failed to make the necessary arrangements for their dependents to receive the allotments they have been getting in the past. In recent weeks, I have received several complaints from the wives of servicemen who have young children and are dependent on these allotments for their subsistence.

What can such families do? In an information sheet prepared by one of the military services, we are told that the dependent may contact the serviceman's unit commander. If the serviceman, having been counseled, refuses to furnish direct support or initiate a class E allotment, "he renders himself subject to disciplinary action, including reduction to a grade in which a class Q allotment is mandatory and may be initiated without his consent."

This creates a difficult administrative problem for the military services and much unnecessary work. But the worst part of it is that the services can only try to impress the servicemen with the need for providing assistance to their families, they can take certain disciplinary action against men who refuse to do so, but they cannot force them to provide support. This is something that only a civil court can do.

In some communities, I understand, such families are turning for help to local welfare organizations and the Red Cross. Women with small children are becoming desperate in their efforts to make ends meet, after having been deprived of support. Some of these people have told me of their plight in person, others have written to me. I should like to quote from a letter of a woman in my district, who writes:

> Previous to January 1, I was receiving $137.10 regularly on the 5th day of each month. I had been receiving a regular allotment check for the past 9 years. Since the new ruling on allotments for dependents of servicemen, which was recently passed, my checks have been discontinued.
>
> I received an American Express check on February 5 in the amount of $100, and at that time I wrote to my husband's commanding officer requesting him to make arrangements for a definite and regular payment. I have not received anything since February 5. I understand it is entirely up to my husband to determine how much I am to receive and that it is his responsibility to see that it is sent to me.
>
> This seems unfair to me because, after all, I do have a small son (age 10) to support, a home to operate, and bills to pay. I must have a definite amount to plan on in order to meet my obligations. I know of several other servicemen's wives who are faced with the same problem. If our husbands do not choose to send us money, we have to worry about how we are to pay our bills.

If this situation becomes widespread, and I fear that it may, it can create great havoc in many families and lead to tragedies where the greatest victims will be the young children. This was not the intention of Congress when the law was enacted last year. Congress was simply trying to raise the quarters allowance for certain members of the Armed Forces and noncommissioned officers were given the freedom to provide voluntarily for their dependents without arbitrary action on the part of the Government. Congress meant well, but human nature being what it is, it did not work out so well for the families of these men. For reasons of their own, many of the men have terminated their assistance with the result that their families, their wives and children, are now suffering great hardship.

In view of the fact that Congress, directly or indirectly, was instrumental in bringing this situation about, I believe that immediate steps should be taken by Congress to rectify the situation. With every day's delay the problem will grow bigger and more difficult. The old system of mandatory allotments should be restored at once before disruption sets in with many families and tragedies ensue.

It is the purpose of my bill to restore the system of mandatory allotments for dependents of military personnel as it existed prior to January 1, 1963. Congress has made a mistake and should recognize it as such and correct it. I appeal to all my colleagues to request this correction before they are deluged with letters from families telling of their hardships. I appeal to the House Armed Services Committee, to whom my bill has been referred, to consider this bill in the nature of emergency legislation and to act on it at once.

The Warsaw Ghetto Uprising of 1943—Their Struggle for Freedom Shall Inspire Mankind for Centuries To Come

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1963

Mr. PUCINSKI. Mr. Speaker, the civilized world has never ceased to marvel at the undaunted courage of poorly equipped patriots who have risen in the face of impossible odds to confront callous oppressors. The Hungarian freedom fighters of 1956 and the Tibetan insurgents of 1959 are cases in point. But with these recent episodes of heroism freshly imprinted on our minds, let us not forget one of the most heart-rending tragedies in this century; namely, the uprising of the 40,000 Jews in the Warsaw ghetto who exactly 20 years ago this month defiantly chose to confront almost singlehandedly the mighty German war machine. They announced to a startled world that they would not die meekly as hundreds of thousands of their brethren had, sacrificial victims on the altar of Nazi superracism. Instead, they elected to die as martyrs, fighting the hated enemy, gun in hand, knowing full well there was little hope their uprising would succeed or that they themselves would live through the conflagration.

It is doubtful whether even a year previous to the uprising these stalwart defenders of human dignity realized the fate that would be forced upon them. They were fully acquainted with Nazi anti-Semitism, but they, like most of the world, could not believe that any human being could stoop to the barbarity and butchery which soon became synonymous with Nazi actions.

But the Nazi noose had been slowly suffocating the hapless remainder of the more than 3 million Jews of prewar Poland, whose ranks had been swelled by the addition of their coreligionists uprooted from their homes in Western Europe. Immediately after the defeat of Poland in the fall of 1939, the Germans had promulgated special laws for the Jews, who were all subject to forced labor and whose assets above a certain amount expropriated. Gradually other restrictions followed which curtailed their religious, economic, and personal freedom—freedoms which should be the inherent right of every human being. Jews were separated from their Aryan neighbors, being forbidden to buy or sell bread with them or doctor them. Every Jew above the age of 12 was compelled to identify himself with a Star of David on his clothing. Violators of these regulations were killed.

This policy of separation entered a new phase as the Nazi masters sought to effect their plan for mass annihilation of the despised Jews. On November 15, 1940, nearly half a million Jews in Warsaw were squeezed into a ghetto whose area of only 100 square city blocks was then sealed with brick walls 10 feet high and barbed wire fences. The Nazi masterminds sought to slowly starve their defenseless victims. Death and demoralization within the compound soon proved the effectiveness of their plan. With only a minority of the inmates employed, ration cards and thus food became exceedingly scarce, although those receiving provisions gave to their less fortunate neighbors. Besides starvation, overcrowding and the lack of sanitation facilities encouraged the spread of epidemics. Bodies were dumped into the streets to be carted away to a common grave. But the spirit of the oppressed Jews was not completely broken. A government sponsored by the Germans existed among them and social services such as schools, libraries, and even a symphony orchestra were kept alive.

This method of separation and starvation proved too slow for the Nazi killers. In the summer of 1942 they turned to more extreme ways of exterminating the inferior race. On July 22, the Germans ordered the Jewish Council to provide 5,000 Jews daily for deportation to labor camps in the east. Actually these Jews were to be sent to the extermination ovens of Treblinka and Auschwitz. Most Jews were skeptical, but some 40,000 were so demoralized that they lined up to receive the promised 7 pounds of bread and 2 pounds of marmalade with which the Germans had baited them. Of the dubious majority, those who did not succeed in escaping the trap were mercilessly beaten and dragged to the waiting railway cars if they resisted. The daily quota of Jews was raised first to 7,000 and then 10,000 per day. In October the Germans announced that henceforth only 40,000 ration books and jobs would be available instead of 120,000. The unlucky two-thirds were to join their brethren on the nightmarish journey to the dread concentration camps. By the end of that month, only about one-tenth of the original number or 50,000 Jews remained in the ghetto. The other 450,000 had either died of starvation or disease or been shipped to the east. Before the end of the year the area of the ghetto was greatly reduced, being split into two separate ghettos.

One might ask why it was that the Jews in the face of these Nazi provocations did not revolt until 1943 when numerically they were much weaker. Let us remember that before these requisitions, the horrors and the grisly intent of the concentration camps were not fully known.

No effective machinery for resistance or arms existed. It was only when hope died, when the remaining Jews no longer feared Nazi retaliation for their acts against all, especially the weak and the old, that they armed to resist. Then they knew that no matter what course was followed, all were doomed. Retaliation meant nothing. By that time generally the younger and physically more able were left to organize and arm a resistance movement.

The necessary machinery came into being with the formation of the Jewish Fighter Organization—ZOB—which ultimately encompassed all Jewish organizations from the Zionists to the Socialists. They were soon strong enough to assassinate some hated German officials which raised morale in the ghetto. But they were not yet strong enough to openly defy the Nazi master.

This stand could only be possible if arms could be obtained. The Polish resistance movements contributed some guns and ammunition and other weapons were bought, but in the face of German military might, they were still greatly underarmed. But their spirit of choosing death embattled against their German oppressors rather than a quiet end in a gas chamber compensated for much of their material weakness.

Their opportunity to strike back came on January 18, 1943, when the Nazis, after waiting 4 months, resumed their campaign of deportation against the remaining 40,000 Jews. To their surprise, they were met with pistols, hand grenades, and homemade gasoline bombs. In 3 days they quelled, but did not subdue the disturbance. The flame of resistance still burned brightly.

Each side knew that the final encounter was yet to come. The Jews used this period of quiet to further arm and organize themselves. Underground shelters, or bunkers, arms factories, and intercommunication lines were perfected. Defensive operations were subdivided and authority meted out by the central ZOB command. Another clash in March convinced the Germans that a new plan was needed. In the middle of April a new German commander, Gen. Juergen Stroop, arrived with orders to liquidate the ghetto. The Jews were ready to face him.

The clash came on April 19. The Germans, angry that only 200 Jews responded to their order for workers for the Trawniki concentration camp, determined to strike on, ironically, the day before the Passover. The reading of the Sedar gave the defiant defenders courage to repulse this new oppressor, just as they had stood up to Pharoah thousands of years before. The blue and white flag of David was rung up alongside of the flag of Poland as the Jews prepared to defend every tenement and every alley with their last drop of blood. Every Jew had an assignment. The ablebodied were at their battle stations, while the children were ready to run messages and the weak were guarding and distributing food.

The battle raged 12 hours. Deadly fire met and repulsed the German, Ukrainian, Polish, and Lithuanian police who had come to escort the Jews to their place of labor. The Germans retired, although some outlying buildings had fallen into their hands. Each side made preparations for the next round of fighting. Daring Jewish commandoes, dressed in captured German army uniforms, fell on Nazi arsenals to carry away badly needed ammunition. Later, again dressed in the stolen uniforms, they liberated the Polish, Jewish, and German prisoners from the Paiwak jail who then joined their benefactors to face the Nazi fire. Polish Socialists—non-Jews—crept into the ghetto to fight side by side with their Jewish compatriots.

Larger German forces now attacked the ghetto as Nazi planes swooped down to seek out the bunkers of the well entrenched defenders. Tanks rumbled forward, many to be blown up by Jewish suicide squads, clothed in the captured German uniforms, who crawled under them with hand grenades blowing themselves up along with the hated war machines. The Germans began to realize that the determined defenders could only be snuffed out with more systematic, coldblooded methods. A new battle would have to be fought for every block and bunker.

Since they cared little for saving the beleaguered survivors or the rows of houses, the Germans embarked on a policy of leveling the ghetto. Artillery was mounted outside the ghetto and heavy machineguns were installed on roofs of buildings near the Jewish quarter. Their bombardment was complemented by flamethrowers and incendiary bombs and hand grenades. The ghetto was a sea of flames. Victims fleeing the burning buildings were cut down. Blocks of houses were mined and blown up so that they could not become refuges for Jewish snipers. All persons found within shelters were massacred, sometimes with poison gas. During the day, the Germans invaded the ghetto, but at night, when the Jews often executed sorties against them, they left.

With ammunition running low, the Jews were forced to retreat turning from organized military maneuvers to guerrilla tactics. From the rubble of their buildings, they shot at the approaching Germans and emerged to lead forays against the enemy. On May 8, after a 2-hour battle, the Germans blew up the main operational bunker of the ZOB. All 200 defenders, including the main leaders, either died in the blast or were killed or committed suicide. A week later on May 16, the Germans dynamited the great Jewish synagogue. The Nazi General Stroop could report to his superiors in Berlin that there was no longer a Jewish quarter in Warsaw. However, this statement was not entirely correct. Although by the end of May only a flicker of resistance remained among the few remaining Jews who eked out a shadowy existence amongst the rubble, the last guerrillas were not wiped out until the end of September.

As to the survivors of this worst of all Nazi atrocities, the Germans gave no quarter. The sick in Jewish hospitals were shot in their beds. Except for the few that managed to escape and join the partisan forces, the remainder were shipped to the dreaded death camps. The city itself suffered greater destruction than in 1939 when the Germans conquered Poland. In the ghetto itself, only eight buildings remained standing—and these were not intact. But the price was not small. For the thousands of Jewish martyrs dead, the Germans had lost hundreds dead and a thousand wounded besides countless war material.

But more important, the true nature of Nazi savagery was starkly revealed to the world by this handful of doomed Jews who knew that they would lose. Under Nazi oppression, the Jews had turned the other cheek more than 70 times 7 times. But when their only choice was that between which kind of death, the Jews of the Warsaw ghetto did not hesitate. They scorned the passive death of the gas chambers or ovens of the Nazi concentration camps which were the reward for those Jews who managed to survive the inhuman train ride there, packed in railway cars for days. This method of destruction was the one chosen for them by a victor who, in typical Nazi fashion, showed a sadistic contempt for human values. Instead, these heroic Jews of Warsaw elected the death of martyrs, upholding not only their own pride and dignity, but that of the whole human race.

Mr. Speaker, the heroic struggle of these Jewish martyrs during the Warsaw gettto uprising shall serve as a monument to the courage of the Jewish people for centuries to come. As we pay tribute this month to their tremendous sacrifice in the cause of human dignity, let us resolve that the free world shall never again permit such genocide against any people because of their race, religion, or ethnic background. If this can be done, then their tragic death was not in vain but instead shall serve forever as a beacon, reminding mankind of its responsibility toward its fellow man.

A Plan Needed for Liberation of Cuba

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1963

Mr. ALGER. Mr. Speaker, the deterioration of our relations with the Cuban exiles and the apparent inability to cope with the Cuban situation stems from the apparent lack of any concrete plan by President Kennedy. In his usual manner of dealing with problems he confounds everyone by a series of conflicting statements emanating from the White House and through his brother, the Attorney General.

Since the Bay of Pigs disaster we have been told by the President, by his spokesmen, and by the Attorney General that we did promise air cover for the invasion, that we did not promise air cover, that we would support the freedom fighters in their struggle to liberate their homeland, that we would arrest any of them that tried it.

In a brave and heroic speech to the world a few days before the election last fall, the President demanded the removal from Cuba of Russian missiles and troops. The quarantine he called for turned out to be no quarantine nor blockade indeed. We never halted any ships and even allowed the first Russian vessel to proceed even though its cargo was oil, the most vital commodity necessary to the Castro economy. No on-site inspections were ever made to assure that the missiles had actually been removed. Months later we are still trying to get the Russian troops out of Cuba by appealing to Khrushchev to honor his pledges and accepting his word that they are being removed in spite of the fact that he has never been known to honor his word or any agreement.

At this point I would like to include an editorial from the Wall Street Journal pointing out the risks of the Kennedy inaction, and that the President must formulate and execute a plan of action to reimpose the Monroe Doctrine:

THE RISKS OF INACTION

President Kennedy is perfectly correct when he observes that it's pointless for people to just say we've got to "do something" about Cuba. And he is equally right in noting that a good deal has been done since October in terms of restricting trade and maintaining surveillance of the Communist island.

But these are not the issues which bother so many people. The causes of concern are an uneasy feeling that the administration is not telling all it safely could about Cuba, the unhappy spectacle of the U.S. Government bitterly fighting with the Cuban foes of Castro and, above all, the continued presence of Soviet troops with no apparent American plan for getting rid of them once and for all.

As former Vice President Nixon put it the other day, whether there are 12,000 or 17,000 Soviet troops in Cuba, Khrushchev's position "is firmer today than a year ago." Senator KEATING also says the precise number is somewhat beside the point; one Red soldier is too many. What matters is not Castro, who by himself would be just another pipsqueak dictator. Rather, the threat to all the Americas is Khrushchev in Cuba.

The New York Senator does, however, insist there has been practically no net reduction in the number since November, because the troops that have left have been replaced. Government officials retort in effect that it's easy to make such charges without documentation, and especially easy for political critics of the administration.

Unfortunately for that answer, the charges are coming from nonpolitical sources as well. For a notable example, from the New York Times' Ruby Hart Phillips, who spent 25 years in Cuba before being expelled by Castro in 1961 and who still remains in close touch as head of the Times' Miami bureau.

According to Mrs. Phillips' information, the Russian troops are being rotated, not taken out. Moreover, she declared flatly in a speech the other day that the missiles still remain in Cuba. "And I have not a doubt that they have a good submarine base and extensive submarine pens."

Such assertions, whether right or wrong, deserve more than an official brush-off. They could hardly be more serious; in Mrs. Phillips' view, unless Cuba is taken out of the Communist camp, all of Latin America is going to fall, country by country. Or, in Mr. Nixon's words, Khrushchev didn't spend a billion dollars merely for the purpose of acquiring Cuba; he has far bigger game in mind.

Nor do all those who are disturbed by administration policy take refuge in the "do something" generality. Mrs. Phillips is forthright enough; she says only force of arms will get communism out of Cuba. Many disagree, but it is a possibility that cannot be ruled out for all time.

Meantime Mr. KEATING, among others, advocates a number of further economic, diplomatic and military moves short of invasion. Certainly it does seem that, after facing up to Khrushchev last fall, it ought to be possible to demand the withdrawal of troops and weapons. It is hard to believe that it was necessary to lose October's initiative and move to the extreme of protecting Khrushchev's men from attacks by Cuban exiles.

Mr. Nixon may, perhaps, be charged with vagueness when he says the United States must make "a command decision to do whatever is necessary to force the removal of the Soviet beachhead." But his real point is that without such a decision, the problem can only get worse for us.

Will the risks of action, he asks, "be less in 6 months, 1 year, 2 years? If we allow Cuba to remain an example for Communist takeovers in other Latin American countries, the risks are certain to grow."

The issue is not, it seems to us, whether we should dispatch the Marines this minute. The deeply disquieting thing is the seeming absence of any real plan. Or if there has been any decision, for all the American people can tell, it is to accept an intolerable coexistence with Soviet conquest in our hemisphere.

Mr. Speaker, I think it is important to emphasize the points made in this editorial: First, the administration is not telling all it safely could about Cuba. Second, it is not Castro, it is Khrushchev. Khrushchev's position is firmer today in Cuba than it was a year ago. Third, there has been no significant decrease in Russian troops in Cuba. The Russian troops are being rotated, not taken out. Fourth, there is substantial evidence that missiles remain in Cuba and a good submarine base and submarine pens are in existence. Fifth, there is increasing evidence that other Latin American countries are in danger of being subverted by Khrushchev-Castro directed Communists. Sixth, and, in my opinion, most important, the seeming absence of any real plan by the Kennedy administration for freeing Cuba and getting the Russian aggressors out of this hemisphere.

The President, in his news conference today, complained that his critics have not come up with any concrete plan. A look at the RECORD any day of the week will disclose that many of us have been advocating a number of measures, short of military action, which can and must be taken. I would suggest as a starter that the United States recognize a Cuban Government-in-exile. Contrary to the President's disavowal of the importance of exile governments in today's press conference, we have only to point to the important role such governments played in rallying underground forces in occupied countries in World War II to remind him that once again he is wrong or does not understand history.

Another phase of a positive program which we could enact now is to support a massive propaganda effort to encourage the Cubans, within and without that country, to throw off their dictators. Support internal uprisings of the Cuban people and let them know that we will not fail them if they do accept our promise to support their efforts to win freedom. We should institute an effective blockade. From all available information it is apparent that if we were to cut off only the oil supplied to Cuba from Russia, the Castro government would be in immediate danger of collapse.

Yes, Mr. Speaker, Cuba can be freed and the Russian menace to the United States and this hemisphere can be eliminated if the President will quit the doubletalk and replace his high-sounding words with deeds and action. We can again take the initiative in winning the war in which Communist Russia is engaging us if the President will face the issue with courage and will trust the American people with the facts. He can electrify all those who believe in freedom and can reinspire the Cuban people to renew their fight for liberty if he will immediately impose the Monroe Doctrine and in no uncertain terms notify Khrushchev that all Russian troops and all Russian equipment and all Russian subversion must be removed from this area without further delay.

The people are ready to back you up, Mr. President. Are you ready to lead the Nation?

Of course the distasteful truth is that no action that President Kennedy initiates will be successful, if the President does not understand the need and reasons for it. The President disregards the dangers of Khrushchev controlling Cuba, the military buildup, the base for subversion of other nations, the submarines bases, and the continuing violation of the Monroe Doctrine and the sound reasons underlying this doctrine.

To be successful what is needed is a sound, consistent, firmly stated worldwide foreign policy of toughness and self-interest, then a consistent hemispheric policy and then consistent actions directed to freeing Cuba. Isolated single shot actions like the quarantine are worse than any action without a continuing, consistent, tough understandable policy.

The Kennedy policy of indecision, vacillation, inconsistency, appeasement, and accommodation is no basis on which to launch any new Cuban action.

The President's inability to see a clear course of action does not mean that such actions are not possible or are not seen by others.

Silver

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1963

Mr. WHITE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial of the Washington Post regarding the proposed repeal of the Silver Purchase Act and a letter I sent regarding the editorial:

[From the Washington Post, Mar. 21, 1963]

THE SILVER DOLLAR

We have come a long way since William Jennings Bryan used to orate about the "cross of gold" and demand the acceptance of silver as basic to our monetary system on a ratio of 16-to-1 with gold. Now Secretary of the Treasury Dillon has made a recommendation that, if approved by Congress, will diminish the importance of silver by switching from silver certificates to Federal reserve notes thus freeing 1.3 billion ounces of silver required by law to maintain $1 silver certificates in circulation. The recommendation is eminently sensible. Mr. Dillon points out that the Government's supply of silver for coinage will run out in 1965 unless it can free for use by the Government's mints some of the 1.3 billion ounces now lying useless in vaults. When the Government's supply runs out, it may have to buy silver in foreign markets, for the domestic production of silver is not sufficient to meet all demands.

Some of the silver producing States have long maintained a sentimental interest in silver dollars, along with a powerful bloc in Congress that prevented any modernization of our silver laws. The silver dollar is about as obsolete as the arguments of the silver bloc, and sentiment is strong for a revision of our laws concerned with silver in its relation to the monetary system. If something is not done, Mr. Dillon suggested even graver threats to silver coinage ahead. If the Government has to diminish its gold reserve still further by purchasing silver abroad, we may be faced with a common European expedient of using other cheaper metals. The silver bloc would hate the thin jingle of aluminum dimes and quarters. To forestall that hazard, let the silver laws be revised.

MARCH 21, 1963.

EDITOR, THE WASHINGTON POST,
1515 L Street NW.,
Washington, D.C.

DEAR SIR: It was a great pleasure for me to return to Washington and have the benefit of the generally fine editorial policy of the Post. However, the traditional aspirations for spring's first day turned to ashes this morning upon reading the editorial entitled, "The Silver Dollar."

I am sure that if more research had been spent on the proposed demonetization of silver, more than half the truth would have appeared in the editorial. Even a few minutes of reflection would have cleared up the confusion of silver dollars with silver certificates. Perhaps some study of the silver situation would have given the author of this unfortunate editorial some arguments, other than the ad hominen references to William Jennings Bryan and the bogeyman silver bloc, for the Treasury bill to replace silver certificates with Federal Reserve notes.

At the risk of being labeled the sole surviving representative of the powerful silver bloc in Congress, I would like to briefly point out some of the rational arguments against the Treasury Department's proposal in H.R. 4413. Silver has traditionally been, in this country, and in almost every other civilized nation, a monetary metal. The present drive to substitute currency that has 100 percent silver backing with notes which will have but 25 percent gold backing is aimed at complete demonetization of gold as well as silver. The recent spectacular rise in the price of silver has given a lever to the proponents of a completely managed currency system. However, I am disappointed that our Treasury's reaction is only one of panic, rather than reason.

Silver production now has but a 12 to 1 ratio with gold. The monetary price of silver at $1.29 per ounce represents an approximate ratio to gold of 27 to 1. Rather than irretrievably retire silver certificates, a more sensible approach would be to place the monetary value of silver in a more realistic relation to gold. I have suggested to the Banking and Currency Committee that a monetary value of $1.38 for silver would be a sound move at this time. This would involve no mechanical problems at all, since the monetary price of the silver in our coins is $1.38.

To replace $2 billion in silver certificates with Federal Reserve notes would cost the American taxpayer more than $50 million per year, since 75 percent of the backing for Federal Reserve notes is in the form of collateral, upon which the United States pays interest. It costs the taxpayer nothing to keep silver certificates in circulation; rather the Treasury has realized an economic profit on them every year since the enactment of the Silver Purchase Act.

The history of silver legislation is clouded with too much emotion. I believe it is time that the Congress approach the problem rationally and that is why I would like to see the Post apply its policy of thoroughness and objectivity to this legislation.

Sincerely,

COMPTON I. WHITE, JR.,
Member of Congress.

Action Now

EXTENSION OF REMARKS
OF

HON. ROBERT N. C. NIX

OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1963

Mr. NIX. Mr. Speaker, the time is now for immediate and drastic executive action, for accelerated legal procedures by the Attorney General, for positive congressional action to strengthen and extend the law by giving to the Attorney General the legal authority to protect the rights of the Negroes of Mississippi, as well as the rights of minorities everywhere in the United States, to the limit.

Mr. Speaker, I take this opportunity to solicit the aid of every Member of the Congress of the United States to join me now in protesting and denouncing the illegal actions on the part of the authorities of Mississippi and elsewhere insofar as the actions of those authorities in anyway hamper the constitutional rights of Negro citizens.

I call the attention of my colleagues to a long series of outrages suffered by Negroes of Mississippi and I emphatically state that these crimes cry out for positive and courageous action, not tomorrow, but now.

CHRONOLOGY OF VIOLENCE AND INTIMIDATION IN MISSISSIPPI SINCE 1961

1961

January 1, Greenville, Washington County: Two young white men rode a motorbike through a residential area and, according to the local police chief, fired a volley of shots into a group of Negroes. George Mayfield, 18, was seriously wounded in both legs; Percy Lee Simmons, 19, was shot in the right leg.

March 30, Jackson, Hinds County: Club-swinging police and 2 police dogs chased more than 100 Negroes from a courthouse where 9 Negro students were convicted for staging a sit-in demonstration. Several were struck by the clubs and at least one person was bitten by the dogs.

May 7, Jackson, Hinds County: Several white youths, riding in an open convertible, lassoed 9-year-old Negro Gloria Laverne Floyd with a wire and dragged her along the street. The girl suffered a deep gash in her head that required three stitches, cheek bruises, a laceration of her right shoulder, and burn marks on her neck. Police made arrests.

August 15, Amite County: Robert Moses, Student Nonviolent Coordinating Committee—SNCC—registration worker, and three Negroes who had tried unsuccessfully to register in Liberty, were driving toward McComb when a county officer stopped them. He asked if Moses was the man "who's been trying to register our niggers." All were taken to court and Moses was arrested for "impeding an officer in the discharge of his duties," fined $50 and spent 2 days in jail.

August 22, Amite County: Robert Moses went to Liberty with three Negroes, who made an unsuccessful attempt to register. A block from the courthouse, Moses was attacked and beaten by Billy Jack Caston, the sheriff's first cousin. Eight stitches were required to close a wound in Moses' head. Caston was acquitted of assault charges by an all-white jury before a justice of the peace.

August 26, McComb, Pike County: Hollis Watkins, 20, and Elmer Hayes, 20, SNCC workers, were arrested while staging a sit-in at the F. W. Woolworth store and charged with breach of the peace. They spent 36 days in jail.

August 27 and 29, McComb, Pike County: Five Negro students from a local high school were convicted of breach of the peace following a sit-in at a variety store and bus terminal. They were sentenced to a $400 fine each and 8 months in jail. One of these students, a girl of 15, was turned over to juvenile authorities, released, subsequently rearrested, and sentenced to 12 months in a State school for delinquents.

August 29, McComb, Pike County: Two Negro leaders were arrested in McComb as an aftermath of the sit-in protest march on city hall, charged with contributing to the delinquency of minors. They were Curtis C. Bryant, of McComb, an official of the NAACP, and Cordelle Reagan, of SNCC. Each arrest was made on an affidavit signed by Police Chief George Guy, who said he had information that the two "were behind some of this racial trouble."

August 30, McComb, Pike County: SNCC Workers Brenda Travis, 16, Robert Talbert, 19, and Isaac Lewis, 20, staged a sit-in in the McComb terminal of the Greyhound buslines. They were arrested on charges of breach of the peace and failure to obey a policeman's order to move on. They spent 30 days in jail.

September 5, Liberty, Amite County: Travis Britt, SNCC registration worker, was attacked and beaten by whites on the courthouse lawn. Britt was accompanied at the time by Robert Moses. Britt said one man hit him more than 20 times. The attackers drove away in a truck.

September 7, Tylertown, Walthall County: John Hardy, SNCC registration worker, took two Negroes to the county courthouse to register. The registrar told them he "wasn't registering voters" that day. When the three turned to leave, Registrar John Q. Wood took a pistol from his desk and struck Hardy over the head from behind. Hardy was arrested and charged with disturbing the peace.

September 13, Jackson, Hinds County: 15 Episcopal ministers—among them three Negroes—were arrested for asking to be served at the lunch counter of the Greyhound bus terminal. They were charged with inviting a breach of the peace. They were found not guilty of the charge on May 21, 1962, by County Judge Russell Moore.

September 25, Liberty, Amite County: Herbert Lee, a Negro who had been active in voter registration, was shot and killed by white State representative E. H. Hurst in downtown Liberty. No prosecution was undertaken, the authorities explaining that the representative had shot in self-defense.

October 4, McComb, Pike County: The five students who were arrested as a result of the August 29 sit-in in McComb returned to school, but were refused admittance. At that, 116 students walked out and paraded downtown to the city hall in protest. Police arrested the entire crowd, but later released all but 19, all of whom were 18 years old or older. They were charged with breach of the peace and contributing to the delinquency of minors and allowed to go free on bail totaling $3,700. At the trial on October 31, Judge Brumfield, finding the students guilty, and sentencing each to a $500 fine and 6 months in jaid, said:

> Some of you are local residents, some of you are outsiders. Those of you who are local residents are like sheep being led to the slaughter. If you continue to follow the advice of outside agitators, you will be like sheep and be slaughtered.

October 5, McComb, Pike County: Charles Sherrod was arrested on the street, thrown into a police car, and charged with resisting arrest. Cordelle Reagan was also arrested and charged with contributing to the delinquency of a minor. Both were fieldworkers for SNCC.

October 11, McComb, Pike County: Paul Potter of Philadelphia, a vice president of the National Student Association, and Tom Hayden of Atlanta, both white, were dragged from their car and beaten as they drove alongside a group of Negroes making an antisegregation march. When the two slowed their car for a traffic light, a heavy-set white man opened the door and dragged the driver out and hit him several times. He then walked around to the other side of the car, opened the door and knocked the second man to the street. The incident occurred in the business section of the city.

October 13, McComb, Pike County: Police Officer B. F. Elmore shot and killed a Negro motorist. Police Chief George Guy said that Elmore said he had stopped Eli Brumfield at 4 a.m. for speeding. Brumfield allegedly jumped from his car with a pocket knife in his hand and attacked Elmore. A coroner's jury ruled Elmore fired in self-defense.

October 22, Jackson, Hinds County: Dion Diamond, a SNCC worker, was arrested for "running a stop sign" after being followed all day. In court the next day, the arresting officer told the judge:

> "He is a Freedom Rider. Throw the book at him."

Diamond was refused legal counsel and fined $168.

November 9, McComb, Pike County: Jerome Smith, 22, Congress of Racial Equality—CORE—field man, and four companions, Dorothy Smith, 18; Alice Thompson, 22; Thomas Valentine, 23; and George Raymond, 18, were attacked by a mob of 30 to 40 whites when they sought service at the lunch counter of the Greyhound bus terminal in McComb. Smith, who suffered head injuries when he was slugged with brass knuckles during the attack, said FBI agents were present at the time of the attack, but did "nothing but take notes" while the mob kicked and beat his companions. The victims were rescued from the mob by a Negro truck driver and Negro cab drivers.

November 10, Jackson, Hinds County: Jessie Divens, 12-year-old, was arrested for refusing to move to the rear of a city bus. Judge Carl Guernsey released the girl to the custody of Rev. G. R. Horton, chaplain of Campbell College where she attended classes. Judge Guernsey continued the case until November 17:

> With the understanding that the Reverend Mr. Horton and the child come back with a workable plan which would cause the child's mind to be concerned with education rather than social reformation.

November 18, McComb, Pike County: Persons unknown fired a shotgun blast into the bedroom of Dion Diamond and John Hardy at 702 Wall Street. Investigating officer Frank Williams found shotgun pellets embedded in the window frame.

December 1, McComb, Pike County: Four white men attacked three newsmen on the street, sending one crashing into a plate glass window of a store. The newsmen were Tom Uhrborck and Don Underwood, Life magazine, and Simmons Fentress, Time magazine.

December 2, McComb, Pike County: Police broke up an attempt by white attackers to drag three Freedom Riders from an automobile at the Greyhound bus terminal. Four men kicked at the locked car and beat upon the windows in an attempt to reach the young Negroes and their driver, Thomas Gaither, field secretary of CORE. The police, who were standing by when the riders arrived aboard a bus from Jackson, pulled the men away from the car, but made no arrests.

December 26, Jackson, Hinds County: Rafford Johnson, Negro, was severely beaten by two law officers after being involved in a minor collision with a car driven by a white woman. Johnson underwent surgery for skull injuries.

1962

February 6, 1962, Clarksdale, Coahoma County: Miss Bessie Turner, 19, a Negro, was walking with a young man down a Clarksdale street when Clarksdale police officers stopped them and accused Miss Turner of having been involved in a theft. Miss Turner said the officers took her to the jail, forced her to unclothe and to lie on her back. She said one of the policemen then beat her between the legs with his belt. A few minutes later, Miss Turner said, the other officer beat her across her naked breasts. Miss Turner filed Federal charges against the officers.

March 15, 1962, Shelby, Bolivar County: Aaron Henry, State president of the NAACP, was convicted in Justice of Peace court on charges of making perverse advances on a white teenage hitchhiker. Henry stated that the charges were a complete fabrication, and presented an alibi supported by sworn witnesses. The conviction has been appealed. When he later stated in a press conference that the prosecutor and the police chief, who figured in the trial, had conspired to frame him, Henry was sued by the two for defamation. A Mississippi white jury awarded the prosecutor $25,000 and the police chief $15,000.

April 12, 1962, Taylorsville, Smith County: Cpl. Roman Ducksworth, Jr., U.S. Army, a Negro, was shot and killed by Policeman Bill Kelly, when, according to an NAACP news release, Duckworth "insisted on his right to sit where he chose on an interstate bus." Policeman Kelly claimed that Ducksworth was drunk and started fighting. No charges were brought against Kelly. Ducksworth was en route from Camp Ritchie, Md., to see his wife who was ill in a Laurel, Miss., hospital.

April 1962, Lucedale, George County: Mrs. Ernestine Denham Talbert, who lives in George County but teaches in Green County, was notified by the Green County School Board that her teaching contract would not be renewed. Mrs. Talbert had tried in January to register to vote but had been refused.

May 17, 1962, Rankin County: The Negro editor, of the Mississippi Free Press, said he and a companion were beaten by Rankin County officers and a highway patrolman. Lawrence Hudson, Jr., of Jackson, said the beating occurred after he was stopped en route from Jackson to Forest to check on a rumor that a Negro man had been killed by a white man. He was jailed, refused permission to phone a lawyer, tried the next day on several charges and fined $151.

June 21, 1962, Clarksdale, Coahoma County: A white lawyer from Jackson and four college students were jailed in Clarksdale for 20 hours without outside communication. One of the students was a Negro. William Higgs, the lawyer, and the students were jailed on a Sunday night by county officers and were released the following day, without charges being filed against them.

July 5, 1962, Jackson, Hinds County: Jesse Harris, 20, and Luvaghn Brown, 17, SNCC workers, charged that they were beaten and threatened with death while serving a 30-day sentence in the county jail for contempt of court. The young Negroes had refused to move from a court bench customarily occupied by whites while they were attending the trial of Mrs. Diane Nash Bevel. The young men said that, in the courthouse elevator, a deputy sheriff called Harris "a damned nigger" and beat him about the head with his fist. At the county farm, they were singled out as freedom riders and wore striped uniforms. Both were beaten by guards. Harris was beaten by a guard named Keith while other prisoners held him. Keith beat him across the back with a length of hose threatening:

> Nigger, I'll kill you.

August 16, 1962, Greenwood, Leflore County: Samuel Block, 23, SNCC field secretary, said three white men accosted him in a parking lot and "started beating me with their fists." He said they threatened him and then beat him for about 5 minutes.

> There is no use reporting it to local authorities—

He said.

August 17, 1962, Greenwood, Leflore County: SNCC workers Samuel Block, Luvaghn Brown, and Lawrence Guyot were forced to flee from the second story window of their voter registration office. They said armed white men invaded the premises intent upon doing them harm.

August 17, 1962, Ruleville, Sunflower County: Mayor Charles Durrough asked Mr. Leonard Davis, a Negro employed by the city, what he knew about the registration school being conducted at a Negro church. Mr. Davis replied that he did not know anything at all about the school, and did not attend any of the classes. The mayor then told him that he, the mayor, knew what kind of school they were having. The mayor said he knew it—presumably, civil rights for the Negro—was coming, and he was not going to allow it to be forced on them. The mayor said that anyone attending the school would be given a one-way ticket out of town, and if that would not do it, they would use whatever they had available. See entry below for September 3, 1962.

August 1962, Greenwood, Leflore County: Welton McSwine, Jr., 14-year-old Negro, was arrested by police after a white woman's house had been broken into. When police got the youth to the station an officer said:

> All right, nigger, you know why you are here, and we want to know who broke into that white woman's house.

McSwine told them he knew nothing of the incident, saying that he spent all his time in the cottonfield, and suggesting that his mother could corroborate this. McSwine said officers then took him to a cell and beat him, first hitting him in the head with a blackjack; then one of the policemen beat him in the face with his fist while another hit him in the stomach with his club; then the officers made him lie naked on the floor on his side while they beat him with a whip. McSwine was released after intercession of his father's white employer.

August 21, 1962, Liberty, Amite County: Sam Wells and Tommy Weathersby went to the courthouse to register. While they were waiting to get into the registrar's office, they stood on the front porch of the courthouse. Deputy Sheriff Daniel Jones told them:

> Get your ——— off the front porch, and don't come back on.

Weathersby and Wells got off the porch. A few moments later, rain began, and the two wanted to take shelter in the courthouse, but Deputy Sheriff Jones would not permit it.

August 21, Liberty, Amite County: Dewey Greene, Jr., Mississippi Free Press reporter, was taking pictures of Negroes waiting to register at the courthouse. An unidentified young man working in the office down the hall from the registrar's office snatched Greene's camera away, and refused to return it. Greene was told to leave town by three white men, one of whom was flourishing a length of lead pipe. He left.

August 29, 1962, Clarksdale, Coahoma County: Seven Negroes were arrested after attending a voter registration meeting. David Dennis, CORE field secretary, was charged with failure to yield right-of-way after a police officer had forced him to submit to a long harangue of threats and abuse. Samuel Block, John Hodges, J. L. Harris, Richard T. Gray, and Albert Garrer, SNCC field workers, and Dewey Greene, Jr., reporter for the Mississippi Free Press, were forced by Clarksdale police to alight from their car, and were charged with loitering in violation of the city curfew.

August 30, 1962, Indianola, Sunflower County: SNCC workers C. R. McLauren, Albert Garner, J. O. Hodges, Samuel Block, and Robert Moses were arrested by Indianola police on a charge of distributing literature without a permit. The registration workers had been taking leaflets announcing a registration mass meeting door-to-door in the Negro community. Lafayette Surney, 17, another SNCC worker, was arrested and then released to Rev. James Bevel, of the Southern Christian Leadership Conference—SCLC.

August 31, Indianola, Sunflower County: During the trial of Samuel Block on charges of distributing literature without a permit, the Municipal Judge informed Block that he could cross-examine the arresting officer. Block asked the officer:

> Did you actually see me hand out a leaflet?

The judge turned to the officer and said:

> He can ask you anything he wants to, but you don't have to answer.

The judge told Lafayette Surney if he was caught in Indianola agitating again, he would be sent to the penal farm.

September 3, 1962, Ruleville, Sunflower County: Because of registration activity, two Negro-owned dry cleaning establishments were closed—allegedly for violating city ordinances.

September 3, 1962, Ruleville, Sunflower County: Lenard Davis, 49, sanitation department worker, was told by Mayor Charles M. Durrough:

> We're going to let you go. Your wife's been attending that school.

He referred to a registration school conducted by SNCC workers in Ruleville.

September 3, 1962, Ruleville, Sunflower County: Fred Hicks, 40, who drove fieldworkers to the plantations, was told he could no longer use a bus without a commercial license. Hicks said the bus owner told him that, because Hicks' mother had registered to vote:

> We gonna see how tight we can make it—gonna make it just as tight as we can. Gonna be rougher and rougher than you think it is.

September 3, 1962, Ruleville, Sunflower County: Moses and Amzie Moore, a local Negro leader, were walking down the street. A white man in a pickup truck drew up alongside and asked if they were the "folks getting the people to register." Moses and Moore answered yes, they were. The man asked if they could come out to his plantation to register people. The two answered, yes, they could come. The man said then:

> I've got a shotgun waiting for you, double barrel.

September 3, Ruleville, Sunflower County: A letter from Mayor Durrough notified the Williams Chapel Missionary Baptist Church that tax exemption and free water were being cut off because the property was being used for "purposes other than worship services." The church was a meeting place for voter registration workers.

September 10, Ruleville, Sunflower County: Marylene Burkes, 20, and Vivian Hillet, 19, were severely wounded when an unidentified assailant fired through the window of Miss Hillet's grandparents' home. The grandparents had been active in voter registration work.

October 3, Biloxi, Harrison County: A Negro frame residence and a gasoline station were targets for two "Molotov cocktails" which caused more than $4,000 damage. One of the bombs struck the home of Dr. Gilbert Mason, a Negro physician, who is active in integration efforts. The other crashed through the window of a service station operated by Emmett Clark, a Negro.

October 5, Harmony, Leake County: Night riders fired shotguns into eight Negro homes and a Negro store. An elderly Negro said he was struck in the knee by squirrel shot while he and his 9-year-old grandson were sleeping. He said he was not seriously hurt. Harmony Negroes had recently petitioned authorities for school desegregation.

October 10, Columbus, Lowndes County: A "Molotov cocktail" was tossed from a speeding car into the home of Dr. James L. Allen of Columbus, vice chairman of the Mississippi Advisory Committee to the U.S. Commission on Civil Rights.

October 29, Clarksdale, Coahoma County: Charles McLaurin, SNCC registration worker, was stopped by police as he was walking a group home from the courthouse. The group had tried to register to vote. The officer asked to see

McLaurin's driver's license. McLaurin showed it. The officer asked McLaurin what he was doing there. McLaurin told him he worked in voter registration. Then, accompanied by obscene remarks, the officer said:

> Nigger, do you know the way out of town?

McLaurin replied:

> Yes.

The officer said, with more obscenity:

> Nigger. Can't you say "Yes, sir?"

The officer's partner asked the officer what charge should be put on the tickets.

The officer said:

> Charge the ——— $26 on both charges. Nigger, you got $52?

McLaurin replied:

> No.

The officer said:

> Then you're going to jail.

At the jail, McLaurin learned that the officer was Clarksdale Police Chief Ben Collins. McLaurin was in jail a few minutes when his companions posted bond for him in the amount of $103. They decided to forfeit bond rather than run the risk of a higher fine or incur the legal expense of an appeal.

October 31, Jackson, Hinds County: Thomas E. Johnson, a white minister, and a member of the Mississippi Advisory Committee to the U.S. Commisison on Civil Rights, saw a group of neighbors dumping garbage on his lawn. Johnson had just returned from taking his car to a safe place because of threats by neighbors to damage it. Johnson sought a peace bond against the man whom he had observed leading the garbage-dumping operations of his neighbors. The man presented 11 witnesses who swore that he had been in their presence at all times on the evening in question. The justice of the peace accepted their testimony and refused the bond. Then the Hinds County Grand Jury indicted Johnson and his wife on perjury charges, because of their testimony at the peace bond hearing.

November 6, 1962, Greenville, Washington County: Two WAF's and two airmen—all white—from the Greenville Air Force Base were fined $55 and given 30-day suspended sentences on charges of creating a disturbance by entering a restaurant and seeking service with two Negro voter registration workers.

December 26, 1962, Clarksdale, Coahoma County: Ivanhoe Donaldson and Benjamin Taylor, students from Detroit, brought a truckload of food, clothing and medicines for distribution to the Delta's needy families who had been cut off from Federal surplus commodities. The medicines had been donated by a physician in Louisville, and were consigned to Aaron Henry, a licensed pharmacist. They were arrested by Clarksdale police and held for investigation. After police searched the truck on December 27, and found what they described as a drug used to ease the pain of middle-aged women, Donaldson and Taylor were charged with possession of narcotics and bond was set at $15,000. Bond was later reduced to $1,500.

1963

January 17, Canton, Madison County: The castrated and mutilated body of Sylvester Maxwell, 24-year-old Negro, was found by his brother-in-law less than 500 yards from the home of a white family. Mississippi NAACP Field Secretary Medger Evers termed the slaying a "probable lynching."

February 2, Greenwood, Leflore County: Willie Peacock, SNCC registration worker, complained to the Justice Department that officials had refused to register him on two occasions, and had rejected his poll tax payment for this year.

February 20, Greenwood, Leflore County: Four Negro businesses on the same street as the SNCC voter registration office were burned to the ground. Mrs. Nancy Brand, a worker in the SNCC office, reported an anonymous telephone call in which a man's voice asked her if she ever came to the office. When she said "yes", the voice said:

> You won't be going down there anymore, that's been taken care of.

The burned businesses were Jackson's Garage, George's Cafe, Porter's Pressing Shop, and the Esquire Club. The pressing shop is next door to the SNCC office, and SNCC workers believed the businesses were burned by mistake. Sam Block, SNCC field secretary, was arrested 2 days later for suggesting there was some connection between the burnings and the registration efforts of SNCC. He was charged with circulating statements calculated to create a breach of the peace.

February 28, Greenwood, Leflore County: Three registration workers were attacked with gunfire on U.S. Highway 82 just outside Greenwood. The shots were fired from a 1962 white Buick. The car in which the workers were riding was punctured by 11 bullets. One worker, James Travis of SNCC, was wounded in the neck and shoulder.

March 4, Clarksdale, Coahoma County: The show windows in the Fourth Street drugstore were smashed, as they have been several times in the past. The proprietor of the store, Aaron Henry, found the damage when he returned from speaking at a mass meeting in Leflore County in connection with the voter registration drive there.

March 6, Greenwood, Leflore County: Samuel Block and three others were fired on from a station wagon which pulled up beside their car as they were parked in front of the SNCC voter registration office. Both front windows were shattered. Police later found the wadding from a shotgun shell buried in the headliner of Block's car, and several pellets in the wall of the building in front of which the car had been parked.

March 12, Greenwood, Leflore County: A 12-year-old Negro girl was attacked by an egg-throwing truckload of white teenaged boys. The girl suffered facial bruises.

March 20, 1963, Jackson, Hinds County: Three shots were fired through the windshield of a car belonging to Mrs. Mattie Dennis while it was parked in front of the home of Mrs. Dennis' cousin, whom she was visiting. Mrs. Dennis is the wife of David Dennis, CORE field secretary for Mississippi. Both have been active in voter registration.

March 24, 1963, Greenwood, Leflore County: Fire destroyed partially the interior of the voter registration office at 115 East McLaurin Street, making the office unusable and necessitating a search for new headquarters. Witnesses said they saw two white men fleeing the scene shortly before the fire was discovered.

March 26, 1963, Greenwood, Leflore County: A shotgun blast ripped into the home of Dewey Greene, Sr., father of the latest Negro applicant to the University of Mississippi. Another of Mr. Greene's sons and a daughter have been active in the Leflore County registration project. Greenwood police said they were investigating.

March 27, 1963, Greenwood, Leflore County: James Forman, executive secretary of SNCC, Bob Moses, and about 10 other registration workers were arrested and taken from a group en route to the courthouse to register after the police dispersed a group of more than 100 Negroes with the use of police dogs.

HOUSE OF REPRESENTATIVES

MONDAY, APRIL 8, 1963

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D.D., offered the following prayer:

Psalm 72: 19: *Blessed be His glorious name forever; and let the whole earth be filled with His glory.*

Almighty God, we have entered upon Holy Week, commemorating events and experiences in the life of our blessed Lord whose sacred meaning our finite minds can only faintly comprehend.

Grant that during these days we may be filled with penitence and humility, with praise and thanksgiving as we turn our minds and hearts to the cross to meditate upon the sufferings and death of the great High Priest, who on Good Friday laid upon the altar the acceptable sacrifice of His own life for the sins of the world.

May we accept and submit ourselves to His claims and commands and have the faith and the courage to believe that someday all mankind shall be lifted to higher levels of character and conduct through the transforming and conquering power of His sacrificial love.

Hear us in our Saviour's name. Amen.

THE JOURNAL

The Journal of the proceedings of Thursday, April 4, 1963, was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. McGown, one of its clerks, announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 6. An act authorizing the Housing and Home Finance Administrator to provide additional assistance for the development of comprehensive and coordinated mass transportation systems, both public and private, in metropolitan and other urban areas, and for other purposes;

S. 72. An act for the relief of Jozsef Pozsonyi and his wife, Agnes Pozsonyi, and their minor child, Ildiko Pozsonyi;

S. 74. An act for the relief of Dr. Olga Marie Ferrer;

S. 93. An act for the relief of Flora Romano Torre;

S. 196. An act for the relief of Carnetta Germaine Thomas Hunte;

S. 206. An act for the relief of Chang Ah Lung;

S. 213. An act for the relief of Carmelo Schillaci;

S. 215. An act for the relief of Mannor Lee;

S. 292. An act for the relief of Yoo Chul Soo;

S. 310. An act for the relief of Kaino Hely Auzis;

S. 504. An act for the relief of Domenico Martino;

S. 671. An act for the relief of Mirhan Gazarian;

S. 686. An act for the relief of Millie Gail Mesa;

S. 715. An act for the relief of Laszlo Janos Buchwald;

S. 752. An act for the relief of Janos Kardos;

S. 822. An act for the relief of Elvira Ciccotelli; and

S. 866. An act for the relief of Enrico Petrucci.

COMMITTEE ON RULES

Mr. BOGGS. Mr. Speaker, I ask unanimous consent that the Committee on Rules may have until midnight tonight to file sundry reports.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

SUBCOMMITTEE NO. 5 OF THE COMMITTEE ON THE JUDICIARY

Mr. BOGGS. Mr. Speaker, I ask unanimous consent that Subcommittee No. 5 of the Committee on the Judiciary may be permitted to sit during general debate on Tuesday, April 9, 1963.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

ACCELERATED PUBLIC WORKS PROGRAM

Mr. HECHLER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

Mr. HECHLER. Mr. Speaker, many people will be making pitches this afternoon.

My pitch, Mr. Speaker, is on behalf of the accelerated public works program. This Nation needs the $500 million for which the President asked in his request for a supplemental appropriation.

I was interested in this morning's paper to read a strange observation by the chairman of the Republican National Committee, who stated:

> It is high time some White House initiative was exerted to lift us out of the Democratic rut.

I congratulate the Republican Party, which usually charges strong Presidents with being dictators, for at long last coming out in favor of firm Presidential leadership in the Lincoln-Teddy Roosevelt tradition. One of the best examples of Presidential leadership was the statement which President Kennedy made last Saturday urging the Congress to restore the $500 million needed for the accelerated public works program.

As a part of my remarks I include President Kennedy's statement, as follows:

[From the New York Times, Apr. 7, 1963]

Yesterday's decision by the House Appropriations Committee to eliminate funds for the accelerated public works programs was, I believe, most unfortunate and one that I am confident will be reversed by the entire House when the facts are presented to it.

It seems inconceivable to me that people can make speeches against unemployment and then vote to destroy a program the objective of which is to attack the unemployment problem by providing jobs, especially in those areas with chronic and persistent unemployment.

When the Congress enacted the program I recommended, authorizing the $900 million program last year, and appropriated $40 million to initiate the program, it was widely understood that the additional amount authorized would be considered early in 1963 and that the early experiences under the program would guide the Congress in determining how much money should be made available of the remaining $500 million authorization.

The response to the program has been truly remarkable. Since its enactment thousands of projects have already been approved and there are now in hand applications for over 6,200 projects for more than 3,000 communities throughout the United States, which are eligible under the standards of the program.

It will be recalled that the basic objective of the program is to speed up those projects which would otherwise be undertaken at a later date in order to provide immediate employment—hospitals, streets, sewers and other essential facilities.

On the basis of experience thus far under the program it is clear that with the full $900 million authorized by the Congress last year 500,000 of our Nation's unemployed will be on the job, on project sites and in supporting activities. That the projects undertaken by the funds are worthwhile is evidenced by the fact that local communities across the country have raised matching funds to participate in the programs even to the extent of passing local bond issues. The combination of local and Federal money flowing into the economy has proved to be a healthy and substantial stimulant.

This program must not be permitted to lapse and I am confident that the Congress will not permit it to do so. I hope that partisan activity will not be allowed to destroy or weaken a program aimed at our unemployment problem.

Mr. Speaker, some 3,000 projects have been approved, and I believe that this additional funding will enable the financing of over 6,000 projects which are now pending. We should not only have the $500 million supplemental appropriation but also move immediately to extend the accelerated works authorization for another year as contained in the bill H.R. 3311, which I have introduced.

Mr. BLATNIK. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. BLATNIK. Mr. Speaker, I wish to call attention to the fact that the $450 million supplement authorized by the whole Congress last year to complete the accelerated public works program has been deleted from the bill reported last Friday by the House Committee on Appropriations and intended for consideration in this body tomorrow.

There is no need to repeat the history of this bill. It is well known. We all recall that the bill authorized $900 million in matching funds to assist municipalities in undertaking needed public works essential to the health and welfare of the community in many distressed areas, including northeastern Minnesota, where the unemployment problem is acute.

The House had already sent its appropriation bill to the Senate when the Accelerated Public Works Act became Public Law 87-658 on September 14, 1962. The Senate, in October, appropriated $400 million for the program of accelerated public works. The statement on the accelerated public works appropriation published in the Senate committee report on the appropriations bill was specifically and enthusiastically endorsed at the joint conference by the House managers.

Mr. Speaker, the whole Congress thus pledged itself to a definite program of assistance to the Nation's distressed municipalities. The following remarks from the report published by the Senate and endorsed by the House conferees clearly identifies this pledge:

> The committee felt, therefore, that it would be desirable to provide a partial appropriation which would permit this program to get underway at the maximum possible rate for the next 4 months, with the understanding that the administration can submit a supplemental estimate in January, at which time they should be in a position to support a definite program, with specific recommendations for projects to be undertaken and justification therefor.

To be frank, Mr. Speaker, I am deeply shocked at the action of the House Committee on Appropriations, and I say this advisedly, with full respect for the members of the committee on both sides of the aisle. The Congress made a serious commitment, on the basis of which distressed municipalities and governmental subdivisions throughout America went ahead and planned to raise additional local funds for over 6,000 essential public works projects. In many instances they even utilized the difficult procedure of floating bond issues while waiting for this additional $450 million or $500 million to be appropriated. They counted on the money being made available this year to take up the slack of unemployment by creating work in their localities. Now, for some reason or other, after having given a solemn pledge, a firm declaration of intention, the Congress has reneged.

When the appropriations bill comes up, I urge the full membership of this body to give serious reconsideration to restoring the $450 million accelerated public works supplemental appropriation which was both authorized and literally promised to the distressed communities by the 87th Congress.

THE PURCHASE OF A MOBILE AIRPORT CONTROL TOWER KNOWN AS THE AN/MRN-12

Mr. WILSON of Indiana. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

Mr. WILSON of Indiana. Mr. Speaker, last Monday, as my colleagues will recall, I presented an hour-long documentation of a procurement case I had studied for over 4 months. It was a purchase of a mobile airport control tower known as the AN/MRN-12 in which, my analysis showed, the Air Force wasted over $560,000 and paid Craig Systems, Inc., of Lawrence, Mass., considerable excess profits. I asked for a complete audit of the matter by the General Accounting Office as well as a study by the Federal Bureau of Investigation and the Department of Defense.

In reply to my presentation made on the floor of the House, Erich Kauders, president of Craig Systems, made a statement to the Boston Globe. It was printed on page 28 of the Globe on Monday, April 1. In his statement, Mr. Kauders said my allegations made on the floor of the House were, and I quote:

> Repetitious of a speech he (WILSON) made last October and it is our understanding that the findings of various Government agencies who have reviewed this procurement since then are contrary to Congressman WILSON's findings.

To my knowledge, no such reports have been made. Certainly I want to see them if they exist. I contacted the General Accounting Office and asked if any such report had been made by the Comptroller General. I was assured it had not. I contacted the Air Force and was told the same thing—no study has been made of the procurement, so consequently no findings had been returned.

In a spirit of cooperation, Mr. Kauders was then telephoned for his assistance. Certainly, since he mentioned the reports, he knew where they could be found. I wished to see them in order to be perfectly fair with everyone concerned. Mr. Kauders at first denied having made the statement, but after I read it to him verbatim from the Boston Globe, he confirmed its content as his own remarks. However, he said, he had nothing to add and declined to identify the various Government agencies mentioned in his statement.

Mr. Speaker, I can only assume that there are no such reports and that none have been made. I can only assume that the contractor and perhaps some in the military are trying to pour oil on the troubled waters at Lawrence and Boston, Mass., and Griffiss Air Force Base, N.Y.

This, to me, is simply more evidence that this entire procurement should be audited thoroughly by the General Accounting Office, the Justice Department and the Department of Defense. A letter of transmittal referring my file to GAO, together with a series of questions I wish answered, went into the mail today, and I hope for an early reply.

SUPPLEMENTAL VIEWS ON H.R. 5389 TO REPEAL THE SILVER ACT

Mr. CURTIS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. CURTIS. Mr. Speaker, this week the House will consider H.R. 5389, to repeal the Silver Purchasing Act of 1934. H.R. 5389 was referred to the Banking and Currency Committee because of its impact upon monetary policy. The Banking and Currency Committee referred title II of the bill to the Ways and Means because it involved the repeal of a tax.

Because of the haste with which this matter was considered my request to file supplemental views with the majority views of the Ways and Means was neglected. I am setting forth these views in the CONGRESSIONAL RECORD so they will be available during debate on the measure.

Essentially I am pointing out that no committee considered the fiscal aspects of the proposed legislation which are of grave importance because of our balance of payments, gold flow, and debt-management problems.

The Kennedy administration is cashing in capital assets wherever it can find them to lessen its current deficits—see my remarks of April 4, 1963, entitled "Balance of Payments," page 5827, CONGRESSIONAL RECORD. This simply staves off the day of accounting and makes it worse when it comes because we have failed to do what is necessary, reform our ways of spending more than we take in in current revenues. H.R. 5389 permits the administration to cash in $2 billion of capital assets, $2 billion of silver bullion. It is an essential step to the devaluation of our dollar. The problem we face of the cash in of silver certificates and melting down silver coins for the silver value in them can be met without permitting the administration to cash in the silver itself to meet current expenditures. This matter needs the study and evaluation of a committee of the Congress before floor action is in order. Hence I recommend recommitting this bill to the Ways and Means Committee for such and study.

Herein follow my supplemental views:

SUPPLEMENTAL VIEWS OF HON. THOMAS B. CURTIS ON H.R. 5389, TO REPEAL THE SILVER PURCHASING ACT OF 1934, INCLUDING THE TAX ON TRANSFERS OF SILVER BULLION

H.R. 5389 is divided into two parts. The first part, sections 1 through 3, is concerned with the repeal of the silver legislation and authorization for $1 Federal Reserve notes. This matter was referred to the Banking and Currency Committee which held hearings on these aspects on March 11-14, expressly reserving to the Committee on Ways and Means jurisdiction with respect to the second part of the measure, the repeal of tax on transfers of silver bullion. The Ways and Means Committee held no public hearings and devoted one morning session of informal executive session to the matter. No testimony was taken, and very short notice was given to the members of the committee that the matter was to be taken up.

Neither the hearings nor report of the Banking and Currency Committee were available during the Ways and Means Committee's consideration. Nor were the hearings and report of the Ways and Means Committee which had jurisdiction of the entire legislation in 1934 made available to the committee. The memorandum prepared by the Ways and Means Committee staff made no reference to the original 1934 hearings and committee report. Upon interrogation of the Secretary of the Treasury and other persons present at the informal executive session it was apparent that they were unfamiliar with these hearings and report.

I received copies from the Library of Congress just as the committee went into executive session.

From the 1934 hearings and report, it is apparent that the Silver Act of 1934 was presented "in developing an improved monetary system."

The committee in its report makes the following points:

The measure is a logical and necessary complement of the Gold Reserve Act passed by this House on January 20 and approved by the President on January 30, 1934. Silver is a valuable component of any monetary system designed to stabilize the money's worth of goods. * * * We may look toward a coordinated use of that silver to check changes in the purchasing power of the dollar.

Section 2 declares the policy of the United States to be to increase the proportion of silver to gold in its monetary stocks with the ultimate objective of having and maintaining in silver one-fourth of the monetary value of the stocks of gold and silver, and three-fourths of the monetary value of such stocks in gold.

The second sentence of the section (5) requires that there be maintained in the Treasury as security for all silver certificates heretofore or hereafter issued an amount of silver in bullion and standard silver dollars aggregating in monetary value the face value of such certificates outstanding at the time.

Section 10 states: "'Monetary value' is defined to mean a value calculated on the basis of $1 for an amount of silver or gold equal to the amount at the time contained in the standard silver dollar and the standard gold dollar respectively."

In respect to the tax being imposed, the committee report has this to say: "Holders of silver are thus allowed to make a profit which should at least equal any profits arising from investments in silver or the purchase and sale of silver for industrial use during times when the price is not being increased by governmental action. The tax being in the nature of a profits tax covers transactions taking place prior to enactment. Were this provision not included in the bill, the policy of equitably reimbursing the Government for the increase which its action may bring to the price of silver could easily be obstructed."

The first question asked Secretary of the Treasury, Hon. Henry Morgenthau, Jr., when he testified before the committee was in respect to the revenue aspects of the tax. I quote from page 9 of the hearings of the House Ways and Means Committee on H.R. 9745, the Silver Purchasing Act of 1934, in the 2d session of the 73d Congress, May 25 and 26, 1934:

"The CHAIRMAN (Mr. Doughton). Mr. Secretary, has there been any estimate made as to the probable amount of revenue that may be derived from this 50 percent tax?

"Secretary MORGENTHAU. It would have to be a very rough estimate, but I would say that it is perfectly possible the Government might get as much as $25 million.

"The CHAIRMAN. Per annum?

"Secretary MORGENTHAU. Well, I would not want to say that; but over the period of the purchase of silver.

Mr. VINSON. The Treasury is deriving no revenue from that source at this time?

"Secretary MORGENTHAU. No.

"Mr. VINSON. Then that will be additional revenue?

"Secretary MORGENTHAU. That is correct."

I make this reference to point up two things. The expressed basis for the passage of the act was to establish a monetary policy based upon two precious metals, silver and gold. The purpose of the tax was to collect revenue from the profits that speculators in silver stood to gain from the Government's actions.

The proposal of the Kennedy administration to repeal the act and the tax makes no reference to this historical basis.

The Congress is asked to abandon the monetary policy based upon two precious metals established in 1934 with no reference to its merits or demerits and with little reference to the monetary policy which will supplant it.

The administration presents its arguments in 1962 as if the reasons advanced by the administration in 1934 were specious and sham, that the real purpose of the Silver Act was not to establish a monetary policy, but to provide subsidization to the silver mining industry and that the real purpose of the tax was not to raise revenue, but rather to police the subsidization act.

The question for the Congress is not to determine why the Kennedy administration should treat the Roosevelt administration proposals as sham, but rather whether the 1962 presentation itself is a sham.

Perhaps the Silver Act of 1934 was not to establish a monetary system, but rather to provide a subsidy for the silver industry. Perhaps the tax was imposed not for revenue, but for policing the subsidy measure.

But the proposal of President Kennedy to repeal the act is certainly not designed to improve our monetary system. Rather it is designed to solve a serious economic condition resulting from the fiscal policy of deficit finance and economic circumstances wherein silver bullion is worth considerably more than the silver certificate for which it may be exchanged.

Repeal of the act adds one other method to the many which have been utilized by the Kennedy administration to cash in capital assets of the Nation to temporarily ease the problems created by the continued high deficits we have experienced and that the administration is planning to continue for several years to come.

In other words, there are more fiscal issues than monetary issues involved in the proposal to repeal the Silver Act.

The bald effect of the President's proposal to repeal the Silver Act is to permit him to sell off and to use as current revenue $2 billion of precious metals (silver bullion and vault silver dollars) which is maintained as security for $2 billion of our paper currency. He may then issue $2 billion of new Federal Reserve notes in place of the $2 billion of silver certificates. This will leave us with an additional $2 billion of paper money backed by our present diminishing gold reserves.

Not only will this leave us minus $2 billion of precious metal to back up our $32 billion of paper currency but it withdraws precious metal which was required to be dollar for dollar of the paper money issued against it. Furthermore due to the rise in value of silver in relation to the paper dollar, the silver bullion behind our silver certificates is 30 percent greater than the face value of the paper money it supports. Contrast this to our gold reserves which must be only 25 percent of the outstanding paper money and we begin to see how much the outright repeal of the Silver Act cuts back on our precious metal reserves.

If the Kennedy administration was simply trying to repeal or amend the bimetallic monetary policy we have adopted instead of, as I suggested, cash in capital assets to pay for some of our current expenditures then it would propose one of two things: Readjust the silver reserve required to back up the silver certificates or replace the silver backing the paper currency with gold. Either proposal would correct the problem of silver cash-ins which is the professed concern of the administration.

Certainly it is true that as the policy of deficit financing continues the problems of marketing and managing the Federal debt (a part of fiscal policy within the purview of the Ways and Means Committee) becomes more acute. The precious metal standing behind our currency is not just a matter of monetary policy, in these critical times of balance of payment and limited supply of precious metals in our vaults. It deeply involves our basic fiscal policies.

Neither the Banking and Currency Committee nor the Ways and Means Committee have studied or evaluated the implications of the repeal of the Silver Act upon the overall fiscal policy of the United States. This is a responsibility the Ways and Means Committee must meet.

I suggested to Secretary Dillon in executive session that by proposing an outright repeal of the Silver Act the administration lends credence to the belief currently expressed that the administration contemplated devaluing the dollar. Secretary Dillon stated that this was in no sense the policy of the administration. I then asked him if it was true that repeal of the Silver Act was a necessity in order to devalue the dollar. With this he agreed, reaffirming, however, no intention on the part of the administration to do so.

Under these circumstances I strongly urge that this bill be recommitted to the Ways and Means Committee for immediate and full hearings into the fiscal implications of this bill.

MONETARY POLICY

Mr. ALGER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. ALGER. Mr. Speaker, I join the gentleman from Missouri in concern over the situation that is involved in our monetary backing of our money in gold and silver. Also, I join the gentleman from Missouri in his supplemental views on the silver bill. The gold outflow is implicit in the trade bill and in the tax bill on which we have concluded hearings and are now in executive session.

We have $15.8 billion of gold on hand. Gold is outflowing at the rate of $100 million a month and foreign holdings of liquid liabilities are increasing. The world holds $24 billion that can be claimed on us in gold. We have only $4.1 billion on hand above the $11.7 billion sold for monetary backing. Devaluation of our money is imminent at the current outflow. Huge deficits are building up. The Silver Act, of course, points in that direction as we reduce precious metal backing of a dollar from 100 to 25 cents.

The outflow of gold is so serious that I will not be a party to this conspiracy of silence, one may call it, where we have not faced up to the gold outflow problem, the reasons for it, what to do about it and confide in the American people.

Mr. CURTIS. Mr. Speaker, will the gentleman yield?

Mr. ALGER. I yield to the gentleman from Missouri.

Mr. CURTIS. I simply wanted to point out that I just had a study made of foreign and international ownership of Federal securities which shows that in 1950 the ownership was $4.3 billion; in 1962 the holdings are $15.3 billion, an increase from 1.7 percent as the total of Federal securities outstanding to 5 percent, which further bears on this important issue of balance of payments which is in addition to the demands that can be directed against our gold supply and other capital assets.

Mr. ALGER. I thank the gentleman. Mr. Speaker, I ask unanimous consent to include my views at this point in the RECORD in supplement to what the gentleman from Missouri has said.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The supplemental views are as follows:

Mr. ALGER. Mr. Speaker, our tax policies at home and abroad are intimately interrelated with our overall economy and our international balance of payments. Several witnesses have mentioned gold outflow and the imbalance of payments. Earlier, of course, the consideration of the Trade Expansion Act of 1962 by the Ways and Means Committee resulted in our considering the imbalance of payments many times during both the hearings and the executive sessions.

Over the years the Ways and Means Committee has never lost sight of the inherent danger of our position as the world's banker and our responsibility as a committee in the field of refinancing Federal indebtedness. Former Secretary of the Treasury, Bob Anderson, warned us in no uncertain terms of the danger of our gold outflow at a time when the U.S. gold level was approximately $22 billion.

Inasmuch as the imbalance of payments and gold outflow are a part of the hearings on tax recommendations and because of colloquies between the gentleman from Massachusetts [Mr. BURKE] and myself, I would like to supplement earlier statements with information bringing the gold situation up to date. At my request, Colin Stam, chief of staff of the Joint Committee on Internal Revenue Taxation, submitted the following information which I include at this point:

MARCH 25, 1963.

Hon. BRUCE ALGER,
House of Representatives,
Washington, D.C.

DEAR MR. ALGER: In response to your request for data on the relationship between the U.S. balance of international payments and declines in the U.S. gold stock, we are enclosing a table which shows the U.S. balance of international payments and the offsets thereto, including changes in U.S. gold stock, during the period 1954–62.

In this connection, you may be interested in the following succinct summary of the U.S. experience in the last 5 years by Hon. William McChesney Martin, Jr., chairman, Board of Governors, Federal Reserve System, in his February 1, 1963, statement before the Joint Economic Committee. Mr. Martin stated: "Finally, let me comment briefly on our balance-of-payments problem. * * * As a result of five large successive deficits, we have transferred to foreigners some $7 billion from our monetary gold stock and added another $9 billion to our liquid liabilities."

Sincerely yours,

COLIN F. STAM,
Chief of Staff.

U.S. balance of international payments and resultant reductions in U.S. gold stock, 1954–62

[In millions of dollars]

Year	U.S. balance of payments	Year	Increase (−) in liquid liabilities to foreigners [1]	Increase (+) or decrease (−) in convertible currencies	Increase (+) or decrease (−) in U.S. gold stock
1954	−1,550	1954	−1,252		−298
1955	−1,145	1955	−1,104		−41
1956	−935	1956	−1,241		+306
1957	+520	1957	−278		+798
1958	−3,529	1958	−1,254		−2,275
1959	−3,743	1959	−3,012		[2] −731
1960	−3,925	1960	−2,223		−1,702
1961	[3] −2,360	1961	−1,618	+116	−858
1962	[3] −2,181	1962	−1,274	−17	−890

[1] To International Monetary Fund, foreign central banks and governments, foreign commercial banks, and other international and regional institutions.

[2] Excludes payment of $344,000,000 as increase in U.S. gold subscription to the International Monetary Fund.

[3] The U.S. payments deficit in 1962 would have been $900,000,000 higher in the absence of certain special receipts: $660,000,000 of advance repayments by France, Italy and Sweden of postwar debt to the U.S. Government, and $250,000,000 of receipts from sale by U.S. Treasury of 15- and 16-month nonmarketable securities denominated in foreign currency to Italy and Switzerland. Debt prepayments of over $660,000,000 had also been received in 1961. By the end of 1962 most countries experiencing reserve gains had repaid all or a substantial part of their 1946–49 borrowing in the United States.

This information was then more fully explained again in my request by Mr. Stam in the following letter:

MARCH 25, 1963.

Hon. BRUCE ALGER,
House of Representatives,
Washington, D.C.

DEAR MR. ALGER: This is in response to your request for data showing for the 5-year period 1958-62 the relationship between the U.S. balance of payments on the one hand and the resultant increase in liquid liabilities to foreigners and decrease in our gold stock on the other.

The requested data are as follows:

[In millions of dollars]

U.S. balance of payments	−15,738
Increase in liquid liabilities to foreigners	−9,381
Increase in convertible currencies	+99
Decrease in U.S. gold stock	−6,456
Total	−15,738

If the $344 million increase in U.S. gold subscription to the International Monetary Fund is included as a decrease in gold stock rather than as an increase in liquid liabilities, the figures would appear as follows:

[In millions of dollars]

U.S. balance of payments	−15,738
Increase in liquid liabilities to foreigners	−9,037
Increase in convertible currencies	+99
Decrease in U.S. gold stock	−6,800
Total	−15,738

Thus, as our letter of this morning indicated, the 5-year situation may be summarized as follows:

As a result of five large successive deficits in our balance of payments, we have transferred to foreigners some $7 billion from our monetary gold stock and added another $9 billion to our liquid liabilities.

The above figures were derived from those in the table submitted to you this morning.

Sincerely yours,

COLIN F. STAM,
Chief of Staff.

This information clearly shows the extreme danger of our current position where foreign nations hold approximately $24 billion for which they may demand gold, and we have on hand as of March 1963 $15.8 billion. The outflow has been approximately $100 million a month for the last several years. Mr. Stam's figures show that the outflow of gold is only a part of the clear and present danger wherein the liquid liabilities to foreigners have increased $4,640 million in fiscal 1961 and 1962. In his more recent letter, Mr. Stam outlines the 5-year period 1958 through 1962 increase of liquid liabilities to foreigners $9,381 million, and the decrease of gold out stock of $6,456 million for a total of $15,738 million of increase in both gold outflow and liquid liability.

At any time our gold supply, therefore, could be wiped out and our currency valuation and entire economy jeopardized. The greatest danger, of course, would be loss of confidence at home and abroad in the future value of our currency and the interrelated aspect of lack of fiscal self-discipline by the Federal Government, assuming the best, however, rather than a run on the bank, it would appear that we have less than 4 years left at the current rate of outflow assuming further no speedup of imbalance of payments before it will be necessary to devalue our currency by reducing the percentage of gold backing upon our currency.

The danger becomes all the more apparent to some of us who recognize in the President's deficit financing the large oversea expenditures through foreign aid and the lowering of tariffs, a further increase of gold outflow or increase of liquid liabilities, which would build up the pressure to a possible breaking point.

So far as I am concerned there is absolutely no room at this point for complacency or wishing away the problem. We are derelict in our duty if by silence we default in solving the problem. As I see it, we must go to meet this problem. At this juncture, it is nothing short of ridiculous to justify our present fiscal imbalance by pointing out that our imbalance monthly or yearly is now less than during comparable periods in the preceding administration. Every day that passes the cumulative pressure is building toward that inevitable moment when creditors of the United States abroad doubt our fiscal responsibility and demand gold.

Not to be forgotten in our concern over gold outflow is the accompanying jeopardizing of confidence of American businessmen in our Government's fiscal policies. Our entire economy, which is largely private and still oriented around the principles of capitalism, is motivated almost entirely by confidence—confidence of businessmen in the value of currency, confidence in the stability of the market, confidence in future supply and demand wages and prices and any loss of confidence because of the intrusion of Government through deficit financing, inflationary practices, planned economy and fiscal irresponsibility would jeopardize our entire economic system. Lack of confidence will tie up risk capital, stifle incentive, result in layoff of workers, less expansion of future business in a decelerating spiral which in total could wreck the American economic system. If we do not or cannot pay off in gold when requested, foreign and domestic confidence in the U.S. Government would nosedive.

On a related subject we see a gold squeeze developing as we remove 100 percent backing in precious metal of $1 bills, to be replaced by 25 percent backing in gold which is not redeemable. This change will require $35 million per year approximately to be added to our gold reserve and suggests two related problems: First, we are devaluing $1 currency by 75 percent and, secondly, we will be needing even more gold to undergird our money and the gold supply is rapidly dwindling.

It is obvious that our gold supply and the imbalance of payments is interrelated by the President's tax recommendations and these figures and remarks should be a part of this RECORD.

It is appropriate at this point that I include the memorandum of April 5 of the gentleman from Louisiana [Mr. PASSMAN] concerning gold holdings, U.S. dollars owned by foreign countries, U.S. balance-of-payments position, and gross public debts:

Gold holdings (free world countries):	
U.S. gold holdings on Dec. 31, 1952	$23,252,000,000
U.S. gold outflow to foreign countries, 1952 through 1962	−7,195,000,000
U.S. gold holdings on Dec. 31, 1962, reduced to	16,057,000,000
Gold holdings, other countries,[1] Dec. 31, 1952	13,028,000,000
Gold holdings, increase, other countries, 1952 through 1962	+11,630,000,000
Gold holdings, other countries, Dec. 31, 1962 increased to	24,648,000,000
U.S. dollars owned by foreign countries (free world):	
Foreign dollar holdings on Dec. 31, 1952	10,546,100,000
Increase in foreign dollar holdings, 1952 through 1962	+14,437,900,000
Foreign dollar holdings on Dec. 31, 1962, increased to	24,984,000,000
U.S. balance-of-payments position:	
1950 net deficit	−1,912,000,000
1951 net deficit	−578,000,000
1952 net deficit	−1,100,000,000
1953 net deficit	−2,100,000,000
1954 net deficit	−1,500,000,000
1955 net deficit	−1,100,000,000
1956 net deficit	−1,000,000,000
1957 (only credit in 13 years)	+500,000,000
1958 net deficit	−3,400,000,000
1959 net deficit	−3,700,000,000
1960 net deficit	−3,800,000,000
1961 net deficit	−2,400,000,000
1962 net deficit	−2,200,000,000
U.S. deficit, 1950 through 1962, inclusive	−24,290,000,000
Gross public debts:	
U.S. public debt on Dec. 31, 1962	303,470,080,489
Other free world countries (latest available figures)	201,500,000,000
U.S. debt exceeds debts of other free world countries by	101,970,080,489
U.S. debt exceeds all other countries of world by	24,000,500,000

[1] Does not include Sino-Soviet bloc.

The above indicates clearly what the foreign aid program is doing to our gold reserves and our balance-of-payments position (trade).

It is long overdue but let us hope not too late that the Congress immediately direct its attention to solving the imbalance of payments and the gold outflow. For my part, it is quite clear that restoring fiscal order will require reduced Federal spending, immediate balanced budget, a reduction of our debt and then with that background tax reform which primarily means a drastic cutback in the tax progression and a reduction of rates.

Finally, a further comparative chart from 1950 to 1962 on foreign holdings of Federal securities, balance-of-payments deficits, and gold outflow to which the gentleman from Missouri [Mr. CURTIS] referred:

	Foreign and international ownership of Federal securities[1]	As a percent of total Federal securities outstanding[2]	As a percent of total short-term liabilities to foreigners[3]	Balance-of-payments deficit[4]	Change in total gold stock[5]
End of December—	*Billions*			*Billions*	*Millions*
1950	$4.3	1.7	50.0	−$3.6	
1951	4.3	1.7	46.2	.3	
1952	5.3	2.0	50.5	−1.0	$492
1953	5.9	2.1	50.9	−2.2	−1,168
1954	6.3	2.3	48.5	−1.6	−298
1955	7.5	2.7	55.1	−1.1	−40
1956	7.8	2.8	52.3	−.9	305
1957	7.6	2.8	50.0	.5	799
1958	7.7	2.7	47.5	−3.5	−2,275
1959	12.0	4.1	61.9	−3.7	−1,075
1960	13.0	4.5	61.0	−3.9	−1,703
1961	13.4	4.5	59.8	−2.5	−857
1962	15.3	5.0	61.2	−2.2	−890

SPEECH OF THE RIGHT HONORABLE HAROLD WILSON, O.B.E., M.P.

Mr. RYAN of New York. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. RYAN of New York. Mr. Speaker, I was privileged on April 1 to attend the National Press Club luncheon for the Right Honorable Harold Wilson, O.B.E., M.P. Mr. Wilson's brilliant analysis of the economic and foreign policy problems confronting the free world deserves our attention. As leader of Britain's Labor Party, Mr. Wilson brings to us a new approach. I commend Mr. Wilson's speech to my colleagues.

SPEECH BY THE RIGHT HONORABLE HAROLD WILSON, O.B.E., M.P., AT THE NATIONAL PRESS CLUB AT WASHINGTON, D.C., APRIL 1, 1963

I should like to begin by saying what I am here for. First, what I am not here for. I am not here to negotiate. An opposition cannot negotiate with Governments. I am here as leader of one of the great parties in our democracy to learn more about current thinking in the United States on the great issues confronting the Atlantic partnership. I was last here in January 1962, at that time as the Labor Party's spokesman on foreign affairs. I would have come in January of this year, but had to return from New York to London on the day that Hugh Gaitskell died, without coming on to Washington.

So having said what I am here for I do not need, I hope, to repudiate the story which was featured in some papers last week under the title "Wilson's Fourteen Points." I haven't got 14. I haven't got any. A statement in one of Friday's papers that I "announced" before leaving London that I was bringing a 14-point program is quite wrong. The London story came as the responsibility of the pressman who wrote it and who at that time had not been to see me or had any discussion with me. It was a nice and amusing piece of imaginative writing but I cannot take any responsibility for it. I'm sorry.

I have not come to press any lines of policy on the U.S. administration. To do so would be highly improper and unconstitutional. My purpose in coming is to learn and to listen—and to explain, when I am asked, the general trend of Labor Party thinking and policy on the main issues of world affairs.

But I have read a great deal of what has been written, and I should like to thank you for all the kind things you have said about me—I have in the process learned a lot of things about myself I didn't know before, and I have been asked by many pressmen a lot of questions about our approach. I should, therefore, like to try today in my talk to answer some of these questions.

I should like to begin with the economic problems the free world is facing.

All of us want to see a great expansion of trade, and a removal of trade barriers, between member-countries of the Atlantic Community. Equally we urgently need to see a steady and dynamic expansion of production within our respective countries. My fear is that anything we are able to do in freeing trade and expanding national production will run in a measurable period of time into a crisis of world liquidity. World trade his increased fourfold in monetary terms since prewar: the monetary resources available to lubricate this trade have barely doubled. We have the position that the two greatest trading nations in the world both urgently need to expand production, in their own interests and that of the free world, and that both are inhibited by fear of balance-of-payments difficulties. We are moving more and more into the position that if sterling is strong, the dollar is weak, if the dollar is strong, sterling is weak, there are times when we face the danger that both are weak. And if Western nations show the degree of statesmanship which we hope for in reducing trade barriers, there is a real danger that trade expansion will grind to a standstill through a famine of liquidity. And we shall be reduced again to beggar-my-neighbor measures designed to export unemployment and deflation from one country to another. We are within a reasonable distance of a major seizeup in free world trade, beginning with a crisis in dollar and sterling trade, which at best will inhibit our hopes of economic expansion at a time when other nations are pressing remorselessly ahead, and which at worst could create another 1931. I am also deeply concerned at the growth of indebtedness in underdeveloped countries such as those of Latin America. Already the burden of servicing loans is preempting a high proportion of their overseas earnings; in 4 or 5 years many of them will reach breaking point.

In passing may I say with all the emphasis I can command that the answer does not lie in devaluation whether of the dollar, or sterling, or both. That would be a lunatic and self-destroying operation, neither justified by the problem nor relevant to its solution. The same applies to loose talks about floating rates. As an ex-trade minister I have a built-in prejudice in favor of enabling exporters to quote fixed prices with reasonable assurance of monetary stability. Equally the answer cannot be found in a revaluation of gold, which would simply provide an uncovenanted benefit to two countries, South Africa and the Soviet Union, whose benefit should be low in our scale of priorities.

What is needed is a medium for the creation of international credit through the established machinery of the International Monetary Fund. The unparalleled American and British expansion in the 19th century was made possible by a new discovery, the power of commercial banks to create credit, free from the thralldom of gold. In the 20th century we have so far shown ourselves unworthy of the ingenuity and inventiveness of our grandfathers. We should now move toward a system in which the IMF could create international credit peri passu with the development of world trade. If this could be combined with the Australian proposal for discriminatory credit facilities to be issued to underdeveloped countries to spend in debtor countries—such as, in present circumstances, United States and Britain, we could evoke increased production in our two countries, related to the needs of world development. This could be the answer to unused capacity in our countries.

The dangers—and the opportunities—we now face would justify the summoning of a World Monetary Conference, an economic summit for the free world.

Now I turn to the situation which arises from the breakdown of the Brussels negotiations. I do not want to go back over the past. What matters now is our response to a challenging and even exciting situation. It is above all a new, though not an unforeseeable situation. For 18 months Western policies were directed to a consummation in Brussels. Now we have to start again.

The Labor Party was prepared to accept a solution which would have been genuinely outward-looking and be a steppingstone to a wider free trade area embracing the Atlantic Community and the Commonwealth. There was nothing in the Treaty of Rome, as such, that would have precluded such an advance. What we were not prepared to join was an inward-looking, autarchic Europe which would sever Britain from our traditional channels of trade with the Commonwealth and the wide trading world. The adoption by the EEC of an agricultural policy based on restrictionism, of high prices policed by a penal import levy on imports from the outside world was a sign that perhaps Schacht, rather than Adam Smith, provided the inspiration for the agricultural planners of the new Europe. This policy involved a degree of interference with established market channels, a degree of rigging of prices and production, of internal self-sufficiency, far transcending the wildest dreams of any British or American Secretary of Agriculture, of any party, who ever existed, and in saying this I am speaking the language of superlatives.

At every stage of the debates in Parliament, Hugh Gaitskell and I and others of us stressed the need for the preparation of an alternative policy in case the talks broke down and Britain was presented with entry terms which proved intolerable. This was designed not only to strengthen our bargaining position, for negotiations based on the thesis that there was no alternative to entry were bound to produce stiff, possibly unacceptable, terms: it was designed to avoid a vacuum, a paralysis of policy in the event of breakdown. At all stages we spelled out a policy based on the concept of an Atlantic—and wider than Atlantic—community based on the United States, Britain and EFTA, EEC, the Commonwealth and probably Japan and possibly Latin America. As long ago as November 1961, when the Clayton-Herter report was presented to the joint committee of Congress, I said that this, rather than a narrow European conception, provided the key to the future.

President De Gaulle's brusque intervention faced us with the need for a constructive alternative. Paying every tribute to the breadth and vision of Mr. Macmillan's reappraisal after Brussels, I could not feel that a policy whose constructive measures were limited to the cancellation of a royal visit to Paris could be said to be measuring up fully to the challenge with which we were faced. We, therefore, put forward the following:

First, urgent action to make the Kennedy round effective, on the basis I have mentioned including the United States, United Kingdom, the Commonwealth, EFTA, and those trading areas such as Japan and Latin America which are essential to U.S. trade.

Second, urgent action to conclude international commodity agreements to provide stability in the prices and production of those commodities which enter into international trade, including products of temperate zones such as cereals and dairy produce, and those of primary producing countries such as cocoa, tin, rubber, sisal and tea. We are too apt to forget that all that has been done in the past 10 years in the development of economic aid from advanced countries to the underdeveloped areas, amounting now to $3½ billion, has been more than offset by the collapse in the export income of underdeveloped countries through the fall in primary commodity prices.

Three, associated with this, action to channel food surpluses from advanced countries to meet the needs of hungry nations, for example on the lines proposed by Lord Boyd-Orr in 1946 for a World Food Board, an imaginative concept 15 years ahead of its time, which was rejected because most of us hadn't the dollars in a dollar-hungry world. We must face the fact in our modern democracies, that built-in subsidies and support to our farmers will mean a permanent surplus of food, and this will be enormously augmented if the Common Market agricultural policy is not vetoed by GATT.

Four, planned international action to provide not merely monetary help for developing countries, but governmental and intergovernmental orders for steel, machine tools and transportation equipment—linking their needs with our industries at present working below capacity.

Five, measures to expand international liquidity.

Six, urgent action on the lines so imaginatively proposed by Mr. George Ball to provide planned quota outlets in all advanced countries for textiles and other manufactured goods from Asia and Africa.

Seven, on a Commonwealth basis closer integration of Commonwealth development plans enabling Britain to recapture markets we have lost through neglected opportunities in the past decade.

These are measures required on a marked scale. For our part we are prepared in Europe to work to find a solution to the problem of an economic division between EEC, and EFTA. Perhaps OECD will provide the right forum; perhaps, as we have suggested, regular meetings of European heads of government to seek close political unity and a solution of Europe's economic problems. We are prepared at the right time, and given the right conditions to enter into fresh negotiations with the Six, provided this does not mean another 18 months with Britain sitting in the antechamber while the Six meet and wrangle about our fate, provided that no one regards the concessions made by Mr. Heath as an acceptable starting point. We have stated the five broad conditions which should govern Britain's entry and we are prepared to negotiate on the basis of these conditions. But no one sees any immediate prospect of a new breakthrough, and that is why I stress the urgency of the other measures which are open to us.

Now I turn to some of the wider issues of world affairs, three in particular: Berlin, disarmament, and the defense of the West.

On Berlin, I recognize that reports of a speech I made in Cardiff 5 weeks ago have caused some anxieties. This is because the full text was never available. I do not blame the press. I overloaded them. It was the night I made my first major speech as leader of the opposition. I had a full handout on our policy for housing and rents, and the position of slum landlords: In addition I had a few animadversions on Mr. Macmillan and his colleagues which news editors thought of some interest. So there was little space to report a speech I made earlier in the day at the university in which Berlin was mentioned. Our view, which I repeatedly stated in Berlin when last year I led 42 Labor M.P.'s on a mission to Berlin, designed to show our solidarity and support for Willy Brandt and the citizens of West Berlin, is clear. Any settlement of the Berlin issue must provide two nonnegotiable, inalienable conditions—first, the right of the people of West Berlin to live in a system of society and under a system of government of their own free choosing: second, guarantees of access to West Berlin from the West going beyond mere paper promises together with all other measures necessary to insure the viability of West Berlin. Third, we regard it as essential that for the foreseeable future Western forces remain in Berlin, as of right, and as custodians of the new agreement. Fourth, to secure such an agreement, we should be prepared to show some degree of flexibility in relation to recognizing the existence of the authorities in East Germany and working out practical measures with them. Fifth, we should show a willingness to recognize on a factual basis Germany's eastern frontiers. Unfortunately some reports from Cardiff only repeated the fourth and fifth points of this package.

On disarmament I will say little because of the delicate stage of the negotiations, because we could be on the verge of a great breakthrough. My party accepts and insists on the need for effective international verification and supervision. On the test ban there is not only the problem of the number of inspections, but also the means and effectiveness of the system of inspection. On this Russia still has to come through.

On the wider question of a comprehensive disaramament agreement, nuclear and conventional, we feel that the time has come when the Secretary-General of the United Nations might be asked to take the two drafts and examine the possibility of bridging the formidable gap which still exists between them.

We believe that a further step forward could be made—here I know that what I am saying will find little acceptance here today—by the creation in areas of high tension, of nuclear-free zones and areas of effectively controlled conventional disarmament. Such areas as the continent of Africa, the Middle

East, Latin America, and central Europe, might be taken, perhaps in that order.

This would mean effective inspection. The Soviet acceptance of the Rapacki plan involves acceptance of inspection. But inspection must be effective. And, as the Swedish Government insisted in their December 1961 resolution at U.N., we must have realism and no disturbance of the present balance of forces in Europe.

Now, on defense. Our position is clear. We stand firmly by NATO and the Western Alliance. We are not a neutralist party and neutralism has no part or place in our policies. We want to see Britain and other European countries make a more effective contribution to NATO.

I know there is nothing more boring in nature than a politician who continually refers to his past speeches, but I find that if I repeat, ipsissimis verbis, the speeches I made 2 or 3 years ago on this issue, there is a rush to say "How he's changed since he became leader of his party." In every speech I made as foreign affairs spokesman I stressed the central role of NATO in our defense policy and in that wide section of our foreign policy which relates to defense; and secondly, the paramount need to increase our contribution to the conventional strength of NATO forces. We do not believe this is possible if we pour out our substance on the vain effort to maintain the so-called independent, so-called British, so-called deterrent. Because it isn't independent, it isn't going to be British and its deterrent value in our view adds nothing to the effectiveness of Western deterrent power.

But it does mean such a deployment of our financial and real resources as to limit our ability to make an effective contribution to NATO's ground forces. It does mean a block to our hope of preventing the proliferation of nuclear weapons and it does mean increasing the danger that a conventional outbreak in Europe can quickly escalate into nuclear war.

I believe that our view on this represents the consensus of military opinion in Britain, including many Conservative M.P.'s, and that in this respect Mr. Macmillan is inhibited from pursuing the right military policy by the clamant pressure of a small but vociferous band of atavistic back-benchers whose intervention was decisive at the time of Nassau.

It is argued that to be realistic and recognize the plain fact that the United States is the custodian of the strategic deterrent on behalf of the Western alliance, that this places us in a position of humiliating dependence on another nation. I do not agree. It is dependence on the United States for the so-called British deterrent which creates the wrong relationship and which means that meetings of Western leaders, instead of being directed to the urgent problems of strenthening the alliance, are dominated by unrewarding, and I would feel humiliating wrangles about the supply of particular weapons.

Every American pressman I meet asks whether a labor government would repudiate the Nassau Agreement. I don't like the word "repudiate" which implies breaking faith with a partner, and I have my doubts about the enthusiasm with which the U.S. administration approached the Nassau Agreement. My answer is that a labor government's first task would be to survey the defense position we inherit, to survey the shambles, some say, then to enter into discussions with our American partners about Nassau and about our broader approach to NATO. In view of our policy on deterrents, we should then renegotiate, I have heard the word "denegotiate," the agreement.

Before I leave defense I should like to say one word about Britain's oversea bases east of Suez. The future of some of them is obscure: one thing we should have learned at heavy cost is that you cannot hold a military base in hostile territory. But in general, though some rundown is possible and desirable to release troops for Germany and for the strategic reserve, I believe it to be a mistake to evacuate key bases where we have the chance to remain. It is a hundred times easier for Britain to remain there, even with a token force, than for us, still less the United States, to seek to enter if trouble breaks out. I believe, therefore, that our maintenance of these bases should be regarded as a specific and invaluable contribution to the alliance.

I have talked today mainly about the relationship of Britain and the United States within the alliance. Frequently I am asked, "What about the special relationship?" I am never quite sure what this means. I am more interested in a close relationship based on a common purpose, common objectives, and as far as can be achieved community of policy, a relationship based not on condescension or on a backward-looking nostalgia for the past, but on the ability of both parties to put forward their strength and their own unique contribution to our common purpose. Charles Lamb said in one of his essays, "There is nothing so irrelevant in nature as a poor relation," and if ever our relationship with you were based on that status the sooner it were ended the better: that is why the first priority in British internal policy is to build up our economic strength so that as partners—in the alliance, in Europe, and the Commonwealth—we are relevant and necessary. It is on that, not on any conception of past greatness that our standing in the world will depend. Our ability to restore the lost dynamic to Britain's economic society, to restore a sense of economic and social and moral purpose, will have far more bearing on our value as an ally and a partner than any vain nuclear posturings. It may not be long before the same truth dawns on President de Gaulle.

Because we reject the notion that Britain is fated by history or some vicious twist of fate or by internal debility to be treated as the Sick Man of Europe, we are not. We have a reservoir of unused and underused talent, of skill and craftsmanship, of inventiveness, and ingenuity, of administrative ability and scientific creativeness which if mobilized will, within a measurable period of time enable us to become—not the workshop of the world; that is no longer our role—but the pilot plant, the toolroom of the world. Our scientists are among the finest in the world. The tragedy is we don't produce enough of them, and those we do produce we do not use intelligently. Some we fail even to hold—and the reason for this is not, as one noble lord has said, the deficiencies in your educational system—it is deficiencies in our industrial and governmental system, that we do not provide the status and opportunities, above all the key role in our society that the needs of the 1960's demand.

That is why the central thread of Labor policy, the key to our plan to redynamize Britain's economy, is our plan to mobilize the talents of our scientists and technicians, redeployed from missile and warheads, on research and development contracts, civil reresearch and development to produce the new instruments and tools of economic advance both for Britain and for the war on poverty in underdeveloped areas of the Commonwealth and elsewhere. If we are able to do this, and I have no doubt that we can—we shall be able in a very few years to transform our society and, in the alliance, in our economic relations with the Atlantic Community, and in the wider context of the North-South challenge, to put forward our full and so far unrealized strength, dependent on no one, but ready to play our full role in the interdependent community of free nations.

URBAN RENEWAL

The SPEAKER. Under previous order of the House, the gentleman from Texas [Mr. ALGER] is recognized for 60 minutes.

Mr. ALGER. Mr. Speaker, I will say to my colleagues that I do not intend to take this full time. However, I shall be back. I will be back on Wednesday next with a special order and there will be sufficient time for my colleagues to participate in an exchange, I hope, on urban renewal.

Mr. Speaker, I plan to be blunt enough today in the RECORD, for those who are interested in the subject, so there will be plenty of reason to cross-examine me or to share with me this concern next Wednesday at the time of my special order.

Mr. Speaker, what is urban renewal?

Urban renewal is the replanning and rebuilding of our Nation's cities by the Federal Government at the expense of the taxpayer. It is the condemnation of one man's property for resale to another—in violation of our traditional concepts of property rights. It is the demolition of whole areas of our cities. It is the rebuilding of cities in conformity to the schemes of Federal planners, through Federal finance and Federal control. It threatens to end local self-government.

Urban renewal is a political weapon. It is an attempt by liberals using the taxpayers' money, to reduce their opposition to ineffectiveness by buying off large sections of the business community. If an individual accepts his slice of the New Frontier, how can he legitimately deny others their portion? Urban renewal is a planned alliance between local political leaders and the Kennedy administration, aimed at keeping both in power.

Urban renewal is a pretext for introducing public housing into a community. Frequently, public housing—unpopular on its own merits—is tied to urban renewal as a condition for receiving Federal funds, and in this way socialized housing gets a foothold in the local community.

Now a new trend in urban renewal and public housing is developing. If the social planners in Washington get their way, the Government will be able to nationalize your home or choose your neighbors for you.

Mr. Speaker, I would call to my colleagues' attention the fact that tomorrow, I believe, is the issue date for a special supplement of Human Events that will spell out in some detail this proposition on urban renewal which I will develop further on Wednesday next.

Mr. Speaker, I hope my colleagues will have the time to look at this RECORD tomorrow and to participate with me on Wednesday in this matter of urban renewal.

In any bill of particulars these matters deserve special attention:

First. Because of urban renewal, the Supreme Court has reinterpreted the Constitution, and violated the letter and spirit of the law.

Second. Private property can be taken away for esthetic and spiritual reasons for private—not public—use.

Third. The Federal contribution results in Federal control of local government.

Fourth. Local need for Federal help has been fraudulently determined by both local and Federal Government.

Fifth. The financially less able cities and States are supporting the wealthier cities and States in the Federal aid distribution.

Sixth. Federal guidelines, procedures, criteria, and formulas are inequitable, and cannot be made equitable.

Seventh. Misuse of Federal aid is scandalous.

Eighth. Windfall profit at taxpayer expense is commonplace.

Ninth. Public housing is forced on communities that want urban renewal.

Tenth. Crime abounds in public housing and is getting worse; morals and moral values are being destroyed.

Eleventh. Urban renewal and public housing are being used to affect sociological changes in U.S. society at the planners' whim.

Twelfth. When people know the facts and there is a referendum, public housing is rejected.

The constructive answer to urban renewal and housing is local; it is a local problem, not Federal. The solution must be local, not Federal. Examples are Indianapolis, Dallas, Erie, Pa., and many others.

U.S. MILITARY AID TO INDIA—THE NEED FOR A KASHMIR SETTLEMENT

The SPEAKER pro tempore (Mr. LIBONATI). Under previous order of the House, the gentleman from Michigan [Mr. BROOMFIELD] is recognized for 45 minutes.

Mr. BROOMFIELD. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and to include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. BROOMFIELD. Mr. Speaker, last Friday, Secretary of State Rusk, in a hearing before the House Foreign Affairs Committee, outlined the foreign aid programs proposed for the next fiscal year.

While we appreciated the detail and depth in which the Secretary of State delved in these discussions, many of us were disturbed over what is happening in Asia between two neighboring countries.

At a time when India faces the immediate threat of further invasions of its territory by the Red Chinese, we find that India is diverting a large portion of its military forces, not to protect against invasion from China, but to guard the border between India and Pakistan.

If Red China should launch another offensive against India, most military experts agree that India would have little chance of stopping it.

At the same time, Pakistan would find itself under possible attack by the Communists.

Instead of facing up to this dangerous situation, what has happened?

A majority of the forces of both India and Pakistan, some say as high as 80 percent, now face each other on the Kashmir border.

Defense expenditures

[Millions of dollars]

PAKISTAN	
Figures for 1962–63:	
Total expenditure inluding revenue expenditure and capital outlay	1, 022
Total defense expenditure (the Pakistan expenditure on defense is approximately 20 percent of total expenditure)	216
INDIA	
Figures for 1963–64:	
Total expenditure including revenue expenditure and capital outlay	5, 626
Total defense expenditure	2, 043

NOTE.—The Indian expenditure on defense is approximately 36 percent of their total expenditure. If revenue expenditure alone were to be taken, India's defense expenditure in 1963 will amount to nearly 47 percent of their total revenue expenditure.

The crux of the dispute between India and Pakistan is Kashmir, not a very prosperous territory of high mountains and beautiful lakes. At present, Kashmir is under the control of India.

Pakistan argues that Kashmir should be Pakistani because the majority of its people are Moslems. India argues that it should continue to retain control, because the present rulers are Hindu.

Four attempts have been made to settle this longstanding dispute, but so far without success. A fifth series of conferences on this question is now about to begin, and hopes for a successful solution are very slim.

Instead, a majority of the armed forces of both Pakistan and India confront each other on the border, forgetting for the time being their need to unite against a common enemy.

The current U.S. military assistance program to India, in which the British are participating, is to cost around $120 million. And this is only the beginning. A joint United States-British-Canadian mission recently returned from India after studying India's needs for offensive and defensive air power. Another mission has visited India to study ways of developing her defense production capacity. The Indian Army is to be expanded from the existing 11 divisions to 17 divisions in the near future. The United States will, no doubt, be asked to pick up the tab when the time comes to implement these proposals—a tab that may eventually run into billions of dollars.

What is the declared purpose of this heavy and obviously long-term military aid to India? To enable her to resist Communist aggression. But it seems to me that the method we have chosen to buttress Indian defenses against the Chinese Communists will, if persisted in, not only defeat our purposes in that region but may also lose for us the friendship of Pakistan, our stanchest ally in that part of the world.

The scale of the current U.S. military assistance to India, and the prospects of it continuing for the next 10 years—for that is Mr. Nehru's estimate of the time it will take to settle the Sino-Indian conflict—has caused alarm among the people of Pakistan. It is creating bitter resentment among the Pakistani people against U.S. policies in that region. Even so, there is no certainty, that if the hot war were to start again in the Himalayas, the Indians would be able to resist the Chinese attack any more successfully than they did last year.

Commenting on this subject, the Chicago Tribune had this to say in an editorial on February 27. I quote:

> Once again we find ourselves ignoring the interests of a country (Pakistan) with which we have firm military alliances in favor of those of India, which has studiously avoided committing itself to the West. If a country is our friend, Washington seems to reason there is nothing to gain by being nice to it. The folks we must humor are the uncommitted ones. Sooner or later our friends may decide that they are being made suckers.

The Tribune's warning is not to be taken lightly. Editorials in Pakistani newspapers have, in recent months, been outspokenly bitter in their criticism of U.S. military aid to India, a neutral country, which has made no secret of its hostility to Pakistan, a U.S. ally. Pakistanis feel they are being let down by their allies.

Now, why should the Pakistanis, who have been, and still are, our stanch allies, begin to think in those terms?

The Pakistanis argue—and no one has disputed their argument—that the key to the security of south Asia lies in a just and satisfactory settlement of the Kashmir dispute between Pakistan and India.

In the absence of such a settlement, we have seen the pathetic spectacle of India trying with a handful of troops to defend its borders against Chinese Communist attacks while maintaining an estimated 80 percent of its best-equipped forces massed against Pakistan.

This state of affairs is borne out by Mr. Saville R. Davis, of the Christian Science Monitor, who paid a visit to India to study the situation there during the Chinese attack. Writing in the Monitor's issue of March 1, 1963, he categorically states that the Nehru policy was to endorse, and here I quote Mr. Davis' own words:

> The stationing of most of India's Army with its best weapons on the frontier of Pakistan—while leaving the Chinese Communist frontier virtually undefended except by the interposition of patrols and armed posts and some half-hearted deploying of pathetically underequipped forces.

Listing the reasons for the Indian defeat by the Chinese, Mr. Davis says, and I quote again:

> That Mr. Nehru did not want to make concessions to Pakistan in Kashmir to free the Indian troops so they could face the Chinese.

Mr. Davis' conclusion was that the Indian nation under Mr. Nehru's leadership "was, and is, unsure where it is going." Let us see the course Mr. Nehru has charted for his government.

He is anxious to take from the United States all the military assistance this country can give him. Yet he insists on remaining allegedly unalined. I say "allegedly" because he has sided with the Soviet Union against us whenever it suits him, and will no doubt continue to do so, despite our aid. He insists that China's attack on India was not Communist aggression; instead, he calls it merely imperialist aggression. Rather than settle the Kashmir dispute with Pakistan, which would immediately release two-thirds of his army, now immobilized on Pakistan's borders, he wants to maintain the bulk of his forces against Pakistan and create a second army to face the Chinese. Hence his Government's decision to double the size of the Indian Army, which he hopes to arm with military assistance from the United States.

Unsure as the Indians are of the direction in which they are going so far as resisting Communist aggression is concerned, the United States is, nevertheless, prepared to give them heavy long-term military assistance despite the danger it might constitute to Pakistan and despite opposition from our Pakistani allies.

It is not surprising, then, that the Pakistanis should exhibit alarm at such U.S. policies.

Already the Indian Army, they say, is four times as strong as their own and more than three-fourths of it has always remained massed on Pakistan's borders. The recent Indian military takeover of Goa was a fresh reminder to the Pakistanis that no faith can be placed in Mr. Nehru's professions of peaceful intentions, or in his promises not to use American arms for purposes of aggression. They recall that, while explaining the reasons for the Indian military debacle in the recent fighting against the Chinese, Mr. Nehru publicly admitted that the Indian Army had been organized to fight Pakistan only. This is precisely what the Pakistanis had maintained ever since Mr. Nehru sent in his troops to occupy Kashmir. Indian leaders have repeatedly alleged that by her presence in Kashmir, Pakistan is guilty of continuing aggression against India and have suggested that Mr. Nehru take steps to put an end to this aggression, if necessary, by force of arms. They have publicly termed Pakistan as India's enemy No. 1.

All these factors have served to make the Pakistanis extremely suspicious of Indian military intentions. An India greatly strengthened with American arms, they argue, may or may not fight the Chinese Communists. It will certainly use its vastly increased military strength to intimidate or attack Pakistan. This danger is very real and cannot be ignored.

The aim of U.S. policy is to strengthen the security of the India-Pakistan subcontinent as a whole. What is needed to implement this sound policy is that the Indian and Pakistani forces in Kashmir and along the Indo-Pakistan borders be disengaged. This would immediately release six to seven divisions of the best equipped Indian forces for deployment against the Chinese, without the United States having to spend a single additional dollar of aid. Such a disengagement can be brought about only, however, if there is a just and satisfactory settlement of the Kashmir issue. Without it, Indian and Paskistani relations cannot improve and the armies of the two countries will continue to remain poised against each other, immobilized through mutual fear.

I cannot see how, under present circumstances, the supply of massive U.S. military equipment to India can serve to strengthen India's defenses against the Chinese Communists. On the contrary, continued U.S. military aid to India could only serve to make Mr. Nehru more determined in his resolve not to make concessions in the Kashmir dispute, which in turn will make the dispute itself more difficult to settle. Yet the key to the security of the entire south Asian region clearly lies in the settlement of the Kashmir issue and the establishment of a rapprochement between India and Pakistan which only a Kashmir solution can bring about.

To give military assistance to India without making it contingent upon a Kashmir settlement can only cause harm to the real interests of India, Pakistan, and the United States. If there is no Kashmir settlement, the security of India would not be increased despite the arms. In fact, both India and Pakistan could be further weakened by this heightening of tension between two neighbors with a common enemy. The U.S. taxpayer would have provided very large sums of money to no purpose. The only result of this policy would be to destroy the existing good relations between the United States, Pakistan, and India.

Some claim that a settlement between India and Pakistan is impossible. I do not think so.

India and Pakistan came to a mutual understanding on a problem at least as complex and important when agreement was reached on the Indus River Basin compact.

In 1949, the United Nations passed a resolution urging a plebiscite in Kashmir to determine the wishes of the majority of people in that area. India to date has refused to honor this resolution.

Supplying the arms and equipment for two nations to destroy each other while the wolf is waiting at the door to pick up what is left seems, to me, to be folly.

Unless there is some assurance that the arms we are supplying will not be used by two friends to fight each other, I think we should seriously reconsider military assistance to both Pakistan and India.

The need is apparent for India and Pakistan to face a common foe together, united in strength rather than weakened by division and conflict.

NATO and the coordinating of defense forces in free Europe certainly should demonstrate to India and Pakistan the absolute necessity of a common front against a common aggressor, whether that foe be communism, imperialism, or a combination of both.

[From the Chicago Tribune, Feb. 27, 1963]

WHY BE NICE TO OUR FRIENDS?

The announcement of our latest and largest development loan to India—$240 million for the purchase of foodstuffs—isn't going to contribute to our stature as an unbiased helper in the negotiations between India and Pakistan over Kashmir.

Our friendship and military alliance with Pakistan already have been jeopardized by the military aid we've given India since the Chinese invasion. Pakistan's suspicions have been aggravated by reports that when the Kashmir talks resume on March 9, the United States will propose a partition favorable to India.

The American plan, according to information from New Delhi, is supported by the British. Although it would give Pakistan at least half of all Kashmir, it would give India the capital, Srinagar, and most of the valley surrounding it—which is pretty much the only part of Kashmir worth having. Most of the state consists of snowy Himalayan peaks.

It would ignore the legitimate Pakistani contention that most of those who live in and around Srinagar are Moslems and would vote to join Pakistan.

Although Pakistan should be entitled to most of Kashmir on ethnic grounds and on the basis of self-determination, our Government seems to favor the claim of India, which is based on a legalistic act of accession by the late Maharajah of Jammu and Kashmir and on India's present possession of the Vale.

Once again we find ourselves ignoring the interests of a country with which we have firm military alliances in favor of those of India, which has studiously avoided committing itself to the West. If a country is our friend, Washington seems to reason, there's nothing to gain by being nice to it. The folks we must humor are the uncommitted ones. Sooner or later, our friends may decide that they're being made suckers.

[From U.S. News & World Report, Apr. 8, 1963]

INDIA NOW: IF THERE'S A NEW ATTACK BY CHINESE REDS—

(NOTE.—Mostly, it's business as usual in India, little sign of urgent alert against another invasion by Red China. Sol W. Sanders, of the international staff of U.S. News & World Report, studied Indian defenses and plans for this report from New Delhi.)

NEW DELHI.—It is just about half a year since Chinese Communists poured over the border and clobbered the Indian Army. It was a jolt that Prime Minister Jawaharlal Nehru says could be repeated any time.

Yet, the country is not on anything like a war footing, although a new defense budget is before Parliament.

The Army probably could do better than last time if the Reds attacked again. But it couldn't halt an offensive.

And Mr. Nehru, despite the shock the Communists gave him, still is committed to a policy of nonalignment.

The new budget includes the equivalent of $1.8 billion for defense, almost three times that of last year. But just before the budget was submitted, T. T. Krishnamachari, the Minister of Economic and Defense Coordination in the Nehru Cabinet, said that the economic measures to meet the emergency of renewed war with Communist China were both unrealistic and insufficient.

Additional troops are being raised. Plans are under way to recruit and train six new divisions for mountain warfare. With the aid of a dozen American transport planes and crews, the Indian Army has pushed supplies into several forward areas in the Himalayan regions bordering Chinese Communist Tibet. But no one believes this buildup has yet reached anything like the proportions needed to hold the Chinese in check.

Other elements are at work to endanger effective military cooperation among India, Britain, and the United States. Indian requests for Western aid are regarded as being quite impractical, in many cases. But refusal to meet these requests is being used by leftwing and anti-Western forces—centering around former Defense Minister V. K. Krishna Menon—to prove that Western help cannot be relied on.

This, in turn, is leading the Indians to count heavily on Russian help to brake the Chinese Communists. The result is almost certain to make effective cooperation between India and the United States that much more difficult.

POLITICS TO BLAME?

Looking back on the defeats of last autumn, observers here tend more and more to put the blame on the intrusion of politicians into strictly military questions—although shortage of materiel, Chinese superiority in men and weapons, surprise and terrain all played a role.

Military men say the essential mistake was the insistence by Prime Minister Nehru and Defense Minister Krishna Menon on the so-called forward positioning of Indian troops. This meant that Indian outposts were flung out on mountain pinnacles where they could not be defended. The policy was a calculated risk based on a belief that the Chinese Communists would never attack in force. But they did.

As a result of the defeats, both Gen. P. N. Thapar, chief of the army staff, and Gen. B. M. Kaul, who commanded the corps that suffered the greatest defeats have been removed. The new commander is Gen. J. N. Chaudri, who has been characterized by one of the foreign military attachés here as "a perfect British officer and gentleman."

A high Indian officer says now that if the Chinese should attack again, India would retreat to positions that could be defended and held.

TAKING THEIR TIME

What worries many foreign observers here is the slowness with which Indians are repairing deficiencies exposed by last year's attack. An American military mission has been set up under Brig. Gen. J. E. Kelly, an Infantry officer with experience in Asia. But so far the Indians have not taken many of General Kelly's hints of offers to extend training facilities. The same thing is true with the British.

A planning target established during the heat of the Chinese attack called for $120 million worth of American and British aid—$60 million from each side. But by March only about $30 million worth of the U.S. aid had arrived or was in the pipeline.

An Indian source says the aid is moving slowly because the Indians are screening their requests, carefully "since, theoretically, at least, we don't know whether there will be anything forthcoming after this $120 million is used up." But American sources put the blame on unrealistic requests they get from the Indians—that, plus the slowness with which requests are processed in the Indian Defense Ministry.

LOGISTICS OF LADAKH

Everybody admits that the job of building up Indian defense against the Chinese Communists is a terrific one. Take the example of the defense line in Ladakh, the northwestern corner of the 1,800-mile Indian frontier with Red China.

For 4 months, the Indians have been building stockpiles in the area against a possible Chinese attack this spring. This has been done with the help of U.S. air transports, since India does not have the aircraft required.

It has been a tremendous job. Yet, American military observers here believe that the huge tonnage necessary to maintain Indian forces in Ladakh cannot be permanently airlifted—even if India had the planes to do it.

The observers say that India needs two all-weather roads leading from the valley of Kashmir to Leh, the jump-off place in Ladakh for Indian defenses. U.S. sources estimate it would take at least 2,000 trucks, much heavy roadbuilding machinery, snow-handling equipment, and other equipment plus spare parts to turn the one truck route that is passable only part of the year into an adequate supply line. It could mount up to a $50 million project.

Such logistical problems abound along the whole northern frontier.

THE STUCK UMBRELLA

Also, there still is thorough confusion about Indian strategy and tactics. For example, consider the issue of an "air umbrella," as it has been called by Indian newspapers.

The Chinese Reds have at least 12, possibly 15, airfields capable of launching jets within easy range of India's 3 principal cities—Delhi, Calcutta, and Bombay. If hostilities broke out again now, the Communists would have virtual immunity from Indian air attack. It is believed they have jet interceptors that could keep India from bombing Tibet's difficult supply lines.

The Chinese also could make terror raids on Indian cities. It was fear of this that kept the Indians from using their tactical air support in the fighting in the northeast frontier agency last year.

AIR COVER—BUT HOW?

During the crisis last autumn, Mr. Nehru asked the United States for air cover for Indian cities. A joint United States-British-Australian-Canadian mission is preparing a report at India's request on the air-defense question.

But it is clear that any extensive buildup of the Indian Air Force—even if the United States and the rest of the West were willing to foot the bill—would take anywhere from 3 to 5 years.

It is also clear that any attempt to have Western air power here "on a standby basis" as some Indian newspapers have suggested would mean the presence of Western ground forces. Yet, Mr. Nehru insists that he will not tolerate Western bases in India—and that includes Western personnel permanently assigned here.

An American mission has toured India to see whether the country's two dozen ordnance plants can be overhauled. Some of these date back to before World War I.

The plants performed excellently under the British, and even supplied a good part of the munitions used during the Battle of Britain in World War II. But during the past 15 years the plants have been permitted to deteriorate.

One Indian official estimates that $125 million worth of capital equipment is needed just to begin their rehabilitation. And he says "eight times that figure" is needed in foreign-exchange support for the defense budget—largely to finance the importation of raw materials. These figures do not include future capital equipment for the ordnance plants, many of which appear to American observers to be suitable only for scrapping.

A BURDEN—BUT WHOSE?

What part of this burden can the Indians bear themselves? Very little, the Indians believe. The argument is that, should a large part of their resources be diverted from their 5-year development plans, the country would be further weakened and exposed to Red subversion.

The Indians maintain—and most foreign observers here agree—that very little of this planned economic development could be turned to defense purposes. Much of the money is committed to specific projects. Their abandonment would weaken the overall defense effort, since they are devoted to building up India's basic structure—steel, railroads and power.

So far, about the only important measure the Government has taken to meet the crisis that grew out of the Communist attack is to try to gather up India's huge hoard of privately held gold. Some economists estimate it to be as much as $10 billion.

The Government has asked private holders of gold to declare their holdings and has offered a 6½-percent gold-bond loan. It has forbidden jewelers to make gold into jewelry of more than 14-carat purity.

Critics of the Government policy—including most businessmen—say these steps not only are unreasonable, but are damaging to the economy.

In a country where some of the highest interest rates in the world prevail, the 6½-percent bond issue is regarded as a joke. Also, by searching for bullion, the Government has driven it into hiding and closed off one of the most important sources of credit financing in India.

Businessmen and bankers predict a wide-scale flouting of the gold law. They say it will bring an increase in black-marketing and will create general antagonism toward the Government at a time when national unity is essential.

UNLEARNED LESSONS

About half a year after a shocking military defeat, there is little evidence that the Indians learned many lessons from their experience on the Chinese border.

Mr. Nehru said after the Chinese Communist attack that India had been living in a world of unreality of its own creation. It seems incredible that India should ever move back into that world. Yet, most observers here believe that, to a large extent, that is exactly what has happened.

PUT TEETH IN EXPORT CONTROL ACT

Mr. BROOMFIELD. Mr. Speaker, I ask unanimous consent that the gentleman from Ohio [Mr. HARSHA] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. HARSHA. Mr. Speaker, I want to call to the attention of the House the merry-go-round policies of the State and Commerce Departments, and point out some very interesting revelations that require this Congress to put some teeth in the Export Control Act.

Since the beginning of 1963, the Department of Commerce has persisted in issuing export licenses authorizing the shipment of such strategic materials as steel mill machine parts, synthetic rubber, woodpulp, recording and controlling instruments and electrical devices, to Russia, Yugoslavia, Czechoslovakia, and other Communist nations.

This trade is voluminous, running into many millions of dollars. One such authorization was for $4 million worth of rolling mill machine parts to Yugoslavia. This type of mill is used to reduce steel ingots into intermediary sizes and shapes before further processing into such things as steel plates, rails, wheels, sheets and skelp—which is used in the manufacture of oil pipe, the very type of pipe which the United States and NATO have asked Germany not to ship to Russia.

The products of this mill are also to be used in the machine building and ship construction industries, and Yugoslavia has been engaging in shipping and trade with Cuba.

The synthetic rubber we ship to Czechoslovakia is for the manufacture of tires, and the woodpulp to Russia is for the manufacture of rayon tire cord. It is not inconceivable that this same material finds its way into the tires used on the military equipment these countries have delivered to Cuba.

The recording and controlling instruments and other electrical equipment are of the same type that is found on the Russian fishing trawlers that spied on our nuclear testing in the Pacific and that have recently been seen prowling all corners of the globe collecting data and intelligence.

Apparently, the only way to bring a halt to this practice is to tie the hands of the Departments of Commerce and State by putting teeth in the Export Control Act.

Incredibly, many of these same purchases are financed through the Export-Import Bank, an organization which acts as agent for the U.S. Treasury. The Export-Import Bank negotiates the loan with the Communist nation, then borrows the money from the U.S. Treasury and lends it to the Communist nation to make the purchase. This, in effect, is using the taxpayers' money to enhance the Communist economy.

Last year, Congress authorized the Export-Import Bank to borrow up to $750 million for development loans.

What good are economic sanctions by this country against Cuba if she can obtain these materials indirectly from the United States through her Communist allies?

How can we expect to win the cold war by making it possible for these Communist countries to obtain these strategic materials through the use of U.S. tax dollars? Where is this merry-go-round going to lead us?

APPALACHIAN HIGHLANDS DEVELOPMENT PROGRAM

Mr. GIBBONS. Mr. Speaker, I ask unanimous consent that the gentleman from Kentucky [Mr. PERKINS] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. PERKINS. Mr. Speaker, the bill I am introducing provides for immediate action and for longer time comprehensive planning for developing the resources of the Appalachian Highlands area.

The time is long past due to take more positive action to prevent disastrous floods such as were experienced in 1957 when there were $40 million worth of damages in eastern Kentucky alone. Again in 1963 a similar disastrous loss occurred with like amounts in eastern Kentucky and in Virginia, West Virginia, Tennessee, and other States.

These disastrous losses can be prevented, and at the same time productive and profitable use can be made of the abundant rainfall with which this whole region is blessed. Plans are underway to build more reservoirs under authorities already in existence, but I am proposing a greatly expanded program for water resource developments in the Appalachian Highlands area.

In this bill, I am proposing both a long-range approach and an immediate acceleration of action under existing authorities.

To accomplish this, I have made a four-pronged approach under four titles.

Title I provides for an Appalachian Highlands Commission composed of Federal agencies and representatives appointed by the Governor of each of the 11 States in the region. This proposal is patterned after the legislation that established the U.S. study commissions for the Texas river basins and the river basins of Southeastern States. This Commission could be formed immediately, and could begin at once to prepare comprehensive plans for development of the entire Appalachian Highlands region. Such a Commission would not preclude the formation of an Appalachian States Interstate Compact at such time as it is needed. In fact, I would favor the formation of such an interstate compact. But to form such a compact might require several years. The Commission I am proposing could get underway immediately with studies, surveys, and long-range plans to deal with the many complex problems of accelerated development of recreation, timber supply, water commerce industry, and full employment.

As a part of this bill I have incorporated the provisions of a bill which I previously introduced as H.R. 2610, 88th Congress, 1st session. This provides for a new approach to meeting the peculiar needs of this area for conserving and developing soil, water, woodland, wildlife, and recreation on farms and woodlands of the Appalachian Highlands. I have proposed a $100 million appropriation authorization for this work.

I have made provision to get underway with immediate action by authorizing an appropriation of $500 million to accelerate Federal public works programs under existing authorities, but with cost-sharing provisions more in keeping with the needs of this area than are provided for in existing programs. I am proposing an amendment to the Small Watershed Act, which I had previously introduced as H.R. 4189, to adapt the authorities of that program to the special conditions in depressed rural areas.

A more detailed summary of the bill follows:

SUMMARY OF BILL TO PROVIDE FOR A RESOURCE AND ECONOMIC DEVELOPMENT PROGRAM FOR THE APPALACHIAN HIGHLANDS AREA

The President would be authorized under the bill to establish the boundaries of the Appalachian Highlands area within the States of Alabama, Georgia, Kentucky, Maryland, North Carolina, Ohio, Pennsylvania, South Carolina, Tennessee, Virginia, and West Virginia, and to designate the counties in which the provisions of titles I, II, and III would be applicable.

The bill would provide for the formulation and submission to Congress of a comprehensive plan of resource and economic development in the Appalachian Highlands area by a Commission composed of representatives of Federal departments and agencies and of the concerned States. Pending the authorization of the plan by Congress, the bill would authorize a program for the conservation and development of soil and water resources through Federal assistance agreements with landowners, operators, and occupiers in the Appalachian Highlands area, and would also authorize acceleration in such area by Federal departments and agencies of public works projects and programs carried out by such departments and agencies.

TITLE I

Title I would provide for the formulation of a comprehensive plan for flood prevention and control, domestic and municipal water supply, improvement and safeguarding navigation, reclamation and irrigation of land, including drainage, possibility of hydroelectric power and industrial development, soil conservation, forest conservation, preservation, protection and enhancement of fish and wildlife resources, salinity and sediment control, pollution abatement and protection of public health, industrial, housing, transportation and other economic development, and other beneficial and useful purposes.

The plan would be formulated within guidelines set out in the bill by an Appalachian Highlands Commission composed of a chairman, to be appointed by the President; Federal members representing the Departments of Agriculture, Army, Commerce, Health, Education and Welfare, Interior, and Labor, the Housing and Home Finance Agency, and the Tennessee Valley Authority, to be appointed by the heads of such departments and agencies; and State members representing the States in the Appalachian Highlands Area, to be appointed by the Governor of each State.

The duties, functions, and authorities of the Appalachian Highlands Commission are prescribed, and the compensation of the chairman and State members are set forth. Federal members would receive no additional compensation.

In the formulation of the comprehensive plan respecting the control, conservation and utilization of water, conservation and development of land resources, flood prevention and control, navigation, reclamation, agriculture purposes, power, recreation, fish and wildlife, economic development, and other needs set out in title I, the Commission would be directed, among other things, to take into consideration certain prescribed benefits, utilize the services, studies, surveys and reports of existing Government agencies, and to include in the plan specified costs, benefits, and payout schedules, and the Commission's recommendations concerning construction and operation of the projects therein.

Prior to the submission of the comprehensive plan to the Congress through the President, the plan would be submitted to each Federal department or agency and to the Governors of each State represented on the Commission, for their written views, comments or recommendations.

TITLE II

Title II would provide for a program in the Appalachian Highlands Area for the conservation and development of soil and water resources, including land use adjustments and the beneficial use of lands. The Secretary of Agriculture would be authorized to enter into agreements of not more than 15 years with landowners, operators, and occupiers in counties having serious need of protection of lands from water erosion, and flooding or sedimentation, stabilization and improvement of the quality of streamflow, development of beneficial uses of land, including improved woodland, and private recreational and fish and wildlife developments, or improvement of local living conditions and of opportunities for raising the level of family income through conservation and development of soil and water resources.

In return for the agreement by such landowners, operators, or occupiers to make needed changes in land use, and to establish practices and measures needed to conserve and develop soil, water, woodland, wildlife, and recreation resources, the Secretary would be authorized to furnish them with appropriate technical, financial, and other assistance.

Acreage allotments and marketing quota histories would be preserved for any landowners, operators, or occupiers during the period of the agreement, and for an equivalent period thereafter for specified purposes.

An appropriation of $100 million would be authorized to carry out the purposes of this title.

TITLE III

Title III would authorize the direct Federal departments and agencies to accelerate within the Appalachian Highlands Area, to the maximum extent feasible under authorized increased appropriations, existing public works programs and other programs providing technical or financial assistance, grants or loans to States and local agencies. It would provide that all land rights needed for such projects and programs, except those needed in connection with Federal projects, would be acquired by and in the name of State and local agencies in accordance with the provisions of State laws. It would increase the existing statutory percentage of Federal financial participation in such projects and programs by one-half the difference between the existing statutory percentage and 100-per centum Federal participation. An appropriation of $500 million would be authorized to carry out the purposes of this title.

TITLE IV

Title IV would amend the Watershed Protection and Flood Prevention Act to provide that in areas in which Federal grants and loans may be made under the Public Works Acceleration Act the Secretary of Agriculture would be authorized to bear the costs of relocations, removals, and replacements needed to make land, easements, and rights-of-way acquired by local organizations suitable for the installation of works of improvement, and that such costs would not need to be considered in determining benefit-cost ratios. It would also authorize the Secretary of Agriculture to bear an equitable part of the cost of installing works of improvements for the added purpose of water quality control.

THE WILDERNESS BILL

Mr. GIBBONS. Mr. Speaker, I ask unanimous consent that the gentleman from California [Mr. SHELLEY] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. SHELLEY. Mr. Speaker, on March 28, 1963, I introduced H.R. 5246, to establish a national wilderness preservation system for the permanent good of the whole people of our Nation. This measure is substantially the same as the bill introduced in the U.S. Senate by Senator CLINTON ANDERSON, of New Mexico.

Mr. Speaker, this bill would block development and exploitation of the few remaining virgin areas left in the United States. It creates a national wilderness preservation system of about 6.8 million acres.

I like the language of this legislation. Senator ANDERSON's definition of what wilderness is, is both eloquent testimony of our wilderness areas and strong argument for enactment of this legislation. It states:

> Wilderness—in contrast with those areas where man and his works dominate the landscape—wilderness is an area where the earth and its community of life are untrammeled by man—where man himself is a visitor who does not remain.

In a very short time—because of commercial development or the growing recreational program—there will not be many areas left in California nor throughout the Nation where "the earth and its community are untrammeled by man—where man himself is a visitor who does not remain."

Mr. Speaker, as a native Californian, I have seen vast sections of our outdoors give way to front doors, sliding doors, and picture windows—with no picture left to view. Nor are Californians the only Americans who have seen this. All Americans see this endless drama unfold every day. This is growth. This is boom. This is progress. This drama is, in fact, one measure of our Nation's greatness. Pioneers who tested their cunning and skill against the elements to tame the wilderness are national heroes. And well they should be. They tamed the West and laid the groundwork for this prosperous life we now enjoy.

In many ways, this pioneering spirit is seen today as the businessmen who risk their capital and their energy and time to develop new lands—to build homes and streets and shopping centers on the land. This is good. This is progress.

My fear is that in our dedication to progress—in our sturdy individualism—that one day we may wake up to find our State and our Nation with no land left "untrammeled by man."

There is another equally important factor to consider, too. It is this: The decrease in primitive, virgin land in this country is not due to commercial interests alone. It is due also to the unprecedented pressure of our States and Federal Government to open more and more park lands to mass public recreational uses.

What does this mean? It means recreational facilities—roads and boat landings—cabins and barbecue pits—cars and trailers—service stations and restaurants.

In a word, it means civilization. And that starts with C and that rhymes with T and that stands for trouble.

Trouble for those of us who believe some wilderness areas should be set aside and left exactly as they are.

Trouble for the generations of Americans who will follow us. We have seen the wilderness. We must ask ourselves: Will they? There will be outdoor recreation, to be sure. But will there be any wilderness left? Will any areas remain where "man and his works have not begun to dominate the landscape"?

Let me read a little more from the bill itself:

> Wilderness is further defined to mean an area of undeveloped Federal land retaining its primeval character and influence—with the imprint of man's works substantially unnoticeable.

Recreational areas show the imprint of man's works. The imprint is there—from lodges to superscenic highways to advertisements. The imprint is as bold as life and as up to date as the cheerful billboards reminding us that "every litter bit hurts." Indeed, every litter bit does hurt. I feel a pain every time I am reminded of that fact in that manner. Yes—a thousand times, yes—I am against litter bugs—be they driving down Market Street or toasting marshmallows at Lake Tahoe.

But it seems to me that there ought to be some lands preserved in our Nation where there are no antilitter signs, littering up the landscape—where there are no picnic tables and salt licks—and man and beast are alone on the land from which they sprang. The land is our land—yours and mine. And we ought to preserve some of it—just a little of it anyway—just the way it was created.

We are not asking too much, really. The wilderness bill would include in its national wilderness preservation system only about 2 percent of the more than 2 billion acres of national land area. Two percent of 2 billion. That is not very much.

The wilderness bill will create a wilderness area system to be composed of areas that are already reserved and restricted—forest, park and wildlife areas. These areas will continue to be administered by the agency now in charge of it. There would be no change of their present purpose—as game ranges or refuges or parks or monuments or forests. We would simply add to their administration the new condition that they remain wilderness areas. And cannot be reclassified without an act of Congress.

Mr. Speaker, enactment of this legislation will insure a sensible and logical program of our overall land, water, and resource conservation program. It would be most meaningful in holding large timber stands and preserving our water runoff sheds.

Let me point out that all of these areas subject to inclusion in the wilderness system are presently restricted areas. They have already been set aside by Congress, by the President or the Department of Interior or Agriculture for special purposes—including preservation of their natural state.

What the bill does is this: It says that those areas presently under a high degree of wilderness protection may be placed in the wilderness system upon the recommendation of the President. But any new areas—areas not already restricted—can only be included in the wilderness system by Act of Congress.

Inclusion of the wild and wilderness and primitive, park and wildlife areas in the wilderness system will cause little or no disturbance to individuals or communities or economic patterns. These areas have been restricted for years. There have been no timber sales from forest lands involved so there are no lumber mills dependent on them which would be forced to close down.

In short, there is virtually no change in the status quo. The bill simply makes wilderness preservation a statutory directive. The existing administering agency continues to hold responsibility for the land. The bill does not set up any new agencies or new categories of land classification.

In introducing this bill in 1961, Senator Anderson said that he did not remember a witness before his Senate Interior Committee who was opposed to preserving some of our great, natural scenic areas in their primitive, natural state. The debate he said, had been over how the preservation would be accomplished—over what safeguards would be placed around the wilderness system once it had been established.

I think the arguments in support of the bill are sound. I agree with Interior Secretary Udall when he says that "wilderness can be preserved only by positive public action designating and protecting areas of wilderness."

I agree with a spokesman for the AFL-CIO who pointed out that the wilderness bill offers "every reasonable concession to those who fear that economic development may be hindered by setting aside certain wilderness areas."

Mr. Speaker, as a Californian I believe I am in a unique and enviable position of seeing—at closer range, perhaps, than many other people—why this legislation is important—why it is so necessary that we pass it as soon as possible—why this is in a very real sense last-chance legislation.

I think a short summary of reasons for supporting this bill go something like this:

America is growing. To be sure, we have very serious problems—unemployment, for example, is much too high—production in many industries is well below capacity—but the undeniable fact is that we are growing. California—the No. 1 State in the Union—is vigorous testimony to that growth.

Every year California must provide 200,000 to 300,000 new jobs. Because 1,600 new citizens arrive in our State every day. And we must build and build and build—new homes and schools and highways and playgrounds and supermarkets and harbors and department stores.

A hundred years from now students will ask their history professors, Well, did it ever stop—all this building and growing?

I know the answer will be, "No, it never stopped." They were bold, ambitious, enterprising people—these energetic citizens of the sixties. They went right on building their schools and their homes and highways and playgrounds.

But they were not so consumed with their own destiny—their own needs and ambitions—that they forgot about ours.

They left us their spirit—they left us their natural resources—they even left us some of their wilderness as a reminder of our past and our heritage. This they inherited from those who went before them. This they preserved for us. This we must preserve, too.

UPHOLD THE CONSTITUTION OR UPHOLD THE JUDGES?

Mr. GIBBONS. Mr. Speaker, I ask unanimous consent that the gentleman from Texas [Mr. Casey] may extend his remarks at this point in the Record and include extraneous matter.

The **SPEAKER** pro tempore. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. CASEY. Mr. Speaker, Mr. Sam Holliday, of San Antonio, Tex., has written a very provocative analysis of our Supreme Court's recent operations. In my opinion Mr. Holliday, whom I have the pleasure of knowing for many, many years, is a very able student of constitutional law. It gives me pleasure to insert his analysis and observations in the Record at this point:

Does the Supreme Court of the United States Have the Right To Reverse Prior Constitutional Interpretations by That Court?

In considering this question, we are immediately met with the evident and undisputable fact that the Constitution does not state that the Supreme Court may interpret the Constitution. It does not say anything whatever about the matter. Many eminent men, including Thomas Jefferson, the author of the Declaration of Independence and one of the inspirers of the American Bill of Rights, incorporated into the Constitution, were of the opinion that the Supreme Court had no more power to interpret the Constitution than did the other branches of the Government in their respective spheres. The Court's asserted right is based, upon a claimed logical necessity. It is claimed that the Court, in applying the Constitution to the facts in cases coming before it, must ascertain, or interpret, the true meaning of the Constitution in order to know what it was applying. In other words, it is claimed that the Court is called upon, or has the duty, to search for and ascertain the Constitution's true meaning and then apply that meaning to the facts before the Court.

Much criticism has been heaped upon those, especially lawyers, who do not agree with recent reversals of prior constructions of the Constitution by the Supreme Court. Generally, such reversals occurred when the Court was composed of a different group of judges than those who rendered the prior decision. The basis of such criticism is that the Supreme Court has the duty to interpret the Constitution, when it needs interpreting to arrive at its true meaning; that as the Court is only interpreting the Constitution to ascertain its true meaning in order to apply such meaning, that, when the Court does interpret, or construes, a provision, that is, when it has ascertained or found its true meaning, such interpretation should be accepted as the same as the provision. It is claimed that it is the duty of all citizens to uphold such interpretation just as if that had been the way the provision in question had been expressed when it became part of the Constitution, because that was its true meaning when it was adopted, only expressed differently. It is claimed that such interpretation must be upheld whether the lawyer critic, or other critic, likes it or not, just as it is his duty to uphold the express terms of the Constitution, whether he likes it or not. This writer has no fault to find with such reasoning.

But the duty to uphold the Constitution and such an interpretation is not only that of the lawyer, the official, the soldier, and other citizens, but it is also the obligation of the members of the Supreme Court themselves. They, like the lawyers and other citizens, are obliged to uphold all of the Constitution. And if an interpretation becomes a part of it, then the judges themselves, like the lawyers and other citizens, have sworn to and are obligated to uphold it, just as they are obligated to uphold the Constitution as written, whether they like it or not. It would appear axiomatic that, if they are not so obligated, neither is anybody else, because the obligation of each to uphold it is the same. Is the Constitution which the lawyer swears to uphold the same or a different Constitution from that which the judges of the Supreme Court swear to uphold?

There is only one Constitution of the United States of America, and all citizens, regardless of their position, not excluding judges of the Supreme Court, are all alike dutybound to uphold it.

Does a lawyer, official, soldier, or citizen have the right to say, "I will not uphold this provision, or this interpretation, because it is out of date and should be changed?" It is evident that he does not.

Does a judge of the Supreme Court have the right to say, "I will not uphold this provision, or this interpretation, because it is out of date and should be changed?" It is still evident that he does not.

Suppose that the night before a reversal is made by the Supreme Court, a lawyer is upholding the Constitution as originally interpreted by such Court, which had correctly interpreted it as having the meaning it had when it was adopted. But the following morning, without his knowledge, the Supreme Court reverses such prior interpretation and gives it a meaning opposite to the original interpretation. Thereupon, still without knowledge of the change, the lawyer continues upholding the constitutional interpretation as he was the day before. Who would be upholding the Constitution, the lawyer or the judges who attempt to change the prior interpretation? Is it the lawyer's duty to uphold the Constitution or to uphold the judges?

It is inconceivable to this writer's mind that the judges can emit judgments, orders, or whatnot, which everybody, except themselves, is dutybound to uphold. Our laws are applicable to all citizens, generally. We do not have a two-class citizenship, one composed of nine judges who are above the law and yet who, at the same time, can make what amounts to law binding on everybody else, the second-class citizens. I do not believe that we have a nation of 180 million second-class citizens, including writer, and nine first-class citizens. In a society of our background and traditions, it cannot be that the judges of the Court can set the limits of their own power, for in such a case there would be no limits to such power. Would the government then be by the people? How could it be, if the people have no effective will, no power, as a matter of RIGHT to decide on their government? How could this be if any expression of their will must depend on the will of nine men, and any expression of their will can be disregarded, nullified and destroyed by those nine men? And the quaint idea in the Declaration of Independence that every just power is derived "from the consent of the governed," where would it fit in?

I beg you earnestly to consider the following reasoning.

There are at least three reasons why the Supreme Court cannot change, that is, amend by interpretation, by construction, the meaning of a provision of the Constitution, or its equivalent, a prior interpretation, which, as such an interpretation, has become of constitutional status, or as it is sometimes stated, "a part of the Constitution."

The first reason is that the Constitution contains no provision giving the Court such right. This was no oversight because the Constitution does provide how it is to be amended, and the Court is not mentioned in this connection. Is this not proof that the authors, great and learned men, who labored so earnestly and ably to make the Constitution clear, simple, and comprehensive, as well as the people who adopted it, had no intention of giving the Court such power, under the well recognized rule of legal construction, "Inclusio unius est eclusio alterius."

But the fundamental question as raised by the Court itself, is this: "Can the Supreme Court change the meaning of the Constitution, including prior interpretations, in order to make the Constitution better, to make it suit what the Court considers to be our current conditions and the better current sociological thought?"

Whether a particular decision was good or bad, or whether any particular change in the Constitution should have been made is not herein considered. We here are only interested in whose right it is to make changes in meaning in the Constitution.

Writer has never heard of anyone who claims that the authors who wrote the original Constitution, and the people who adopted it, thought they were providing that the Supreme Court could amend the Constitution. If they did, why didn't they say so? Furthermore, in such case, why did they expend so much effort, care, and thought in writing out a full Constitution at all? It would have been much simpler, and equally as effective, to have provided something like this: "There shall be one Supreme Court and its word shall be the Constitution and the supreme law of the land; and such Court may, as and when it sees fit, change or amend such Constitution, in the manner it sees fit, by its word alone."

Can anyone believe that Madison's hand could, in seriousness, have written anything meaning that? Can anyone believe that Washington, Jefferson, Patrick Henry, Franklin, John Adams, and other patriots would have agreed to it? And that grizzled, lean, austere, uncompromising, old Samuel Adams, whose life was so enmeshed with the struggle for freedom that one can hardly think of the one without thinking of the other, would he have agreed to it, or would he have died first?

Who can believe that the people, after revolting and undergoing nearly 8 years of suffering, hardship, and war to get freedom would have adopted such a provision denying them that freedom?

It is certain that that did not happen, and I will waste no more time on whether the Constitution, at the time of its adoption, meant that it could be amended by the Supreme Court. If the Court ever acquired such right, it happened in some other way and later. We will in this discussion, I believe, arrive at a correct conclusion as to whether this happened.

If the Court has the right to change, or amend, a prior interpretation, or construction, that is, an explanation of the meaning of the Constitution, which has become a part of the Constitution, it can also change a part of equal dignity, an express provision of the Constitution. If it can change it to what one person believes is good, it can change it to what another person believes is good, although it may seem bad to the first person. We are all aware that the 13th amendment provides that slavery may not exist in the United States. Does the Court have the right to say (not, will it do so) that such provision is now changed and it means, "Slavery may exist anywhere within the territorial limits of the United States, notwithstanding any objection by any particular State"?

If the judges of the Court can decide what is forward, they can decide that backward is forward, because, if their will is the test, that which is backward and that which is forward depend upon the ideas and whims of the judges of the Court. It may just as well be the reverse of what those who support discretionary power for the Court believe, just as some of its reversals are the reverse of what some other people believe.

But the Constitution is inviolate. It is this inviolability of the Constitution, or what the cases call inviolatus, and not stare decisis, which makes the Constitution invulnerable against changes without constitutional amendment. The Doctrine of inviolatus means that the Court cannot make changes in the meaning of the Constitution because it is sacred as it is. Stare decisis has no application to constitutional construction.

The second reason that the Supreme Court has no such right is that any right of the Court to make such a change would be diametrically opposed to, inconsistent with, the duty of the Court to interpret, to ascertain and to apply the true meaning of the Constitution so as to preserve it inviolate, and to protect it, the only function which the Supreme Court has with respect to the Constitution. Consider this a moment. The Court, as a court, has no choice whatever with respect to the Constitution other than to decide the form, not the meaning, of its interpretations. The meaning has already been set by the Constitution which the Court is interpreting or ascertaining. There are rights under the Constitution in the judges, as citizens, and those rights are no different from those in other individual citizens. But, as a court, its relation to the Constitution is principally that of a duty owed. The duty is to perform a function. That function, as above stated, is to apply the Constitution and to interpret it so as to preserve it, preserving its meaning. The function is commensurate with the duty and extends only as far as the duty extends. Where there is no duty, there is no function to perform. The duty arises in necessity to ascertain and make clear and apply the true meaning of the Constitution, and the function goes no further than the duty and the necessity. The right which is correlative to the Court's duty is in the people and it is to have the Court faithfully interpret the Constitution.

Expressed in another way, the function of the Court to interpret the Constitution is necessary in order for it to perform its duty to apply the true meaning of the Constitution to the facts coming before the Court. Such facts vary. Rarely, if ever, are the facts before the Court in the exact words, or the exact opposite of the words of, the Constitution. Hence the necessity that the Court ascertain, or interpret, the meaning of the Constitution with reference to such facts. This necessity is the only excuse or reason for the Court's construing, that is to say interpreting, the Constitution. The function of the Court arises in and exists only from and to the extent of such duty, and the duty arises in and is dependent upon such necessity. Therefore, the function to interpret the Constitution goes only to the extent of such necessity. Such necessity sets the limits of the function of the Court to interpret.

If there is no such necessity, there is no call for an interpretation, and, therefore, no duty or function to interpret. It is not necessary to misinterpret to interpret. From this it is evident that the Court's duty and function does not extend to misinterpreting, that is changing the meaning of, a provision of the Constitution, for this would be contrary to and would destroy the meaning which the Court is dutybound to ascertain, or interpret, and to apply. The function to interpret the Constitution is the exact opposite to and is inconsistent with any function to misinterpret or to give another meaning to, to change, the Constitution. The Court cannot discharge its duty to apply, to interpret and to protect, preserve and uphold the Constitution by attacking it and destroying it. Therefore the Court has no such function, much less a right, to change, or amend, the Constitution.

The third reason that the Court cannot amend the Constitution, or an interpretation with constitutional status, is because the Constitution positively, and clearly, though not in so many words, prohibits the Supreme Court from doing so. What provision is that?

It is the one directly and affirmatively stating how the Constitution is to be amended. It provides that it can be amended by the people through their representatives. One may say, "Yes, but this is not a statement that the Court can't." Yes, it is, in effect, for consider this:

I am not relying only on the well known rule of construction, "Inclusio unius est exclusio alterius." Such rule is, of course, applicable. But there is a much more compelling and fundamental reason why such right in the people excludes the same right in the Court. This reason is that, if the Court can have such power as a right, then the people cannot, despite the clear and express provisions in the Constitution that they can. If the Court can, by interpreting, change the meaning of a provision or an amendment adopted by the people, the Court can reject such provision or amendment and the people's act would be futile. Hence either the one or the other of such claimed rights must yield. Of course, if such claimed rights conflict and are inconsistent, then the claimed right in the Court would have to cede in view of the clear, direct statement in the Constitution that the people can amend it.

How do they conflict? If the Court, at will, amends, or changes the Constitution, or an interpretation which has become a part thereof, it must be because the Court decides to make a change in its meaning. If the Court can change it because it is bad or wrong or for any other notion of its own, then it is the idea of the judges which limits the right to make the change. If the judges' idea as to what change they want to make is the test, then they could make a change whenever they take a notion to do so; they could do it immediately upon the adoption of an amendment or later when the notion struck them. This would amount to the right of veto over any amendment by the people. Then the right of the people would be ineffective and such right would exist only so long as the judges decided not to veto it. It is clear then that the right of the people to amend would not then exist as a right at all, but only as a matter of sufferance or grace on the part of the judges of the Court. A so-called right that does not exist, except by sufferance or grace of another man or men, is no right. Then the two rights would be antagonistic and the Court's right would be destructive of the people's so-called right. But the Constitution expressly provides that the people have such right and says nothing about the Court's having any such right. Therefore the claimed right of the Court is necessarily denied by the recognition of the inconsistent right in the people. The provision that the people have such right cannot be twisted to mean they cannot.

The Court does have the same right that all its predecessors had—the right to construe, to interpret, that is, to ascertain, the meaning of the Constitution, to reinterpret the meaning of it, or of a prior interpretation, and to respect their own constitutional acts, as many times as may be necessary to apply the meaning of the Constitution to the varying facts which may come before that Court, but not to change, that is to amend, such meaning.

There are two exceptions, as writer sees it, when a later Court can set aside a prior interpretation: If the interpretation were made through fraud, and if the prior interpretation was wrong in that it did not give a provision the meaning it had when it was adopted. If there were such a cause of fraud, there would have been no interpretation at all and, consequently, such purported interpretation could be ignored by a subsequent Supreme Court. In the second case the Court would not have performed its function to give a provision its true meaning, and the Court cannot intentionally or through mistake change the meaning of a provision of the Constitution. But these exceptions do not authorize the Court to make changes in the meaning of an interpretation for other reasons, certainly not because the Court thinks a provision is "bad" and should not have been adopted by the people, and certainly not because the Court believes that "the better modern sociological thought" has changed and now considers a provision "bad" that was before thought to be "good." Any misinterpretation by a later Court is likewise vulnerable and can be corrected, if the Court does not give a provision the correct meaning it had when it was adopted.

The supporters of discretionary power for the Court do not seem to understand that, when they advocate the Court's having the right, at will, to interpret out of existence prior interpretations, which have reached constitutional status, they are in reality advocating the destruction of the entire process of constitutional interpretation by the Supreme Court and hence the destruction of constitutional government. How does this follow:

If the limitations are removed as to the present Court, they likewise are removed from the next and ensuing Courts. If the prior interpretations mean nothing to this Court, then this Court's interpretations would mean nothing to the next and future Courts. Each Court would be able to interpret the Constitution and prior interpretations as it sees fit, thereby being able to disregard the prior acts of the Court and to interpret them out of existence. The will of the judges would then become the only law. The Constitution, and prior interpretations, including those of all past, present and future Courts, would become surplusage. A Constitution that is surplusage and which cannot furnish a binding rule is no Constitution and might just as well never have been written. As a result of too much power in the Court, the entire constitutional system would have disappeared. A true Constitution is a limitation on the Court. If there is no limitation, there is no Constitution. An interpretation, to be effective as an interpretation, must have binding effect. If it does not have binding effect, then that which has equal dignity, a written provision of the Constitution, would have no binding effect and we would have government by fiat, or order, by the word of a few men, changeable at their discretion. What the discretionary power of a judge means has been considered before. On other occasions I have called to your attention that one such case is that of *State* v. *Cummings*, 36 Mo. 263, in which it is said:

"The discretion of a judge is the law of tyrants; it is always unknown; it is different in different men; it is casual and depends on constitution, temper and passion. At best it is often caprice; in its worst it is every vice, folly and passion to which human nature can be liable."

THE CENTURY OF HUMAN RIGHTS

Mr. GIBBONS. Mr. Speaker, I ask unanimous consent that the gentleman from Texas [Mr. Gonzalez] may extend his remarks at this point in the Record and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. GONZALEZ. Mr. Speaker, on several occasions I have taken the privilege of calling the attention of the House to some of the public expressions of our Vice President.

I am satisfied that these expressions of Vice President Lyndon B. Johnson are not going unnoticed by the Members of this House, but I feel it important that they be recorded in the Record of the Congress since they constitute important parts of the history we are every day living.

Vice President Johnson has time and again demonstrated his keen skill in taking the pulse of our history. He is particularly well situated to perform this service, for no other man in government is so privy to the expressions, the moods, the beliefs, and the actions of both the executive and legislative branches of our Government.

Our Vice President is sensitive to the nuances of current events and is in a position to comment on them as they recede from time to time to form the history of our time. His comments on this century as "The Century of Human Rights" are a worthy addition to the records of this day.

The Century of Human Rights

(Address by Vice President Lyndon B. Johnson upon receiving the B'nai B'rith Human Rights Award, New York City, April 4, 1963)

You do me a very great honor by this award tonight. For deeply personal reasons, it is a most gratifying honor—most gratefully received—and I thank you for it.

In responding to what has been so generously said, I realize that I cannot divorce my personal words from my public station nor can I disregard the public nature of this occasion. But insofar as it is possible, I would like to speak with you as I might do privately.

This century in which we live has been given many names. One predecessor in the office I hold described it eloquently as the "century of the common man." Others have applied different descriptions of both hope and despair. For myself, I feel it may be most accurately and aptly described as the "century of human rights."

It may seem paradoxical to refer to a century which has seen the rise of two of the greatest tyrannies in history—fascism and communism—as the century of human rights. But in the light of historic human behavior, it becomes apparent that there is no paradox whatsoever—in fact, that the rise of these forces is evidence of the growing strength of the cause of equality.

The intense fury with which the totalitarians of both the right and the left deny the concept of human rights is the measure of their realization that their cause is doomed. People who are truly confident, people who truly believe they represent the wave of the future, do not resort to mass denial of age-old religious practices, mass denial of political rights, or mass extermination. These are the weapons of frustration—the last resort of men who know, however loudly they may deny the fact, that they have reached the end of one of the blind alleys of history.

It is difficult for our generation—which has known of Dachau and Warsaw, of the imprisonment of cardinals and the fate of Passover in the Soviet Union—to realize the tremendous advance of the concept of equal rights in the mid-20th century.

A few short decades ago, the thought that all men and women—regardless of race, creed, color or origin—were entitled to equality of treatment was a novel idea.

There was a concept of tolerance, but to far too many people it was a tolerance for "lesser breeds without the law" who were to be treated with kindness and humanity but not with equal regard as fellow human beings.

There are very few thinking men today who regard this kind of tolerance as a virtue, however much it may have contributed at one time to "peaceful" relations. The whole moral drive of the Western World is focused on the concept that we are all children of God—however we may worship our God—and entitled to judgment on our individual merits without regard to irrelevant considerations of ancestry.

This is the true "wave of the future"—the fulfillment of the dreams and hopes of moral men throughout the ages. However much we may fall short of our ideals, we are striving to attain them with an intensity heretofore unknown to history. They have become an accepted part of the fabric of our society. And however vehement may be the forces of bigotry, the fact remains that those forces are on the defensive. They are fighting a losing battle.

That is why I am confident our century—the century of human rights—will be remembered for the legacy it leaves to the future more than for its inheritance from the past.

SEASON OF CHANGE

I would like to speak for these few moments about certain of our special American responsibilities to the greater fulfillment of this century of human rights.

It is abundantly clear that in the course of our Nation's affairs, we have arrived at a season of change in our policies and our relationships with the world—especially the non-Communist world. A period of searching reassessment has begun. However, we lose—and others lose—a necessary and indispensable perspective, when we neglect the fact that this is also a time for reassessment by all nations of the free world community.

All of us together are emerging from a period which has seen history's greatest explosion of political rights. We are also emerging from the early phase of what has been called the explosion of economic aspirations. In a very brief period, new world standards of political equality and equality of economic expectations have been established and we cannot neglect the implications.

We of America welcome what has happened. We are proudly conscious that both the revolution of political independence and the revolution of economic expectations had their beginnings on these shores. We are conscious of special responsibilities to these forces which have reshaped the destinies of so many men. Our national policies since World War II have sought to honor those special responsibilities.

As the authentic revolutionaries of the world, however, we of America must make it clear to those who have chosen freedom that the revolution of freedom is fundamentally and above all else a revolution of human rights.

And we must make it clear not only by words but by example and precept. Our own house must be in order.

HARD DECISIONS

When our system was created, many hard decisions were required. None was harder—none was more revolutionary—than the decision embodied in our Bill of Rights that the Central Government should be prohibited from serving as the instrument for perpetuation of the prejudices and bias and discrimination of any sect or segment of American society. This decision was—and has continued to be—fundamental to our American unity, fundamental to our American capacity for economic growth, fundamental to the eternal harmony of our society, and fundamental to our capacity for exercising leadership on behalf of freedom beyond our own shores.

We must not acquiesce passively to any concept that the world can enjoy a new freedom while remaining the accomplice and prisoner of old prejudices.

To say this is to point no finger of scorn—nor to cast first stones of criticism. We make for ourselves no claim of national perfection.

But if a better world is to be built—and I am an unreserved optimist about the potentials—there must be a universal recognition that mankind must marshal the full potential of human resources and make full use of those potentials without regard to hereditary bias, prejudice, and discrimination.

If we of America are to rise to our full height as men in this century, we must face courageously the world's problem of human discrimination. We must speak clearly. We must speak in concrete terms. We must help the world to understand that the curing of the problems of discrimination is the beginning—not the end—of genuine freedom.

STEREOTYPES

As long as there have been societies more complex than tribal simplicity, majorities and minorities have relied on stereotypes to mold their opinions of one another. Such stereotypes have been convenient—but they have also been cruel.

We can take some measure of satisfaction from the fact that there is progress and that these stereotypes disappear as human understanding spreads.

For example, the two highest elective offices in the strongest free nation on earth are held today by men who have overcome the dead hand of the stereotype—for reasons of religion or region of birth. And I believe that each passing day will diminish the force of the stereotype for all of us.

As recently as last week when I attended the swearing in of an Ambassador of the United States it was noted in some accounts that I am "from a Southern State." The Ambassador himself was from a Southern State, also. But the accident of my birth became newsworthy, as did his, because I was born in the South of white parents—and he was born of Negro parents.

If to stand by his side and to shake his hand and wish him "Godspeed" make news, then that is news I am proud to make.

HIGHER SIGHTS

I say this to emphasize that the effort made by your national leadership today against discrimination, against bias, against division, and against the tyranny of stereotypes is, above all, an effort directed by men who know personally the enemy—and know his toll.

But, I say this also to suggest that perhaps we of America should consider raising our sights toward larger horizons. Certainly in this field there is much still to accomplish—but what remains undone does not detract from the magnitude of what has been done.

Much of our effort is directed today to the subtle forms of discrimination. This is a necessary and worthwhile effort—and we cannot be content until we have succeeded completely. But when we look to the world as a whole, the problem of discrimination is a massive problem—requiring massive effort on our part.

We cannot be content until we commit ourselves to massive support of the cause of human rights everywhere.

Our American vocabulary is filled with frequent expressions identifying illiteracy, illness, ignorance, and poverty as the oppressors of humankind. I believe we need to complete our vocabulary by acknowledging frankly that the greatest oppressor of all continues to be that of bias and prejudice.

We shall have failed our country and our cause if, from the position we are now privileged to enjoy in the world, we do not undertake the initiative in fulfilling the promise of this 20th century as the "century of human rights."

If we are to be remembered as constructive builders of a better world of peace and justice and freedom we shall be remembered not for the dollars we sent abroad but for the force of the influence and leadership we exercise to improve the lot of all mankind. It is this work that challenges us—it is this undertaking that summons us—it is toward this higher goal that we must lift up our sights and set our course.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. Willis, for 20 minutes, tomorrow, April 9, 1963.

Mr. Hall (at the request of Mr. Broomfield), for 30 minutes, on Thursday, April 11, 1963.

Mr. Schadeberg (at the request of Mr. Broomfield), for 1 hour, on Thursday, April 11, 1963.

Mr. Alger (at the request of Mr. Broomfield), for 1 hour, on Thursday, April 11, 1963.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the Congressional Record, or to revise and extend remarks, was granted to:

Mrs. Kee.

Mr. Randall.

Mr. Curtis and to include extraneous matter.

(The following Members (at the request of Mr. Broomfield) and to include extraneous matter:)

Mr. Fino.

Mr. Rhodes of Arizona.

Mr. Gubser.

Mr. Tupper.

(The following Members (at the request of Mr. Gibbons) and to include extraneous matter:)

Mr. Macdonald.

Mr. Purcell.

SENATE BILLS REFERRED

Bills of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 72. An act for the relief of Jozsef Pozsonyi and his wife, Agnes Pozsonyi, and their minor child, Ildiko Pozsonyi; to the Committee on the Judiciary.

S. 74. An act for the relief of Dr. Olga Marie Ferrer; to the Committee on the Judiciary.

S. 93. An act for the relief of Flora Romano Torre; to the Committee on the Judiciary.

S. 196. An act for the relief of Carnetta Germaine Thomas Hunte; to the Committee on the Judiciary.

S. 206. An act for the relief of Chang Ah Lung; to the Committee on the Judiciary.

S. 213. An act for the relief of Carmelo Schillaci; to the Committee on the Judiciary.

S. 215. An act for the relief of Mannor Lee; to the Committee on the Judiciary.

S. 292. An act for the relief of Yoo Chul Soo; to the Committee on the Judiciary.

S. 310. An act for the relief of Kaino Hely Auzis; to the Committee on the Judiciary.

S. 504. An act for the relief of Domenico Martino; to the Committee on the Judiciary.

S. 671. An act for the relief of Mirhan Gazarian; to the Committee on the Judiciary.

S. 686. An act for the relief of Millie Gail Mesa; to the Committee on the Judiciary.

S. 715. An act for the relief of Laszlo Janos Buchwald; to the Committee on the Judiciary.

S. 752. An act for the relief of Janos Kardos; to the Committee on the Judiciary.

S. 822. An act for the relief of Elvira Ciccotelli; to the Committee on the Judiciary.

S. 866. An act for the relief of Enrico Petrucci; to the Committee on the Judiciary.

ADJOURNMENT

Mr. GIBBONS. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 12 o'clock and 34 minutes p.m.) the House adjourned until tomorrow, Tuesday, April 9, 1963, at 12 o'clock noon.

CONTRACTUAL ACTIONS, CALENDAR YEAR 1962, TO FACILITATE NATIONAL DEFENSE

The Clerk of the House of Representatives submitted the following report for printing in the Congressional Record pursuant to section 4(b) of Public Law 85–804:

National Aeronautics and
Space Administration,
Washington, D.C., March 15, 1963.

Hon. John W. McCormack,
Speaker of the House of Representatives,
Washington, D.C.

Dear Mr. Speaker: This is a report to the Congress pursuant to section 4 of the act of August 28, 1958 (72 Stat. 972), submitted to the Speaker of the House of Representatives pursuant to rule XL of that House.

During the calendar year 1962, the National Aeronautics and Space Administration utilized the authority of the above-cited statute three times:

1. Under date of January 3, 1962, it authorized an adjustment in the amount of $2,976.50 in a contract for documentation services with the National Aeronautic Association, Washington, D.C.

2. Under date of April 2, 1962, it authorized an adjustment of $24,640 in a contract for launching and related services with the Department of Supply, Government of Australia.

3. Under date of June 19, 1962, it authorized an adjustment in the amount of $1,585 in the contract for minor items of electronic equipment with the Vector Manufacturing Co., Southampton, Pa.

Very truly yours,

Hugh L. Dryden,
Deputy Administrator.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

653. A letter from the President of the Board of Commissioners of the District of Columbia transmitting a draft of a proposed

bill entitled "A bill to authorize the establishment of a Junior College Division within the District of Columbia Teachers College, and for other purposes"; to the Committee on the District of Columbia.

654. A letter from the President of the Board of Commissioners of the District of Columbia, transmitting a draft of a proposed bill entitled "A bill to amend the Motor Vehicle Safety Responsibility Act of the District of Columbia"; to the Committee on the District of Columbia.

655. A letter from the President of the Board of Commissioners of the District of Columbia, transmitting a draft of a proposed bill entitled "A bill to amend the act of July 8, 1932, relating to the control or possession in the District of Columbia of dangerous weapons, and for other purposes; to the Committee on the District of Columbia.

656. A letter from the Chairman, Federal Power Commission, transmitting a draft of a proposed bill entitled "A bill to amend section 14 of the Natural Gas Act"; to the Committee on Interstate and Foreign Commerce.

657. A letter from the Chairman, U.S. Atomic Energy Commission, relative to requesting that the pending legislation for authorization of fiscal year 1964 appropriations for the Atomic Energy Commission be amended; to the Joint Committee on Atomic Energy.

658. A letter from the president, National Safety Council, transmitting a report of the audit of the financial transactions of the National Safety Council for the year 1962, pursuant to Public Law 259, 83d Congress; to the Committee on the Judiciary.

659. A letter from the Secretary of the Treasury, transmitting a draft of a proposed bill entitled "A bill to amend the provisions of title 14, United States Code, relating to the appointment, promotion, separation, and retirement of officers of the Coast Guard, and for other purposes"; to the Committee on Merchant Marine and Fisheries.

660. A letter from the Chairman, U.S. Civil Service Commission, transmitting a draft of a proposed bill entitled "A bill to amend the automatic-separation provisions of the Civil Service Retirement Act"; to the Committee on Post Office and Civil Service.

661. A letter from the Postmaster General, transmitting a draft of a proposed bill entitled "A bill to amend title 39 of the United States Code to increase the area within which the Postmaster General may establish stations, substations, or branches of post offices, from 10 to 20 miles"; to the Committee on Post Office and Civil Service.

662. A letter from the Secretary of Commerce, transmitting a draft of a proposed bill entitled "A bill to amend the act of March 3, 1901 (31 Stat. 1449) as amended, to incorporate in the Organic Act of the National Bureau of Standards the authority to make certain improvements of fiscal and administrative practices for more effective conduct of its research and development activities"; to the Committee on Science and Astronautics.

663. A letter from the Administrator, Veterans' Administration, transmitting a draft of a proposed bill entitled "A bill to amend title 38 of the United States Code to allow the Administrator of Veterans' Affairs to delegate to the Chief Medical Director in the Department of Medicine and Surgery, authority to act upon the recommendations of the disciplinary boards provided by section 4110 of title 38, United States Code"; to the Committee on Veterans' Affairs.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, pursuant to the order of the House of April 4, 1963, the following bill was reported on April 5, 1963:

Mr. THOMAS: Committee on Appropriations. H.R. 5517. A bill making supplemental appropriations for the fiscal year ending June 30, 1963, and for other purposes; without amendment (Rept. No. 198). Referred to the Committee of the Whole House on the State of the Union.

[*Submitted April 8, 1963*]

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. POWELL: Committee on Education and Labor. H.R. 5131. A bill to authorize the establishment of a Youth Conservation Corps to provide healthful outdoor training and employment for young men and to advance the conservation, development, and management of natural resources and recreational areas; and to authorize State and community youth employment programs; without amendment (Rept. No. 199). Referred to the Committee of the Whole House on the State of the Union.

Mr. SMITH of Virginia: Committee on Rules. House Resolution 310. Resolution to authorize additional traveling authority for Committee on Banking and Currency; without amendment (Rept. No. 200). Referred to the House Calendar.

Mr. DELANEY: Committee on Rules. House Resolution 311. A resolution waiving points of order on H.R. 5517, a bill making supplemental appropriations for the fiscal year ending June 30, 1963, and for other purposes; without amendment (Rept. No. 201). Referred to the House Calendar.

Mr. MADDEN: Committee on Rules. House Resolution 312. Resolution for consideration of H.R. 5207, a bill to amend the Foreign Service Buildings Act, 1926, to authorize additional appropriations, and for other purposes; without amendment (Rept. No. 202). Referred to the House Calendar.

Mr. THORNBERRY: Committee on Rules. House Resolution 313. Resolution for consideration of H.R. 5389, a bill to repeal certain legislation relating to the purchase of silver, and for other purposes; without amendment (Rept. No. 203). Referred to the House Calendar.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, pursuant to the order of the House of April 4, 1963, the following bill was introduced on April 5, 1963:

By Mr. THOMAS:

H.R. 5517. A bill making supplemental appropriations for the fiscal year ending June 30, 1963, and for other purposes.

[*Introduced and referred April 8, 1963*]

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ASHMORE:

H.R. 5518. A bill to consolidate the two judicial districts of the State of South Carolina into a single judicial district and to make suitable transitional provisions with respect thereto; to the Committee on the Judiciary.

By Mr. CELLER:

H.R. 5519. A bill to authorize the Administrator of General Services Administration to dispose of Ellis Island for educational purposes; to the Committee on Government Operations.

By Mr. CLARK:

H.R. 5520. A bill to amend the Area Redevelopment Act so as to provide preference in the awarding of certain Government contracts to contractors in areas of substantial and persistent unemployment; to the Committee on Banking and Currency.

By Mr. FUQUA:

H.R. 5521. A bill to determine the need for a channel from Lanark Village to St. George Sound, Fla.; to the Committee on Public Works.

By Mr. HALL:

H.R. 5522. A bill to protect postal patrons from obscene mail matter and Communist propaganda; to the Committee on Post Office and Civil Service.

By Mr. LIBONATI:

H.R. 5523. A bill to encourage the creation of original ornamental designs of useful articles by protecting the authors of such designs for a limited time against unauthorized copying; to the Committee on the Judiciary.

By Mr. OLSEN of Montana:

H.R. 5524. A bill to amend the Internal Revenue Code of 1954 and the Internal Revenue Code of 1939 with respect to the determination of unrelated business taxable income; to the Committee on Ways and Means.

By Mr. PERKINS:

H.R. 5525. A bill to provide for a resource and economic development program for the Appalachian Highlands area; to the Committee on Agriculture.

By Mr. ROBISON:

H.R. 5526. A bill to amend the Internal Revenue Code of 1954 so as to exclude from gross income gain realized from the sale of his principal residence by a taxpayer who has attained the age of 65 years; to the Committee on Ways and Means.

By Mr. RYAN of Michigan:

H.R. 5527. A bill to provide readjustment assistance to veterans who serve in the Armed Forces during the induction period; to the Committee on Veterans' Affairs.

By Mr. SIKES:

H.R. 5528. A bill to abolish the Arms Control and Disarmament Agency, and repeal the Arms Control and Disarmament Act; to the Commmittee on Foreign Affairs.

By Mr. TOLL:

H.R. 5529. A bill to provide for Federal assistance for the construction and expansion of public community junior colleges; to the Committee on Education and Labor.

By Mr. SHELLEY:

H.R. 5530. A bill making Columbus Day a legal holiday; to the Committee on the Judiciary.

By Mr. McINTIRE:

H.J. Res. 376. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

By Mr. HARRISON: Joint memorial of the House of Representatives, 37th State Legislature of the State of Wyoming, memorializing the Congress of the United States to provide legislation regarding the feasibility reports required in connection with applications for Federal small projects loans, and requiring such reports only when they are needed to establish the ability of the borrowing entity to repay the loan; to the Committee on Interior and Insular Affairs.

By the SPEAKER: Memorial of the Legislature of the State of Alaska, memorializing the President and the Congress of the United States to take favorable action upon a request by the Director of the Bureau of Mines for funds to carry on a mineral resource study; to the Committee on Appropriations.

Also, memorial of the Legislature of the State of Alaska, memorializing the President and the Congress of the United States relative to the territorial waters of Alaska; to the Committee on Foreign Affairs.

Also, memorial of the Legislature of the State of Alaska, memorializing the President and the Congress of the United States relative to the construction of modern sternramptrawlers for experimental commercial fishing and research; to the Committee on Merchant Marine and Fisheries.

Also, memorial of the Legislature of the State of Alaska, memorializing the President and the Congress of the United States relative to congressional action on H.R. 4901 which provides for a flat annual installment rate by employers, repaying Federal loans made to the State for its unemployment compensation program; to the Committee on Ways and Means.

Also, memorial of the Legislature of the State of Arizona, memorializing the President and the Congress of the United States to authorize the immediate cessation of printing of all $1 silver certificates which do not bear the inscription "In God We Trust"; to the Committee on Banking and Currency.

Also, memorial of the Legislature of the State of Arizona, memorializing the President and the Congress of the United States relative to requesting the defeat of any legislation amending the enabling act so as to permit the State of Arizona to sell school and institutional lands granted to the State by the Federal Government without appraisal and public auction; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of Arizona, memorializing the President and the Congress of the United States relative to requesting the establishment of a national cemetery in Arizona; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of Arizona, memorializing the President and the Congress of the United States, relating to Federal taxation and recommending that the Federal excise tax on women's handbags be abolished; to the Committee on Ways and Means.

Also, memorial of the Legislature of the State of Hawaii, memorializing the President and the Congress of the United States relative to requesting favorable action on a bill for an act making the pay of the Federal workers at Pearl Harbor Naval Base comparable to that of Federal workers doing the same work in San Francisco Bay area; to the Committee on Armed Services.

Also, memorial of the Legislature of the State of Hawaii, memorializing the President and the Congress of the United States, relative to requesting the amendment of Federal laws which grant subsidies to any industry so as to require compliance with the Fair Labor Standards Act; to the Committee on Education and Labor.

Also, memorial of the Legislature of the State of Missouri, memorializing the President and the Congress of the United States to call a convention for the purpose of proposing an amendment to the Constitution of the United States; to the Committee on the Judiciary.

Also, memorial of the Legislature of the State of Ohio, memorializing the President and the Congress of the United States, relative to providing for ratification of the proposed amendment to the Constitution of the United States, regarding the qualifications of electors; to the Committee on the Judiciary.

Also, memorial of the Legislature of the State of Rhode Island, memorializing the President and the Congress of the United States to enact legislation introduced by Senator Claiborne Pell (S. 751) to amend the immigration and nationality laws; to the Committee on the Judiciary.

Also, memorial of the Legislature of the State of Utah, memorializing the President and the Congress of the United States, relative to ratifying a proposed amendment to the Constitution of the United States; to the Committee on the Judiciary.

Also, memorial of the Legislature of the State of Washington, memorializing the President and the Congress of the United States, relative to the ratification of a proposed amendment to the Constitution of the United States; to the Committee on the Judiciary.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. FULTON of Pennsylvania:

H.R. 5531. A bill for the relief of Maria Santina Filomena Tambellini; to the Committee on the Judiciary.

H.R. 5532. A bill for the relief of Evdokia Mitchell; to the Committee on the Judiciary.

By Mrs. KEE:

H.R. 5533. A bill for the relief of Mrs. Lydia Schmidt Thompson; to the Committee on the Judiciary.

H.R. 5534. A bill for the relief of Dr. Gerardo L. Yubero, his wife, Luz Fortuny de Lopez, and their two minor children, Gerard Lopez Fortuny, and Fernando Lopez Fortuny; to the Committee on the Judiciary.

By Mr. LIBONATI:

H.R. 5535. A bill for the relief of Paul Ching-Szu Chen; to the Committee on the Judiciary.

By Mr. O'NEILL:

H.R. 5536. A bill for the relief of Maria Anotonieta Ribeiro Da Costa Marques; to the Committee on the Judiciary.

By Mr. POWELL:

H.R. 5537. A bill for the relief of Melbourne B. Siebbles; to the Committee on the Judiciary.

By Mr. FINO:

H.R. 5538. A bill for the relief of Giovanni Licastri; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII:

82. The SPEAKER presented a petition of Dracut Board of Selectmen, Dracut, Mass., petitioning consideration of their resolution relative to requesting efforts toward the location of the NASA Space Research Laboratory in the Central Merrimack Valley, which was referred to the Committee on Science and Astronautics.

SENATE

MONDAY, APRIL 8, 1963

The Senate met at 9 o'clock a.m., and was called to order by the President pro tempore.

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

Almighty God, maker of all things, judge of all men: With solemnized hearts and reverent awe we bow at the beginning of this holy week, over whose grim days is the shadow of a cruel instrument of torture. With multitudes under all skies, we have followed the hallowed footsteps of man's Best Man, of love's Best Love, the crystal Christ, as in lowly pomp He rode into His nation's crowded capital. As we gaze on Him, in whose face Thy full glory is revealed, teach us anew the pretense of pride, the hollowness of self-centered ambition, the vanity of might, the deceit of riches, the ashes of fame.

In the set and steadfast countenance of that Servant of all, who rides on to die and to life no grave can hold, may we see anew the royalty of love and the majesty of meekness riding on, as His dreams which enthrall the heart are brought to earth—

"In mart and court and Parliament
The common good increase
'Til men at least shall ring the bells
Of Brotherhood and Peace."

In His spirit and vision we bring our prayer. Amen.

REPORTS OF COMMITTEES SUBMITTED DURING ADJOURNMENT

Pursuant to the orders of the Senate of April 4, 1963,

Mr. CLARK, from the Committee on Labor and Public Welfare, reported favorably, with an amendment, on April 5, 1963, the bill (S. 1) to authorize the establishment of a Youth Conservation Corps to provide healthful outdoor training and employment for young men and to advance the conservation, development, and management of natural resources and recreational areas; and to authorize local area youth employment programs, and submitted a report (No. 111) thereon.

Mr. SIMPSON, from the Committee on Interior and Insular Affairs, reported favorably, without amendment, on April 5, 1963, the bill (S. 982) permitting the Secretary of the Interior to continue to deliver water to lands in the third division, Riverton reclamation project, Wyoming, and submitted a report (No. 112) thereon.

NATIONAL WILDERNESS PRESERVATION SYSTEM—REPORT OF A COMMITTEE—MINORITY AND INDIVIDUAL VIEWS

Under authority of the order of the Senate of April 3, 1963,

Mr. ALLOTT, on April 5, 1963, for himself, Mr. Jordan of Idaho, and Mr. Dominick, submitted minority views, and the individual views of Mr. Simpson, on the bill (S. 4) to establish a National Wilderness Preservation System for the permanent good of the whole people, and for other purposes, which were printed.

THE JOURNAL

On request of Mr. Mansfield, and by unanimous consent, the reading of the Journal of the proceedings of Thursday, April 4, 1963, was dispensed with.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 5366. An act making appropriations for the Treasury and Post Office Departments, the Executive Office of the President, and certain independent agencies for the fiscal year ending June 30, 1964, and for other purposes; and

H.R. 5367. An act to designate the Bear Creek Dam on the Lehigh River, Pa., as the Francis E. Walter Dam.

HOUSE BILLS REFERRED

The following bills were each read twice by their titles and referred as indicated:

H.R. 5366. An act making appropriations for the Treasury and Post Office Departments, the Executive Office of the President, and certain independent agencies for the fiscal year ending June 30, 1964, and for other purposes; to the Committee on Appropriations.

H.R. 5367. An act to designate the Bear Creek Dam on the Lehigh River, Pa., as the Francis E. Walter Dam; to the Committee on Public Works.

CALL OF LEGISLATIVE CALENDAR DISPENSED WITH

On request of Mr. MANSFIELD, and by unanimous consent, the call of the legislative calendar was waived.

LIMITATION OF STATEMENTS DURING MORNING HOUR

On request of Mr. MANSFIELD, and by unanimous consent, statements during the morning hour were ordered limited to 3 minutes.

COMMITTEE MEETING DURING SENATE SESSION

Mr. CHURCH. Mr. President, I ask unanimous consent that the Veterans' Affairs Subcommittee of the Committee on Labor and Public Welfare be permitted to sit during the session of the Senate today.

The PRESIDENT pro tempore. Without objection——

Mr. ALLOTT. Mr. President, by request, I must object to that unanimous-consent request.

The PRESIDENT pro tempore. Objection is heard.

Mr. MANSFIELD subsequently said: Mr. President, I ask unanimous consent that the Subcommittee on Veterans' Affairs of the Committee on Labor and Public Welfare be authorized to sit during the session of the Senate today.

The PRESIDING OFFICER. Is there objections? The Chair hears none, and it is so ordered.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

Report of National Aeronautics and Space Administration on Adjustment of Certain Contracts

A letter from the Deputy Administrator, National Aeronautics and Space Administration, Washington, D.C., reporting, pursuant to law, that under date of January 3, 1962, the Administration authorized an adjustment in a contract for documentation services with the National Aeronautic Association, Washington, D.C.; under date of April 2, 1962, the Administration authorized an adjustment in a contract for launching and related services with the Department of Supply, Government of Australia, and under date of June 19, 1962, the Administration authorized an adjustment in the contract for minor items of electronic equipment with the Vector Manufacturing Co., Southampton, Pa.; to the Committee on Aeronautical and Space Sciences.

Improvements of Fiscal and Administrative Practices in the National Bureau of Standards

A letter from the Secretary of Commerce, transmitting a draft of proposed legislation to amend the act of March 3, 1901 (31 Stat. 1449) as amended, to incorporate in the Organic Act of the National Bureau of Standards the authority to make certain improvements of fiscal and administrative practices for more effective conduct of its research and development activities (with acompanying papers); to the Committee on Commerce.

Penalties for Certain Offenses Committed in Connection With Highway Construction

A letter from the Attorney General, transmitting a draft of proposed legislation to provide penalties for certain offenses committed in connection with highway construction (with an accompanying paper); to the Committee on the Judiciary.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the PRESIDENT pro tempore:

A joint resolution of the Legislature of the State of Washington; to the Committee on the Judiciary:

"HOUSE JOINT RESOLUTION 15

"Whereas both Houses of the 87th Congress of the United States of America, by a constitutional majority of two-thirds thereof, proposed an amendment to the Constitution of the United States, which is in words and figures as follows, to wit:

"'Joint resolution proposing an amendment to the Constitution of the United States relating to the qualifications of electors

"'*Resolved by the Senate and House of Representatives of the United States of America in Congress assembled,* That the following article is hereby proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution only if ratified by the legislatures of three-fourths of the several States within seven years from the date of its submission by the Congress:

"'"ARTICLE—

"'"SECTION 1. The right of citizens of the United States to vote in any primary or other election for President or Vice President, for electors for President or Vice President, or for Senator or Representative in Congress, shall not be denied or abridged by the United States or any State by reason of failure to pay any poll tax or other tax.

"'"SEC. 2. The Congress shall have power to enforce this article by appropriate legislation"': Therefore be it

"*Resolved,* That said proposed amendment to the Constitution of the United States of America be, and the same is, hereby ratified by the Legislature of the State of Washington; and be it further

"*Resolved,* That certified copies of this joint resolution be forwarded by the Governor of the State to the Secretary of State of the United States, to the presiding officer of the United States Senate, and to the Speaker of the House of Representatives of the United States.

"Passed the house February 23, 1963.

"WILLIAM S. DAY,
"Speaker of the House.

"Passed the senate March 14, 1963.

"JOHN A. CHERBERG,
"President of the Senate."

A joint resolution of the Legislature of the State of Washington; to the Committee on the Judiciary:

"HOUSE JOINT MEMORIAL 1

"*To the President of the Senate and Speaker of the House of Representatives, and to the Senate and House of Representatives of the United States, in Congress assembled:*

"*Resolved,* That we, your memorialists, the House of Representatives and Senate of the State of Washington in legislative session assembled, respectfully petition that the Congress of the United States call a convention for the purpose of proposing the following articles as an amendment to the Constitution of the United States:

"'ARTICLE—

"'SECTION 1. No provision of this Constitution, or any amendment thereto, shall restrict or limit any State in which the people have the right of initiative in the appointment of representation in its legislature.

"'SEC. 2. The judicial power of the United States shall not extend to any suit in law or equity, or to any controversy, relating to apportionment of representation in a State legislature in a State in which the people have the right of initiative.

"'SEC. 3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within 7 years from the date of its submission'; and be it further

"*Resolved,* That if Congress shall have proposed an amendment to the Constitution identical with that contained in this memorial prior to January 1, 1965, this application for a convention shall no longer be of any force or effect; and be it further

"*Resolved,* That copies of this memorial be immediately transmitted by the secretary of state to the Secretary of the Senate of the United States, the Clerk of the House of Representatives of the United States and to each Member of the Congress from this State.

"Passed the house March 28, 1963.

"WILLIAM S. DAY,
"Speaker of the House.

"Passed the senate March 30, 1963.

"JOHN A. CHERBERG,
"President of the Senate."

A resolution of the General Assembly of the State of Rhode Island; to the Committee on the Judiciary:

"SENATE RESOLUTION 478

"Resolution memorializing Congress to enact legislation to amend the immigration and nationality laws. Legislation introduced by Senator CLAIBORNE PELL (S. 751)

"Whereas the birth, growth, strength, and defense of the United States has stemmed from the combination of skills and cultures of people from many nations; and

"Whereas many people from nations all over the world seek entrance to this great Nation in the hope that they may apply their skills and add their cultures to this free society; and

"Whereas the present immigration laws are archaic and arbitrary and are not in keeping with the American philosophy of the equality of man; and

"Whereas S. 751, a bill to amend the immigration and nationality laws, introduced by Senator CLAIBORNE PELL, grants more equality to all deserving potential immigrants and proportionately and categorically presents a fair system of immigration; and

"Whereas the provisions providing for pioneer immigrants will strengthen the immigration system and enrich the American economic system; and

"Whereas this bill which is in keeping with the principles advocated by Jefferson and Lincoln, strengthens the democratic cause around the world and leaves the United States in a better light since it will grant a fair share and equal rights immigration law that is in line with the true principles of a free society: Now, therefore, be it

"*Resolved*, That the general assembly place itself on record as respectfully requesting the Congress of the United States to enact into law S. 751, an act in amendment of the immigration and nationality laws (the Pell Act); and be it further

"*Resolved*, That the secretary of state prepare certified copies of this resolution and send them to the Speaker of the House of Representatives and the President of the Senate in the U.S. Congress, the majority and minority leaders of both Houses, the chairman of the Committee on Immigration and the members of the Rhode Island delegation in the Congress."

Two concurrent resolutions of the Legislature of the State of Missouri; to the Committee on the Judiciary:

"House Concurrent Resolution 4

"*Resolved by the house of representatives (the senate concurring therein)*, That the General Assembly of the State of Missouri respectfully petitions the Congress of the United States to call a Convention for the purpose of proposing the following article as an amendment to the Constitution of the United States:

" 'Article—

" 'Section 1. No provision of this Constitution, or any amendment thereto, shall restrict or limit any State in the apportionment of representation in its legislature.

" 'Sec. 2. The judicial power of the United States shall not extend to any suit in law or equity, or to any controversy, relating to apportionment of representation in a State legislature.

" 'Sec. 3. This article shall be inoperative unless it has been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within 7 years from the date of its submission'; and be it further

"*Resolved*, That if Congress has proposed an amendment to the Constitution identical with that contained in this resolution prior to January 1, 1965, this application for a Convention shall no longer be of any force or effect; and be it further

"*Resolved*, That a duly attested copy of this resolution be transmitted immediately to the Secretary of the Senate of the United States, the Clerk of the House of Representatives of the United States, and to each Member of the Congress from this State."

"House Concurrent Resolution 5

"*Resolved by the house of representatives (the senate concurring therein)*, That the General Assembly of the State of Missouri respectfully petitions the Congress of the United States to call a convention for the purpose of proposing the following article as an amendment to the Constitution of the United States:

" 'Article—

" 'Section 1. Article V of the Constitution of the United States is hereby amended to read as follows:

" ' "The Congress, whenever two-thirds of both Houses shall deem it necessary, or, on the application of the legislatures of two-thirds of the several States, shall propose amendments to this Constitution, which shall be valid to all intents and purposes, as part of this Constitution, when ratified by the legislatures of three-fourths of the several States. Whenever applications from the legislatures of two-thirds of the total number of States of the United States shall contain identical texts of an amendment to be proposed, the President of the Senate and the Speaker of the House of Representatives shall so certify, and the amendment as contained in the application shall be deemed to have been proposed, without further action by Congress. No State, without its consent, shall be deprived of its equal suffrage in the Senate.

" ' "Sec. 2. This article shall be inoperative unless it has been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within 7 years from the date of its submission" '; and be it further

"*Resolved*, That if Congress has proposed an amendment to the Constitution identical with that contained in this resolution prior to January 1, 1965, this application for a convention shall no longer be of any force or effect; and be it further

"*Resolved*, That a duly attested copy of this resolution be transmitted immediately to the Secretary of the Senate of the United States, the Clerk of the House of Representatives of the United States, and to each Member of the Congress from this State."

JOINT RESOLUTION RELATING TO PROPOSED INCREASES IN RATES CHARGED BY SOUTHERN CARRIERS

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed at the appropriate place in the Record a joint resolution by the Vermont Legislature with respect to proposed increases in truck rates charged by southern carriers. This relates to the proposal to institute highly discriminatory truck rates between certain Southern States and the States of Maine, New Hampshire, and Vermont. This proposal is also opposed before the Interstate Commerce Commission by the North Carolina Textile Manufacturers Association, Inc., the South Carolina Textile Manufacturers Association, Inc., and the traffic department with headquarters at Atlanta, Ga., representing several hundred textile mills.

I also ask unanimous consent to have printed in the Record at this point excerpts from a brief filed with the Interstate Commerce Commission.

The PRESIDING OFFICER (Mr. Inouye in the chair). Under the rules, the resolution will be received and printed in the Record and appropriately referred; and, without objection, the excerpts referred to will be printed in the Record.

The joint resolution was referred to the Committee on Commerce, as follows:

Joint Resolution Relating to Proposed Increases in Rates Charged by Southern Carriers

Whereas the Southern Motor Carriers Conference proposes to increase less-than-truck rates by 15 percent into Vermont, and truckload and volume rates by 6 percent on finished and unfinished textile products, effective April 15, 1963; and

Whereas the Interstate Commerce Commission has set a deadline of April 3, 1963, for the receipt of protests to the proposed increase; and

Whereas this proposed increase is discriminatory against Vermont interest; Now, therefore, be it

Resolved by the senate and house of representatives, That the General Assembly of the State of Vermont hereby registers its protest to such proposed increase and requests that the Interstate Commerce Commission Board of Suspension suspend the proposed increase for the entire period provided by law pending investigation by the Commission into the facts relating thereto; and be it further

Resolved, That the secretary of state be and hereby is instructed to forward a copy of this resolution to the Secretary of the Interstate Commerce Commission, Hon. George D. Aiken, Hon. Winston L. Prouty, and Hon. Robert T. Stafford; and be it further

Resolved, That the secretary of state be and hereby is instructed to send a telegram to the Secretary of the Interstate Commerce Commission, advising of the adoption of this resolution of protest.

Approved April 2, 1963.

The excerpts presented by Mr. Aiken are as follows:

In addition to the violation of section 216(b) of the Interstate Commerce Act by providing rates prima facie higher than maximum reasonable on certain descriptions of traffic, obvious violations of section 216(d) also would result in that:

(a) The protested rates higher than the classification basis on textile products, as illustrated by appendix B, would create unjust discrimination and undue prejudice against this description of traffic.

(b) The discriminations and prejudice against localities are obvious from the fact that the increases apply only on shipments to or from points in the three States of Maine, New Hampshire, and Vermont. These States are a portion of New England territory and a smaller portion of eastern territory and no justification appears for imposing upon shippers or receivers of freight in those three States a special discrimination and disadvantage in the amount of charges required to be paid for transportation of shipments to and from the Southern States.

The application of the protested increases is not dependent upon ratemaking distances. This is also illustrated by appendix B. For example, between Danville, Va., and Bennington, Vt., for a ratemaking distance of only 626 miles, the increases would apply whereas from Atlanta, Ga., to Massena, N.Y., for a distance of 1154 miles, almost twice as great, the increases would not apply.

The selection of certain States for application of the increases produces higher rates for similar distances dependent solely upon whether the origins or destinations are in a particular State. For example, from Greenville, S.C., to Bennington, Vt., distance 825 miles, the present rate on finished cotton piece goods, less truckload, is $2.79 per 100 pounds, which is 1 cent lower than the $2.80 per-100-pound-rate from Greenville, S.C., to Massena, N.Y., for 1013 miles or 138 miles greater distance. The increased rate of $3.21 to Bennington is 41 cents higher than to the 138 miles more distant point of Massena, and it is 61 cents higher than the rate of $2.60 to Newburyport, Mass., for 104 miles greater distance.

This controvenes the basic principle and purposes of the act to protect the public interest and prohibit restrictions against the freedom of movement of commerce between all States in the Nation at just and reasonable rates without unjust discriminations, undue preference, or prejudice.

REPORTS OF A COMMITTEE

The following reports of a committee were submitted:

By Mr. **BIBLE**, from the Committee on Interior and Insular Affairs, without amendment:

S. 18. A bill to change the name of Harpers Ferry National Monument to Harpers Ferry National Historical Park (Rept. No. 114); and

S. 932. A bill relating to age limits in connection with appointments to the U.S. Park Police (Rept. No. 113).

By Mr. **BIBLE**, from the Committee on Interior and Insular Affairs, with an amendment:

S. 386. A bill to consolidate Vicksburg National Military Park and to provide for certain adjustments necessitated by the installation of a park tour road, and for other purposes (Rept. No. 115).

By Mr. **METCALF**, from the Committee on Interior and Insular Affairs, with an amendment:

S. 138. A bill to redesignate the Big Hole Battlefield National Monument, to revise the boundaries thereof, and for other purposes (Rept. No. 116).

By Mr. **ANDERSON**, from the Committee on Interior and Insular Affairs, without amendment:

S. 2. A bill to establish water resources research centers at land-grant colleges and State universities, to stimulate water research at other colleges, universities, and centers of competence, and to promote a more adequate national program of water research (Rept. No. 117).

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. **GRUENING** (for himself, Mr. Moss, Mr. Bartlett, Mr. McGovern, and Mr. Church):

S. 1279. A bill to amend title 30, United States Code, relating to the exploration program for discovery of new minerals, and for other purposes; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. Gruening when he introduced the above bill, which appear under a separate heading.)

By Mr. **HILL**:

S. 1280. A bill to amend section 4103 of title 38, United States Code, with respect to the appointment of the Chief Medical Director of the Department of Medicine and Surgery of the Veterans' Administration; to the Committee on Labor and Public Welfare.

By Mr. **HART**:

S. 1281. A bill to establish an agency of the legislative branch of the Federal Government authorized to conduct the elections of Members of the Senate and the House of Representatives; to the Committee on Rules and Administration.

(See the remarks of Mr. Hart when he introduced the above bill, which appear under a separate heading.)

RESOLUTIONS

AMENDMENT OF RULE XXXIII, TO PROVIDE FOR REPORT AND QUESTION PERIODS

Mr. **KEFAUVER** (for himself, Mr. Gruening, Mr. Inouye, Mr. Kuchel, Mr. McGee, Mrs. Neuberger, Mr. Pell, Mr. Randolph, and Mr. Metcalf) submitted a resolution (S. Res. 120) to amend rule XXXIII to provide for report and question periods, which was referred to the Committee on Rules and Administration.

(See the above resolution printed in full when submitted by Mr. Kefauver, which appears under a separate heading.)

PRINTING OF ADDITIONAL COPIES OF REPORT AND HEARINGS ON "STATE DEPARTMENT SECURITY"

Mr. **EASTLAND** submitted the following resolution (S. Res. 121) authorizing the printing for the use of the Senate Committee on the Judiciary of additional copies of a report and hearings on "State Department Security" issued by its Internal Security Subcommittee during the 87th Congress, which was referred to the Committee on Rules and Administration:

> *Resolved*, That there be printed for the use of the Senate Committee on the Judiciary eight thousand additional copies of the report (committee print) of its Internal Security Subcommittee of the Eighty-seventh Congress, second session, entitled "State Department Security"; five thousand copies each of part 1 ("The William Wieland Case"), part 2 ("The Office of Security"), part 3 ("The New Passport Regulations"), part 4 ("Testimony of Elmer Hipsley, Otto Otepka, John Leahy, Roger Jones, Scott McLeod, Andreas Lowenfeld"), and part 5 ("Testimony of William Wieland") of the subcommittee's hearings of the Eighty-seventh Congress on "State Department Security"; and five thousand additional copies of part 13 of the subcommittee's hearings of the Eighty-seventh Congress on "Communist Threat to the United States Through the Caribbean."

U.S. MINERS DESERVE AND NEED HELP

Mr. **GRUENING**. Mr. President, a good businessman keeps an inventory. When a certain item is sold out or is in need of replenishment, the good businessman reorders the stock. The procedure is routine.

I suggest that the Federal Government would be wise to follow a similar inventory procedure in meeting its metals and minerals needs. This Nation confronts an increasingly perilous situation because of its growing dependence upon foreign sources for its metals and minerals, even as its own mineral resources have yet to be explored fully.

How can we correct this cart-before-the-horse approach?

One remedy, of course, is to learn the extent of our minerals reserves. Mining today is not the relatively simple business of 1890. The day of the prospector accompanied by his mule discovering a multimillion-dollar gold vein in the mountains of Colorado is passé. Mining in the 1960's is complicated and expensive.

The Congress of the United States has taken some remedial action to meet the new needs of this new era. Public Law 701 of the 85th Congress established the Office of Minerals Exploration in the Department of the Interior. The funding, although modest, has been helpful, and the work of the staff of the Office of Minerals Exploration is increasing.

I have discussed the program with its director, and, in response to my questions, Mr. George Fumich told me that he and his staff anticipate receiving more valid exploration fund requests than they can fill in fiscal year 1964 under the Office's proposed budget request.

His testimony before congressional committees this year on behalf of the OME fiscal year 1964 budget request includes reference to the growing number of requests for funding. The OME staff has worked to prevent a waste of funds on projects. A portion of the budget is used for professional assistance and technical guidance for applicants because OME deals with small firms and individuals who need and request such aid.

To facilitate better understanding of the program let me quote Mr. Fumich directly:

> Briefly stated, the OME offers financial assistance to firms and individuals who wish to explore their properties for one or more of 35 mineral commodities. This help is offered to applicants who ordinarily would not undertake the exploration under present conditions or circumstances at their sole expense and who are unable to obtain funds from commercial sources on reasonable terms.
>
> We contract with an eligible applicant to pay one-half of the cost of approved exploration work. The applicant pays the rest. The Government participation in a single contract cannot exceed $250,000. Interest, at rates which have ranged from 5¾ to 6½ percent, is charged from the time funds are made available.
>
> Funds contributed by the Government are repaid by a 5-percent royalty on production from the property. If nothing is produced, there is no obligation to repay. Royalty is paid on any production during the period in which work is being done under the contract; and if the Government certifies that production may be possible from the property, the royalty obligation continues until the Government's contribution is repaid with interest, or for the 10-year period usually specified in the contract.

Mr. President, under such a program, the Federal investment need not be a contribution, and I am confident that the miner would prefer to make repayment.

The Office of Minerals Exploration program is providing our ailing mining industry with some tools which to a limited degree have and will bolster the industry.

It is educational to see how the program has developed. Overfunded by the Congress initially, before OME could learn what its real role was to be, the Office barely touched the fiscal year 1959 appropriation of $4 million, obligating slightly more than $90,000. The obligated sum has increased and in March of this year OME had contracted for $612,000 of its $750,000 appropriation and had under investigation requests which would use the funding remaining—and more.

Mr. President, I ask unanimous consent to place in the Record at this time a copy of Public Law 85–701 and a table showing the development by year of the OME program.

There being no objection, the public law and table were ordered to be printed in the Record, as follows:

Public Law 85-701, 85th Congress, S. 3817, August 21, 1958, 72 Stat. 700

An Act to provide a program for the discovery of the mineral reserves of the United States, its Territories, and possessions by encouraging exploration for minerals, and for other purposes

MINERALS EXPLORATION

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That it is declared to be the policy of the Congress to stimulate exploration for minerals within the United States, its Territories and possessions.

Section. 1. The Secretary of the Interior is hereby authorized and directed, in order to provide for discovery of additional domestic mineral reserves, to establish and maintain a program for exploration by private industry within the United States, its Territories and possessions for such minerals, excluding organic fuels, as he shall from time to time designate, and to provide Federal financial assistance on a participating basis for that purpose.

EXPLORATION CONTRACTS—INTEREST RATES

Sec. 2. (a) In order to carry out the purposes of this Act, and subject to the provisions of this section, the Secretary is authorized to enter into exploration contracts with individuals, partnerships, corporations, or other legal entities which shall provide for such Federal financial participation as he deems in the national interest. Such contracts shall contain terms and conditions as the Secretary deems necessary and appropriate, including terms and conditions for the repayment of the Federal funds made available under any contract together with interest thereon, as a royalty on the value of the production from the area described in the contract. Interest shall be calculated from the date of the loan. Such interest shall be at rates which (1) are not less than the rates of interest which the Secretary of the Treasury shall determine the Department of the Interior would have to pay if it borrowed such funds from the Treasury of the United States, taking into consideration current average yields on outstanding marketable obligations of the United States with maturities comparable to the terms of the particular contracts involved and (2) plus 2 per centum per annum in lieu of recovering the cost of administering the particular contracts.

ROYALTY PAYMENTS—CERTIFICATION—AGREEMENTS

(b) Royalty payments received under paragraph (a) of this section shall be covered into the miscellaneous receipts of the Treasury.

(c) When in the opinion of the Secretary an analysis and evaluation of the results of the exploration project disclose that mineral production from the area covered by the contract may be possible he shall so certify within the time specified in the contract. Upon certification, payment of royalties shall be a charge against production for the full period specified in the contract or until the obligation has been discharged, but in no event shall such royalty payments continue for a period of more than twenty-five years from the date of contract. When the Secretary determines not to certify he shall promptly notify the contractor. When the Secretary deems it necessary and in the public interest, he may enter into royalty agreements to provide for royalty payments in the same manner as though the project had been certified.

(d) No provision of this Act, nor any rule or regulation which may be issued by the Secretary shall be construed to require any production from the area described in the contract.

ADJUSTMENT OF CONTRACT

(e) The Secretary shall establish and promulgate such rules and regulations as may be necessary to carry out the puposes of this Act: *Provided, however,* That he may modify and adjust the terms and conditions of any contract to reduce the amount and term of any royalty payment when he shall determine that such action is necessary and in the public interest: *Provided further,* That no such single contract shall authorize Government participation in excess of $250,000.

(f) No funds shall be made available under this Act unless the applicant shall furnish evidence that funds from commercial sources are unavailable on reasonable terms.

EXPLORATION

Sec. 3. As used in this Act, the term "exploration" means the search for new or unexplored deposits of minerals, including related development work, within the United States, its Territories and possessions, whether conducted from the surface or underground, using recognized and sound procedures including standard geophysical and geochemical methods for obtaining mineralogical and geological information.

ADVISORY SERVICES

Sec. 4. Departments and agencies of the Government are hereby authorized to advise and assist the Secretary of the Interior, upon his request, in carrying out the provisions of this Act and may expend their funds for such purposes, with or without reimbursement, in accordance with such agreements as may be necessary.

REPORTS TO CONGRESS AND PRESIDENT

Sec. 5. The Secretary of the Interior is authorized and directed to present to the Congress, through the President, on March 1 and September 1 of each year, a report containing a review and evaluation of the operations of the programs authorized in this Act, together with his recommendations regarding the need for the continuation of the programs and such amendments to this Act as he deems to be desirable.

APPROPRIATION

Sec. 6. There are hereby authorized to be appropriated, from any funds in the Treasury not otherwise appropriated, such sums as may be necessary to carry out the provisions of this Act.

Approved August 21, 1958.

Office of Minerals Exploration program development

Fiscal year	OME budget request	Bureau of budget allowances	Appropriated by Congress	OME contractual obligations	Fund carry-over
	Millions	*Millions*			
1959	$5.0	----------	$4,000,000	$90,295	----------
1960	6.0	$1.5	1,100,000	275,000	----------
1961	1.5	1.1	550,000	220,000	$304,000
1962	1.5	1.0	750,000	726,325	197,632
1963	1.5	1.0	750,000	[1] 612,000	----------
1964	1.0	.9	----------	----------	----------

[1] To date.

Mr. GRUENING. Mr. President, the men who have worked with the program these past 5 years speak of its worth. When I asked them if the interest rate had been found too high—it is 6 percent or more—they admitted that the small operator time and again had found it so. When I asked as to the limitation of $250,000 for a single contract limitation, in view of the expense of mining, they told me the limitation was too low considering that exploration for gold, for example, may require work far below the surface of the earth. I asked why no language in the public law made specific reference to air exploration—since so much of our initial minerals exploration work comes with air overflights.

Air exploration gives the 20th century prospector 20th century methods. Through the use of the magnetometer he may measure the intensity and direction of magnetic forces, thereby locating anomalies having deposits of iron and other minerals. Large magnetometers are carried in airplanes, but smaller magnetometers may be carried for ground exploration. Air exploration with a refined Geiger counter, the syntometer, helped prospectors locate uranium deposits in Wyoming. And air exploration includes the taking of aerial photographs for geological mapping. These are but a few of the refinements which are modernizing mining today.

But this type of exploration must be specified in the public law.

Likewise there appeared to be need for amending legislation which would make possible Federal financial assistance for the development of domestic ores as well as language which would authorize technical assistance for exploration and development of mineral deposits and in their utilization.

I am, therefore, introducing today on behalf of myself, my colleague from Alaska [Mr. Bartlett], the Senator from Utah [Mr. Moss], the Senator from South Dakota [Mr. McGovern], and the Senator from Idaho [Mr. Church] five amendments to Public Law 85-701.

Enactment of this proposed legislation would aid our ailing mining industry. It would help the operator who is confronted with a fixed price for his product and a continually increasing cost of production.

The miner today has to find higher grade ore. He must also find a means to reduce his cost. The Federal Government can help lick its growing dependence upon foreign sources for its metals and minerals by sharing the risk and cost, thereby stimulating exploration and, hopefully, increasing production.

Mr. President, I ask unanimous consent that the amendments proposed and an explanation of each be printed in the Record at this time.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill and explanation will be printed in the Record.

The bill (S. 1279) to amend title 30, United States Code, relating to the exploration program for discovery of new minerals, and for other purposes, introduced by Mr. GRUENING (for himself and other Senators), was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That title 30, United States Code, is amended as follows:

(1) Section 642(a) is amended as follows: In the last line after the word "contracts" delete the period, insert a colon, and insert the following: "*Provided,* That in no event shall the interest rate exceed 4½ per centum."

(2) Section 642(e) is amended as follows: In the last line after the word "of" delete the figure "$250,000" and insert in lieu thereof the figure "$500,000."

(3) Section 643 is amended as follows: In line 2 after the word "or" delete the word "unexplored" and insert in lieu thereof the word "additional," and in line 5 after the word "the" insert the word "air" and a comma.

(4) Sections 644 through 646, inclusive, are renumbered as section 646 through 648, respectively.

(5) Add a new section 644 as follows:

"SEC. 644(a). The Secretary is hereby authorized and empowered to provide Federal financial assistance to individuals, partnerships, corporations, and other legal entities for the development of domestic ores.

"(b) In order to carry out the purposes of this section, and subject to the provisions of this section, the Secretary is authorized to enter into agreements with individuals, partnerships, corporations, or other legal entities that shall provide for such Federal financial assistance as he deems in the national interest. These agreements shall contain such terms and conditions as the Secretary deems necessary and appropriate, including terms and conditions for repayment, together with interest, of the Federal funds made available under any agreement. Interest shall be calculated at a rate determined by the Secretary from the date that Federal funds are made available."

(6) Add a new section 645 as follows:

"SEC. 645. The Secretary is hereby authorized to provide technical information and assistance which would be useful in stimulating the exploration and development of mineral deposits and in their utilization."

(7) The redesignated section 647 is amended as follows: In line 2 after the first comma, delete the words "through the President,"; after the word "on" delete the words "March 1 and"; and in line 3 after the comma delete the letter "a" and insert in lieu thereof the words "an annual".

The explanation presented by Mr. GRUENING is as follows:

EXPLANATION OF AMENDMENTS TO PUBLIC LAW 85-701 INTENDED TO BE PROPOSED BY SENATOR GRUENING

Enactment of this legislation would be especially beneficial to the operator who is faced with a fixed price for his product and a continually increasing cost of production. He must find higher grade ore and also find means to reduce his cost. By sharing in the risk and cost of finding and developing mineral deposits the Government stimulates exploration and increased production thereby aiding depressed mining areas.

The proposed legislation would aid the miner by:

1. Placing a ceiling of 4½ percent on the interest rate he would pay on Government funds granted him for exploration. The present high rate of 6 percent or more is a psychological roadblock to the small operator and a burden on long-range projects.

2. Raising the single contract limitation from $250,000 to $500,000. The present limitation is not responsive to modern-day methods. Most of the surface gold deposits, for example, have been worked out. The great majority of new gold deposits of significant size will be deep below the surface and require expensive, high-cost exploration projects.

3. Redefining exploration to give clear authority for exploration by air. This would enable the Government to participate more fully in modern methods of exploration.

4. Authorizing Federal financial assistance for the development of domestic ores. This would be especially helpful to the small operator who needs some assistance to get into production or maintain his production but is unable to obtain the required funds from banks or other Government agencies.

5. Authorizing technical assistance for exploration and development of mineral deposits and in their utilization. This would enable technical assistance to be extended to the small operator who needs such assistance in finding higher grade deposits, developing his ore deposits, lowering his operating costs, beneficiating his ore, and producing a marketable product.

Mr. GRUENING. Mr. President, perhaps some of the Members of this body read as I did in Sunday's edition of the Washington Post and Times-Herald that the domestic chrome market was becoming increasingly depressed as other producers dumped their chrome on the world market in what would appear to be a direct attempt to break the market.

This attack is injurious to democracy. It cannot be longer ignored. Our mining industry can meet any challenge if we give it a chance.

The bill I am introducing today is designed to help give that chance.

Mr. CHURCH. Mr. President, we of the Western States deeply appreciate the efforts which the distinguished Senator from Alaska has made, as chairman of the Subcommittee on Minerals of the Committee on Interior and Insular Affairs, on behalf of the advancement of the interests of the mining industry. All of us know of the serious problems confronting the mining industry and of the need for effective legislation in this field. I am pleased to say that the Senator from Alaska brings to this whole problem new and vigorous leadership and a determination to get something done. For this, we are thankful.

Mr. GRUENING. Mr. President, I thank the distinguished senior Senator from Idaho. He has always been an advocate of an enlightened and progressive policy, not only with respect to our mining resources, but for all the resources of the West—indeed, of the whole Nation.

I think it is time we looked into this problem searchingly and seriously and came up with some constructive proposals that will take this great industry, mining, which once was so promising and productive, from its present doldrums.

I thank the Senator from Idaho for his unfaltering, helpful encouragement.

AGENCY IN LEGISLATIVE BRANCH TO CONDUCT ELECTIONS OF MEMBERS OF THE SENATE AND HOUSE

Mr. HART. Mr. President, I introduce, for appropriate reference, a bill which would create an agency of the legislative branch of the Federal Government designed to insure that the right of all citizens to vote for Members of Congress shall be adequately protected.

Congress recently has given the executive branch additional enforcement tools to protect the rights of American citizens to participate in all Federal elections. These are contained in the Civil Rights Acts of 1957 and 1960. The President, in his message to the Congress on February 28, outlined further amendments which the administration believes will be helpful in meeting continuing pockets of resistance to the full exercise of the right of franchise.

While all of this is progress, Congress has an additional responsibility that goes quite directly to the election of its own Members—to the problem of assuring full citizen rights in the election of the Members of Congress. The proposed act would give Congress the machinery to meet this problem, one which is and should be of special concern to the legislative branch of our National Government.

The Constitution, under article I, section 4, and under the 15th amendment, authorizes the Congress to make regulations as to the time, place, and "manner of holding elections for Senators and Representatives or to alter regulations prescribed by the State legislatures for such purposes, except as to the place of choosing Senators."

The Federal judiciary cannot be expected to bear the full burden of litigating the dilatory actions of innumerable local registration officials intent on frustrating the desires of eligible voters.

This problem is the active election-by-election responsibility of the Congress, placed on the Congress by the Constitution, to insure the right to vote in each Federal election.

Nor is this a matter of States rights. The States have only that authority in this field of congressional elections expressly given them by the Congress. The Congress itself has the duty to see to it that those who sit as its Members are elected by all the people. The buck on this issue stops here.

There is a long history of widespread and flagrant denials of the right to vote. The record of the hearings held by the Constitutional Rights Subcommittee of the Senate Judiciary Committee over the years tells the story. Further, the hearings held by the Commission on Civil Rights, expressly established by the Congress to look into voting practices, emphasizes the need for congressional action.

The proposal I make to establish a Congressional Elections Commission as an arm of the Congress, is, as far as I know, a unique one. I first introduced it in 1959. The virtue of the bill I now introduce lies in the fact that it establishes a continuing agency of the Congress itself, designed to insure that registration and election procedures shall be reasonable, fair, and equally available to all our citizens. It can perform the same service for the Congress in the vital area of its elections which the Government Accounting Office, another agency of the legislative branch, does in matters involving the public purse.

I ask unanimous consent that the text of the bill, together with a summary of its provisions, be printed with my remarks.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the Record.

The bill (S. 1281) to establish an agency of the legislative branch of the Federal Government authorized to conduct the elections of Members of the Senate and the House of Representatives, introduced by Mr. Hart, was received, read twice by its title, referred to the Committee on Rules and Administration, and ordered to be printed in the Record, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Congressional Elections Act".

TITLE I—STATEMENT OF PURPOSE: DEFINITIONS

Sec. 101. Taking cognizance of the fact that, although ninety-three years have passed since the fifteenth amendment was adopted, American citizens otherwise qualified to vote continue to be denied that right because of their race or color, and that qualified voters are thus arbitrarily and discriminatorily being denied the right to cast a vote for the selection and election of their representatives in the Senate and the House of Representatives; and recognizing the authority and the obligation of the Congress under the fifteenth amendment, and more particularly under article I, section 4, to assure that Members of the Senate and the House of Representatives are nominated and elected in a manner and pursuant to procedures which best assure that every qualified elector is afforded full opportunity to cast his vote, the Congress hereby determines that it is necessary, in order to assure to all qualified electors the opportunity to participate in the selection and election of Members of the Senate and the House of Representatives, that Congress establish an agency to conduct registration and voting in the primary, special, and general elections at which nominees to the Senate and the House of Representatives are elected.

Sec. 102. As used in this Act—

(a) The term "Commission" means the Congressional Elections Commission established by this Act.

(b) The term "special or general election" means any special or general election in any State or congressional district for the purpose of electing Members of the Senate and the House of Representatives of the United States.

(c) The term "primary election" means any election, whether by convention, meeting, popular primary, or otherwise, in any State or congressional district for the purpose of choosing party nominees as candidates for the Senate or House of Representatives of the United States.

TITLE II—ESTABISHMENT OF CONGRESSIONAL ELECTIONS COMMISSION

Sec. 201. (a) There is hereby established, as an agency of the legislative branch of the Federal Government, a Congressional Elections Commission, as an authority to conduct primary, special, and general elections for Members of the Senate and the House of Representatives.

(b) The Commission shall be composed of three members who shall be appointed by the President by and with the advice and consent of the Senate. Not more than two of the members shall belong to the same political party. The President is requested in appointing members to provide, insofar as possible, representation for the various geographical areas of the United States.

(c) Each member of the Commission shall be appointed for a term of nine years, except that—

(1) the three members first appointed shall be appointed for terms expiring respectively on December 31, 1965; December 31, 1968; and December 31, 1971; and

(2) a person appointed to fill a vacancy in the Commission occurring by reason of the death, disability, resignation, or removal of a member before the expiration of his term shall be appointed to serve for the remainder of such term.

(d) The President shall designate one of the members of the Commission as Chairman and one as Vice Chairman. The Vice Chairman shall act as Chairman in the absence or disability of the Chairman or in the event of a vacancy in the office of Chairman.

(e) Subject to the provisions of subsection (f), a vacancy in the membership of the Commission shall not affect its powers.

(f) Two members of the Commission shall constitute a quorum thereof.

Sec. 202. Each member of the Commission, other than the Chairman, shall receive compensation at a rate of $20,000 per year. The Chairman of the Commission shall receive compensation at a rate of $20,500 per year.

TITLE III—REGISTRATION OF VOTERS BY THE COMMISSION

Sec. 301. The Commission is authorized to make and maintain temporary and permanent registers of voters qualified to participate in primary, special, and general elections in the various congressional districts. The Commission's making and maintenance of such registers of voters shall be in its discretion and it shall not be necessary, for the making and maintenance of such registers in any congressional district, for the Commission to have first determined to hold an election therein pursuant to title IV of this Act.

Sec. 302. No person shall be registered as a voter under section 301 who does not have the qualifications requisite for electors of the most numerous branch of the legislature of the State in which the congressional district is situated. The Commission shall establish adequate procedures to assure that all persons placed upon its registers as qualified voters continue to have the residence and other qualifications requisite for electors of the most numerous branch of the legislature of the State in which the congressional district is situated.

Sec. 303. No State or local laws or ordinance governing the time, place, or manner of the registration of voters shall be applicable to or limit the power of the Commission to conduct registrations of voters pursuant to this title, but the Commission shall endeavor as far as in its judgment is conducive to uniform and orderly election procedures, to conform its conduct of the registration of voters to the procedures governing time, place, and manner of registration, prescribed in the State or local laws or ordinances in effect in the congressional district.

TITLE IV—CONDUCT OF ELECTIONS BY THE COMMISSION

Sec. 401. The Commission is authorized in any congressional district to conduct the primary, special, or general elections for the purpose of selecting and electing Members of the Senate and the House of Representatives whenever—

(1) the Commission is officially requested so to do by the duly empowered official of the State in which the congressional district is situated; or

(2) the Commission determines that unless such election is conducted by the Commission, persons having the qualifications requisite for electors of the most numerous branch of the legislature of the State in which the congressional district is located are likely to be denied their right in such primary, special, or general election to cast their votes and to have them fairly counted.

Sec. 402. Whenever the Commission conducts a primary, special, or general election, such election shall be the sole primary, special, or general election for the congressional district for Members of the Senate and the House of Representatives, and the results thereof shall, in any primary election, determine the authorized nominees, and in any special or general election, determine the duly elected Member of the House of Representatives, and the official vote of such congressional district for Members of the Senate and the House of Representatives at large.

Sec. 403. No person shall cast a vote in an election conducted pursuant to section 401 unless (a) he has been found by the Commission, pursuant to title III foregoing, to have the qualifications requisite for electors of the most numerous branch of the legislature of the State in which the congressional district is situated, or (b) he is registered on a State registration list, which the Commission determines to be appropriate for utilization in the election conducted by it, as a person having the qualifications requisite for electors of the most numerous branch of the legislature of the State in which the congressional district is situated.

Sec. 404. The Commission shall, immediately upon determining to conduct an election pursuant to the authority contained in section 401 (a) or (b), give notice of such determination to the Governor of the State concerned.

Sec. 405. No State or local laws or ordinances governing the time, place, and manner of conducting elections shall be applicable to, or limit the power of, the Commission to conduct elections pursuant to this title, but the Commission shall endeavor, as far as in its judgment is conducive to uniform and orderly election procedures, to conform its conduct of elections to the standards of time, place, and manner prescribed in State or local laws or ordinances in effect in the congressional district.

TITLE V—CERTIFICATION OF RESULTS

Sec. 501. The Commission shall, upon the determination of the results of any primary, special, or general election conducted pursuant to title IV, certify the results of such election to the Speaker of the House of Representatives, to the Secretary of the Senate, to the Governor of the State in which the election was conducted, and to other appropriate persons. Such a certification shall constitute the binding and conclusive determination of the results of the election.

TITLE VI—DELEGATION OF POWERS

Sec. 601. The Commission is authorized to delegate to any appropriate officer or officers of a State or local government, or to any agent, employee, or designee of the Commission, any or all of the powers granted by this Act, with the exception of the authority granted pursuant to section 301 to determine whether or not to make and maintain registers of voters in any congressional district, and the authority granted pursuant to section 401 to determine whether or not to conduct an election thereunder, which determinations shall be made only by a quorum of the Commission itself.

TITLE VII—JUDICIAL REVIEW

Sec. 701. Any citizen of a State, having the qualifications requisite for electors of the most numerous branch of the legislature, who has made appropriate application for inclusion upon a register of qualified electors maintained by the Commission for the congressional district in which he is a resident, who is denied such registration or who, having once been so registered, is removed from such register or denied the opportunity to vote in a primary, special, or general election conducted by the Commission in such congressional district, shall have an action for declaratory and injunctive relief in the United States district court for such district.

TITLE VIII—PERFORMANCE OF COMMISSION FUNCTIONS

SEC. 801. The Commission is authorized to appoint and fix the compensation of such officers and employees as may be necessary to enable it to perform its functions and duties.

SEC. 802. In carrying out its functions the Commission is authorized to utilize on a temporary basis employees of the departments and agencies of the executive branch of the Government. Each department and agency of the executive branch of the Government shall fully cooperate with the Commission to the end that it may effectively carry out its functions and duties and shall, at the request of the President, assign on a temporary basis employees of such department or agency to the Commission.

SEC. 803. In carrying out its functions the Commission is authorized to utilize the services of State and local governmental officers and employees and the facilities of State and local governments. The Commission is authorized to reimburse any State or local officer or employee whose services are utilized under the authority of this section for travel expenses incurred, and to pay to any such officer or employee per diem in lieu of subsistence, in the same amounts as authorized by law for persons in the Government service serving without compensation. The Commission is authorized to reimburse any State or local government for the services of any officer or employee of such government, and for the facilities of such government, utilized under the authority of this section.

SEC. 804. (a) In carrying out its functions and duties, the Commission may sit and act at such times and places, hold such hearings, take such testimony, administer such oaths, require the attendance and testimony of such witnesses and the production of such books, records, or other written matter, procure such printing and binding, and make such expenditures as the Commission deems advisable. Any member of the Commission may administer oaths or affirmations to witnesses appearing before the Commission. Subpenas for the attendance and testimony of witnesses or for the production of written matter may be issued over the signature of the Chairman, or any member designated by him, and may be issued by any person designated by the Chairman or by such member.

(b) A witness attending any session of the Commission shall receive $4 for each day's attendance and for the time necessarily occupied in going to and returning from the same, and 8 cents per mile for going from and returning to his place of residence. Witnesses who attend at points so far removed from their respective residences as to prohibit return thereto from day to day shall be entitled to an additional allowance of $12 per day for expenses of subsistence, including the time necessarily occupied in going to and returning from the place of attendance. Mileage payments shall be tendered to the witness upon service of a subpena issued on behalf of the Commission.

(c) In case of contumacy or refusal to obey a subpena issued on behalf of the Commission, any district court of the United States or the United States court of any possession, or the District Court of the United States for the District of Columbia, within the jurisdiction of which the inquiry is carried on or within the jurisdiction of which the person guilty of contumacy or refusal to obey is found or resides or transacts business, upon application by the Attorney General of the United States shall have jurisdiction to issue to such person an order requiring such person to appear before the Commission, there to produce evidence if so ordered, or there to give testimony touching the matter under investigation; and any failure to obey such order of the court may be punished by the court as a contempt thereof.

SEC. 805. The Commission may promulgate such rules and regulations, not inconsistent with the provisions of this Act, as it deems necessary or desirable for the performance of its functions and duties under this Act.

SEC. 806. The Commission shall, on or before January 31 of each year, submit to the Congress a report of its activities under this Act, together with any recommendations for suggested legislation which it finds desirable.

SEC. 807. There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

SEC. 808. No provision of law contained in section 5 of the Act entitled, "An Act for the Apportionment of Representatives in Congress among the several States under the Thirteenth Census", approved August 8, 1911; section 26 of the Revised Statutes; and section 27 of the Revised Statutes, which is inconsistent with this Act, shall be applicable to elections conducted under this Act.

The analysis presented by Mr. HART is as follows:

ANALYSIS OF CONGRESSIONAL ELECTIONS COMMISSION BILL INTRODUCED BY SENATOR PHILIP A. HART

It is the purpose of the Congressional Elections Act to establish an agency of the legislative branch of the Federal Government with authority to conduct the elections of Members of the Senate and the House of Representatives.

TITLE I

Title I states that because of the continuing denial to American citizens, on grounds of their race or color, of their right to vote, particularly to vote in the election of Representatives and Senators, recognizing the authority of Congress under the 15th amendment and under article I, section 4 of the Constitution to assure fullest participation of qualified electors in congressional elections, the Congress determines it necessary to establish an agency to conduct registration and voting in the primary, special and general elections at which Representatives and Senators are elected.

TITLE II

Title II establishes the Congressional Elections Commission as an agency of the legislative branch of the Federal Government authorized to conduct primary, special and general elections for Members of the Senate and the House of Representatives. The Commission is composed of three members appointed by the President with the advice and consent of the Senate, Commissioners to be appointed for a term of 9 years.

TITLE III

Title III authorizes the Commission to make and maintain registers of voters in various congressional districts who are qualified to participate in primary, special and general elections of Members of the Senate and House of Representatives. The Commission may maintain registration lists in various congressional districts whether or not it has determined to run an election in the district. It is also provided that no person can become or stay registered on the Commission's lists who does not have the qualifications for electors of the most numerous branch of the State legislature. It is also provided that State and local laws and ordinances covering the time, place or manner of registration are not applicable to registrations conducted by the Commission, but the Commission is instructed to conform its conduct of registration as far as possible to the procedures in effect under State or local laws.

TITLE IV

Title IV authorizes the Commission to conduct primary, special or general elections in any congressional district for Members of the Senate and the House of Representatives either when (1) the Commission is officially requested so to do by the State in which the district is located, or (2) the Commission determines that unless it conducts such an election, qualified voters are likely to be denied their right in such a primary, special or general election to cast their votes and have them fairly counted. Whenever the Commission conducts a primary, special or general election that shall be the sole primary, special or general election in the congressional district for Members of the Senate and the House of Representatives and the results thereof shall determine the party nominees, the elected Members of the House of Representatives and the official vote of the congressional district for Members of the Senate and the House of Representatives at large. No person may vote in an election conducted by the Commission unless he has either been registered under title III by the Commission or he is registered on a State registration list determined by the Commission to be appropriate for use in its own elections. The Commission, if it decides to conduct an election, shall immediately notify the Governor of the State.

TITLE V

Title V provides for the certification of results of election by the Commission to the Speaker of the House, the Secretary of the Senate, and the Governor of the State, and that such certification constitutes the binding and conclusive determination of the results of the primary, special or general election.

TITLE VI

Title VI authorizes the Commission to delegate to its own agents and employees or to appropriate officials of the State and local governments any of the powers provided by the act with the exception of the authority of the Commission to determine whether or not to maintain registers of voters or to conduct an election in any particular congressional district which powers shall be exercised only by the Commission itself.

TITLE VII

Title VII authorizes suits for declaratory and injunctive relief in the U.S. district court by any citizen qualified to vote who has applied for registration by the Commission and is denied it or after being granted registration is removed from the registry or is denied opportunity to vote in an election conducted by the Commission.

TITLE VIII

Title VIII contains miscellaneous provisions concerning the compensation of agents and employees of the Commission as well as officials of the State to whom Commission functions may be delegated; provisions for the taking of testimony by the Commission; attendance of witnesses; refusals to testify; promulgation of the Commission rules and regulations; reports to the Congress; and amendment of prior laws.

Mr. HART. Also, Mr. President, I ask unanimous consent that the bill lie at the table until the end of business on Wednesday, April 10, so that Senators who might wish to join in sponsoring it will have an opportunity to do so.

The PRESIDING OFFICER. Without objection, it is so ordered.

REPORT AND QUESTION PERIOD

Mr. KEFAUVER. Mr. President, I submit, for appropriate reference, a resolution to amend the rules so as to make it possible to invite heads of departments and independent agencies to report and answer questions on the floor of the Senate. I ask that the resolution be held at the desk for 5 days, to enable other Senators to join in sponsoring it.

When I was a Member of the other body, I suggested that a similar procedure be adopted there; and that suggestion was very favorably received. At that time, more than 350 daily newspapers commented editorially on this suggestion, and all referred approvingly to it. A survey of the Gallup poll showed that 72 percent of those interviewed were favorable to the proposal, and only 7 percent were opposed. In addition, a poll throughout the country of leading citizens, political scientists, and men with governmental experience resulted in a virtually unanimous approval of this idea.

I think the report and question period would be even better suited to the Senate than it would be to the other body, because of the smaller membership and more intimate atmosphere of the Senate.

The resolution would allow the Rules Committee to provide for a report and question period on the floor of the Senate at least once every 4 weeks, but not more often than once a week. The sessions would not last more than 2 hours.

During the first half of the report and question period, members of the Cabinet or the heads of agencies would be invited to appear on the floor of the Senate and to answer written questions, which would have been prepared and submitted to them in advance. The last half of the question period would be taken up by questions by Members from the floor of the Senate, with the time to be allocated by the chairman and the ranking minority member of the committee.

I believe that much good would result if administrators were brought face to face with representatives of the people under an ordinary procedure, in order that the country might have the benefit of free and open consultation between them.

As a result, we in the Senate would have the benefit of a regular accounting from the heads of the departments as to how they are administering and interpreting the laws we pass. This would bring about better teamwork between the Congress and the executive departments, and would foster better public understanding of both.

It would also give the Senate a fresh source of initiative in governmental matters, and would give Members of the Senate direct and fuller information with regard to the operation of all departments—not just those supervised by their committees. It would also give the Cabinet members a chance to give their proposals directly to all Members of the Senate.

I am pleased that the Senator from Alaska [Mr. Gruening], the Senator from Hawaii [Mr. Inouye], the Senator from California [Mr. Kuchel], the Senator from Wyoming [Mr. McGee], the Senator from Oregon [Mrs. Neuberger], the Senator from Rhode Island [Mr. Pell], and the Senator from West Virginia [Mr. Randolph] have joined with me as cosponsors of this resolution.

Mr. President, I ask unanimous consent to have the text of the resolution printed at this point in the Record.

The PRESIDING OFFICER. The resolution will be received and appropriately referred; and, without objection, the resolution will be printed in the Record.

The resolution (S. Res. 120) was referred to the Committee on Rules and Administration, as follows:

Resolved, That rule XXXIII of the Rules of the Senate be amended by adding at the end thereof the following new paragraph:

"There shall be held in the Senate immediately following the reading of the Journal on at least 1 day in each period of 4 calendar weeks, but not oftener than 1 day in any 1 calendar week, a 'report-and-question period,' which shall not consume more than 2 hours, during which heads of departments, agencies, and independent establishments in the executive branch of the Government are requested to answer orally written and oral questions propounded by Members of the Senate. Each written question shall be submitted in triplicate to the committee having jurisdiction of the subject matter of such question, and, if approved by such committee, one copy shall be transmitted to the head of the department, agency, or independent establishment concerned, with an invitation to appear before the Senate, and one copy to the Committee on Rules and Administration with a request for allotment of time in a report-and-question period to answer such question. Subject to the limitations prescribed in this paragraph, the Committee on Rules and Administration shall determine the date for, and the length of time of, each report-and-question period, and shall allot the time in each period to the head of a department, agency, or independent establishment who has indicated his readiness to deliver oral answers to the questions transmitted to him. All written questions to be propounded in any one period shall be approved by one committee. With the consent of the committee which has approved the written questions to be propounded in any period, the head of a department, agency, or independent establishment may designate to represent him in such period the head of a principal division of such department, agency, or independent establishment, and, in the case of a department, the head thereof may designate the Under Secretary or an assistant secretary of such department. The latter half of each period shall be reserved for oral questions by Members of the Senate, one-half of such time to be controlled by the chairman of the committee which has approved the written questions propounded in such period and one-half by the ranking minority member of such committee. Each oral question shall be germane to the subject matter of at least one of the written questions propounded in such period. The time of each report-and-question period and the written questions to be answered in such period shall be printed in two daily editions of the Record appearing before the day on which such period is to be held, and the proceedings during such period shall be printed in the Record for such day."

YOUTH EMPLOYMENT ACT—AMENDMENTS

Mr. GOLDWATER submitted amendments, intended to be proposed by him, to the bill (S. 1) to authorize the establishment of a Youth Conservation Corps to provide a healthful outdoor training and employment for young men and to advance the conservation, development, and management of natural resources and recreational areas; and to authorize local area youth employment programs, which were ordered to lie on the table and to be printed.

WILDERNESS ACT—AMENDMENTS

Mr. ALLOTT (for himself, Mr. Bartlett, Mr. Bennett, Mr. Cannon, Mr. Dominick, Mr. Fong, Mr. Goldwater, Mr. Hayden, Mr. Jordan of Idaho, Mr. Lausche, Mr. Mechem, Mr. Mundt, Mr. Randolph, Mr. Simpson, and Mr. Thurmond), submitted an amendment, intended to be proposed by them, jointly, to the bill (S. 4) to establish a National Wilderness Preservation System for the permanent good of the whole people, and for other purposes, which was ordered to lie on the table and to be printed.

Mr. ALLOTT submitted amendments, intended to be proposed by him, to Senate bill 4, supra, which were ordered to lie on the table and to be printed.

YOUTH CONSERVATION CORPS—MINORITY AND INDIVIDUAL VIEWS

Mr. CLARK. Mr. President, I ask unanimous consent that minority and individual views on Senate bill 1, the youth education bill, may be filed while the Senate is in adjournment.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL COSPONSORS OF BILLS AND CONCURRENT RESOLUTION

Under authority of the orders of the Senate, as indicated below, the following names have been added as additional cosponsors for the following bills and concurrent resolution:

Authority of April 1, 1963:

S. 1238. A bill to amend the Federal Property and Administrative Services Act of 1949, as amended, with respect to the purposes for which surplus personal property may be donated: Mr. Anderson, Mr. Bartlett, Mr. Bible, Mr. Burdick, Mr. Byrd of West Virginia, Mr. Church, Mr. Clark, Mr. Engle, Mr. Fulbright, Mr. Inouye, Mr. Javits, Mr. Long of Missouri, Mr. Magnuson, Mr. Mansfield, Mr. McGee, Mr. McGovern, Mr. Moss, Mr. Nelson, Mr. Randolph, Mr. Ribicoff, Mr. Yarborough, Mr. Young of North Dakota, and Mr. Young of Ohio.

Authority of April 2, 1963:

S. 1250. A bill to provide for advance consultation with the Fish and Wildlife Service and with State wildlife agencies before the beginning of any Federal program involving the use of pesticides or other chemicals designed for mass biological controls: Mr. Douglas, Mr. Long of Missouri, and Mr. McIntyre.

S. 1251. A bill to amend the act of August 1, 1958, in order to prevent or minimize injury to fish and wildlife from the use of insecticides, herbicides, fungicides, and pesticides: Mr. Douglas, Mr. Long of Missouri, and Mr. McIntyre.

S. 1255. A bill for the establishment of a Commission on Revision of the Antitrust Laws of the United States: Mr. Cooper.

Authority of April 3, 1963:

S. 1262. A bill to amend title II of the Social Security Act to provide disability insurance benefits thereunder for any individual who is blind and has at least 20 quarters of coverage, and for other purposes: Mr. Long of Missouri and Mr. Scott.

S. 1268. A bill to amend title II of the Social Security Act to provide disability insurance benefits thereunder for any individual who is blind and has at least six quarters of coverage, and for other purposes: Mr. Long of Missouri and Mr. Scott.

Authority of March 21 and April 1, 1963:

S. Con. Res. 34. Concurrent resolution to express the sense of Congress that the President appoint a committee to evaluate our foreign aid program in each country and report its finding to the President and the Congress: Mr. Case, Mr. Fong, Mr. Javits, Mr. Keating, Mr. Kuchel, Mr. Long of Missouri, Mr. Miller, Mr. Morton, Mr. Pearson, and Mr. Randolph.

NOTICE OF HEARINGS ON SENATE BILL 777, TO AMEND THE ARMS CONTROL AND DISARMAMENT ACT

Mr. FULBRIGHT. Mr. President, I wish to announce that the Committee on Foreign Relations will hold public hearings on Wednesday, April 10, on S. 777. This is an administration bill to amend the Arms Control and Disarmament Act in order to increase the authorization for appropriations and to modify the personnel security procedures for contractor employees. S. 777 was introduced by Senator Humphrey for himself and Senators Clark and Randolph on February 11, 1963.

The hearing will be held at 10:30 a.m. in room 4221 of the New Senate Office Building.

CHANGE IN HEARINGS DATE ON AREA REDEVELOPMENT LEGISLATION BY THE SUBCOMMITTEE ON PRODUCTION AND STABILIZATION OF THE SENATE COMMITTEE ON BANKING AND CURRENCY

Mr. DOUGLAS. Mr. President, as chairman of the Subcommittee on Production and Stabilization of the Committee on Banking and Currency, I wish to announce a change in the date for beginning hearings on S. 1163, a bill to amend certain provisions of the Area Redevelopment Act.

The hearings will begin at 10 a.m., Tuesday, April 30, 1963, rather than Monday, April 22, as previously announced. The hearings will be held in room 5302, New Senate Office Building, and will continue on the following days of that week.

All persons who wish to appear and testify on this bill are requested to notify Mr. Jonathan Lindley, Senate Committee on Banking and Currency, room 5300, New Senate Office Building, telephone CApitol 4-3121, extension 3921.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the Record, as follows:

By Mr. RANDOLPH:

Comments praising the six recipients of the 1963 Federal Woman's Award.

NOMINATIONS FOR BRIGADIER GENERALS

Mr. STENNIS. Mr. President, there is now pending before the Senate nomination reference 41, containing the names of 49 Army colonels for promotion to temporary brigadier general in the Army. The Committee on Armed Services has unanimously recommended that this list be approved.

Mr. President, the Armed Services Subcommittee on Officer Grade Limitations held a hearing on this nomination list. I emphasize that the subcommittee did not challenge the fitness of any officer nominated for promotion. The hearing did involve a matter of policy, however, which I feel should be called to the attention of the Senate.

With respect to this list, the average age of those recommended for promotion to brigadier general is about 46½ years. This represents an average drop of about 2 years in age as compared with the lists of the last several years. Furthermore, speaking in terms of prior service before promotion, in 1961 and 1962 more than 75 percent of the officers had completed at least 24 years of service at the time of their selection. With regard to the pending list, however, only about 37 percent will complete 24 years or more of service. On the whole, therefore, the officers selected for general on this list were younger and had less years of service than those selected in prior years.

The point was raised as to whether the selection of a greater proportion of younger officers was wise as a matter of policy and was fair to the more senior colonels who would have been selected in greater numbers had the promotion policies of the last few years been followed.

Mr. Vance, Secretary of the Army, appeared before the subcommittee and stated in effect that it was necessary to select some of the younger officers in order to give those who were commissioned in 1941 a fair chance for consideration for promotion to general officer. There were fairly large numbers of officers commissioned in 1941 and the contention is that in order to give this group a reasonable opportunity over the next few years their promotion to brigadier general should begin at the present time.

In technical promotion terms, Mr. President, what happened is as follows: In 1960, the primary promotion zone ended at year group 1936, that is, those commissioned in that year; in 1961 it ended at year group 1937; and in 1962, year group 1938. But for those promoted in 1963, it ended at 1941. Three additional year groups were therefore put in the promotion zone for the recent selections. The result is that year groups 1939 and 1940 were competing along with 1941 for selection for promotion.

It was the contention of the Army that over the next few years the percentage of those selected from each year group will balance out and will be about the same. That is, year groups 1939 and 1940 will probably receive as great a percentage of selections to brigadier general as 1941.

Mr. President, I would like to make two points in connection with this promotion matter.

First. The first point is that approval of this list should not be construed as a commitment or blanket endorsement of any overall policy of early promotion. In other words, the committee's action on this list does not mean that future lists involving this question will not be carefully reviewed, depending on the circumstances involved.

Second. The second point, Mr. President, is that this promotion policy may well have two definite side effects which are not desirable. First, there is the fact that if the bulk of the colonels are to be considered at around 21 or 22 years of service, many of those not selected will feel that there is little hope for advancement for the remainder of their normal 30 years of service. Many of the colonels who feel this way will undoubtedly lean toward early retirement at a time when they are at the height of their experience and knowledge. Furthermore, where officers enjoy early selection to the grade of brigadier general, we may see a policy which will result in the early retirement of these same officers. The case is often made that early retirements are desirable in order to avoid promotion humps and permit advancement for the younger officers. Mr. President, the record should be clear that the subcommittee will closely observe the whole matter of early retirement which could result from the Army policy.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I see the distinguished Senator from Hawaii [Mr. Inouye] on the floor. I note that on the Executive Calendar are a number of nominations reported by him from the Armed Services Committee. I move that the Senate proceed to the consideration of executive business, to consider those nominations, beginning with the new reports on page 2.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

The PRESIDING OFFICER. If there be no reports of committees, the nominations on the Executive Calendar, beginning with the new reports on page 2, will be stated.

THE ARMY

The Chief Clerk proceeded to read sundry nominations for temporary appointment in the Army of the United States.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that these nominations be considered en bloc.

The PRESIDING OFFICER. Without objection, the nominations will be considered en bloc; and, without objection, they are confirmed.

THE MARINE CORPS

The Chief Clerk proceeded to read sundry nominations in the Marine Corps.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that these nominations be considered en bloc.

The PRESIDING OFFICER. Without objection, the nominations will be considered en bloc; and, without objection, they are confirmed.

THE NAVY

The Chief Clerk proceeded to read sundry nominations in the Navy.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that these nominations be considered en bloc.

The PRESIDING OFFICER. Without objection, the nominations will be considered en bloc; and, without objection, they are confirmed.

THE ARMY AND THE NAVY

The Chief Clerk proceeded to read sundry nominations in the Army and in the Navy, which had been placed on the Secretary's desk.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that these nominations be considered en bloc.

The PRESIDING OFFICER. Without objection, the nominations will be considered en bloc; and, without objection, they are confirmed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The PRESIDING OFFICER. Without objection, the President will be notified forthwith.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

EXCELLENT APPOINTMENT OF CHESTER BOWLES TO BE AMBASSADOR TO INDIA

Mr. PROXMIRE. Mr. President, the designation of Chester Bowles by President Kennedy to be our Ambassador to India is a very worthy appointment. Just as Governor Bowles, in his earlier capacity as Under Secretary of State, has helped select such uniquely qualified men as Edwin O. Reischauer, our Ambassador to Japan, and William Attwood, our Ambassador to Guinea, so the President has now shown similar imagination and excellent judgment in asking Governor Bowles to return, once again, to India, to be our Ambassador. He previously served in that vitally important post from 1951 to 1953. During that time, a decade ago, he was instrumental in establishing vital bonds of understanding between India and the United States.

Let me say that it seems to me that Chester Bowles became the model of what an Ambassador should be. He mingled very closely with the people of India. He took his family with him, and they learned the language and magnified the warm and friendly Bowles association with Indians. As Ambassador, Governor Bowles spoke to large numbers of groups in all walks of life—students, labor, business and many others. He did a splendid job in winning friends for us in India and in demonstrating in act as well as word to the people of India what American democracy means.

As we know, India has been challenged by a serious threat from the Communist regime on the mainland of China. India finds herself in the midst of an arduous and probably long-run effort to preserve her independence and her way of life against the Communist threat. In this time of peril for India, a time when the people of the subcontinent of India are united as never before by new ties of national spirit, it is especially fitting that the United States return Governor Bowles to the Embassy where he served with such great flair and distinction 10 years ago.

Governor Bowles has had a long and remarkable career of public service, ranging over nearly all parts of our Government. After a career in high Government posts in Washington and abroad, he served as Governor of Connecticut and as a Congressman from Connecticut. As our Ambassador to India, he will take with him the good wishes of his many colleagues on both sides of the aisle and in both Houses of Congress.

Mr. President, yesterday there was published in the New York Times a most interesting article on Mr. Bowles. The article was written by the distinguished head of the Washington Bureau of the New York Times, James Reston. In the article he pointed out that Mr. Bowles is one of those rare souls who is a deep and profound thinker who says what he thinks. As Mr. Reston points out in the article, of course those who have new ideas and express them vigorously and honestly are always subjected to criticism; and Mr. Bowles has a large number of critics. However, I think the fact that he does have critics is an index to the sort of stimulating and thoughtful person he is. I believe we should also recognize that Mr. Reston is the one who put to rest the vicious story that Chester Bowles had talked publicly about opposing the President's decision about the Bay of Pigs invasion. Mr. Reston is the one who had first developed the story that Mr. Bowles had opposed this tragic mistake; and Mr. Reston went to Mr. Bowles to ask him directly about it. Mr. Bowles in fact refused to comment on the situation or to discuss it.

Yet, on that score, Mr. Bowles has been criticized very severely and obviously very unjustly—because Mr. Reston is certainly the authority in this case.

Mr. President, I am happy to support this nomination with enthusiasm.

Mr. RIBICOFF. Mr. President, this past weekend President Kennedy announced his intention to appoint Chester Bowles as Ambassador to India.

With this important assignment, Chet Bowles continues what is one of the most varied and remarkable careers of public service of any American. He has served with great distinction as head of the Office of Price Administration, Director of Economic Stabilization, Governor of Connecticut, Ambassador to India, U.S. Representative from Connecticut's Second Congressional District, Under Secretary of State, and Special Assistant to the President for Asian, African, and Latin American Affairs.

In returning to the crucially important post of Ambassador to India, Chet Bowles takes with him one of the most creative and imaginative minds in our country. He has thought and written and spoken about foreign affairs with insight, courage, and dedication. He has the vision that produces ideas and the energy and determination that turn ideas into action.

Chet and I have been close political and personal friends for many years. I have always valued his advice and wise counsel.

The President is to be congratulated for selecting for this assignment such an eminently qualified person, and Chet Bowles deserves the appreciation of his country for his willingness to take on yet another challenging task in a brilliant record of distinguished public service.

Mr. President, I hope and expect the Senate will speedily confirm this nomination. I ask unanimous consent that an editorial from the Washington Post be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PASSAGE TO INDIA

The appointment of Chester Bowles as Ambassador to India will give this country an able, gifted and articulate spokesman in New Delhi. His previous service as Ambassador to India in the fifties, his profound knowledge of the economic, political and social problems of the subcontinent and his friendly relations with the Indian people all eminently qualify him for this assignment.

India has made much progress in the decade since Mr. Bowles last served as Ambassador there, but the basic problems remain. It still is struggling to achieve industrial growth, rural development and social progress. The problem of Kashmir remains a constant complication. The Chinese invasion has added to the old problems the new one of military organization.

This country needs an informed, able and perceptive observer in New Delhi. And India needs the kind of an American Ambassador who can understandingly and sympathetically interpret its situation to Washington. It would be difficult to find a public man better suited for the challenges of the post to which he has been assigned.

ARMS CONTROL AND DISARMAMENT—TRIBUTE TO SENATOR HUMPHREY

Mr. PROXMIRE. Mr. President, the distinguished senior Senator from Minnesota [Mr. HUMPHREY] has led an almost single-handed fight to persuade the Senate and the country to recognize the wisdom of a treaty to suspend nuclear testing. He has done a great job with very, very little recognition nationally. Max Freedman, a columnist for the Washington Post, in an article printed in this morning's issue of the Washington Post, discussed the fight in which the Senator has engaged. Mr. Freedman has stressed the effort of the Senator from Minnesota to serve the national interest as well as the cause of peace throughout the world.

I ask unanimous consent that the fine column by Max Freedman entitled "Humphrey And Disarmament" be printed at this point in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

HUMPHREY AND DISARMAMENT

(By Max Freedman)

Without Senator Humphrey the debate on disarmament would proceed against hopeless odds. He has been President Kennedy's chief supporter in Congress for a prudent and responsible treaty. When Mr. Eisenhower was President he gave the same kind of courageous support to a Republican administration. It is not the least of his merits that he believes that disarmament, like defense policy, should be above mere partisan skirmishing. In view of this record he is entitled to a thoughtful hearing when he makes a major statement on the disarmament negotiations at Geneva.

Yet this careful examination of his proposals is precisely what has been lacking. It almost seems as if the cynical principle is being followed of ignoring Senator Humphrey's points because one cannot answer them. Some time ago he delivered an elaborately documented analysis of the disarmament deadlock but his address met with little response in the Senate and with only scattered attention in the country. This surely is shabby treatment for a Senator who is carrying the lonely burden of protecting the public interest in a safeguarded disarmament treaty.

It may therefore be some contribution to the public debate if one summarizes the main points which Senator Humphrey is now making.

He points out that in 1958 it was the belief of both Russian and American scientists that there would have to be an international inspection system with about 180 control posts, of which 19 would be in the Soviet Union. It would have taken between 4 to 6 years to install this system; scores of international technicians would have been included in the project; the system would have cost $2 billion to build and several hundred million dollars a year to maintain. Today no such system needs to be established at all.

The United States, like Russia, can now identify nuclear tests in the atmosphere, underwater, and in outer space. If Russia would agree to a treaty outlawing such tests, the risks of successful evasion or cheating would form no problem. The real concern is with tests conducted underground where they may be harder to detect or may be confused with earthquakes.

Senator Humphrey reports that in the past 5 years the United States has greatly improved its ability to identify earthquakes in Russia. It is a generous figure to suggest that these unidentified occurrences in any one year will be only a few dozen at most. Under the British-American treaty each of these mysterious events would be subject to inspection. From a scientific or technical standpoint, the problem of security is wholly manageable. Russia would soon learn this fact if it were willing to give the proposed treaty a fair trial.

Senator Humphrey asked the Kennedy administration to make available the results of studies of underground events in Russia from 1958 through 1962. He has quoted "a competent administration official in whom I repose the highest confidence" as saying that the United States has the present ability to monitor a test ban agreement with full safeguards for American security.

Under these new arrangements it would be necessary to supplement these monitoring devices by inspections inside Russia carried out by inspectors who could be accompanied by Soviet observers. The inspected area would be small and would be located by using the records of at least four detection stations. There would be no more than seven inspections each year. The treaty would lapse and the United States would be free to resume its tests if Russia refused to agree to any suggested inspection or was caught in a secret test.

Since the 1960 campaign Mr. Kennedy has shown much more eagerness than the general public to reach a disarmament agreement with Russia, above all on a test ban treaty. The public has tended to view the Geneva talks with resigned apathy as a meaningless charade. Yet all the time hard working and often misunderstood officials have been closing the gap between the Russian and American positions, while always striving for a treaty that would be endorsed by two-thirds of the Senate. It is high time that we realize that American public indifference is very helpful to Russia in resisting a treaty. For Russia can twist and equivocate at Geneva without being called to account by a bored American press.

WASTE IN THE SPACE PROGRAM

Mr. PROXMIRE. Mr. President, over the weekend there were a number of developments, calling into question the wisdom of proceeding with as generous and, I think, as wasteful an appropriation for space as the Congress has been in the habit of doing. On Friday the New York Times, in a very unusual story, reported that the Air Force had documented $77 million of duplication in the space budget. The article stated chapter and verse specific duplication, citing the place, the facility, and the degree of duplication in dollars and cents.

I ask unanimous consent that the remarkable story entitled "Air Force Scores Building by NASA" be printed at this point in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

AIR FORCE SCORES BUILDING BY NASA—SAYS SPACE AGENCY'S PLAN WILL DUPLICATE FACILITIES

Washington.—The Air Force, in a formal memorandum, has charged that the National Aeronautics and Space Administration is asking for construction of $77,671,000 worth of facilities that duplicate Air Force facilities.

The memorandum appears to support charges that the civilian space program, initiated during the Eisenhower administration and endorsed by the Kennedy administration, needlessly incorporates many projects already being studied by the military.

In reply to a reporter's questions about the memorandum, Dr. Hugh L. Dryden, Deputy Administrator of NASA, said that his organization had frequent coordination meetings with the Department of Defense and that "no such statement has been made to us."

He described the Air Force memorandum as representing "a point of view of junior people who can't get their superiors to support their desires."

On a point made in the memorandum about offering bioastronautics facilities to the Space Agency, Dr. Dryden said:

"We have offered to carry half the cost of bioastronautics laboratories but this was not accepted by the Department of Defense."

One reason for the creation of the National Aeronautics and Space Administration in 1958 was the desire to emphasize this country's belief in peaceful rather than military exploration of space. The early U.S. space programs were all conducted by the military services.

Little by little NASA has taken over such space facilities as the former Army installation at Huntsville, Ala. The military services, however, have retained many major projects and still support NASA with missiles and base facilities.

Over the years, however, as the United States has pressed its space efforts, a controversy has developed as to whether the major space responsibilities should not have been retained by the military services.

It has been pointed out that the Soviet Union's space programs are believed to be directed chiefly toward military ends.

In recent congressional hearings, members of the House Science and Astronautics Committee have questioned NASA officials regarding possible duplication of facilities already controlled by the Air Force.

Robert Seamans, Associate Administrator of the space agency, has testified that all of the construction requests have been carefully coordinated with the Defense Department. The agency's construction requests total $800 million.

The Air Force memorandum, apparently prepared in connection with the President's budget proposals for the fiscal year 1964, beginning next July 1, starts with this question:

"What is the Air Force's opinion of NASA's need for the facilities listed in the NASA fiscal year 1964 construction program, which is attached?"

GIVES OWN ANSWER

It gives this answer:

"Specific characteristics and capabilities of the individual facilities on the attached NASA construction program are not available to the Air Force in the majority of the items. However, from limited information available, location of proposed facility, title assigned and knowledge of the NASA center's responsibilities, it is highly likely that similar or duplicating facilities to present Air Force facilities are being requested by NASA."

The memorandum cites the following examples:

(a) Ames Research Center, Moffett Field, Calif.

(1) Life sciences research facility—$4,880,000. The Air Force has a large facility and technical capability in the bioastronautics area, which has been offered several times to support NASA programs. The space agency has not accepted these offers.

(2) Space Materials Laboratory—$3,600,000. The Air Force Materials Laboratory complex at Wright-Patterson Air Force Base, Ohio, could support the space agency in this area.

OTHER FACILITIES CITED

(b) Langley Research Center, Langley Field, Va.

(1) Vehicle antenna test facility addition—$1,758,000. The Air Force has capabilities in this area at the Wright-Patterson base, and at the Rome, N.Y., Air Development Center.

(c) Launch Operations Center, Cape Canaveral, Fla.

(1) Central instrumentation facility—$31,508,000. This facility appears to provide NASA with an excess of capability, in view of the Department of Defense's capability at the Atlantic missile range. The range's telemetry system was jointly planned with NASA, thus the requirement for additional telemetry by the space agency is unknown. In addition, this facility contains $5 million for electronic tracking items. Tracking is a range responsibility and the range has adequate electronic tracking capability.

(2) Calibration and standards laboratory—$2,867,000. It would appear that the best interest of the Government would be served

by expanding the existing Department of Defense capability to satisfy the requirements of all missile-range users, rather than establishing a separate capability.

DUPLICATION FOUND

(3) Optical and Electronic Component Servicing Facility—$855,000. Department of Defense has a similar capability at the Atlantic missile range.

(d) Lewis Research Center, Cleveland.

(1) Propulsion component and subsystem environmental facilities—$2,320,000. The Rocket Laboratory at Edwards Air Force Base in California has capabilities in this area.

(e) Manned Spacecraft Center, Houston, Tex.

(1) Mission Control Center—$8,409,000. It is probable that the missile range capability could fulfill this need.

(2) Launch environment and antenna test facilities—$7,482,000. Air Force facilities at Wright-Patterson base and Rome Air Development Center are available for similar efforts.

(3) Mission simulation and procedures training facilities—$2,216,000. The Air Force Aerospace Research Pilots School at Edwards base has similar facilities. Many NASA pilots have utilized this Air Force facility.

(4) Atmospheric reentry materials and structures evaluation facilities—$2,915,000. The Air Force has excellent facilities at Arnold Engineering Development Center and at Wright-Patterson base.

(5) Ultrahigh vacuum space chamber facilities—$2,685,000. Similar facilities are available at Arnold Engineering Development Center.

(f) Marshall Space Flight Center, Huntsville, Ala.

(1) Acceleration test and calibration facility—$1,700,000. Comparable facilities are available at Wright-Patterson, Edwards, and Holloman Air Force Base, N. Mex.

Mr. PROXMIRE. Mr. President, I ask also that an article published in the Milwaukee Journal entitled "Stress on Space Called Dangerous to Science," in which Dr. Barry Commoner, professor of plant physiology at Washington University in St. Louis, Mo., a very competent and able scientist, discusses the adverse consequences to science of excessive emphasis on space.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STRESS ON SPACE CALLED DANGEROUS TO SCIENCE

PHILADELPHIA, PA.—American science, in the opinion of a prominent biologist, is in danger because of the emphasis and money being allocated to the exploration of space.

Dr. Barry Commoner, professor of plant physiology at Washington University in St. Louis, Mo., warned of the danger in a speech to the National Science Teachers' Association convention.

His speech reflects widespread concern within the scientific community over implications of the rapid growth of Government support of science in recent years. The growth has been stimulated by the advent of space technology. Government funds for research and development have quadrupled in the last decade.

NOT JUST GROWTH PAINS

Commoner contends that U.S. science is "not merely suffering the natural pains of rapid growth."

"Certain weaknesses at the very heart of the scientific enterprise may threaten the future of science and its usefulness to the Nation and to the world," he says.

His basic objection is that American science and the Government's support of research is becoming oriented too sharply toward a specific mission, particularly the exploration of space and the landing of a man on the moon, rather than being aimed at the broader objective of the pursuit of knowledge.

"We are engaged in a spectacular balancing act," he says. "Education is supported by science, science by space and space by the man on the moon.

PINCHPENNY EFFORT

"We should recognize this policy for what it is—a shortsighted, pinchpenny effort to buy a few selected fruits of the tree of knowledge without accepting the honest responsibility of nourishing the whole living, growing organism."

As evidence of how "project oriented research" is tending to dominate and to distort the overall course of American science he points to the emergence of the National Aeronautics and Space Administration as one of the principal patrons of basic research and graduate education.

In 1962, he says, more than one-third of the total Federal obligations of $900 million for basic research come from NASA while the National Science Foundation, the agency created to support basic research, received less than $90 million.

SOURCE OF FELLOWSHIPS

The space agency also has become the major source of graduate fellowships in science, he adds.

The space agency program, he argues, no longer follows the principle, laboriously established legislative debate on the National Science Foundation bill, "that a national program of support for science should be science oriented rather than mission oriented."

Commoner also complains that education and science are becoming "constricted" by the present policies of support.

"Science is a subsidiary part of education and one would suppose that any effort to strengthen science should be predicated on adequate support for the entire educational base," he says. "But we seem to have turned this relationship upside down.

"While exhibiting a considerable reluctance to provide the total support needed to sustain our schools and universities, the Nation is eager to expand that part of the educational system which deals with science."

Most universities have become so dependent on Government research funds that "if such funds were withdrawn their total competence as educational institutions would sharply decline," he contends.

ADDITIONAL EVIDENCE

As further evidence to support his view, he cites:

A "glut" in scientific literature which results from the tendency to ignore the interrelationships of scientific knowledge.

"Serious failures" in the proper application of science, such as in the failures to anticipate the harmful effects of detergents, insecticides and atomic fallout.

A tendency toward authoritarianism and neglect of theory—again resulting from the "excessive isolation of scientific fields" and the "fragmentation of knowledge."

Mr. PROXMIRE. Mr. President, James Reston has very well stated the position that more and more thoughtful people are beginning to take regarding the space program.

There are many Americans who favor space exploration, and favor being first to the moon. But it seems to me the real issue about the space budget is summed up in Mr. Reston's conclusion:

This is the real issue about the space budget: not whether it should explore space, but whether the degree of exploration should be so great as to spend tens of billions on propaganda as well.

I ask unanimous consent that the article by Mr. Reston published in the New York Times, issue of April 5, be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MAN ON THE MOON AND THE MEN ON THE DOLE

(By James Reston)

WASHINGTON.—The debate on the Nation's space program is getting out of hand. Some Republicans are attacking the program as if it were a vast boondoggle, and President Kennedy is defending it as if it were the Bill of Rights.

Most of the extreme arguments, however, are sheer political moonshine. The main issue is not one of politics but one of priorities. The question is not whether the exploration of space is important, but whether it is more important to put a man on the moon than to get several million men off the dole.

When the President was asked in his news conference this week about General Eisenhower's attack on the budget in general and the space budget in particular, he seemed annoyed and immediately went into a political orbit.

His reaction was to compare his budget record with the worst of President Eisenhower's, and to imply that anybody who wanted to cut the space budget was willing to hand over the space race to the Russians.

The space debate, however, deserves a more serious response. For a large and influential sector of the scientific community of the Nation, while enthusiastic about the exploration of space, believes that the scientific objectives of the program can be achieved at a fraction of the cost by putting instruments, rather than man, on the moon.

SCIENCE OR PROPAGANDA

Thus, the issue, as they see it, is whether the man on the moon is essential for scientific purposes, and whether the immense additional cost of the man-landing should take a higher priority than using a part of the savings on other essential tasks that would invigorate the economy and create jobs.

Dr. Warren Weaver, former president of the American Association for the Advancement of Science, recently said: "I believe that most scientists consider the proposed expenditures quite unjustified on the grounds of scientific considerations; and also consider the frantic pace of the program to be wasteful."

Dr. James R. Killian, former president of Massachusetts Institute of Technology, has asked: "Will several billion dollars a year additional for enhancing the quality of education not do more for the future of the United States and its position in the world than several billions a year additional for man in space?"

In 1960, the administration spent on space, $523 million; the next year the ante went up to $964 million; in the present fiscal year, the bill will be $3,700 million; and for the coming fiscal year, the administration has requested $5,712 million.

ESTIMATING THE COSTS

Estimates of total space costs for the sixties vary. The Deputy Administrator of the space agency, Robert C. Seamans, Jr., has put it between $50 billion and $60 billion. Fortune magazine puts it at $75–$100 billion for a decade in which the Nation shall also have spent $50 billion on missiles.

It is not only some Republicans, but prominent Democrats, such as Chairman J. W. FULBRIGHT of the Foreign Relations Committee, who are asking whether the non-scientific part of this immense total should be spent on a lunar man landing rather than on projects that will ease the unemployment, education, slums, housing, and transportation problems here below.

The scientific objectives are not primarily in question, but the propaganda objectives are. FULBRIGHT, for one, is opposed to paying such a price for what he regards as a kind of lunar Olympic race to land a man on the moon, especially since he believes the Nation's prestige will never be greater than its ability to house, transport, educate, and employ its own people.

VALUES AND PRIORITIES

What has happened here is fairly clear. The violent popular reaction to the first Soviet sputnik has deranged the administration's sense of priorities and values, and the preference of the Congress for spectacular victories over the Russians has aggravated the imbalance.

Clearing slums and wiping out unemployment raise more controversies on Capitol Hill than shooting John Glenn to the moon. Accordingly, the administration has said, in effect: "Ask not what is best for the country, but what is easiest to get through Congress."
